The Bombay Association now possesses four well-equipped buildings:—Wodehouse Road, Lamington Road, Rebsch Street, and Reynolds Road. The President is The Hon. Mr. Justice K. Barlee and the General Secretary is Mr. H. W. Bryant, M.B.E. In connection with each branch there is a well managed hostel providing accommodation for over 200 young men. These branches are managed by a Committee working under the Board of Directors. Each Branch organisation directs many and varied activities designed to meet the physical, spiritual, social, and mental needs of their members. A Welfare Service agency for labourers started in 1924 is now conducting eight centres, serving mill workers, Municipal menial employees, Port Trust and Railway employees. A programme of education, lectures, physical culture, play and general uplift, profitably fills up the leisure time of the workers and their families. The Association is responsible for the direction of three public playgrounds in the city, which are financed by the Municipality.

YOUNG WOMEN'S CHRISTIAN ASSOCIATION OF INDIA, BURMA AND CEYLON.—This Association founded in the year 1875 was organised nationally in 1896.

The aim of the Association is to unite women and girls of India, Burma and Ceylon in fellowship and mutual service for their spiritual, intellectual, social and physical development. The Association exists for Indian, Anglo-Indian and European girls and women. There are members in the following Branches. General 41; Student 43, and Girl Guides 12. The needs of girls are met by physical drill, recreation, clubs and classes, lectures, commercial classes, Bible study and devotional meetings, and meetings for social intercourse. Hostels, some of them holding as many as 70 girls, are established were there is a demand for them and the Association, at present, owns 21 including 8 holiday homes in the hills. These hostels accommodate working girls, teachers, nurses, students, and apprentices. Rates vary according to the residents' salaries and accommoda-

tion, though all equally receive the benefits of a comfortable home, good food and wholesome surroundings. The holiday homes provide cheap holidays in healthy surroundings and also accommodate girls who work in the hills during the hot season. In addition to holiday homes Summer Conferences are held annually at Ananda-giri, the Conference estate owned by the Association, in Ootacamund. Special Girls' Camps are arranged from time to time in many centres.

Traveller's aid work is done in the large ports, especially Colombo, and a large number of transient guests and visitors are accommodated in the Homes in these centres. The Association also runs employment bureaux through the agency of which many girls find positions. The commercial schools train girls for office and business life. These larger Associations are manned by a staff of trained secretaries, some of whom come from Great Britain, America, Australia, New Zealand and Canada. The others are found and trained in India. In many of the smaller branches where the work is of a simpler nature, it is carried on by voluntary workers who render faithful service year by year. The Student Department is affiliated to the World's Student Christian Federation and has 43 branches in the various Schools and Colleges.

The Association, which is affiliated to the World's Young Women's Christian Associations, is international and interdenominational. Active membership is open to all who declare their faith in our Lord Jesus Christ and desire to serve others in His spirit of love, and Associate membership is open to any girl or woman, regardless of what her religion may be, who wishes to join the world-wide fellowship of the Y. W. C. A. and declare her sympathy with its purpose, and to share in its activities.

The Patroness of the Association is H. E. Lady Willingdon.

Copies of the annual reports and other printed matter can be obtained from the National Office which is at 134, Corporation Street, Calcutta. The official organ of the Association is the leaflet "Everymember" which is issued each month and sent to members and friends of the Association.

ASSOCIATION OF BRITISH UNIVERSITY WOMEN IN INDIA.

The Association of British University Women in India was established in 1913. Its objects are:—

(1) To facilitate Intercommunication and co-operation between women belonging to the universities of the United Kingdom, resident in India.

(2) To provide a means of keeping in touch with the universities of the United Kingdom by communication with the British Federation of University Women, and otherwise as may seem expedient.

(3) To act as an organisation which shall afford opportunity for the expression of united opinion and for concerted action by university women.

Membership is open only to those women who hold degrees in any university in the United Kingdom, or hold Oxford or Cambridge Honours Certificates; but Associate Membership is open to women who have studied at a British University for two years and each Branch may admit as Honorary Members women who have advanced the higher education and interests of women.

The Association of British University Women has two branches. The addresses of the Honorary Secretaries are as follows:—

Hony. Local Secretaries.

Bombay ..Mrs. A. J. Moore, 31, Pedder Road, Bombay.

Punjab ..Mrs. Skemp, Race Course Road, Lahore.

The Delhi and Punjab Branches came into existence in 1918. The Calcutta and Bombay Branches are influential and have repeatedly intervened with good effect to educate public opinion with regard to subjects affecting women. All Branches have, for instance, made investigations on behalf of the Education Department, Government of India, the Calcutta University Commission, etc., and have supplied, through the International Federation of University Women, information on Secondary Education in India to the League of Nations. They have been the means of introducing women on to University Senates and Municipalities. The Calcutta Branch carried through an important exhibition of Food Products.

The Bombay Branch has done good work in connection with the formation of the Social Purity Committee and has, through a special sub-committee, organized public meetings for women on subjects affecting their interests about which legislation was being or had been recently enacted.

A valuable part of the work of the Association was the establishment of **Women's Employment Bureau** in Calcutta and Bombay. They were remarkably successful. The Bombay Bureau was eventually merged into the employment Bureau established by the Women's Council; the Calcutta Bureau has ceased to exist.

As a means of promoting friendships between women from various parts of the United Kingdom, with widely differing tastes and interests and spheres of life in India, and as an instrument for affording opportunities for usefulness to educated women, the Association of University Women has a useful function to perform.

This Association is Federated to the "Federation of University Women in India," and thus forms one of the Units of the Indian Federation.

Federation of University Women in India.

This is an organization conceived to unite for service and fellowship all University Women of whatever race or University who may be resident in India. Units representing British Universities, Indian Universities and American Universities severally have existed since 1913 (Britain) and 1920 (India and America) respectively.

These Units are now affiliated to the F. U. W. I. and are as such affiliated to the International Federation of University Women which embraces 31 countries of the world and has its headquarters at Crosby Hall, Cheyne Walk, London.

This International Federation is then a kind of League of Nations in which the University is the Unit: and the opportunities it affords for better understanding for world-friendship, and world service, will easily be imagined.

As forming one Family, its Members help the common cause of women: they help one another by inspiration and interchange of service: they help the country for which as individual Units they stand, inasmuch as that country is swept forthwith by reason of its place within the International Federation alone, into world statistics and the dignity of recognition by the League of Nations at Geneva.

The benefit to Members individually also is great. The Club Houses of the Federation all over the world are open to them. Equally so are all Scholarships and Fellowships offered by the Federation.

During 1929 these last have included. Scholarships from Great Britain and America which gave free tuition, board and residence at certain Colleges to students for a degree: residential scholarships at Crosby Hall, valuable Fellowships and Prizes offered chiefly for Medical or Scientific research by Australia and America.

A special scholarship was offered in 1929 by Barnard College, Columbia University, to under-graduates from India.

Membership is open to Women Graduates of any University through the Unit representing that University. Colonial Graduates are at present attached to the British Unit. The Bombay Presidency Women Graduates' Union offers membership to a graduate of any recognised University in the whole world.

Subscriptions.—Each Unit pays capitation at 8 as. per head.

The Federation has Branches in Bombay, Lahore, Madras, Kodaikanal. Each Branch has its local Committee. But as a whole the Federation is under a Central Committee with Headquarters at Calcutta for the years 1928 and 1929. Headquarters are at Bombay from 1930.

OFFICE BEARERS, CENTRAL COMMITTEE.

President: Dr. Muthulakshmi Reddi, M.B., C.M.

LOCAL REPRESENTATIVES.

Bombay	..Mrs. Moore.
	Miss I. Baptist.
Punjab	..Mrs. Skemp
Madras	..Miss Joseph.
Kodaikanal	..Mrs. C. McClalland.

Honorary General Secretary: Mrs. Doctor, Hirji Mansions, Gowalia Tank Road, Bombay 6.

Applications for membership should be made to the Honorary General Secretary who will forward the same to the Local Secretary to whose Unit it may appertain.

Hon. General Secretary: Mrs. Gulbanu J. R. Doctor, Federation of University Women in India.

ASSOCIATION OF COLUMBIA UNIVERSITY ALUMNI IN INDIA.—This is an organization conceived to unite for service and fellowship all Columbia alumni who may be resident in India. It was founded in 1931, and is a constituent member of the Alumni Federation of Columbia University, New York, U.S.A. There are more than fifty such Columbia Associations including one in London, Paris, Madrid and Berlin. The India Association has its Headquarters in Bombay.

President of the Association: Dr. Jal Dastur C. Pavry, M.A., Ph.D., 63, Pedder Road, Malabar Hill, Bombay.

ROTARY IN INDIA.

ROTARY CLUBS IN MIDDLE ASIA REGION.

H. W. Bryant, M.B.E., J.P., Honorary Commissioner, Middle Asia Region, Y.M.C.A., Wodehouse Road, Bombay.

INDIA.

AMRITSAR (1933): *President* W. Roberson-Taylor, *Hon. Secy.* D. May Arrindell, 65, The Mall, Amritsar. 2nd and 4th Tuesdays of each month, at 8-30 p.m., from the 15th October to 14th April; at 8 p.m. from the 15th April to 14th October. The Amritsar Hotel.

BOMBAY (1929): *President* S. T. Dockray. *Hon. Vice-President*:—H. W. Bryant, *Hon. Secretaries*:—R. G. Higham and Albert Raymond. Every Tuesday, 1-30 p.m., Taj Mahal Hotel.

CALCUTTA (1919): *President* A. R. Dalal. *Hon. Secy.* C. Warren Boulton, Stephen House, Dalhousie Square. Every Tuesday, 1-30 p.m., Great Eastern Hotel.

KARACHI (1933): *President* Sir Montagu De. P. Webb, C.I., C.B.E., Caxton House, Kutchery Road. *Hon. Secy.* Hatim B. Tyabji, Bar-at-Law, Sunny Side Road. Every 1st and 3rd Saturday 1-15 p.m. The Central Hotel.

LAHORE (1927): *President* G. T. Hamilton Harding, C. I. E., J. P. *Hon. Secy.* H. J. Rustomji, 6 High Court Chambers. Every Friday, 8-30 p.m., Nedou's Hotel.

MADRAS (1929): *President* R. D. Richmond *Hon. Secy.* C. Rajagopalachari, "Ardlui," 45, Spur Tank Road, Egmore, Madras. Every Friday, 1-30 p.m., Gymkhana Club.

BURMA.

RANGOON (1929): *President* Col. C. de. M. Wellborne. *Hon. Secy.* C. P. Wilton, Vacuum Oil Co., 581, Merchant Street. *Jt. Hon. Secy.* S. T. Sadasivan, 644, Merchant Street. Every Tuesday, 1 p.m., Strand Hotel.

THAYETMYO (1929): *President* U Than Tin, B.A., B.C.S. Deputy Commissioner, Thayetmyo. *Hon. Secy.* U Yon, Secretary, District Council, Thayetmyo. Every Saturday at 5 p.m., Rotary Club House.

CEYLON.

COLOMBO (1929): *President* A. Gammon, Hayley & Kenny, Colombo. *Hon. Secy.* R. A. Haines, P. O. Box No. 88 Colombo. Every Thursday, 1 p.m., The Grand Oriental Hotel.

STRAITS SETTLEMENTS.

SINGAPORE (1930): *President* W. Allan Eley, Esq. *Hon. Secy.* Major J. Lee, St. Andrew's School. Every Wednesday at 1 p.m., Adelphi Hotel.

PENANG (1930): *President* Dr. K. Md. Ariff. *Jt. Hon. Secretaries.* Dr. S. Rasanayagam & G. Maund. Address, c/o Health Office, Penang. Every Tuesday at 1 p.m., E & O. Hotel.

FEDERATED MALAY STATES.

KUALA LUMPUR (1930): *President* Mr. E. D. Butler. *Hon. Secy.* Mr. L. D. Gammans, M.C.S. P. O. Box 203, Kuala Lumpur. Every Wednesday at 1 p.m., Hotel Majestic.

SEREMBAN (1929): *President* Mr. H. P. Bryson, Malayan Civil Service. *Hon. Jt. Secretaries.* Mr. S. S. Chelvanayagam, c/o Chartered Bank. Seremban, F.M.S., and Dr. Eu Kay Hoe, International Dispensary, Birch Road, Seremban. Closed Meeting, 1st Thursday of each month at 7 p.m. Open Meeting, 3rd Thursday of each month, at 8 p.m., The Rest House, Seremban.

KLANG AND COAST (1929): *President* Goh Hoch Huat, J.P. *Hon. Secy.* C. J. H. Lowe, Secretary, Sanitary Board, Klang, F.M.S. Every Tuesday at 5 p.m., Chinese Merchants' Club, Klang.

JAVA.

BANDOENG: *President* Ing. D. W. Sparnaay. *Hon. Secy.* J. A. C. de Kock van Leeuwen. Riouwstraat 30, Bandoeng. Every Thursday at 8 p.m. Societeit Concordia.

DJOKJAKARTA: *President* Ir. P. A. G. Asselbergs. Class.—Railroad Equipment (Car rebuilding). *Address*, 1 Pengok, Djokjakarta, N. E. I. *Secretary*: J. C. L. Gotz van der vet. Class.—Agriculture (Educational extension). *Address*. 33 Gondokoesoeman, Djokjakarta, N. E. I. Sodeteit" de Vereeniging" Every Friday at 8 p. m.

MALANG (1930): *President* Prof. Dr. A. Leber. *Hon. Secy.* L. S. A. M. von Romer. Every Wednesday, 8 p.m., Club Concordia.

SOERABAYA (1930): *President* Th. A. van der Laan. *Hon. Secy.* K. K. J. L. Steinmetz, (M. R. I. C. E.). Every Thursday, 8 p.m., Orange Hotel, Soerabaya.

SUMATRA.

MEDAN (1930): *President* Dr. J. W. Wolff. *Hon. Secy.* G. G. Matthieu, Medan. Every 1st and 3rd Monday of the month at 8 p.m., Grand Hotel, Medan.

BUITENZORG.

BUITENZORG: *President* Dr. P. van Hulstijn. *Secretary*: Dr. J. G. J. A. Maas, van Imhoffweg 16, Buitenzorg club, Thursday, 7-30 p.m.

The Church.

The Church of England in India became on March 1, 1930, a self-governing branch of the Anglican Communion. Until that date it had been an integral part of the Church of England and its bishops were considered to be suffragans of the Archdiocese of Canterbury. This legal bond was severed by the passing of the Indian Church Act and Measure in 1927, and from the date of severance appointed under the Act, the Church of India, Burma and Ceylon has been free to manage its own affairs, although, as it states in the Preamble to its Constitution, it has no intention or desire "to renounce its obligations to the rest of the Holy Catholic Church and its fundamental principles, but on the contrary acknowledges that if it should abandon those fundamental principles it would break spiritual continuity with its past and destroy its spiritual identity."

Like all the other branches of the Anglican communion the Church of India, Burma and Ceylon is Episcopal. It is composed of fourteen sees, Calcutta, Madras, Bombay, Colombo, Lahore, Rangoon, Travancore and Cochin, Chota Nagpur, Lucknow, Tinnevelly and Madura, Nagpur, Dornakal, Assam and Nasik. Of these the first to be erected was Calcutta in 1814 and the last was Nasik in 1930. Vacancies on the Episcopal Bench are filled by election, each diocese electing its own bishop. The Bishops rule the Church and to them is reserved the final word in all matters of faith and order, but they rule in conjunction with a system of Councils which has been framed so as to give the greatest possible amount of representation to the whole body of the faithful. The foundation of the system is the **Parochial Council** of which the Parish Priest is the convenor and chairman. Every baptised, and confirmed member of the Church residing in the parochial area who contributes, in some recognised way, to the financial support of the Church, is a member of the Parochial Council of the ecclesiastical area in which he resides and is called a Qualified Elector.

Above the Parochial Councils come the **Diocesan Councils.** All Priests holding the Bishop's license are members of the Diocesan Council and to it are sent Lay Representatives elected by the Qualified Electors of every Parochial Council. The Diocesan Councils manage all purely domestic matters and have the right of petitioning the General Council about any subject of wider importance which may interest them. They elect a given number of priests and laymen to be their representatives on the General Council. General Councils are held not less than every three years and usually at Calcutta. They consist of three "Houses," Bishops, Priests and Laymen. Every Diocesan Bishop has a place in the House of Bishops. The other two Houses are formed by the elected representatives of the Diocesan Councils. The three Houses usually sit and vote together but any House has the right to meet alone if it desires to do so in order to formulate its policy or classify its opinions. A "Canon" of the Church is a Resolution passed with additional precautions ensuring due consideration by all three Houses. In all questions touching faith or Order the position of the episcopate as the divinely authorised teacher of the Church is most carefully safeguarded and the Bishops alone, without the concurrence of the other Houses, can issue Determinations about both subjects. But no Determination of the Bishops can be the subject of disciplinary action until it has become a Canon.

Every priest before being licensed to work in the Church of India, Burma and Ceylon takes an oath of obedience to the Canons.

The Ecclesiastical Establishment.—At the time of the passing of the Indian Church Act and Measure the Government of India acknowledged that it was responsible for providing for the spiritual needs of the Soldiers and Civilians whom it brought out to India. These responsibilities it discharges by maintaining an establishment of chaplains and churches for the four principal denominations of Christians—Anglican, Presbyterian, Roman Catholic and the Free Churches. The Chaplains of the two first named groups are appointed by the Secretary of State for India, the Anglicans on the recommendation of a Selection Committee of which the Archbishop of Canterbury is the Chairman. They are paid by Government and pensioned after a covenanted period of service. Although they form a definite Department of Government they are not subject to the orders of anyone save their own ecclesiastical superiors. The Presbyterian Chaplains are sometimes appointed to stations and sometimes to regiments. The Anglican chaplains are always chaplains of stations and have the pastoral care of all the inhabitants of the station who do not deliberately withdraw themselves from their ministrations, but when troops are included in the number of their parishioners Government orders that they shall have the first claim on their services. The chaplains and their congregations are members of the Church of India, Burma and Ceylon during their residence in India and have full rights of representation in the Councils of the Church. Their right to the use in worship of the Prayer Book of the Church of England is not only acknowledged in the Constitution of the Church but is also safeguarded by clauses in the Indian Church Act.

Government gives to the Metropolitan an annual block grant which is divided between the seven bishops whom Government recognises as having jurisdiction over the Establishment Chaplains and their congregations. These are the Bishops of Calcutta, Madras, Bombay, Lahore, Lucknow, Rangoon and Nagpur.

Before 1930 they formed part of the Establishment. One of the difficulties which the Church is facing is that the Government Block Grant is not large enough to provide for all the needs of these bishops. In consequence the Church is struggling to raise Diocesan Endowment Funds to make up deficits. More serious still, however, is the situation brought about by the action of Government in 1924, when in pursuance of a general policy of economy necessitated by post-war conditions it cut down the number of its chaplains by sixty. This set the dioceses a very difficult task. It became necessary suddenly to provide the salaries of Diocesan Chaplains and to furnish funds for the upkeep of the churches of many civil stations previously maintained by Government. Realising the magnitude of this burden Government agreed to help for a period of seven years by means of a very generous Block Grant. The question of the reduction of this grant is now under consideration. If the grant is considerably reduced the situation in most dioceses will be very serious. Either the Church must raise and devote to its European work a greatly increased sum of money or many of the churches in up-country stations will have to be closed. The chief sufferers will be the Anglo-Indian and Domiciled community which on account of "Indianisation" is less able than ever to carry the burden which it seems must inevitably be laid upon it. The difficulty of raising funds for the education of the children of this community and of obtaining priests to work for it becomes greater year by year. Nevertheless the Domiciled Community is the backbone of the Church in India and it is through this community that the conversion of India must come.

The Churches in India have not been wholly blind to these facts and have made desperate attempts to cope with the needs of the community in spite of lack of real support from home. The education of its children is very largely in the hands of the Christian denominations though there are a few institutions such as the La Martiniere Schools, on a non-denominational basis; but they are exceptional. In all the large centres there exist schools of various grades as well as orphanages, for the education of Europeans and Anglo-Indians under the control of various Christian bodies. The Roman Catholic Church is honourably distinguished by much activity and financial generosity in this respect. Her schools are to be found throughout the length and breadth of the Indian Empire; and they maintain a high standard of efficiency. The Anglican Church comes next, and the American Methodists have established some excellent schools in the larger hill-stations. The Presbyterians are also well represented in this field, particularly by the admirable institution for destitute children at Kalimpong, near Darjeeling. Schools of all denominations receive liberal grants-in-aid from Government, and are regularly inspected by the Education Departments of the various provinces. Thanks to the free operation of the denominational principle and its frank recognition by Government, there is no "religious difficulty" in the schools of the European and Anglo-Indian communities.

Christian Missions.

The tradition that St. Thomas, the Apostle, was the first Christian missionary in India is by no means improbable. History, however, carries us no further back than the sixth century, when a community of Christians is known to have existed in Malabar. Since then the so-called **Syrian Church** in south-west India has had a continuous life. Except in its infancy this Church (or rather these Churches or the Syrian Christians are now divided into four communions) has displayed little of the missionary spirit until quite recent times. Western Christianity was first introduced into India by the Portuguese, who established their hierarchy throughout their sphere of influence, Goa being the metropolitical see of the Indies. St. Francis Xavier, a Spaniard by race, took full advantage of the Portuguese power in Western India to carry on his Christian propaganda. His almost super-human zeal was rewarded with much success, but many of the fruits of his labour were lost with the shrinkage of the Portuguese Empire. It is really to the work of the missionaries of the **Propaganda** in the 17th century that the Papacy owes its large and powerful following in India to-day. The Roman Catholics in India number 1,823,000, of whom 332,000 were added during the decade 1911-1921. The total of "Syrian" Christians (exclusive of those who while using the Syrian liturgy, are of the Roman obedience) is 315,000, as against 367,000 in 1901. Protestant Christians (the term throughout this article includes Anglicans) number 2,950,000, an increase of 547,000 since 1911. Thus, the total number of Christians of all denominations in India is now close on five millions. In fact it probably exceeds that figure at the present moment, as these statistics are taken from the Census Report of 1911, and the rate of increase during the previous decade was nearly 100,000 per annum.

The Protestant Churches made no serious attempt to evangelise India till 1813. They have thus been at work in the Indian mission field for over 110 years, and the statistical results of their efforts are given above. It is now, however, generally recognized that Christian missions are producing indirect effects in India which lend themselves only incompletely to any sort of tabulation. The main agency of this more diffusive influence of Christianity is the missionary school and college. The **Protestant missions** fill a considerable part in the elementary education of the country. According to the 1923 *Report of the National Christian Council for India* they are teaching 420,255 children in 12,699 elementary schools, mostly situated in villages. The majority (243,895) of children in these schools are non-Christians. The same is true also of the secondary schools and in a still greater degree of the colleges. The former number 523 with 70,254 male and 25,303 female pupils. There are 40 colleges affiliated to Universities, containing 20,062 male and 1,309 female students. Of these as many as 14,148 are non-Christians. From the standpoint of missionary policy much importance is attached to these agencies for the indirect propagation of the Christian faith. The

statesman and the publicist are chiefly interested in the excellent moral effect produced by these institutions amongst the educated classes, and the higher educational ideals maintained by their staffs. The principal **University colleges** under Protestant auspices are the Madras Christian College; the Duff College, Calcutta; the Wilson College, Bombay; the Forman College, Lahore, and three women's colleges—the Women's Christian College at Madras, the Isabella Thoburn College at Lucknow, and the Women's Christian Medical College at Ludhiana. The Roman Catholics have a large number of educational institutions, ranging from small village schools to great colleges preparing students for University degrees But the proportion of Christian students in their institutions is very much larger than in those of the Protestant bodies. The proportion of literates amongst native Roman Catholics is probably lower than amongst the Protestant converts; but compared with Hindus and Mahomedans it is conspicuously higher. The Roman Catholics have some 3,000 elementary schools in which 98,000 boys and 41,000 girls are receiving instruction. In middle and high schools they have 143,000 boys and 73,000 girls and in University colleges about 5,000 students of both sexes. These figures, however, include a large proportion of Europeans and Eurasians, who are an almost negligible quantity in Protestant mission schools and colleges.

More recent, but producing even more wider spread results, is the **philanthropic work** of Christian missions. Before the great famine of 1878, missionaries confined themselves almost exclusively to evangelistic and educational activity. The famine threw crowds of destitute people and orphan children upon their hands. Orphanages and industrial schools became an urgent necessity. But the philanthropic spirit is never satisfied with one kind of organisation or method. A great stimulus was also given to medical missions. **Hospitals and dispensaries** have sprung up in all parts of the mission field; and leper asylums are almost a monopoly of Christian missionary effort. In 1911 the total number of medical missionaries working under Protestant societies in India was 118 men and 217 women, the majority of the former being also ordained ministers of religion. There are 184 industrial institutions in which 59 different arts and crafts are taught, ranging from agriculture to type-writing. In this department the **Salvation Army** hold a prominent place; and the confidence of Government in their methods has been shown by their being officially entrusted with the difficult work of winning over certain criminal tribes to a life of industry. The indirect effect of all this philanthropic activity under missionary auspices has been most marked. It has awakened the social conscience of the non-Christian public, and such movements as "The Servants of India" and the mission to the Depressed Classes are merely the outward and visible sign of a great stirring of the philanthropic spirit far beyond the sphere of Christian missionary operations.

Reunion.—For very many years Indian Christians have shown that they felt much more acutely than Europeans the scandal and disadvantage of the divisions of Christendom. These divisions are due to a very much greater extent than is always recognized to political causes, and in the political conflicts of the sixteenth and seventeenth centuries, when they became crystallised, India had no part. Even those differences amongst Christians which have a purely religious origin and foundation seem to be of very little account to Indian converts. For them the great dividing line is that between Christ and Mahommed or Shiva and Vishnu. Standing before a background of paganism they are conscious of a real fundamental unity in Christ. Compared with the greatness of the gulf which separates Christian from non-Christian, the differences of "confession" and "order" which separate Christian from Christian seem to be wholly artificial and negligible. In consequence the reunion movement, which is noticeable all over the world, is nowhere so strong as in India. In South India it has already resulted in the formation of the South India United Church, which is a group union of five of the principal Protestant communions, and as these bodies are in communion individually with all, or almost all, the other Protestant bodies at work in India the Union may be regarded as a Pan-Protestant Union. The S.I.U.C. is at present negotiating with the Anglican Church. If as seems probable the negotiations are successful the result will amount to a union of all the Christian bodies in South India, except the Roman Catholics, on the basis of the last Lambeth encyclical. This will mean that a real National Indian Church will come into being. Although it will be tolerant of almost every expression of Evangelical opinion and will retain the freedom of development characteristic of Protestantism, by its acceptance of the Catholic creeds and the Historic Episcopate, it will be linked up with the Catholic tradition of the Anglican Church.

Anglican Missionary Societies.

The Church Missionary Society carries on work in India in seven different missions—the United Provinces, South India, Travancore and Cochin, Bengal, Western India, Punjab and Sind and the Central Provinces and Rajputana. The names are in order of seniority. Work was begun in what are now called the United Provinces in 1813, in Bombay in 1820, in the Punjab in 1851, and in the Central Provinces in 1854. The Society has always kept Evangelistic work well to the fore; but it also has important medical missions, especially on the N.-W. Frontier, and many schools of the Primary, Middle and High standards. The Church of England Zenana Missionary Society is an offshoot of the C. M. S. controlling the work of 162 missionary ladies. The number of ordained European missionaries of the C. M. S. in India and Ceylon is 160, European laymen 30 and European laywomen 258. The Society claims a Christian community of 2,21,359 of whom 63,655 are adult communicants.

Society for the propagation of the Gospel.—Statistics of the work of this Society are not easily ascertained, as much of it is done through Diocesan institutions, which, while financed and in many cases manned by the S. P. G., are

entirely controlled by the Diocesan authorities. The best known of the S. P. G. missions is that at Delhi, commonly called the Cambridge Mission to Delhi, carrying on educational work at St. Stephen's College and School. At the College there are about 200 students under instruction, and at the High School 800. The College hostels accommodate 100 students. Missions to the depressed classes exist in Burma, in the Ahmednagar District and in several parts of South India, especially in the Diocese of Tinnevelly-Madura. The S. P. G. also maintains an important Criminal Tribes Settlement at Hubli, in the Bombay Carnatic. There are 116,000 Indian Christians under the aegis of the S. P. G.: 90 ordained European missionaries and 98 European lady workers.

Other Anglican Societies.—The Oxford Mission to Calcutta was started in 1880. It works in the poorest parts of Calcutta and also at Barisal. There are 11 mission priests of this Society, and 16 Sisters. In addition to its work amongst the poor, the Oxford Mission addresses itself to the educated classes in Bengal and issues a periodical called *Epiphany*, which is known all over India.

The Society of St. John the Evangelist (commonly known as the Cowley Fathers) has houses at Bombay and Poona, and small stations in the Bombay Konkan. In Bombay its missionary work centres upon the Church of Holy Cross, Umarkhadi, where there is a school and a dispensary. The Christians are chiefly drawn from the very poorest classes of the Bombay population. At Poona the Society co-operates with the Wantage Sisters and in Bombay with the All-Saints' Sisters. Other Anglican sisterhoods represented in India are the Clewer Sisters at Calcutta and the Sisters of the Church (Kilburn) at Madras. The St. Hilda's Deaconesses' Association of Lahore carries an important educational work (chiefly amongst the domiciled community) in the Punjab. The mission of the Scottish Episcopal Church at Nagpur, the Dublin University Mission at Hazaribagh, and the Mission of the Church of England in Canada working at Kangra and Palampur (Punjab) should also be mentioned under the head of Anglican Missions.

An interesting development has lately taken place in the Anglican communion. In 1922 the foundations were laid of a new Religious community called the Christa Seva Sangh or the Society of the Servants of Christ. The aim of its members is to enable Indians and Europeans to live together a common life based upon the three-fold vows of poverty, chastity and obedience and by living together to develop the Religious life along lines peculiarly suited to India. Indians appreciate fully the value of "renunciation". The Sangh hopes to commend Christianity to India by presenting it with a concrete illustration of Christian asceticism. The first Ashram of the Brotherhood was consecrated by Dr. Palmer, Bishop of Bombay, in 1928. It is situated in Poona and it contained at the time of consecration 13 Brothers, of whom 6 were Indians and 7 Europeans. It shows every sign of life and growth.

Bengal Ecclesiastical Department.

Westcott, Most Rev. Foss, D.D. .. .. .. Lord Bishop of Calcutta and Metropolitan of India.

SENIOR CHAPLAINS.

Grimes, Ven'ble Cecil John .. .. .. Archdeacon of Calcutta.
Birch, Rev. Canon Ormonde Winstanley, M.C. .. Chaplain, St. John's Church, Calcutta. Also Officiating Archdeacon of Calcutta.
Thomson, Rev. Thomas Albert .. .. .. (On leave.)
Williams, Rev. Henry Frank Fulford, M.A. .. Chaplain, Barrackpur.
Wilkinson, Rev. Ernest Roland, M.A. .. .. (On leave.)
Lee, Rev. Percy Erskine, M.A. .. .. .. Chaplain, St. Stephen's, Kidderpore.
Young, Rev. Ernest Joseph, B.A. .. .. .. Chaplain, Darjeeling.
McKenzie, Rev. Donald Stewart, M.A. .. .. Metropolitan's Chaplain.
Higham, Rev. Philip, M.A. .. .. .. Chaplain, Shillong, Assam.
Pearson, Rev. Cyril Greenwood, M.A. .. .. Senior Chaplain, St. Paul's Cathedral, Calcutta.

7 Junior Chaplains.

CHURCH OF SCOTLAND.

Dodd, The Rev. George Edward, M.A., B.D., J.P., H.C.F. — Presidency Senior Chaplain, Church of Scotland, Bengal. (On leave.)
Lee, The Rev. Robert Ewing, M.C., B.D., J.P. .. — Officiating Presidency Senior Chaplain, Church of Scotland, Bengal and Senior Chaplain, St. Andrew's Church, Calcutta.
McLellan, The Rev. Duncan Tait Hutchison, M.A. — Second Chaplain, St. Andrew's Church, Calcutta.

CHURCH OF ROME.

Perier, The Most Rev. Dr. Ferdinand, S.J. .. Archbishop, Calcutta.
Bryan, Rev. Leo, S.J. .. .. Chaplain, Alipore Central Jail.

Bombay Ecclesiastical Department.

Acland, The Right Rev. Richard Dyke, M.A. .. Lord Bishop of Bombay.
Martindale, Ven. Henry, M.A. .. .. .. Archdeacon.
Arthur Patrick Lillie .. .. Registrar of the Diocese.
Eastley, C. M. .. .. Ditto. (Officiating.)

SENIOR CHAPLAINS.

Harvey, Rev. Canon George Frederick, M.A. .. Senior Presidency Chaplain. (On leave.)
Mason, Rev. Charles Douglas Thomas, M.A., A.K.C. (On leave.)
Dart, Rev. Canon John Lovering Campbell, M.A.. Senior Presidency Chaplain, Bombay. (On leave.)
Wormald, Rev. Robert Leonard, M.A., M.B.E. .. Chaplain of Belgaum. (On leave.)
Ashley-Brown, Rev. W., L.T.H. .. .. .. Chaplain of St. Mary's, Poona. Officiating Archdeacon of Bombay (in addition) and Chaplain of Mahableshwar (in addition.)
Dossetor, Rev. F. E., M.A. .. .. .. Chaplain of Deolali.
Fortescue, Rev. C. F., L.T.H. (Dur.) .. .. Senior Presidency Chaplain. Comp.
Seaman, Rev. Alfred Jonathan, M.A. .. .. Chaplain of Ahmedabad.

6 Junior Chaplains.

CHAPLAINS ON PROBATION.

Stansfield, Rev. H. R. .. .. Chaplain of Ghorpuri.

FIELD SERVICE POST.

Nil.

THE ROMAN CATHOLIC CHURCH.

With regard to numbers, the *Catholic Directory of India* gives the following tables:—

	1911	1921	1931
1. *British India and Indian States*—			
(*a*) Latin Rite	1,614,620	1,851,408	2,164,918
(*b*) Syriac Rites.. ..	364,666	440,488	549,981
2. *French India*	25,918	25,489	25,492
3. *Portuguese India*	296,148	288,741	326,690
Total, India	2,301,346	2,606,117	3,067,031
4. Ceylon	322,163	363,986	394,993
Total, India and Ceylon ..	2,623,509	2,970,102	3,462,074

NOTE (1):—In 1860, the total for India and Ceylon was 1,170,854. In 1880 it had risen to 1,610,265 and in 1900 to 2,201,674.

NOTE (2):—In 1860 there were 1,504 priests. In 1921 there were 3,156. In 1931 there were 3,625.

The Catholic community as thus existing is composed of the following elements:—

(1) The "Syrian" Christians of the Malabar Coast, traditionally said to have been converted by the Apostle St. Thomas. They were brought under allegiance to the Pope by the Portuguese in 1599, and placed first under Jesuit bishops and then under Carmelite Vicar-Apostolics. They are at present ruled by an Archbishop and three suffragan Bishops of their own Syriac rite.

(2) Converts of the Portuguese missionaries from 1500 and onwards, starting from Goa and working in the south of the peninsula and up the west coast, Ceylon, Bengal, etc.

(3) European immigrants at all times, including British troops.

(4) Modern converts from Hinduism and Animism in recent mission centres.

(5) Recent converts from the Jacobite community in Malabar, of which 2 Bishops, 50 priests and Some 10,000 laity have been "united" to the Catholic Church.

The Portuguese mission enterprise, starting after 1500, continued for about 200 years, after which it began to decline. To meet this decline fresh missionaries were sent out by the Congregation *de propaganda fide*, till by the middle of the 19th century the whole country was divided out among them except such portions as were occupied by the Goa clergy. Hence arose a conflict of jurisdiction in many parts between the Portuguese clergy of the "Padroado" or royal patronage, and the propaganda clergy. This conflict was set at rest by the Concordat of 1886 (amended by the Agreement of 1928, abolishing "double jurisdiction"). At the same time the whole country was placed under a regular hierarchy, which after subsequent adjustments now stands as follows:—

Under the Sacred Congregation of **Extraordinary Ecclesiastical Affairs**:—

The archbishopric of Goa and Damaun (having some extension into British territory) with suffragan bishoprics at Cochin and Mylapore (both in British territory).

Under the Sacred Congregation of **Oriental Churches**:—

The archbishopric of Ernakulam, with Suffragan bishoprics of **Changanacherry, Kottayam and Trichur.**

The archbishopric of Trivandrum, with suffragan bishopric of **Tiruvella.**

Under the Sacred Congregation of **Propaganda Fide**:—

The archbishopric of Agra, with suffragan bishoprics of Allahabad and Ajmere.

The archbishopric of Bombay, with suffragan bishoprics of Poona, Mangalore, Calicut, Trichinopoly and Tuticorin.

The archbishopric of Calcutta, with suffragan bishoprics of Ranchi, Dacca, Chittagong, Krishnagar, Dinajpur and Patna and the Prefectures Apostolic of Assam and Sikkim.

The archbishopric of Madras, with suffragan bishoprics of Nellore, Hyderabad, Vizagapatam and Nagpur, the Prefecture-Apostolic of Jubbulpore, and the Missions of Cuttack and Bellary.

The archbishopric of Pondicherry (French), with suffragan bishoprics of Mysore, Coimbatore, Kumbakonam, Salem and Malacca.

The archbishopric of Simla, with suffragan bishopric of Lahore and the Prefecture-Apostolic of Kashmere.

The archbishopric of Verapoly, with suffragan bishoprics of Quilon, Kottar and Vijayapuram.

The archbishopric of Colombo (Ceylon), with suffragan bishoprics at Kandy, Galle, Jaffna and Trincomalee.

Three Vicariates Apostolic and one Prefecture Apostolic of Burma.

The European clergy engaged in India almost all belong to religious orders, congregation or mission seminaries, and in the great majority are either French, Belgian, Dutch, Swiss, Spanish or Italian by nationality. They number about 1,300 besides which there is a body of secular clergy mostly Indian, etc.,

numbering about 2,200, and probably about 2,000 nuns. The first work of the clergy is parochial ministration to existing Christians, including railway people and British troops. Second comes education, which is not confined to their own people; their schools being frequented by large numbers of Hindus, Mahomedans, Parsis, etc. Among the most important institutions are St. Xavier's College, Calcutta, St. Peter's College, Agra, St. Xavier's College, Bombay, St. Joseph's College, Trichinopoly, St. Aloysius College, Mangalore, Loyola College, Madras, teaching university courses; besides a large number of high schools and elementary schools. The education of girls is supplied for by numerous convent schools worked by religious congregations of nuns to say nothing of orphanages and other charitable institutions. The total number under education amounted in 1904 to 143,051 boys and 73,164 girls, later figures being unavailable. As to missionary work proper, the country is covered with numerous modern mission centres, among which those in the Punjab, Chota-Nagpur, Krishnagar, Gujerat, the Ahmednagar district and the Telugu coasts may be mentioned. (Full particulars on all points will be found in the Catholic Directory already quoted.) The mission work is limited solely by shortage of men and money, which if forthcoming would give the means to an indefinite extension. The resources of the clergy after the ordinary church collections and pay of a few military and railway chaplaincies are derived mainly from Europe, that is, from the collections of *the Society for the Propagation of the Faith* and of *the Holy Childhood*, helped out by private or other donations secured from home by the different local missionaries. In mission work the fathers count as enrolled only those who are baptised and persevering as Christians, and no baptism, except for infants or at point of death, is administered except after careful instruction and probation. This, while keeping down the record, has the advantage of guaranteeing solid results.

The Holy See is represented by a Delegate Apostolic of the East Indies who resides at Bangalore. At present this post is occupied by the Most Rev. Archbishop Kierkels, D.D., appointed in 1931.

THE CHURCH OF SCOTLAND.

The Church of Scotland and the United Free Church have become one. The Union, effected in October 1929, has already exerted a profound influence upon the life of the Church of Scotland in India. The Chaplaincy work of the Church of Scotland dates from 1814, when the Rev. Dr. Bryce landed in Calcutta, and organised a congregation of his Scottish fellow countrymen. The centenary of the churches in the three Presidency towns was celebrated: Calcutta, 1914; Bombay, 1919; Madras, 1921. Since 1903 there have been eighteen chaplains on the staff, of whom nine belong to the Bengal Presidency, five to Bombay, and four to Madras. These minister both to the Scottish troops and to the civil population of the towns where they are stationed, but when there is a Scottish regiment the chaplain is attached to the regiment, instead of being posted to the station where the regiment happens to be placed and as a rule moves with the regiment. There are three Presidency senior Chaplains in charge of Bengal, Bombay, and Madras respectively. There are churches in the chief towns of the Presidencies, and churches have also been built, in all considerable military stations, *e.g.*, Chakrata, Lucknow, Peshawar, Ranikhet, Rawalpindi, Sialkot, Umballa and Jubbulpore. In addition to the regular establishment there are a number of acting Chaplains sent out by the Colonial Committee of the Church of Scotland, and these are serving in such stations as Rawalpindi, Lahore, Cawnpore, Meerut, Mhow and Quetta. The Additional Clergy Societies in India contribute towards the cost of this additional establishment. In other places such as Sialkot, Murree, Dalhousie, and Darjeeling, regular services are provided by Scottish Missionaries. Simla has a minister of its own sent out from Scotland.

The Mission work of the Church of Scotland dates from 1829, when Alexander Duff, one of the greatest of modern missionaries, was sent to Calcutta. He was the first to open schools where English was made the medium for instruction, and where religious teaching was given daily. Similar educational missions were soon afterwards started in Bombay and Madras. Educational work is still an important branch of the mission work of the Church, but the Bombay College was closed in 1819 and in 1907 the College in Calcutta was united with the College of the United Free Church of Scotland, to form the Scottish Churches College. In the Punjab Evangelistic work is being carried on from eight centres under seventeen missionaries. The baptised Christian community now numbers over 14,000. Work commenced in Darjeeling in 1870 is now carried on throughout the whole Eastern Himalayan district, and there is a Christian community there of over 8,000. In the five mission districts of Calcutta, the Eastern Himalayas, Madras, Poona, and the Punjab there were at the end of 1919 over 24,787 baptised Indian Christians. In connection with these missions the Women's Association of Foreign Missions does invaluable service in school, medical and zenana work, having in India 41 European missionaries, 163 teachers, over 50 schools, three hospitals and six dispensaries.

The Church of Scotland has also done much to provide education for European children in India. Its two Churches in Bombay have six representatives on the governing body of the Anglo-Scottish Education Society, and the two churches exercise pastoral supervision over the Bombay Scottish Orphanage. In Bangalore there is the St.

Andrew's High School, and both in Bangalore and in Madras the local congregation supports the school for poor children. The Ayrcliff Girls' Boarding and High School is under the care of the Kirk-Session of St. Andrew's Church, Simla. The now well-known St. Andrew's Colonial Homes at Kalimpong, Bengal, though not directly part of the work of the Church of Scotland, were initiated by and are being locally managed by missionaries of that Church. The homes exist for the benefit of the domiciled European Community, and are doing magnificent work. There are now twenty cottages, and about 600 children in residence. Further information may be found in "Reports of the Schemes of the Church of Scotland," Blackwood & Sons; "The Church of Scotland Year Book" and "The Handbook of the Church of Scotland in India and Ceylon."

Though the former Churches of the United Free Church now belong to the Church of Scotland they remain independent of the establishment recognised by Government. They have only three purely European congregations in India, two in Calcutta, and one in Bombay.

The Church carries on Mission work in seven different areas. They are Bengal (Calcutta, Kalna and Chinsura); the Santal Parganas, with five stations; Western India (Bombay, Poona and Alibag); Hyderabad State (Jalna, Bethel and Parbhani); Madras (Madras City, Chingleput, Sriperumbudur and Conjeeveram); the Central Provinces (Nagpur, Bhandara, Wardha, and Amraoti); Rajputana, where the extensive work instituted by the United Presbyterian Church in 1860 is now carried on from eleven centres.

The work falls into three main divisions, evangelistic, medical, and educational. The Christian community has been organised in all the chief centres into congregations which form part of the Indian Presbyterian Church, and this Church is seeking to take an increasing share in the work of evangelism. There are nineteen Mission Hospitals, among which are four excellently equipped and staffed Women's Hospitals, in Madras, Nagpur, Ajmer, and Jaipur. From the days of Duff in Calcutta and Wilson in Bombay the Mission has given a prominent place to education. It has many schools in all parts of its field and it has also made a large contribution to the work of higher education through four Christian Colleges. The Scottish Churches College, Calcutta, is well known. The Madras Christian College, which owes so much to the work of Dr. William Miller, is now under the direction of a Board representing several Missionary Societies. Other Colleges are Wilson College, Bombay, and Hislop College, Nagpur.

BAPTIST SOCIETIES.

THE BAPTIST MISSIONARY SOCIETY OF GREAT BRITAIN.—Formed in 1792, largely through the efforts of Dr. Wm. Carey, operates mainly in Bengal, Bihar and Orissa, the United Provinces, the Punjab and Ceylon. The Baptist Zenana Mission and the Bible Translation Society have been united with this Society. The staff of the united Mission in India and Ceylon numbers 211 missionaries and about 1,070 Indian and Singhalese workers. Connected with the Society are 347 Indian and Singhalese Churches, 299 Primary Day Schools, 20 Middle and High Schools, and 1 Theological Training College. The Church membership at the close of 1931 stood at 22,128 and the Christian community at 60,344. The membership during the past ten years has increased by about 53 per cent. and the community by 50 per cent. in the same period. Amongst the non-caste people great progress has been made in recent years, and many of the Churches formed from amongst these peoples are self-supporting.

Special work amongst students is carried on in Calcutta, Dacca, Cuttack, Patna and Delhi, where hostels have been erected for the prosecution of this form of work.

EDUCATIONAL WORK.—Ranges from Primary School to Colleges. Serampore College, the only College in India able to bestow a theological degree granted under Royal Charter by His Danish Majesty in 1827, confirmed by the British Government in the Treaty of purchase of the Settlement of Serampore in 1845, and placed in 1856 by the College Council at the disposal of the Baptist Missionary Society to become a part of its Missionary Educational operations, in Arts and Theology. It was affiliated in 1857 to the newly-formed Calcutta University; reorganised in 1910 on the lines of its original foundation with the appointment of a qualified Theological Staff on an Inter-denominational basis for the granting of Theological Degrees to qualified students of all Churches.

As the only College in India granting a Theological Degree a large number of students are now resident in the College. In Arts, the College prepares for the Calcutta Arts Examinations. *Principal*: Rev. G. H. C. Angus, M.A., B.D.

There is a vernacular institute also at Cuttack for the training of Indian preachers and Bible schools in several centres.

There are 9 or 10 purely English Baptist Churches connected with the Society, but English services are carried on in many of the stations. Medical work connected with the Society is carried on in 9 Hospitals, and 6 Dispensaries. Two large Printing Presses for both English and Vernacular work are conducted at Calcutta and Cuttack. The Secretary of the Mission is the Rev. D. Scott Wells; 44, Lower Circular Road, Calcutta.

The Headquarters of the Mission are at 19, Furnival Street, Holborn, London. The total expenditure of the Society for 1931 amounted to £196,827.

THE CANADIAN BAPTIST MISSION.—Was commenced in 1873, and is located in the Telugu Country to the north of Madras, in the Kistna, Godavari, Vizagapatam and Ganjam Districts. There are 22 stations and 553 outstations with a staff of 104 missionaries including 9 qualified physicians, and 1,379 Indian workers, with Gospel preaching in 1,536 villages. Organised Churches number 120, communicants 25,728 and adherents 19,000 for the past year. Forty-one Churches are entirely self-supporting. In the Educational department are 560 village day schools, with 20,371 children, 15 boarding schools, 2 High schools, 2 Normal Training schools, a Bible Training School for Women, a Theological Seminary providing in all for 1,000 pupils, and an Industrial school. There are 6 Hospitals, two leper asylums and an Orphanage. The Mission publishes a Telugu newspaper. Village Evangelisation is the central feature of the Mission, and stress is laid upon the work amongst women and children. During the last decade membership has increased by 63 per cent., the Christian community by 20 per cent., and scholars by 105 per cent. Indian Secretary is the Rev. A. Arthur Scott, Tuni, East Godawari.

AMERICAN BAPTIST FOREIGN MISSION SOCIETY, organized in 1814, has Missions in Burma begun 1813; Assam 1836; Bengal and Orissa 1836; South India 1840. It owes its rise to the celebrated Adoniram Judson. Until 1910 the Society was known as the American Baptist Missionary Union. There are 33 main stations in Burma, 13 in Assam, 10 in Bengal Orissa, 29 in South India, besides many outstations. All forms of missionary enterprise come within the scope of the Society.

The great work of the Mission continues to be evangelistic and the training of the native preachers and Bible-Women, and extends to many races and languages, the most important of which, in Burma, has been the practical transformation of the Karens, whose language has been reduced to writing by the Mission. The work in Assam embraces 9 different languages and large efforts are made amongst the employees of the tea plantations. The Mission Press at Rangoon is the largest and finest in Burma.

Last year the field staff numbered 314 missionaries, 7,064 Native workers. There were 1,892 Churches of which 1,272 were self supporting. Church members number 1,27,828. In the 2,107 Sunday Schools were enrolled 9,60,000 pupils. The Mission conducted 2,741 schools of all grades with 91,091 students enrolled. 14 Hospitals and 34 Dispensaries treated 6,364 in-patients and 1,05,879 out-patients. Indian Christians contributed over Rs. 6,74,000 for this religious and benevolent work during the year.

THE AMERICAN BAPTIST ASSAM MISSION, was opened in 1836, and has 12 main stations staffed by about 50 missionaries. There are 1,038 native workers, 891 organized churches, 53,186 baptised members, 442 schools of all grades including 2 High, 2 Normal, 3 Bible and 14 station schools. 3 Hospitals and 5 Dispensaries treated 1,249 in-patients and 24,147 out-patients during the year. Mission work is carried out in 10 different languages.

Treasurer and Corresponding Secretary: Miss Marion G. Burnham, Gauhati, Assam.

AMERICAN BAPTIST, BENGAL-ORISSA MISSION, commenced in 1836. Area of operation: Midnapore district of Lower Bengal, Balasore district of Orissa and Jamshedpur Mission staff 36, Indian workers 310. Two English Churches and 32 Vernacular Churches, Christian Community 2,686. Educational: Two Boys' High Schools and two Girls' High Schools and 115 Elementary Schools, pupils 4,220. One Industrial School, known as Balasore Technical School, for carpentering, iron work and motor mechanics. The Vernacular Press of this mission printed the first literature in the Santali language.

Secretary—Mr. W. S. Dunn, Bhudrak, Orissa.

THE AMERICAN BAPTIST TELUGU MISSION—Was commenced in the year 1836, and covers large parts of Nellore, Guntur, Kistna, and Kurnool Districts, parts of the Deccan and an important work in Madras and the surrounding vicinity. Its main work is evangelism, but there are also Educational and Medical Institutions of importance. Industrial Settlement work for the Erukalas is carried on at Kavali and vicinity. Industrial departments are maintained also in connection with the Mission High Schools at Nellore, Ongole and Kurnool. Organized Telugu Churches number 326, with 105,596 baptized communicants. There are 88 missionaries, and 2,720 Indian workers. The mission maintains a Theological Seminary at Ramapatnam for the training of Indian preachers. A Bible Training School for the training of Telugu women is located in Nellore. A total of 36,942 receive instruction in 1,270 primary schools, 16 secondary schools and 4 high schools. In Medical work 7 Hospitals and 11 Dispensaries report 5,391 in-patients, 95,108 out-patients, and 115,073 treatments during the year.

Secretary—Rev. F. Kurtz, D.D., 39, Oxford Street, Secunderabad, Deccan.

THE AUSTRALIAN BAPTIST FOREIGN MISSION.—(Incorporated) Embracing the societies representing the Baptist Churches of the States of the Australian Commonwealth. The field of operations is in East Bengal. The staff numbers 42 Australian workers. There are 3,021 communicants and a Christian community of 5,639.

Secretary, Field Council: The Rev. W. G. Crofts, B.A., Biri Siri Mission House, P. O. Hatshipganj, Dist. Mymensingh.

THE STRICT BAPTIST MISSION.—Has 18 European Missionaries, and 223 Indian workers in Madras, Chingleput, Salem, Ramnad and Tinnevelly Districts. Communicants number 1,366; organised churches 51; elementary schools 82, with 3,043 pupils.

Treasurer and Secretary: Rev. D. Morling, Kovilpatti, Tinnevelly District.

PRESBYTERIAN SOCIETIES.

THE IRISH PRESBYTERIAN CHURCH MISSION.—Operates in Gujarat and Kathiawar with a staff of 36 Missionaries, of whom 13 are clerical, 14 Educationalists, 6 are Doctors and 2 Nurses. The Indian staff numbers 524, of whom 15 are Pasters, 87 Evangelists, 4 Colporteurs, 41 Bible-women, and 348 are Teachers. There are 19 Organised Churches, a communicant roll of 2,358, and a Christian Community of 7,739. In Medical work there are 4 Hospitals and several Dispensaries, with 1,714 in-patients, 17,377 new cases, and a total attendance of 67,819. The Mission conducts 3 High Schools, 1 Anglo-Vernacular School, 1 Preparatory School at Parantij and 131 Vernacular schools affording tuition for 6,724 pupils; also, 1 créche, 4 Orphanages, an Industrial School at Borsad, a Teachers' Training College for Women at Borsad, a Divinity College at Ahmedabad, and a Mission Press at Surat. The Mission has made a speciality of Farm Colonies, of which there are about a score in connection with it, most of them thriving.

The Jungle Tribes Mission with 7 Missionaries is a branch of the activities of the above, working in the Panch Mahals and Rewa Kantha districts, with Farm Colonies attached.

Secretary: Rev. George Wilson, B.A., Ahmedabad.

THE UNITED PRESBYTERIAN CHURCH OF NORTH AMERICA.—The Sialkot Mission of this Church was established at Sialkot in the Punjab, in 1855. It is now carrying on work in ten civil districts in the Punjab and two in the North-West Frontier Province. Its missionaries number 113, including married ladies and its Indian workers 316. Its educational work composes one Theological Seminary, one College, four High Schools, one Industrial school, seven Middle schools and 134 Primary schools. The enrolment in all schools in 1930 was 13,209. Medical work is carried on through five Hospitals and four Dispensaries. The communicant membership of the Church which has been established was 44,753 in 1931 and the total Christian community 95,216.

General Secretary: Rev. H. C. Chambers, D.D., Gordon College, Rawalpindi.

THE AMERICAN PRESBYTERIAN MISSION operates in three main sections known as the Punjab, North India and Western India Missions. The American staff, including women, numbers 256, and the Indian staff 1,135. There are thirty-four main stations and 229 out-stations. Organised churches number 100, of which thirty-two are self-supporting. There are 13,826 communicants and a total baptized community of 61,487.

Educational work as follows:—Two men's colleges and an interest in the Isabella Thoburn and Kinnaird Colleges for Women, students about 1,820; one Theological College, students thirty-four; two Training Schools for Village Workers, students about 180; twelve High Schools, students about 3,400; three Industrial Schools; three Agricultural Demonstration Farms; five Teachers' Training Departments; The Miraj Medical School and an interest in the Ludhiana Medical College for Women, students about 170; 280 Elementary Schools; 241 Schools of all grades, pupils about 12,023.

Medical Work:—Seven Hospitals; twenty-four Dispensaries.

Evangelistic Work:—331 Sunday Schools, with an attendance of 11,503 pupils. Contributions for church and evangelistic work, on the part of the Indian church, Rs. 71,254.

The Hospital at Miraj, founded by the late Sir William J. Wanless and now under the care of C. E. Vail, is well-known throughout the whole of S.W. India, and the Forman Christian College at Lahore, under the principalship of Dr. S. K. Datta, is equally well-known and valued in the Punjab. The Ewing Christian College (Dr. C. H. Rice, Principal) has grown rapidly in numbers and influence.

Secretary of Council of A. P. Missions in India:—Rev. J. L. Dodds, D.D., "Lowriston", Dehra Dun, U. P.

Secretary, North India Mission:—Rev. W. L. Allison, B.A., B.D., Gwalior, C.I.

Secretary, Punjab Mission:—Rev. J. B. Weir, M.A., Ewing Hall, Lahore.

Secretary, Western India Mission:—Rev. D. B. Updegraff, M.A., D.D., Nipani, Belgaum District.

THE NEW ZEALAND PRESBYTERIAN MISSION—Commenced as recently as 1910 at Jagadhri, Punjab.

Secretary: Miss B. J. Hardie, Jagadhri, Dist. Amballa.

THE UNITED CHURCH OF CANADA MISSION.—Commenced in 1877 has 14 main stations in Indore, Gwalior, Rutlam, Dhar, Jaora, Sitamau, Bhopal and Banswara States. The Mission staff numbers 80, Indian workers 200. This Mission works in conjunction with the Malwa Church-Council of the United Church of Northern India, which reports for this part of its territory:—Organised churches 21; Unorganised churches 8; Communicants 2,158; Baptised non-communicants 5,387; Unbaptised adherents 649; Total Christian Community 8,194.

Educational work comprises Elementary and Middle Schools for boys and girls; a High School for girls, an Arts College for students of both sexes (The Indore Christian College), a Normal School for girls, and the Malwa Theological Seminary. Women's industrial work is carried on in Mhow and Rutlam, and Vocational Training for boys is a feature of the Rasalpura Boys' School, where training is provided in printing, tailoring, carpentry and motor mechanics.

The Medical work is large. There are three General Hospitals, where both men and women are treated, and five Women's Hospitals, and also a number of dispensaries in central and out-stations.

General Secretary of Mission:—Rev. A. A. Scott, M.A., B.D., B. Paed., Indore, C.I.

Associate Secretary of Mission:—Miss F. E. Clearihue, Kharua, C. I. (*Via* Mehidpur Rd. Station).

Secretary of Malwa Church-Council:—Rev. F. H. Russell, M.A., D.D., Rutlam, C. I.

The Canadian Presbyterian Mission operates in two sections, the Northern Section with headquarters at Jhansi in the U.P., and the Central India Section, known as the Southern Bhil Field.

In Central India the five central stations are located in the States of Alirajpur and Jobat and Barwani, but the Mission comprises within its area the States of Jhabua and Kathiawar, also part of Chhota Udaipur in the Bombay Presidency and parts of Dhar, Indore and Gwalior States bordering on the Jobat-Barwani Road. The Staff in Central India consists of 20 missionaries and 42 Indian workers. There are several elementary schools in the area and a central and vernacular School for boys and girls at Amkhut and Alirajpur States. At Amkhet also there is a Children's Nursery Home and dispensary and a General Hospital for the area is located at Jobat. In the district there are five organised and 2 unorganised churches with 239 communicant members and a baptised community of 805.

Secretary.—Thomas Draper, M.R.C.S. (Lond.), M.R.C.P. (Ed). Jobat, *Via* Dohad, Central India.

The Jhansi Section formerly known as the Gwalior Mission was founded by the late Dr. J. Wilkie in 1905. There is now a staff of twelve missionaries and twenty-five Indian workers who are engaged in Jhansi city, Esagarh, Baragaon and the surrounding villages.

Activities include Anglo-vernacular middle schools for both boys and girls and hostels for Christian pupils in each. There is also an orphanage for children under school age, a dispensary and an industrial school for boys. There is an agricultural settlement at Esagarh where the Mission has a farm of 1,200 acres.

There are two organised churches having a communicant membership of 150.

Secretary.—The Rev. A. A. Lowther, M.A., B.D.

THE WELSH CALVINISTIC METHODIST (PRESBYTERIAN) MISSION established in 1840 with a staff of 40 Missionaries, 950 Indian workers, occupies stations in Assam in the Khassia and Jaintia Hills, the Lushai Hills and at Sylhet and Cachar. The Khassia language has been reduced to writing, the Bible translated, and many books published in that language by the Mission. A large amount of literature has also been produced in the Lushai language. Communicants number 35,396; the total Christian community 92,923; organised Churches 721; Elementary schools number 678, Scholars 20,243 in addition to Industrial Schools and Training Institutions 3 Theological Seminaries, Sunday Schools 822 and Scholars 54,047. Four Hospitals and several Dispensaries provide annually for more than 10,000 patients.

Secretary: Rev. F. J Sandy, Durtlang, Aijal.

THE ARCOT MISSION OF THE REFORMED CHURCH.—In America organised in 1853 occupies most of the North and South Arcot and Chittoor districts in S. India with a staff of 55 Missionaries and 801 Indian workers. Churches number 16, Communicants 7,452; Total Christian Community 26,442; Boarding Schools 17, Scholars 1,129; Theological School 1, students 31; Voorhees College, Vellore, students 137, High Schools 4, Scholars 1,887; Training Schools 2, students 120; Industrial Schools 2, Agricultural Farm and School 1, total pupils 280; Elementary schools 225, Scholars 9,716. Two Hospitals and 4 Dispensaries with a staff of 68 provided for 2,617 in-patients and 29,571 out-patients excluding the Union Medical College Hospitals and Dispensaries, Vellore.

The Union Mission Medical College for South India and a Union Mission Training School are located at Vellore, the headquarters of the Mission. The Union Mission Tuberculosis Sanitarium for S. India is near Madanapalle, Arogiavaram, P.O., Chittoor District.

Secretary:—Rev. W. H. Farrar, Arni, S. India.

CONGREGATIONAL SOCIETIES.

THE AMERICAN BOARD OF COMMISSIONERS FOR FOREIGN MISSIONS.—Has two large Missions, the American Marathi Mission, and the Madura Mission. The Marathi Mission covers a considerable part of the Bombay Presidency, with centres at Bombay, Ahmednagar, Satara and Sholapur. It was commenced in 1813, the first American Mission in India. Its activities are large and varied. The staff at the beginning of 1932 consisted of 52 missionaries in all, and 506 Indian workers operating in 9 stations and 99 outstations. Organized churches number 65 with 6,406 communicants, and 1,831 unbaptized adherents. There is a work for lepers at Sholapur. The educational work includes 10 secondary and training schools, with 1,151 pupils; and 68 primary schools, with 4,145 pupils, three-fifths of whom are non-Christians. Zenana work and industrial work are vigorously carried on, the latter embracing carpentry and lace work. A school for the blind is conducted in Bombay on both educational and industrial lines. In the hospitals and dispensaries of the Mission last year, 60,622 patients were treated. This Mission was the first to translate the Christian scriptures into the Marathi tongue. At Sholapur a settlement for Criminal Tribes is carried on by the Mission under the supervision of Government. *Secretary:* Rev. W. Q. Swart, Ahmednagar.

THE MADURA MISSION.—In the south of the Presidency, founded in 1834, has a staff of 58 missionaries and 930 Indian workers, operates in the Madura and Ramnad Districts and has a communicant roll of 11,854 and a total Christian community of 33,754 and 34 organized Churches most of which are entirely self-supporting and self-governing. These Churches are an integral part of the South India United Church. Schools number 287 with 15,834 pupils. In Madura there are a First Grade College, High and Training schools for girls and hospitals for men and women. At Pasumalai, three miles from Madura, a High School, Training School, Union Theological Seminary and Trade School. Five elementary Boarding Schools are found in as many out-stations, industrial work is increasingly a part of the curricula of all schools above the lower grade. The *Secretary* is the Rev. John J. Banninga, M.A., D.D., Pasumalai.

The Mission celebrates its Centenary in January, 1934, and immediately thereafter will cease to exist as an authoritative body but will hand over its authority for the conduct

of all its work to a body to be known as The Madura Mission Sangam, which will consist of some 45 members, the majority of whom must be Indian. The American College, Madura, will be reorganised under an independent Council.

THE SCANDINAVIAN ALLIANCE MISSION OF NORTH AMERICA.—The mission staff in Khandesh is represented by seventeen missionaries, and 39 Indian workers. There are 253 church members in good standing with 637 in Sunday Schools. 14 Elementary Schools provide for 376 pupils.

Secretary :—Miss Olga E. Noreen, Navapur, West Khandesh.

THE SWEDISH ALLIANCE MISSION.—Working among Bhils, Hindus and Muhammedans in West Khandesh, has 28 missionaries and 68 Indian workers. There are 8 congregations with a total membership of 942 of whom 435 are communicants. There are 9 Elementary Schools, 2 Training Schools and 5 School Homes. The pupils in all schools are 380.

Secretary :—The Rev. S. Ohlson, Mandalwar, *Via* Taloda, W. Khandesh.

FREE CHURCH OF FINLAND MISSION.—Total Mission staff is represented by 6 Missionaries, 1 native pastor, 2 Catechists, 5 teachers. There are about 130 communicants and total community 450. Four day schools, 1 evening school, 2 dispensaries and weaving and wool-cord industries.

Secretary :—Rev. E. A. Ollila, Ghum, D. H. Railway.

THE LONDON MISSIONARY SOCIETY.—Commenced work in India in 1798 and occupies 3 centres in N. India, 12 in S. India and 7 in Travancore. The Mission engages in every form of Missionary activity.

The European staff numbers 87, Indian workers 2,450, Organised Churches 520; Communicants 25,311 and Christian Community 177,795. There are 1 Christian College, students 159; 2 Theological Institutions, students 70; 4 Training Institutions, pupils, 114; 12 high schools, pupils 4,849; 25 Boarding schools, scholars, 1,167 and 862 Elementary schools with 46,371 scholars. In medical work Hospitals number 6, Nurses 7 Europeans and 33 Assistants, 14 qualified doctors, 9 Europeans and 62 Assistants and 10,413 in-patients and 206,276 out-patients for the year.

The main centres of the Mission in N. India are at Calcutta and Murshidabad. L.M.S. work in the United Provinces has been closed but a Union Mission of the W. M. S., C. M. S. and L. M. S. has been opened in Benares City with the Rev. J. C. Jackson of the L. M. S. as Superintendent. This Mission concentrates especially on work amongst pilgrims and students. Special efforts are made amongst the Nama Sudras. The S. India district and Travancore are divided into the Kanarese, Telugu, Tamil, and Malayalam fields with 19 stations and 959 outstations. At Nagercoil (Travancore) is the Scott Christian College and High School with 985 students, a Church and congregation said to be the largest in India, and a Printing Press, the centre of the S. Travancore Tract Society.

Bengal Secretary : Rev. H. A. Wilson, B.A., 1C, Ashutosh Murkerji Road. Calcutta.

South India—Secretary and Treasurer—Rev. George Parker, M.A., B.D., 18, Lavelle Road, Bangalore.

Benares Superintendent.—Rev. J. C. Jackson, Benares, U. P.

ALL-INDIA MISSIONS.

THE CHRISTIAN AND MISSIONARY ALLIANCE.—Dates from the year 1893 under the name of the International Missionary Alliance, but in number of its missionaries were at work Berar Province much earlier. Work is carried on in the Provinces of Berar, Khandesh and Gujarat. There is a staff of 58 missionaries and 128 Indian workers. The number of mission stations is 16 with additional outstations. There is a Christian community of 2,339 adults. There are 4 Boarding Schools, 2 for boys and 2 for girls. 1 Training School for Indian workers and 1 English congregation at Bhusawal.

Executive Secretary :—Rev. K. D. Garrison, Akola, Berar, C.P.

THE CHURCH OF THE BRETHREN (AMERICAN) —Opened work in 1895, and operates in Broach, Surat and Thana Districts, also in Baroda and Rajpipla States. Its staff number 49 foreign workers including missionaries' wives, and 200 Indian workers. The Baptized (immersed) membership stands at 4,871. Education is carried on in 7 Girls' Boarding Schools, 7 Boarding Schools for Boys, and 121 Village Day Schools. Females under instruction number 719, males 2,927, total under instruction 3,698. There are 47 Sunday Schools having 200 teachers and a total enrolment of 4,711. There were 32,052 calls at mission dispensaries in 1932. The foreign medical staff consists of 3 doctors, 4 nurses. Industrial work is carried on in eight of the Boarding Schools. A vocational school, including teachers' training, village trades and agriculture for boys and a school of practical arts for girls are conducted at Anklesvar. Evangelistic, Temperance and Publication work receive due emphasis.

Secretary :—L. A. Blickenstaff, Bulsar, Surat District.

THE POONA AND INDIAN VILLAGE MISSION—Founded in 1893. Mission Stations :—Khed Shivapur, Poona District, Nasrapur (Bher State), Poona District; Lonand, M.S.M. Ry., Satara District; Phaltan, Satara District; and Pandharpur and Nateputa Sholapur District. The staff consists of 46 European and 47 Indian workers, with a community of about 67 Indian Christians and their families. The main work is evangelising in the villages, women's zenana work, and primary education. Medical work is conducted at each station, with a hospital at Pandharpur. Headquarters: 44, Sassoon Road, Poona.

Secretary :—J. W. Stothard.

THE AMERICAN CHURCHES OF GOD MISSION —Has four missionaries at Bogra, one at Khan-

janpur, Bogra District, Bengal, and two at Ulubaria, Howrah District.

Executive Secretary:—Rev. H. W. Cover, M.A., Bogra, E.B.R.

Recording Secretary:—Rev. A. E. Myers, B.A., Ulubaria, Howrah Dist.

THE INDIA CHRISTIAN MISSION.—Founded in 1897, has 41 Organised Churches, 17 Missionaries, 53 stations and out-stations, 1,759 Communicants, 51 Primary schools and one Industrial School and Bible School in the Ellore District, also Station at Dodballapur, near Bangalore, S. India, also Colony for young people of mixed parentage, Champawat, *via* Almora, U. P. stations also in Nuwara Eliya Mulpotha Uva Province and Polgahawella, Ceylon; Girls' Orphanage at Nuwara Eliya; Industrial Homes for children of mixed parentage, Nuwara Eliya. Total Christian community 4,092. Magazines:—English *Missionary Notes* and Telugu *I. C. M. Messenger*.

Directors:—Rev. Arnold Paynter, Champawat, Almora, U. P. and Mrs. A. L. Paynter, Nuwara Eliya, Ceylon.

THE CHURCH OF THE NAZARENE MISSION.—Has its headquarters for India at Buldana, Berar, where it has a Boys' Boarding School, In Chikhli, 14 miles from Buldana there is a Girls' Boarding School. At present there are six missionaries in India and a force of 31 Indian Preachers, teachers and Bible women.

President of the Council:—Rev. L. S. Tracy, Buldana, Berar.

THE HEPHZIBALE FAITH MISSIONARY ASSOCIATION:—Has five missionaries in India. They are Rev. and Mrs. D. W. Zoak, and Rev. and Mrs. W. J. Brown Adra, B. N. Rly., and Miss E. K. Laudis Raghunathpur Manbhum District.

THE TIBETAN MISSION—Has 3 Missionaries with headquarters at Darjeeling, and Tibet as its objective. *Secretary*—Miss J. Ferguson, Darjeeling.

THE INDIAN MISSIONARY SOCIETY OF TINNEVELLY (DORNAKAL MISSION)—Opened in 1903 operates in the Warangal District of the Nizam's Dominions as well as among the hill tribes called Paliars in the British and Travancore Hills. It is the missionary effort of the Tamil Christians of Tinnevelly. There are now nearly 7,078 Telugu Christians in 133 villages and 379 Paliar Christians in the hills. *Secretary*—Rev. D. J. Devapiriam, Palamcottah.

THE MISSION TO LEPERS—Founded in 1874, is an inter-denominational and international Society for the establishment and maintenance of Homes and Institutions for Lepers and of their untainted children working in 15 countries but largely in India, China, Korea and Japan. Its work in India is carried on through co-operation with 30 Missionary Societies. In India alone the Mission now has 36 Asylums of its own with upwards of 6,000 inmates and is aiding or has some connection with work for lepers at 22 other places in India. Altogether in India over 7,000 lepers are being helped.

The Mission also provides for the segregation of the healthy children of lepers from their diseased parents. More than 800 children are thus being saved from becoming lepers.

An important feature of the work of the Mission is the measure of successful medical treatment whereby early cases both adults and children are now benefiting.

Most of the Mission's income is received from voluntary contributions. Some funds are raised in India, but the bulk of the money expended by the Mission in India is received from Britain, although the provincial Government give regular maintenance grants.

There is an Indian Auxiliary of the Mission to Lepers, of which H. E. Lady Sykes, who represents the Bombay Presidency, is a Vice-President.

Hon. Treasurer:—Henry F. Lewis, Esq., 12, Dalhousie Sq., Calcutta.

Hon. Treasurer, Bombay:—R. C. Lowndes, Esq., C/o Messrs. Killick, Nixon & Co., Bombay.

The General Secretary of the Mission is Mr. W. H. P. Anderson, 7, Bloomsbury Square, London, W. C. The Secretary for India is Mr. A. Donald Miller, Purulia, Bihar.

THE REGIONS BEYOND MISSIONARY UNION,—An inter-denominational Society commenced work at Mothihari, Bihar, in 1900, and now occupies 6 stations and 9 out-stations in the Champaran and Saran Districts, with a staff of 17 European and 2 Indian Missionaries and 40 other Indian workers. The Mission maintains 1 Hospital, 1 Girls' Orphanage, 1 Boys' Orphanage and Boarding School with Carpentry industrial department, 1 M. E. School with 200 pupils. Communicants number 80. *Secretary*: Rev. P. O. Wynd, Laukaria Hospital, Bagaba P. O., Champaram District.

THE RANAUL MEDICAL MISSION, affiliated with the Regions beyond Missionary Union has 1 Hospital at Raxaul, Champaran District, with 1 married European Doctor, 1 European Nursing Sister, and 7 Indian workers.

Secretary—Dr. H. C. Duncan.

THE NATIONAL MISSIONARY SOCIETY OF INDIA—Established 1905, started, financed and managed by Indian Christians, has a staff of 27 Missionaries and 93 helpers and Voluntary workers operates in Montgomery District (the Punjab), Sirathu and Khaga, (U.P.), Haluaghat, Mymensingh District (Bengal), Jharsugudah (B. & O.), Murwahi (C.P.), North Kanara, Mirajgaon and Karmala, Talukas (Bombay), Parkal Taluk (Nizam's Dominions) and Tirupattur Taluk (N. Arcot) Thirty-four Elementary Schools and 1 High School with hostel, one printing press, three Dispensaries and two Hospitals. Annual expenditure Rs. 80,000. *The National Missionary Intelligencer* (a monthly journal in English sold at Re. 1 per year post free), *Qasid* (a monthly journal in Persian-Urdu) at Rs. 2-8-0, *Deepekai* (a monthly journal in Tamil and Kanarese) at 8 annas per year, post free.

Address:—N. M. S. Office, Vepery, Madras.

President:—The Rt. Rev. Abraham Mar Thoma, M.A., D.D.

General Secretary:—Rai Bahadur A. C. Mukerji, B.A. *Associate Secretary*: Thos. David, B.A., B.D.

THE SEVENTH-DAY ADVENTIST MISSION—The Seventh-day Adventists commenced mission work in India in 1893, and now employ a staff of five hundred and eighty workers, European and Indian, including one hundred and forty ordained and licensed ministers. Evangelistic and educational work is conducted in sixteen vernaculars, beside work for English-speaking peoples in the large cities. For administrative purposes, there are five branch organizations located as follows :—

Seventh-day Adventist Mission—Western India. (J. S. James, Superintendent). *Office Address :* 8, Dhondy Road, Devlali, Nasik District.

Seventh-day Adventist Mission—Burma. (J. L. Christian, Superintendent). *Office Address :* 30, Voyle Road, Rangoon Cantonment, Burma.

Seventh-day Adventist Mission—North-East India. (G. G. Lowry, Superintendent). *Office Address :* Hinoo P.O., Ranchi.

Seventh-day Adventist Mission—North-West India. (A. H. Williams, Superintendent). *Office Address :* 17, Abbott Road, Lucknow.

Seventh-day Adventist Mission—South India. (E. M. Meleen, Superintendent). *Office Address :* 10, Cunningham Road, Bangalore

The general headquarters for India and Burma is located at Salisbury Park, Poona. A. W. Cormack, President; C. L. Torrey, Secretary and Treasurer. (Office Address: Post Box 15, Poona). On the same estate is an up-to-date publishing house devoted entirely to the printing of health, evangelical, and associated literature. (Address: Oriental Watchman Publishing Association, Post Box 35, Poona).

A large number of day and boarding vernacular and Anglo-Vernacular schools are conducted in different parts of the country; and at Vincent Hill School, Mussoorie, European education is provided, a regular high school course, with more advanced work for commercial and other special students, being available. In all the denominational boarding schools increasing emphasis is being laid on vocational work, the students being required to share in the domestic work of the institutions, and in many cases, to engage in some trades or other work.

Nine physicians, one maternity worker, (C.M.B.) and a number of qualified nurses are employed, regular medical work being conducted at twenty stations.

The baptised membership (adult) is about 4,000, organized into 96 churches; and in addition a substantial community of enquirers is receiving systematic instruction. 261 Sabbath Schools are conducted with an enrolled membership of about 8,000.

The Bombay address is 1, Kamal Mansions, Colaba.

THE AMERICAN MENNONITE MISSION.—Established 1899, works in the C. Provinces Mission staff numbers 35, Indian workers 55, Church members 1,400, Industrial Training Institutions 2, Academy including High School, Normal School and Bible School—Anglo-Vernacular Schools 2, Elementary Schools 11, Orphanages 2, Widows' Home 1, Hospital 1, Dispensaries 7, Leper Home 1, Home for untainted children of lepers 2, Leper Clinic 5.

Secretary: Rev. J. N. Kaufman, Dhamtari, C. P.

THE GENERAL CONFERENCE—MENNONITE MISSION—Started in 1901 in the C. Provinces. Workers number 23; Leper, Medical Orphan, Zenana, Evangelistic and Educational work carried on. *Secretary*: Rev. P. W. Penner, Janjgir, C. P.

THE KURKU AND CENTRAL INDIA HILL MISSION.—Established 1890 in the C. P. and Berar, has a mission staff of 17, Indian workers 20, Churches 9, Communicants 304; Christian Community 509; 2 Boarding Schools with 72 boarders and 2 elementary schools.

Secretary.—Rev. Carl Wyder, Ellichpur, Berar, C. P.

THE CEYLON AND INDIA GENERAL MISSION.—Established 1892, occupies stations in Mysore State, in the Coimbatore and Anantapur Districts and also stations in Horana, Ceylon. Mission staff 36; Indian workers 130; Churches 13; Communicants 900; Christian community 3,100; Orphanages 4; Elementary Schools 35; Pupils 1,300.

Secretary.—N. F. Silsbee, Ali Asker Road, Bangalore.

THE BOYS' CHRISTIAN HOME MISSION.—Owes its existence to a period of famine, was commenced in 1899. Mission staff 17, Indian workers 125. There are elementary schools with three orphanages, two boys and one girl, and a Widows' Home, where Industrial training is given. There are four main stations—At Dhond, in the Poona District and at Bahraich, Orai and Benares in United Provinces. At Benares there is an Industrial Training Institution with about one hundred attendants learning the Motor, Electrical and Carpentry trades. There are also 34 out-stations. *Director*: Rev. John E. Norton, Dhond, Poona District. *Secretary*: W. K. Norton, Benares, U. P.

Ladies' Societies.

ZENANA BIBLE AND MEDICAL MISSION.—This is an inter-denominational society, with headquarters, 33, Surrey Street, London, working among women and girls in 5 stations in the Bombay Presidency, 10 in United Provinces, and 4 in the Punjab. There are 74 European Missionary ladies on the staff and 22 Assistant Missionaries, 247 Indian teachers and nurses and 56 Bible women. During 1932 there were 4,777 in-patients in the three hospitals supported by the Society (Nasik, Lucknow and Patna), but the Victoria Hospital, Benares, and Jaunpur, were closed. There were 24,908 out-patients, 86,968 attendances at the Dispensaries. In their 31 schools were 3,173 pupils and there is a University Department at Lahore. The evangelistic side of the work is largely done by house to house visitations and teaching the women in Zenanas, 1,315 women were regularly taught and 1,342 houses were visited. The 56 Bible women visited 467 villages; the number of houses was 147; major operations 620; minor operations 780. Total expenditure £57,732.

Hon. Treasurer: The Lord Meston of Dunottar.

President.—The Lady Kinnaird.

Secretaries:—Rev. E. S. Carr, M.A. (Hon.) Rev. Canon L. B. Butcher, Lieut. Commander, N. H. Bonham-Carter.

WOMEN'S CHRISTIAN MEDICAL COLLEGE, WITH WHICH IS INCORPORATED THE PUNJAB MEDICAL SCHOOL FOR WOMEN.—In 1894 the North India School of Medicine for Christian Women was opened in Ludhiana in order to give a Medical Education under Christian influences to Indian Women. Doctor Edith Brown, D.B.E., M.A., M.D., was its Founder and Principal. The School was Inter-denominational, and trained students for various Missionary Societies.

Clinical work was at first given at the Charlotte Hospital which belonged to the Ludhiana Zenana and Medical Mission. The Memorial Hospital was opened in 1900, and has now 200 beds. In 1913 non-Christian Students were also admitted for training, and the name was modified to its present title given above.

In 38 years 236 medical students have qualified as doctors, besides 127 as compounders, 157 as nurses and 434 as dais and midwives.

At present 283 are in training—129 as medical students, 17 as compounders, 53 as nurses and 84 as nurse dais.

New laboratories have been built for Clinical Pathology, for Physiology, and for Chemistry and Physics. New quarters for Sisters, Nurses, Assistant staff and also a new Babies' Ward. The new Dispensary for out-patients has now become very popular.

THE MISSIONARY SETTLEMENT FOR UNIVERSITY WOMEN was founded in Bombay in 1896. Its work is religious, social and educational. The Settlement supplies a hostel for University students of all nationalities and a few Indian professional women. Classes for educated girls are provided and teaching is also given in pupils' homes. The Settlement staff take part in many of the organised activities for women's work in the city. The Social Training Centre is located at the Settlement. The course, lasting a year, includes both theoretical and practical work.

Warden:—Miss R. Navalkar, B.A., Reynolds Road, Byculla, Bombay.

THE RAMABAI MUKTI MISSION (affiliated with the Christian and Missionary Alliance Mission in 1925) the well known work of the late Pandita Ramabai, shelters about 600 deserted wives, widows and orphans, educating and fitting them to earn their living. The Mission is worked on Indian lines and carried on by Indian and European workers. Evangelistic work is carried on in the surrounding villages of Kedgaon, Poona District.

Miss Eunice Wells, *Secretary-Treasurer*.

Disciple Societies.

The India Mission Disciples of Christ, under the United Christian Missionary Society, Indianapolis, Indiana, U.S.A., began work in India in 1882. It works in the Central Provinces and South United Provinces. There are 60 missionaries, including missionaries' wives, and 266 Indian workers. There are 17 organized churches with the membership of 2,524. There is a Christian community of 5,000. There are 5 hospitals and 8 dispensaries, in which 2,152 in-patients, and 50,742 out-patients were treated last year, with a total of 2,17,698 treatments. There is an orphanage for children under 8 years of age, with the older orphans provided for in the boarding schools and hostels. Two boarding schools for girls and one for boys, with 2 hostels for boys and one for girls show 640 inmates. There is one Leper Asylum with 120 inmates. A Tuberculosis Sanatorium admitted 120 patients during the year. An Industrial School is Conducted at Damoh in connection with which a 400 acre farm is used for practical work. In the Training Home for women at Kulpahar, needlework, gardening, etc., are taught in connection with which a large business is done each year. The Mission Press at Jubbulpore printed about 3,000,000 pages of Christian Literature. 1 Normal, 2 Industrial Schools, 2 High Schools; 5 Middle Schools and 15 Primary Schools, with about 1,916 under instruction.

The Australian Branch has 3 Mission Stations in the Poona District. The Great Britain and Ireland Branch in Mirzapur District of U.P. and Palamau District in Orissa. These two have no organised connection with the India Mission Disciples of Christ.

Secretary and Treasurer: D. A. McGavran, Ph. D., Jubbulpore, C. P.

Inter-denominational Missions.

THE CENTRAL ASIAN MISSION. United with worldwide Evangelical Crusade. Objective: Salvation of Central Asia: from Afghanistan to Tibet (including N. E. portion of Peshawar District, North Kashmir, etc.) Protestant Evangelical, Inter-denominational. Headquarters in India, Mardan, N. W. F. P.; in London 19, Highland Road, upper Norwood Branch Stations Bandapur, and Gurez N. Kashmir; Kargil, Shigar and Khapalu Baltistan, Kashmir. Seven European Missionaries on field on furlough. Work is principally among the Santals. Mission staff numbers 46 of whom 3 medical missionaries. Indian pastors 31, other Indian workers 500 Christian community in organized congregations 18,500. 6 boarding schools with 900 pupils, 130 elementary schools with 2,300 pupils, 1 industrial school with 60 pupils, 1 printing press, 1 orphanage with 30 orphans, 2 hospitals, 4 dispensaries, 1 leper colony with 300 lepers, 1 tea garden. *Acting Secretary:* Rev. J. Gausdal, Dumka, Santal Parganas.

MISSIONS AND ENEMY TRADING ACT.—In May 1918, the following notice regarding Missions was published in the "Gazette of India":—"The following missions or religious associations are declared companies under Act 2 (the Enemy Trading Act) of 1916:—The Leipzig Evangelical Lutheran Mission, Madras, the Hermansberg Evangelical Lutheran Mission, Madras, the Schleswig-Holstein Evangelical Lutheran Mission, Madras, the Gosner Evangelical Lutheran Mission of the United Provinces and Behar and Orissa, the German Evangelical Lutheran Mission of Ranchi, Behar and Orissa. The Governor-General in Council notifies that the powers conferred under Section 7 of the said Act shall extend to the property, movable and immovable, of these missions or religious associations."

In June, 1919, the Government of India stated:—"Effect is already being given to the suggestion that enemy missions in India should be taken over by British societies. The properties and undertakings of hostile missions have been vested in the Provisional Custodian of Enemy Property with a view to their transfer to boards of trustees composed partly of non-official members nominated by the National Missionary Council of India with the approval of the Government of India and partly of Government officials, and those Boards of Trustees will in due course transfer the undertakings and properties to a missionary society to be selected by them with the approval of the Governor-General in Council."

Methodist Societies.

The Methodist Episcopal Church is the organization in the United States of America which grew out of the Wesleyan revival in England and her American colonies during the latter part of the eighteenth century. This Church began its work in India in 1856, at first confining its activities to what is now the United Provinces. From that centre it spread until the outposts of its work were found in Baluchistan, Burma, Malaysia, Netherlands, Indies and the Philippine Islands. In 1920 a rearrangement of the mission field of the Church separated India, Burma and Baluchistan into what is now known as the Southern Asia division. Within this present field the Church now has a total baptized Christian community of 525,668.

The avowed task of the Church has been the uplift of the depressed classes, and its work has been largely among that class. As a matter of fact, however, it has large numbers who came from the Mohammedans and the caste Hindus, and among such its influence is extending.

The educational work of the Church is extensive, it having in this area a total of 1,181 schools of all grades, including three colleges, twenty-two high schools, and numerous normal training and theological institutions. The registered attendants in these schools number 44,524.

Special effort is made for the instruction and development of the young people of the Church, there now being 336 chapters of the Epworth League with 13,394 enrolled members, and 4,021 organized Sunday Schools with an enrolment 139,422.

The publishing interests of the Church are represented in two presses at Madras and Lucknow, the former doing work in four vernaculars and the latter in six. The periodicals issued cover the interests of both the evangelistic and the educational field, the Indian Witness, the Junior Methodist and Christian Education being in English, while the Kaukab-i-Hind, and other periodicals are issued in several of the vernaculars.

The governing body of the Church is the General Conferences held quadrennially in America in which the eleven conferences now existing in India are represented by twenty-four delegates. The polity of the Church in India looks forward to complete independence under the general governing body, there at present being

but about three hundred and fifty American men and women as compared to 645 ordained and 4,598 unordained Indian and Burmese workers. At present the area is divided into seventy-two districts each in charge of a superintendent and among whom are many Indians. The work is supervised by three Bishops, elected by the General Conference, and resident as follows: Bishop John W. Robinson, Delhi; Bishop Brenton T. Badley, Bombay and Bishop Jashwant Rao Chitambar, Jubbulpur.

THE AMERICAN WESLEYAN METHODIST MISSION, Sanjan, Thana District Headquarters. Stations with Missionaries, Dandi Maroli, *via* Nargole, District Thana. Pardi, District Surat. Six Missionaries on field. Two on furlough. Four main stations. Two Boarding schools. One industrial school. One Bible School. One village farm project. Eight village schools. Chairman of Field Committee, Rev. P. D. Doty, Sanjan, District Thana.

The Methodist Protestant Mission began work in India in 1919, has a staff of six missionaries. The work is confined to Dhulia Taluka, with one Main station, Dhulia. There are two boarding schools, district evangelistic work and medical work. *Secretary*: Mrs. Paul Cassen, Dhulia, West Khandesh.

THE WESLEYAN METHODIST MISSIONARY SOCIETY commenced work in India in 1817 (Ceylon in 1814). The Mission in India, apart from Ceylon, is organised into 7 District Synods with 2 Provincial Synods. There is a large English work connected with the Society, 20 ministers giving their whole time to Military work and English churches.

The districts occupied include 68 main stations in Bengal, Madras, Mysore, Bombay, Punjab, Central Provinces, Hyderabad (Nizam's Dominions), United Provinces and Burma. The Burma Synod has recently been attached to the Ceylon Provincial Synod for purposes of administration. Its statistics are no longer included in this statement. The European staff numbers 102 with 75 Indian Ministers and 791 Indian workers; Communicants 18,513, and total Christian community 101,245. There are 7 large numbers of organised Churches many of which are self-supporting.

Educational work comprises 3 Christian Colleges. students, 2,033; 5 Theological Institutions, students, 329; 7 High Schools, pupils, 3,427; 14 Industrial schools, pupils, 400; 923 Elementary schools, with 26,189 scholars. In Medical work there are 3 hospitals, 12 dispensaries, 1,127 in-patients and 65,431 out-patients.

The Women's Auxiliary carry on an extensive work in the places occupied by the W. M. M. S. There are 93 women workers from abroad of whom 16 are qualified doctors. The Indian women workers number 382. There are 109 girls' day schools with 13,377 pupils and 28 boarding schools with 1,979 boarders. There are several philanthropic institutions for the rescue and training of women. The Women's Auxiliary manage 12 hospitals and 9 dispensaries, which had 8,041 in-patients and 97,583 out-patients. The cost of the work to the Women's Auxiliary in 1925 was nearly £25,000.

THE FREE METHODIST MISSION of North America—Established at Yeotmal, 1893, operates in Berar with a staff of 11 Missionaries and 40 Indian workers. Organised churches 5, 1 Theological school, 1 Girls' Boarding School, 1 Vernacular Middle school, 8 Elementary Schools, 1 Dispensary and 5 centres for Clinical and village health work.

Secretary: Persis M. Phelps, Yeotmal, Berar.

THE SALVATION ARMY.

The work of the Salvation Army in India and Ceylon was commenced in 1882 by the late Commissioner Booth-Tucker; and was for many years under his control, with Headquarters in India. For some time now, the areas occupied have been divided for administrative purposes into 5 Territories, each under a Territorial Commander; and two smaller Commands.

Northern Territory, with Headquarters at Lahore.

Western Territory, with Headquarters at Bombay.

Madras and Telugu Territory, with Headquarters at Madras.

Southern Territory, with Headquarters at Trivandrum, in Travancore State.

Ceylon Territory, with Headquarters at Colombo.

Eastern Command, with Headquarters at Calcutta.

Burmah Command, with Headquarters at Rangoon.

The Commanders are directly responsible to the International Headquarters in London.

Northern Territory.—The area in this Territory is the Salvation Army work in the Punjab, Delhi and United Provinces. The Territory is controlled from Lahore.

Evangelistic work, especially among the "depressed classes," is extensively carried on, both in the Punjab and the U. P.

A number of Settlements for the reformation of "Criminal Tribes" are under the control of the Salvation Army in the United Provinces (where this important reformative work was commenced), and also in the Punjab, great progress has been made. A special Settlement has also been opened in the Andamans during the last few years.

A land colony 2,000 acres in extent is in existence in the Multan District, where a population of 1,800 has been settled. The land will ultimately become the property of the holders.

Medical work is carried on in two Hospitals, one of which is in the Punjab and the other in the United Provinces; and also in one dispensary.

Other institutions include, Day and Boarding Schools, Weaving Schools, Agricultural Colonies, a Hospital for British Military Soldiers, and Civilians at Delhi.

Village centres at which the S. A. Works	1,776
Officers and Employees	580
Social Institutions	22

Territorial Headquarters: Ferozepur Road, Lahore, Punjab.

Territorial Commander: Commissioner N Muthiah.

Chief Secretary.—Lt.-Colonel W. D. Pennick

Western India.—The Western India Territory comprises Bombay, Gujerat, Panch Mahals and the Maharashtra.

Besides the distinctly evangelistic operations, there are established a large General Hospital—Emery Memorial, Anand—and several Dispensaries, at which during the year about 41,906 patients are treated, 222 Day Schools, 4 Boarding Schools, a Home for Juvenile Criminals, and Industrial and Rescue Home for Women, a conditionally Released Prisoners' Home, the management of the Bombay Helpless Beggars' Camp, Weaving Schools, a Factory for the making of Weaving, Warping, and Reeling Machines, and a Land Colony having a population of about 390 Salvationists.

Corps, 280; Outpsts, 457; Societies, 508; Officers and Cadets, 746; of whom 675 are Indian; Employees and Teachers, 61; Social Institutions, 16.

Territorial Headquarters: The Salvation Army, Morland Road, Byculla, Bombay.

Territorial Commander: Colonel Gnana Dasen (Alfred H. Barnett).

Madras and Telugu Territory.—This Territory comprises the city of Madras and work situated in the Nellore, Guntur, Kistna and West Godavari Districts of the Northern Circars of the Madras Presidency, also Bangalore.

There are the following agencies at work, *viz.*, places in which work is systematically done, both evangelical and education and social:—290 Corps and Outposts; 116 village primary schools; 1 Criminal Tribes Settlement; 2 institutions for the training of Officers; 1 Leper Colony at Bapatla taken over by us in 1928; a Women's Industrial Home in Madras; a Boarding Schools for girls, and another for boys of the Salvation Army.

Territorial Headquarters: The Salvation Army, Broadway, Madras. G. P.O. Box 206.

Territorial Commander: Colonel Herbert B. Colledge.

General Secretary: Brigadier H. H. Rawson.

The South India Territory.—The Southern (India) Territory embraces the Native States of Travancore and Cochin extending in the South into the Tinnevelly District of British India.

A well-consolidated and growing work for the spiritual and social advancement of the peoples being prosecuted at more than 1,200 centres and appeals are constantly received urging extension to new districts. Marked advances are being made with the erection of Halls and Quarters for Officers.

Training Garrisons for men and women are established at Trivandrum and Nagercoil. A monthly edition of the "War Cry" is published in Tamil and Malayalam, and other vernacular literature is circulated among the people with gratifying results.

Educational activities provide religious and secular instruction for boys and girls at some 300 schools for about 17,000 children. The Boarding School for boys and another for girls at Nagercoil, and a similar institution for boys in Trivandrum, are greatly appreciated, as also is the Student's Hospital for young men at Nagercoil.

The Lace and Needlework section of the Industrial Department at Nagercoil, continues a useful work, as also does the Industrial Department in Trivandrum, where boys attached to the Boarding School are taught Bookbinding.

Meetings are held regularly in the Trivandrum Goal with encouraging results.

Work at the Catherine Booth Hospital, Nagercoil, and the seven Branch Hospitals is greatly appreciated by all sections of the community. A splendid and up-to-date Tuberculosis Ward is in course of erection at the Catherine Booth Hospital, also an excellent Administrative Block which will make for increased efficiency. An excellent work is also being done at the Cochin Leper Colony where more than 250 lepers are accommodated. Consideration is being given to the establishment of a Leper Colony in Travancore State.

Territorial Headquarters.—The Salvation Army, Kuravanconam, Trivandrum.

Territorial Commander.—Lieut.-Commissioner Priva (Mrs. Trounce).

Laws and the Administration of Justice.

The indigenous law of India is personal and divisible with reference to the two great classes of the population, Hindu and Mahomedan. Both systems claim divine origin and are in extricably interwoven with religion, and each exists in combination with a law based on custom. At first the tendency of the English was to make their law public and territorial, and on the establishment of the Supreme Court at Calcutta in 1773 and the advent of English lawyers as judges, they proceeded to apply it to Europeans and Indians alike. This error was rectified by the Declaratory Act of 1780, by which Parliament declared that as against a Hindu the Hindu law and usage, and as against a Mahomedan the laws and customs of Islam should be applied. The rules of the Shastras and the Koran have been in some cases altered and relaxed. Instances can be found in the Bengal Sati Regulation Act of 1829; the Indian Slavery Act, 1843; the Caste Disabilities Removal Act of 1850; the Hindu Widows' Remarriage Act, 1856; and other Acts and Codes. To quote the Imperial Gazetteer, "A certain number of the older English statutes and the English common law are to a limited extent still in force in the Presidency Towns as applicable to Europeans, while much of the old Hindu and Mahomedan law is everywhere personal to their native fellow subjects; but apart from these, and from the customary law, which is as far as possible recognised by the Courts, the law of British India is the creation of statutory enactments made for it either at Westminster or by the authorities in India to whom the necessary law-giving functions have from time to time been delegated."

Codification.

Before the transfer of India to the Crown the law was in a state of great confusion. Sir Henry Cunningham described it as "hopelessly unwieldy, entangled and confusing." The first steps toward general codification were taken in 1833, when a Commission was appointed, of which Lord Macaulay was the moving spirit, to prepare a penal code. Twenty-two years elapsed before it became law, during which period it underwent revision from his successors in the Law Membership, and especially by Sir Barnes Peacock, the last Chief Justice of the Supreme Court of Calcutta. The Penal Code, which became law in 1860, was followed in 1861 by a Code of Criminal Procedure. Substantially the whole criminal law of British India is contained in these two Codes. One of the most eminent lawyers who ever came to India, Sir James Stephen, said "The Indian penal code may be described as the criminal law of England freed from all technicalities and superfluities, systematically arranged and modified in some few particulars (they are surprisingly few) to suit the circumstances of British India. It is practically impossible to misunderstand the code." The rules of Civil Procedure have been embodied in the Code of Civil Procedure. The Indian Penal Code has from time to time been amended. The Code of Civil Procedure was remodelled in 1908 and the Code of Criminal Procedure in 1898. These Codes are now in force.

Statute Law Revision.

In October, 1921, a committee was appointed under the presidency of the Hon. Mr. A. P. Muddiman, I.C.S., to deal with the question of statute law revision. The functions of the Committee are to prepare for the consideration of Government such measures of consolidation and clarification, as may be necessary to secure the highest attainable standard of formal perfection in the statute law of India. In several branches of the law consolidation has long been overdue, and it is suggested that the preparation of a Bill consolidating the existing law relating to merchant shipping, with such amendments therein as are necessitated or rendered desirable by the enactment of the English statutes since 1894 on the same subject should form the first duty undertaken by the Committee. Under the conditions resulting from the establishment of the reformed Constitution, increasing importance will attach hereafter to the periodical examination and revision of the Statute Book and the Government of India hope that the Committee will take its place as a permanent feature of the legislative machinery of the country.

European British Subjects.

Whilst the substantive criminal law is the same for all classes, certain distinctions of procedure have always been maintained in regard to criminal charges against European British subjects. Until 1872 European British subjects could only be tried or punished by one of the High Courts. It was then enacted that European British subjects should be liable to be tried for any offences by magistrates of the highest class, who were also justices of the peace, and by judges of the Sessions Courts; but it was necessary in both cases that the magistrate or judge should himself be a European British subject. In 1883 the Government of India announced that they had decided "to settle the question of jurisdiction over European subjects in such a way as to remove from the code at once and completely every judicial disqualification which is based merely on race distinctions." This decision, embodied in the Ilbert Bill, aroused a storm of indignation which is still remembered. The controversy ended in a compromise which is thus summarised by Sir John Strachey ("India"). "The controversy ended with the virtual, though not avowed, abandonment of the measure proposed by the Government. Act III of 1884, by which the law previously in force was amended, cannot be said to have diminished the privileges of European British subjects charged with offences, and it left their position as exceptional as before. The general disqualification of native judges and magistrates remains; but if a native of India be appointed to the post of district magistrate or sessions judge, his powers in regard to jurisdiction over European British subjects are the same as those of an Englishman holding the same office. This

provision however is subject to the condition that every European British subject brought for trial before the district magistrate or sessions judge has the right, however trivial be the charge, to claim to be tried by a jury of which not less than half the number shall be Europeans or Americans.....Whilst this change was made in the powers of district magistrates, the law in regard to other magistrates remained unaltered." Since 1836 no distinctions of race have been recognised in the civil courts throughout India.

After a discussion on this subject in the Legislative Assembly in September 1921, the following motion was adopted:—"That in order to remove all racial distinctions between Indians and Europeans in the matter of their trial and punishment for offences, a committee be appointed to consider what amendments should be made in the provisions of the Code of Criminal Procedure, 1898, which differentiate between Indians and European British subjects and American and Europeans who are not British subjects in criminal trials and proceedings and to report on the best methods of giving effect to their proposals." As a result of the recommendations of the Racial Distinctions Committee the law on the subject was further modified, and by the Criminal Law Amendment Act XII of 1923 in place of the old Chapter XXXIII (55443-463) the new Chapter XXXIII (55443-449) with certain supplementary provisions were substituted. This has in some measure reduced the differences between the trials of Europeans and of Indians under the Code.

High Courts.

The highest legal tribunals in India are the High Courts of Judicature. These were constituted by the Indian High Courts Act of 1861 for Bengal, Bombay and Madras, and later for the United Provinces and the Punjab superseding the old supreme and Sudder Courts. More recently High Courts have been constituted for Patna and Rangoon as well. The Judges are appointed by the Crown; they hold office during the pleasure of the Sovereign; at least one-third of their number are barristers, one-third are recruited from the judicial branch of the Indian Civil Service, the remaining places being available for the appointment of Indian lawyers. Trial by jury is the rule in original criminal cases before the High Courts, but juries are never employed in civil suits in India.

For other parts of India High Courts have been formed under other names. The chief difference being that they derive their authority from the Government of India, not from Parliament. In Burma there is a Chief Court, with three or more judges; in the other provinces the chief appellate authority is an officer called the Judicial Commissioner. In Sind the Judicial Commissioner is termed Judge of the Sudder Court and has two colleagues.

The High Courts are the Courts of appeal from the superior courts in the districts, criminal and civil, and their decisions are final, except in cases in which an appeal lies to His Majesty in Council and is heard by the Judicial Committee of the Privy Council in England. The High Courts exercise supervision over all the subordinate courts. Returns are regularly sent to them at short intervals and the High Courts are able, by examining the returns, by sending for proceedings, and by calling for explanations, as well as from the cases that come before them in appeal, to keep themselves to some extent acquainted with the manner in which the courts generally are discharging their duties.

Lower Courts.

The Code of Criminal Procedure provides for the constitution of inferior criminal courts styled courts of session and courts of magistrates. Every province, outside the Presidency towns, is divided into sessions divisions consisting of one or more districts, and every sessions division has a court of session and a sessions judge, with assistance if need be. These stationary sessions courts take the place of the English Assizes, and are competent to try all accused persons duly committed, and to inflict any punishment authorised by law, but sentences of death are subject to confirmation by the highest court of criminal appeal in the province. Magistrates' courts are of three classes with descending powers. Provision is made and largely utilised in the towns, for the appointment of honorary magistrates; in the Presidency towns Presidency magistrates deal with magisterial cases and benches of Justices of the Peace or honorary magistrates dispose of the less important cases.

Trials before courts of session are either with assessors or juries. Assessors assist, but do not bind the judge by their opinions; on juries the opinion of the majority prevails if accepted by the presiding Judge. The Indian law allows considerable latitude of appeal. The prerogative of mercy is exercised by the Governor-General-in-Council and the Local Government concerned without prejudice to the superior power of the Crown.

The constitution and jurisdiction of the inferior civil courts varies. Broadly speaking one district and sessions judge is appointed for each district: as District Judge he presides in its principal civil court of original jurisdiction, his functions as Sessions Judge have been described. For these posts members of the Indian Civil Service are mainly selected though some appointments are made from the Provincial Service. Next come the Subordinate Judges and Munsiffs, the extent of whose original jurisdiction varies in different parts of India. The civil courts, below the grade of District Judge, are almost invariably presided over by Indians. There are in addition a number of Courts of Small Causes, with jurisdiction to try money suits up to Rs. 500. In the Presidency Towns, where the Chartered High Courts have original jurisdiction, Small Cause Courts dispose of money suits up to Rs. 2,000. As Insolvency Courts the chartered High Courts of Calcutta, Bombay and Madras have jurisdiction in the Presidency towns. In the mofussil similar powers were conferred on the District Courts by the Insolvency Act of 1906.

Coroners are appointed only for the Presidency Towns of Calcutta and Bombay. Elsewhere their duties are discharged by the ordinary staff of magistrates and police officers unaided by jurors.

Legal Practitioners.

Legal practitioners in India are divided into Barristers-at-Law, Advocates of the High Court, Vakils and Attorneys (Solicitors) of High Courts, and Pleaders, Mukhtiars and revenue agents. Barristers and Advocates are admitted by each High Court to practise in it and its subordinate courts; and they alone are admitted to practise on the original side of some of the chartered High Courts. Vakils are persons duly qualified who are admitted to practise on the appellate side of the chartered High Courts and in the Courts subordinate to the High Courts. Attorneys are required to qualify before admission to practise in much the same way as in England. The rule that a solicitor must instruct counsel prevails only on the original side of certain of the High Courts. Pleaders practise in the subordinate courts in accordance with rules framed by the High Courts.

Organisation of the Bar.

At Calcutta, Madras, and Bombay there is a Bar Committee presided over, *ex-officio*, by the Advocate-General. This body is elected by the barristers practising in each High Court, and its functions are to watch the interests of the Bar and to regulate its etiquette. At Allahabad, Lahore, Nagpore, and Rangoon a similar Bar Committee exists, but the electorate is extended to include the vakils or native pleaders, and the president is either the senior practising member of the Bar or the Government Advocate. In the larger Districts and Sessions Courts, an organisation representing the Bar is usually to be found, and in the subordinate Courts, including the Revenue Courts similar machinery is generally in use. Pending an opportunity of detailed inquiries in India, these general descriptions must suffice. The recommendations of the Indian Bar Committee of 1923 relating to the constitution of Bar Councils for the several High Courts in India have been recently adopted by the Indian Bar Courts Act, XXXVIII of 1926.

Composition of the Bar.

A considerable change is occurring in the composition of the Indian Bar. The following extract from an informing article in the *Times* (May 25, 1914) indicates the character and incidence of this development. "During the last forty years, a striking change has taken place in the professional class. The bulk of practice has largely passed from British to Indian hands, while, at the same time, the profession has grown to an enormous extent. One typical illustration may be quoted. Attached to the Bombay High Court in 1871 there were 38 solicitors, of whom 10 were Indian and 28 English, and 24 advocates, of whom 7 were Indian and 17 English. In 1911, attached to the same High Court, there were 150 solicitors, of whom more than 130 were Indian and the remainder English, and 250 advocates, of whom 16 only were English and the remainder Indian."

Law Officers.

The Government of India has its own law colleague in the Legal Member of Council. All Government measures are drafted in this department. Outside the Council the principal law officer of the Government of India is the Advocate-General of Bengal, who is appointed by the Crown, is the leader of the local Bar, and is always nominated a member of the Provincial Legislative Council. In Calcutta he is assisted by the Standing Counsel and the Government Solicitor. There are Advocates-General and Government Solicitors for Bombay and Madras, and in Bombay there is attached to the Secretariat a Legal Remembrancer and an Assistant Legal Remembrancer, drawn from the Judicial Branch of the Indian Civil Service. The Government of Bengal consults the Bengal Advocate-General, the Standing Counsel and the Government Solicitor, and has besides a Legal Remembrancer (a Civil Servant) and a Deputy Legal Remembrancer (a practising barrister); the United Provinces are equipped with a civilian Legal Remembrancer and professional lawyers as Government Advocate and Assistant Government Advocate; the Punjab has a Legal Remembrancer, Government Advocate and a Junior Government Advocate; and Burma a Government Advocate, besides a Secretary to the Local Legislative Council.

Sheriffs are attached to the High Courts of Calcutta, Madras and Bombay. They are appointed by Government, selected from non-officials of standing, the detailed work being done by deputy sheriffs, who are officers of the Court.

Law Reports.

The Indian Law Reports are now published in seven series—Calcutta, Madras, Bombay, Allahabad, Patna, Lahore and Rangoon under the authority of the Governor-General-in-Council. They contain cases determined by the High Court and by the Judicial Committee on appeal from the particular High Court. These appeals raise questions of very great importance, and the Council of Law Reporting for England and Wales show their appreciation by printing the Indian Appeals in a separate volume, and have also compiled a digest of Indian Appeals covering the period 1874-1893. The other Provinces and States have series of reports issued under the authority either of the Judiciary or the State.

Legislative Power.

The supreme power of Parliament to legislate for the whole of India cannot be questioned in practice, however, this power is little used, there being a majority of officials on the Imperial Legislative Council—a majority deliberately reserved in the India Councils Act of 1909—the Secretary of State is able to impose his will on the Government of India and to secure the passage of any measure he may frame, regardless of the opinion of the Indian authorities. Legislative Councils have been established both for the whole of India and for the principal provinces. Their constitution and functions are fully described in detailing the powers of the Imperial and Provincial Councils (q.v.). To meet emergencies the Governor-General is vested with the power of issuing ordinances, having the same force as Acts of the Legislature, but they can remain in force for only six months. The power is very little used. The Governor-General-in-Council is also empowered to make regulations, having all the cogency of Acts, for the more backward parts of the country, the object being to bar the operation of the general law and permit the application of certain enactments only.

Bengal Judicial Department.

Rankin, The Hon'ble Sir George Claus, Kt., K.C., Bar-at-Law.	Chief Justice.
Ghose, The Hon'ble Mr. Justice Charu Chunder, Kt., Bar-at-Law.	Puisne Judge.
Buckland, The Hon'ble Mr. Justice Phillip Lindsay, Kt., Bar-at-Law.	Do.
Mukharji, The Hon'ble Mr. Justice Manmatha Nath, M.A., B.L.	Do.
Costello, The Hon'ble Mr. Justice Leonard Wilfred James, M.A., LL.B., Bar-at-Law.	Do.
Lort-Williams, The Hon'ble Mr. Justice John, K.C. ..	Do.
Mallik, The Hon'ble Mr. Justice Satyendra Chandra, I.C.S.	Do.
Jack, The Hon'ble Mr. Justice Robert Ernest, I.C.S. ..	Do.
Mitter, The Hon'ble Mr. Justice Dwarkanath, M.A., D.L.	Do.
Ghose, The Hon'ble Mr. Justice Sarat Kumar, M.A., I.C.S.	Do.
Panckridge, The Hon'ble Mr. Justice Hugh Rahere, Bar-at-Law.	Do.
Patterson, The Hon'ble Mr. Justice David Clarke, I.C.S .	Do.
Ameer Ali, The Hon'ble Mr. Justice Torick, Bar-at-Law..	Do.
Ghosh, The Hon'ble Mr. Justice Mahim Chandra, I.C.S., Bar-at-Law.	Do.
Guha, The Hon'ble Mr. Justice Surendra Nath, Rai Bahadur.	Do.
Ali, The Hon'ble Mr. Justice, Nasim	Do. Additional.
Bartley, The Hon'ble Mr. Justice Charles, I.C.S., Bar-at-Law.	Do. (Officiating.)
McNair, The Hon'ble Mr. Justice George Douglas, Bar-at-Law.	Do. do.
Roy, The Hon'ble Mr. Justice Asoke Kumar, Bar-at-Law.	Do. do.
Sircar, Sir N. N., Kt., Bar-at-Law	Advocate-General.
Roy, A. K., Bar-at-Law	Standing Counsel. (Officiating Judge High Court.)
Bose, S. M., Bar-at-Law	Do. (Officiating.)
Basu, A. K., Bar-at-Law	Government Counsel.
Hodson, S. S.	Do. Solicitor.
Morgan, H. Carey	Do. do. (Officiating.)
Edgley, N. G. A., I.C.S.	Superintendent and Remembrancer of Legal Affairs and Judicial Secretary to Government.
Khundkar, N. A., Bar-at-Law	Deputy Superintendent and Remembrancer of Lega Affairs.
Basak, Dr. Sarat Chandra	Senior Government Pleader.
Sadhu, Rai Tarak Nath Bahadur, C.I.E.	Public Prosecutor in the Courts of th Presidency Magistrates in Calcutta.
Sen, Binod Chandra	Junior Public Prosecutor, Calcutta.
Mitra, Sarat Kumar	Editor of Law Reports.
Collet, Mr. A. L.	Registrar (Original Side).
Ghatak, N., M.B.E., Bar-at-Law	Master and Official Referee.
Banarji, Sachindra Nath	Assistant Master and Referee.
Ghosh, J. M., Bar-at-Law	Registrar in Insolvency.
Mitra, Kanai Lal	Deputy Registrar.
Palsett, F.	Assistant Registrar.
Das-Gupta, Manmatha Bhusan, M.A., B.L.	Do.
Ahmed, O. U. M.A., (Cal.), LL.B. (Bel.), Bar-at-Law ..	Do.
De, Jatindranath	Do.
Ghatak, Niroj Nath, Bar-at-Law	Do.
Sen-Gupta, Subodh Chandra	Do.

D'Abrew, P. A.	Secretary to the Hon'ble Chief Justice and Head Clerk, Decree Department.
Moses, O., Bar-at-Law	Clerk of the Crown for Criminal Sessions.

THE INDIAN POLICE.

Origins.—Cornwallis was the first Indian administrator to take the burden of policing the country off the zemindars and to place it on Government. He ordered the District Judges of Bengal in 1793 to open a Thana (Police Station) for every 400 square miles of their jurisdiction, and to appoint stipendiary Thanadars (Police Station Officers) and subordinates.

In Madras in 1816, Sir Thomas Munro took superintendence of police out of the hands of the sedentary judges and placed it in the hands of the peripatetic Collector, who had the indigenous village police system already under his control. In this way the Revenue Department controlled the police of the districts and still to some extent does so, especially in Bombay Presidency.

In Khandesh from 1826-36 Outram of Mutiny fame showed how a whole time military commandant could turn incorrigible marauders into excellent police; and Sir George Clerk, Governor of Bombay in 1848, applied the lesson by appointing full-time European Superintendents of Police in many Districts.

Madras had a torture scandal in 1853 which showed that 3 Collectors had no time for real police superintendence; in 1859 the principle of full-time European superintendence was introduced in a Madras Act of that year and the control of the Collector was removed.

The Mutiny led to general police overhaul and retrenchment and the Madras Act was mainly followed in India Act V of 1861, "An Act for the Regulation of Police", which still governs police working everywhere in India except Madras and Bombay, which has its own Police Act (IV of 1890).

Working.—Strictly speaking there is no Indian Police. With the doubtful exceptions of the Delhi Imperial Area Police, and the advisory staff of the Intelligence Bureau attached to the Home Department, the Government of India has not a single police officer directly under its control. The police provided for by the 1861 Act is a provincialised police, administered by the Local Government concerned, subject only "to the general control" of the Governor-General.

Within the Local Government area the police are enrolled and organised in District forces, at the head of each of which is a District Superintendent of Police with powers of enlistment and dismissal of constabulary; and Police Station Officers may also be dismissed by the D.S.P.

The D. S. P. is subject to dual control. The force he commands is placed at the disposal of the District Magistrate for the enforcement of law and the maintenance of order in the District. But the departmental working and efficiency of the force is governed by a departmental hierarchy of Deputy Inspector-General of Police, Inspector-General of Police, and Home Department. Generally speaking, the D. S. P. has to correspond with his District Magistrate on judicial and magisterial topics, and with his departmental chiefs on internal working of his force.

The C. I. D.—The Curzon Police Commission of 1902-3 modernised police working by providing for the direct enlistment and training of Educated Indians as Police Station Officers, and by creating specialised police agencies under each Local Government for the investigation of specialist and professional crime. These agencies are known as **Criminal Investigation Departments** and work under a Deputy Inspector-General. They collate information about crime, edit the *Crime Gazette*, take over from the District Police crimes with ramifications into several jurisdictions, and they control the working of such scientific police developments as the Finger Print Identification Bureaux.

Headquarters and Armed Police.—At the chief town of each District the D. S. P. has his office and also his Headquarter Police Lines and parade ground. This is the main centre for accumulation and distribution to the Police Stations and Outposts of the District of clothing, arms, ammunition, and accoutrements. Here are the Stores and the Armoury. Here also constabulary recruits enlisted by the D. S. P. are taught drill, deportment, and duties and are turned out to fill vacancies. The Headquarter Lines also contain the two hundred or so armed police who mount guard on Treasuries in the District, and also provide prisoner and treasure escort. Actually they form a small and mobile local army equipped with muskets (single loading) and bayonets. The most highly trained section of them go through a musketry course and are armed with 303 service rifles. At most head-quarters, but by no means all, there is also a reserve of mounted and armed police.

Thanas and Thanadars.—Almost throughout India the popular terms for Police Station and Police Station Officer are "Thana" and "Thanadar." It is at the Police Station that the public are most in touch with the police and the police with the public. Whether it be in a large city or in a mofussil hamlet the Thana is the place where people come with their troubles and their grievances against their neighbours or against a person or persons unknown. In dealing with such callers, the Thanadar, who like police of all ranks, is supposed to be always on duty, is chiefly guided by the Fourteenth Chapter of the Code of Criminal Procedure, and the Second Schedule at the end of that Code. This schedule shows nearly all penal offences and states whether or not they are "cognisable by the police." The fourteenth Chapter lays down that a cognisable complaint must then and there be recorded, visited, and investigated. A non-cognisable complaint is merely noted in a separate book and the complainant is told to go to court.

Police Prosecutors.—The complainant in a cognisable case not only has his complaint recorded but investigated without payment of fee. If the Thanadar succeeds in establishing a *prima facie* case against the accused, the prosecution in court is conducted free of charge by a police prosecutor, who is generally a junior pleader, engaged by Government to conduct police cases in the lower courts. Cases committed

to the Sessions are conducted by the Public Prosecutor or one of his Assistants, and the reports of these officers and the comments of the judge are a means for the D. S. P. to know whether his Thanadars are doing their work properly.

Out Posts.—When the Police Commission of 1860 devised the plan of police that still holds the field, they laid down two criteria of the numbers required. One was one policeman per square mile; the other was one per thousand of population. In towns it is well enough to have the available police concentrated at the police station. But in the mofussil the Thana is very often fifty miles distant from portions of its jurisdiction. It is in such cases profitable to detach a portion of the police station strength under a head constable to man an outpost where complaints can be received and investigation begun without the injured party having to undertake a long journey to the distant Thana. The secret of good mofussil police working in normal times is dispersion. A single policeman, however junior, represents the rule of law and is an agent of Government.

The Chain of Promotion.—Ordinarily the constable may aspire to become a jamadar, or with ability and luck, a Police Station Officer or even Inspector. The directly recruited matriculate who comes in through the Police Training School as a Thanadar may ordinarily become an Inspector or a Deputy Superintendent, or exceptionally a Superintendent. The direct Deputy, an office reserved for Indians, has a good chance of becoming Superintendent, and perhaps Deputy Inspector-General. The direct Assistant Superintendent, whether from England, or from India, is sure of a Superintendentship, and has chances of D. I. G. after 25 years' service. The period of service for all ranks for full pension is thirty years, and if an officer dies in the process of earning full pension his pension dies with him and all his dependents get his provident fund.

Presidency Police.—In the Presidency Towns there is unified police control for the Police Commissioner is responsible for both law and order and for departmental training and efficiency.

The Commissioner of Police of a Presidency Town is not the subordinate of the Provincial Inspector-General of Police and he deals direct with Government, just as the Presidency Magistrates deal directly with the High Court. The Criminal Procedure Code of India is superseded in the Presidency Towns by special police Acts which prescribe police procedure. Justice in criminal cases in Presidency Towns is somewhat rough and ready, not only from this cause, but also because Presidency Magistrates can give upto six months or Rs. 200 fine summarily, *i.e.*, without formal record of proceedings; and if only whipping or fine up to Rs. 200 is inflicted there need be not even any statement of reasons for the conviction.

Round Figures.—The process of reorganisation and retrenchment goes on ceaselessly, annual administration reports for the ten major provinces and four minor administrations appeared tardily, and there are no unified statistics for the police of India and Burma. The following figures are therefore merely to be regarded as approximations, giving a general idea of the numbers of police and the volume of work put through yearly:—There are about 30,000 Military Police, chiefly in Burma, Assam, and Bengal, and these cost about one and a third crores. The maintenance of them is a departure from the principles laid down by the 1860 Commission and the 1861 Act.

Provincial Police including Burma total about 200,000 and cost ten and a half crores or an average of about one crore per major Province.

There are about 10,000 Thanas or Police Stations which annually investigate from five to six thousand murders, four thousand dacoities, twenty-five thousand cattle thefts, one hundred and seventy thousand ordinary thefts and as many burglaries. They place on trial every year about three-quarters of a million persons, of whom about half a million or more are convicted. The jail population of India, which is over a hundred thousand, consists of many habituals who on release proceed to prey on the public until such time as the police again secure their conviction and incarceration.

STATISTICS OF POLICE WORK.

The undesirability of attaching undue importance to statistical results as a test of the merits of police work was a point upon which considerable stress was laid by the Indian Police Commission, who referred to the evils likely to result from the prevalence among subordinate officers of an impression that the advancement of an officer would depend upon his being able to show a high ratio of convictions, both to cases and by persons arrested, and a low ratio of crime. The objection applies more particularly to the use of statistics for small areas; but they cannot properly be used as a basis of comparison even for larger areas without taking into account the differences in the conditions under which the police work; and, it may be added, they can at the best indicate only very imperfectly the degree of success with which the police carry out that important branch of their duties, which consists in the prevention of crime. These considerations have been emphasized in recent orders of the Government of India. Subject to these observations, the figures below may be given as some indication of the volume of work falling upon the police, and of the wide differences between the conditions and the statistical results in different provinces. They are statistics of cognizable crime:—

JAILS.

Jail administration in India is regulated generally by the Prisons Act of 1894, and by rules issued under it by the Government of India and the local governments. The punishments authorised by the Indian Penal Code for convicted offenders include transportation, penal servitude, rigorous imprisonment (which may include short periods of solitary confinement), and simple imprisonment. Accommodation has also to be provided in the jails for civil and under-trial prisoners.

The origin of all jail improvements in India in recent years was the Jail Commission of 1889. The report of the Commission, which consisted of only two members, both officials serving under the Government of India, is extremely long, and reviews the whole question of jail organization and administration in the minutest detail. In most matters the Commission's recommendations have been accepted and adopted by Local Governments, but in various matters, mainly of a minor character, their proposals have either been rejected *ab initio* as unsuited to local conditions, abandoned as unworkable after careful experiment or accepted in principle but postponed for the present as impossible.

The most important of all the recommendations of the Commission, the one that might in fact be described as the corner stone of their report, is that there should be in each Presidency three classes of jails: in the first place, large **central jails** for convicts sentenced to more than one year's imprisonment; secondly, **district jails**, at the headquarters of districts; and, thirdly, **subsidiary jails** and "lock-ups" for under-trial prisoners and convicts sentenced to short terms of imprisonment. The jail department in each province is under the control of an Inspector-General; he is generally an officer of the Indian Medical Service with jail experience, and the Superintendents of certain jails are usually recruited from the same service. The district jail is under the charge of the civil surgeon, and is frequently inspected by the district magistrate. The staff under the Superintendent includes, in large central jails, a Deputy Superintendent to supervise the jail manufactures, and in all central and district jails one or more subordinate medical officers. The executive staff consists of jailors and warders, and convict petty officers are employed in all central and district jails, the prospect of promotion to one of these posts being a strong inducement to good behaviour. A Press Note issued by the Bombay Government in October, 1915, says:—"The cadre and emoluments of all ranks from Warder to Superintendent have been repeatedly revised and altered in recent years. But the Department is not at all attractive in its lower grades. The two weak spots in the jail administration at the moment are the insufficiency of Central Prisons and the difficulty of obtaining good and sufficient warders."

The Jails Committee.—Since the introduction of the reformed constitution the maintenance of the Indian Prisons falls within the sphere of provincial Governments and is subject to all India legislation. The obvious advisability of proceeding along certain general lines of uniform application led lately to the appointment of a Jails' Committee, which conducted the first comprehensive survey of Indian prison administration which had been made for thirty years. Stress was laid by the Committee upon the necessity of improving and increasing existing jail accommodation; of recruiting a better class of warders; of providing education for prisoners; and of developing prison industries so as to meet the needs of the consuming Departments of Government. Other important recommendations included the separation of civil from criminal offenders; the adoption of the English system of release on license in the case of adolescents; and the creation of children's courts. The Committee found that the reformative side of the Indian system needed particular attention. They recommended the segregation of habituals from ordinary prisoners; the provision of separate accommodation for prisoners under trial; the institution of the star-class system; and the abolition of certain practices which are liable to harden or degrade the prison population.

Employment of Prisoners.—The work on which convicts are employed is mostly carried on within the jail walls, but extra-mural employment on a large scale is sometimes allowed, as, for example, when a large number of convicts were employed in excavating the Jhelum Canal in the Punjab. Within the walls prisoners are employed on jail service and repairs, and in workshops. The main principle laid down with regard to jail manufactures is that the work must be penal and industrial. The industries are on a large scale, multifarious employment being condemned, while care is taken that the jail shall not compete with local traders. As far as possible industries are adapted to the requirements of the consuming public departments, and printing, tent-making, and the manufacture of clothing are among the commonest employments. Schooling is confined to juveniles; the experiment of teaching adults has been tried, but literary instruction is unsuitable for the class of persons who fill an Indian jail.

The conduct of convicts in jail is generally good, and the number of desperate characters among them is small. Failure to perform the allotted task is by far the most common offence. In a large majority of cases the punishment inflicted is one of those classed as "minor." Among the "major" punishments fetters take the first place. Corporal punishment is inflicted in relatively few cases, and the number is steadily falling. Punishments were revised as the result of the Commission of 1889. Two notable punishments then abolished were shaving the heads of female prisoners and the stocks. The latter, which was apparently much practised in Bombay, was described by the Commission as inflicting exquisite torture. Punishments are now scheduled and graded into major and minor. The most difficult of all jail problems is the internal maintenance of order among the prisoners, for which purpose paid

warders and convict warders are employed. With this is bound up the question of a special class of well-behaved prisoners which was tried from 1905 onwards in the Thana Jail.

Juvenile Prisoners.—As regards "youthful offenders"—*i.e.*, those below the age of 15—the law provides alternatives to imprisonment, and it is strictly enjoined that boys shall not be sent to jail when they can be dealt with otherwise. The alternatives are detention in a reformatory school for a period of from three to seven years, but not beyond the age of 18; discharge after admonition; delivery to the parent or guardian on the latter executing a bond to be responsible for the good behaviour of the culprit; and whipping by way of school discipline.

The question of the treatment of "young adult" prisoners has in recent years received much attention. Under the Prisons Act, prisoners below the age of 18 must be kept separate from older prisoners, but the recognition of the principle that an ordinary jail is not a fitting place for adolescents (other than youthful habituals) who are over 15, and therefore ineligible for admission to the reformatory school, has led Local Governments to consider schemes for going beyond this by treating young adults on the lines followed at Borstal, and considerable progress has been made in this direction. In 1905, a special class for selected juveniles and young adults was established at the Dharwar jail in Bombay; in 1908 a special juvenile jail was opened at Alipore in Bengal; in 1909 the Meiktila jail in Burma and the Tanjore jail in Madras were set aside for adolescents, and a new jail for juvenile and "juvenile adult" convicts was opened at Bareilly in the United Provinces; and in 1910 it was decided to concentrate adolescents in the Punjab at the Lahore District jail, which is now worked on Borstal lines. Other measures had previously been taken in some cases; a special reformatory system for "juvenile adults" had, for example, been in force in two central jails in the Punjab since the early years of the decade, and "Borstal enclosures" had been established in some jails in Bengal. But the public is slow to appreciate that it has a duty towards prisoners, and but little progress has been made in the formation of Prisoners' Aid Societies except in Bombay and Calcutta, though even in those cities much remains to be done.

Reformatory Schools.—These schools have been administered since 1899 by the Education department, and the authorities are directed to improve the industrial education of the inmates, to help the boys to obtain employment on leaving school, and as far as possible to keep a watch on their careers.

Transportation.—Transportation is an old punishment of the British Indian criminal law, and a number of places were formerly appointed for the reception of Indian transported convicts. The only penal settlement at the present time is Port Blair in the Andaman Islands.

Commission of Enquiry, 1919.—A committee was appointed to investigate the whole system of prison administration in India with special reference to recent legislation and experience in Western countries. Its report, published in 1921, was summarised in the Indian Year Book, 1922 (pages 670-671). A number of reforms were advocated but, owing to financial stringency, it has not yet been possible to introduce some of the more important of them.

Fines and Short Sentences.—Those sections of the Indian Penal Code, under which imprisonment must be awarded when a conviction occurs, should be amended so as to give discretion to the court. Sentences of imprisonment for less than twenty-eight days should be prohibited.

The Indeterminate Sentences.—The sentence of every long-term prisoner should be brought under revision, as soon as the prisoner has served half the sentence in the case of the non-habitual, and two-thirds of the sentence in the case of the habitual, remission earned being counted in each case. The revision should be carried out by a Revising Board, composed of the Inspector-General of Prisons, the Sessions Judge and a non-official. In all cases, the release of a prisoner on parole should be made subject to conditions, breach of which would render him liable to be remanded to undergo the full original sentence. The duty of seeing that a prisoner fulfils the conditions on which he was released should not be imposed upon the police or upon the village headman, but special officers, to be termed parole officers, should be appointed for the purpose. These parole officers should possess a good standard of education, though not necessarily a university degree, and should both protect and advise the released prisoner and report breaches of the conditions of release.

Transportation and the Andamans.—The future of the penal settlement of Port Blair was continually under the consideration of the Government of India from the time of the publication of the Jails Commission report, but it was not till 1926 that a definite decision was reached. It was then decided that henceforth only those convicts should normally be sent to the Andamans who volunteered to come, that the old restrictions on life in the settlement should be sensibly relaxed, that convicts should be encouraged to settle on the land, that in certain conditions they should be entitled to release to obtain occupancy rights over the land which they had cultivated, and that the importation of wives and families should be encouraged. The object of these changes was to promote the development of a free colony of persons, who would, after the terms of their sentences had expired, make the Andamans their permanent home. The effect up to date has been to introduce a completely new outlook on life into the settlement, but it is still too soon to appreciate its potentialities. It has recently been found necessary to send to the Andamans certain convicts either sentenced to transportation for life or to long terms of rigorous imprisonment for permanent incarceration in the Cellular Jail. Such prisoners will not be released and allowed to go into the settlement, and its development will in no way be affected by their presence.

Criminal Tribes.—The first essential of success in dealing with the criminal tribes is the provision of a reasonable degree of economic

comfort for the people. It is therefore of paramount importance to locate settlements where sufficient work at remunerative rates is available. Large numbers of fresh settlers should never be sent to a settlement without first ascertaining whether there is work for them. Commitment to settlements should, as far as possible, be by gangs not by individuals. It is desirable to utilise both Government and private agency for the control of settlements.

The **variations of the jail population** in British India during the five years ending 1931 are shown in the following table:—

——	1931	1930	1929	1928	1927

Convict population on 31st December.	126,580	136,552	116,187	118,796	116,161

More than one-half of the total number of convicts received in jails during 1931 came from the classes engaged in agriculture and cattle tending, about 166,000 out of 208,000 are returned as illiterate.

The percentage of previously convicted prisoners rose from 15 to 14, while the number of youthful offenders fell from 757 to 430. The following table shows the **nature and length of sentences** of convicts admitted to jails in 1929 to 1931:—

Nature and Length of Sentence.	1931	1930	1929
Not exceeding one month	39,284	35,773	29,888
Above one month and not exceeding six months.	89,647	109,714	67,325
„ six months „ „ one year ..	39,373	40,878	34,235
„ one year „ „ five years ..	30,584	29,950	28,639
„ five years „ „ ten „ ..	4,740	3,935	4,502
Exceeding ten years	575	533	515

(*b*) for a term	100	37	81
Sentenced to death	1,331	1,126	1,175

The total daily average population for 1931 was 121,900, the total offences dealt with by criminal courts was 195, and by Superintendents 114,545. The corresponding figures for 1930 were 129,364; 252 and 129,420, respectively.

The total number of corporal punishments showed a slight decrease, *viz.*, from 220 to 174. The total number of cases in which penal diet (with and without cellular confinement) was prescribed was 3,684 as compared with 5,293 in the preceding year.

Total expenditure decreased from Rs. 2,00,42,583 to Rs. 1,75,48,041 while total cash earnings decreased from Rs. 29,38,455 to Rs. 25,72,343; there was consequently a decrease of Rs. 21,28,430 in the net cost to Government.

The death rate increased from 11·78 per mille in 1930 to 12·42 in 1931. The admissions to hospital were higher, and the daily average number of sick fell from 23·88 to 23·73.

The Laws of 1933

BY

RATANLAL RANCHHODDAS, *Advocate, High Court,*

AND

MANHAR R. VAKIL, *Barrister-at-Law.*

1. The Indian Marine (Amendment) Act.—In order to provide an opportunity for marine service on a voluntary basis for those persons in India who are interested in nautical pursuits, and, at the same time, to constitute a potential reserve of officers for use in emergencies, when the officer strength of the Royal Indian Marine will require expansion, it is proposed to raise and organise a small Royal Indian Marine Volunteer Reserve. Membership of the Reserve will entail a brief period of annual training in one of His Majesty's Indian ships, besides a certain amount of instruction on shore. It is necessary that the members of this Reserve force should be subject, when under training or when called to service, to the same disciplinary code as the members of the Royal Indian Marine. The present Act secures this object by amending s. 2 of the Indian Marine Act, 1887.

2. The Children (Pledging of Labour) Act.—The Royal Commission on Labour found evidence in such widely separated areas as Amritsar, Ahmedabad and Madras of the practice of pledging child labour that is, the taking of advances by parents or guardians on agreements, written or oral, pledging the labour of their children. In some cases, the children so pledged were subjected to particularly unsatisfactory working conditions. The present Act seeks to eradicate this evil by imposing penalties on parties to agreements pledging the labour of children and on persons knowingly employing children whose labour has been pledged. Section 2 defines "an agreement to pledge the labour of a child". An agreement made without detriment to a child, and not made in consideration of any benefit other than reasonable wages to be paid for the child's services, and terminable at not more than a week's notice is, however, not an agreement within the meaning of this definition. Under s. 3 an agreement to pledge the labour of a child is void.

3. The Indian Forest (Amendment) Act.—Under s. 38 of the Indian Forest Act, 1927, the owner of any private forest is allowed to represent his desire that certain sections of the Act be made applicable to his forest or that it should be managed by the expert agency of the Forest Department of Government as a reserved or protected forest on such terms as may be mutually agreed upon. The Court of Wards cannot take advantage of this provision as it is not considered an "owner" of the land or forest of which it is in charge as a trustee. The present Act vests the Court of Wards with the powers of an owner and other sections of the Indian Forest Act, 1927, which are applicable to owners are also made applicable to a Court of Wards.

4. The Cotton Textile Industry Protection (Amendment) Act.—By the Cotton Textile Industry (Protection) Act, 1930, protective duties were imposed on cotton piece-goods for a period of three years. It also extended for a further period of three years the operation of the duty imposed by the Indian Tariff (Cotton Yarn Amendment) Act, 1927. These duties expired on March 31, 1933. When the Cotton Textile Industry (Protection) Bill was under consideration the Government had given an assurance to the legislature that before the termination of the three-year period the effect of the duties on the production of cotton piece-goods in India and on the Indian Cotton Textile industry would be examined in a Tariff Board enquiry. The enquiry was held, but the Board's report was received by the Government of India later than they had originally hoped for and the pressure of public urgent business left insufficient time for the full consideration by Government of the matter. The present Act, therefore, extended the operation of the duties imposed by the original Act up to October 31, 1933, pending formulation of the decision of the Government of India in the matter of the continued protection to the cotton textile industry.

5. The Wheat Import Duty (Extending) Act.—The Act extends the life-time of the Wheat (Import Duty) Act, 1931, so as to continue the existing duties on wheat and wheat flour for a further period of one year, *viz.*, up to March 31, 1934.

6. The Salt Additional Import Duty (Extending) Act.—The Act gives effect to the recommendations made by the Salt Industry Committee of the Legislative Assembly. Subject to certain modifications it extends the life of the Salt (Additional Import Duty) Act, 1931, for a further period of one year.

7. The Indian Finance Act.—This Act continues for one year. Certain duties and taxes imposed under the Indian Finance Act, 1931, read with the Indian Finance (Supplementary and Extending) Act, 1931. Ss. 2, 4, 5 and 7 provide for the continuance for a further period of one year of the existing provisions regarding salt duty, inland postage rates, rates of income-tax and super-tax and the credit to revenue of interest on securities forming part of the Paper Currency Reserve. The duty of one rupee four annas per maund on salt remains liable to the additional duty imposed by s. 5 of the Indian Finance (Supplementary and Extending) Act, 1931. As the tax on incomes of Rs. 1,000 and upwards and below Rs. 2,000 per annum is retained, s. 5 (4) provides for the continuance of the existing procedure

for the assessment of such incomes. S. 3 of the present Act provides for the following alterations in customs tariff:—(1) it fixes a minimum specific duty of 2½ annas including surcharge on uppers of boots and shoes not made entirely of leather; (2) it fixes minimum specific duties of four annas per square yard and two annas and three pies per square yard respectively, with no surcharge, on artificial silk piece-goods and artificial silk mixtures and rounds off the existing *ad valorem* duty, including surcharge, of 34⅓ ths per cent. on artificial silk mixtures to 35 per cent. with no surcharge.

8. The Indian Tariff (Ottawa Trade Agreement) Supplementary Amendment Act.—This Act corrects a few inaccuracies and discrepancies in the Indian Tariff (Ottawa Trade Agreement) Amendment Act, 1932, which have been brought to light by a further scrutiny of the schedules to that Act and by practical experience of the new tariffs. The substance of the Act is contained in the Schedule of amendments.

9. The Provincial Criminal Law Supplementing Act.—The Bengal Public Security Act, 1932, the Bihar and Orissa Public Safety Act, 1933, the Bombay Special (Emergency) Powers Act, 1932, the United Provinces Special Powers Act, 1932, and the Punjab Criminal Law (Amendment) Act, 1932, which replace some of the provisions of the Special Powers Ordinance, X of 1932, contain provisions which require to be supplemented by an Act of the Indian Legislature. The present Act provides for appeals to the High Court in certain cases and excludes their jurisdiction in other matters. It is not within the power of the Local Legislature to pass the legislation necessary to provide for appeals to the High Court from sentences passed by Special Magistrates under the Bengal Public Security Act, 1932. S. 2 of the present Act provides for such appeals. S. 15 of the Bihar and Orissa Public Safety Act, 1933, s. 29 of the Bombay Special Powers (Emergency) Act, 1932 and s. 14 of the United Provinces Special Powers Act, 1932, re-enact the provisions contained in s. 78 of Ordinance X of 1932. Whereas, however, s. 78 of the Ordinance excluded the jurisdiction of High Courts, enactments in the Local Acts have no such effect. S. 3 of the present Act supplements them in this respect. S. 4 does for s. 27 of the Bengal Public Security Act, 1932, what s. 3 does for the local Acts therein referred to. S. 4 on the analogy of s. 491 (3) of the Criminal Procedure Code, bars jurisdiction under the powers conferred by that section in respect of action taken under s. 2 of the Punjab Criminal Law (Amendment) Act, 1932. Under s. 6 the powers of a High Court under s. 107 of the Government of India Act are not affected by anything contained in the present Act.

10. The Auxiliary Force (Amendment) Act.—The Auxiliary Force Act, 1920, provides that persons subject to the Act shall be divided, according to their age, into three classes the Active Force, the "A" Reserve Force and the "B" Reserve, and that specified periods of training shall be undergone by the members of each class. Experience has shown that these provisions, besides being somewhat complicated, are not conducive either to efficiency or economy. An individual's suitability for active or reserve duties need not necessarily depend solely on his age. The present Act, therefore, provides that persons subject to the Act shall be divided only into two classes—the Active class and the Reserve—and empowers the competent military authority to determine the periods of training to be undergone by persons subject to the Act, with the reservation that no such person shall be required to undergo more training than that to which he is liable under the existing law. The original Act is also amended in two other respects. In the first place, greater latitude is provided in the interpretation of the term "competent military authority", so as to enable the administrative procedure and chain of responsibility to conform as nearly as possible to that of the regular army. In the second place, the statutory restriction is removed under which, at present, only persons residing in the prescribed military area in which the headquarters of a corps or unit are located are eligible for enrolment in that corps or unit.

11. The Indian Merchant Shipping (Amendment) Act.—In March, 1929, the Government of India appointed a committee to enquire into the arrangements in force for pilgrims proceeding to the Hejaz from India. The Committee submitted an exhaustive report which contained several recommendations for the amendment of the Indian Merchant Shipping Act, 1923. The Government of India examined these recommendations in consultation with Local Governments and Administrations, shipping companies, Chambers of Commerce, and other interested parties including the Standing Haj Committee of the Indian Legislature, and came to the conclusion that it was desirable to amend the Act in several respects. The present Act makes the requisite amendments. It also effects a few small amendments arising out of the International Sanitary Convention of 1926.

12. The Indian Income-tax (Amendment) Act.—This Act introduces small, but important, amendments in the Income-tax Act of 1922. S. 4 of the Act deals with the application of the Act. Sub-s. (1) of s. 5 makes the Act applicable to all income, profits or gains earned outside, but received in, British India. Sub-s. (2) in dealing with the question referred only to "profits and gains", now the word "income" is added to the phrase to make the two sub-sections harmonious. The amendment is not retrospective; and it does not apply to "income, profits or gains" accruing prior to April 1, 1933, unless they are brought into British India within three years of the end of the year in which they accrued. It is made clear that the section does not apply to agricultural income accruing from land for which any annual payment is made to the State.

13. The Safeguarding of Industries Act.—This Act provides for the imposition of additional duties of customs on imported goods for safeguarding industries in British India. It remains in force till March 31, 1935. S. 2 (1) enables the Governor General in Council to impose additional duties of customs by notification in the Gazette of India to meet any serious menace to Indian industries which may arise from special conditions in any country outside India resulting in the importation of

produce or manufactures into this country at prices which endanger Indian industries. S. 3 (1) provides that every such notification must be laid before both Chambers of the Indian Legislature and will cease to have effect on the expiry of two months from the date on which it has been so laid unless in the meantime it has been approved by a resolution of each Chamber.

14. The Indian Tariff (Amendment) Act.—The wording of Item 148-A of the Second Schedule of the Indian Tariff Act, 1894, extends the lowest preferential rate, *i.e.*, Rs. 30, per ton on sheet of British manufacture rolled from Indian sheet bar, to a considerable quantity of material to which it was not intended that preference should be given. The present Act makes it clear that the lowest preferential rate is applicable only to sheets manufactured from Indian sheet bar imported into the United Kingdom after the ratification of the Ottawa Trade Agreement by the Indian Legislature.

15. The Workmen's Compensation (Amendment) Act.—The Workmen's Compensation Act, 1923, was experimental in character, and since its coming into force on July 1, 1924, a number of modifications of its provisions were effected by the Workmen's Compensation (Amendment) Act, 1929, to remedy admitted defects and to embody improvements of a non-controversial character. The present Act follows the recommendations of the Royal Commission on Labour. Excepting certain sections the Act came into force on January 1, 1934. S. 2 recasts the definition of "dependant" in the Act. It adds certain relations to the list included in the definition, *e.g.*, illegitimate children, and a widowed daughter-in-law. S. 4 deals with the revised scales of compensation payable for death and permanent total or partial disablement. S. 7 relaxes the stringency of provisions regarding notice contained in s. 10 of the original Act in certain cases, *e.g.*, want of or a defect in a notice does not bar proceedings for the recovery of compensation if the employer is proved to have had knowledge of the accident from any other source. S. 8 empowers a Commissioner to require from an employer a statement regarding a fatal accident giving the circumstances attending the death of a workman and indicating whether, in the opinion of the employer, he is or is not liable to deposit compensation on account of the death. It also provides for the prompt deposit of compensation where the employer admits liability. Where the employer disclaims liability the Commissioner may inform the dependants of the deceased that it is open to them so prefer a claim for compensation. S. 11 provides for the imposition of fine for failure to furnish a statement, notice, report, etc., required under the Act. Prosecutions under this section cannot be instituted without the previous sanction of a Commissioner. S. 16 empowers a Commissioner to call on an employer to make up an inadequate deposit to the proper amount. S. 20 provides for the distribution of compensation due under the Act to persons in other parts of the Empire and of compensation due under British or Dominion laws to persons in British India. S. 21 widens the existing classes of workmen benefited by the Act *e.g.*, drivers of private motor cars, workmen employed in handling explosive substances, etc. It also introduces new classes of workmen to the Act, *e.g.*, workmen employed in the operation of any ferry boat, workmen employed in a lighthouse, etc. S. 22 adds four industrial diseases to Schedule III of the original Act, *e.g.*, mercury poisoning, poisoning by benzine and its homologues, chrome ulceration and compressed air illness.

16. The Land Acquisition (Amendment) Act.—The Land Acquisition Act, 1894, makes it possible, where the previous consent of the local Government has been obtained, to acquire land compulsorily on behalf of companies, provided that the land is needed for a work "likely to prove useful to the public". The present Act follows the recommendation of the Royal Commission on Labour and enables land to be acquired by an industrial concern (ordinarily employing not less than one hundred workmen) owned by an individual or by an association, for the erection of dwelling houses for workmen employed by the concern or for the provision of amenities directly connected therewith.

17. The Indian Wireless Telegraphy Act.—The Indian Telegraph Act, 1885 controls only the establishing, maintenance, and working of telegraphs, but does not restrict or control mere possession of apparatus, or penalise such possession without license unless it can be shown that the apparatus is used. It is believed that the revenue lost at present owing to the use of unlicensed wireless apparatus is considerable, thus adversely affecting the financial position of the Indian State Broadcasting Service. The present Act remedies this state of affairs by prohibiting the possession without license of wireless telegraphy apparatus. S. 4 enables the Governor General in Council to permit in proper cases, for instance, for research purposes, the possession without license of wireless telegraphy apparatus. S. 6 penalises possession without license, and provides for the confiscation of apparatus in respect of which an offence is committed. S. 7 provides for the power of search necessary for the enforcement of the Act.

18. The Indian Income-tax (Second amendment) Act.—The object of passing this Act is to stop a leakage owing to the concealment of income derived from interest, especially interest paid on deposits with banks. S. 8 is amended by relieving from income-tax sums deducted from the interest by way of commission by a banker realising such interest. S. 9 cl. (4) is amplified to make its meaning clear. S. 11 deals with professional earnings. The depreciation of buildings, machinery, apparatus, appliances which hitherto was allowed only to persons deriving income from business is now extended to professional men. Extensive alterations have been made in s. 18 with the view of compelling bankers and others to furnish annual statements of payments of interest to any person in respect of deposits held for six months or more. This is further carried out by enacting s. 20A which deals with supply of information regarding interest, not less in amount than Rs. 1,000 in any year. S. 24 has been amended and now the benefits enjoyed by adult members of a firm are extended to its minor members so far as income-tax is concerned.

S. 24A has been newly added. It is meant to enable assessments to be made at once on the income of persons from whom it is difficult to recover the tax after they have left the country, as for instance, a foreign touring circus or theatrical company. The next section 24B enacts a new provision providing for payment of tax of deceased person by his representatives, which lacuna came to notice in a recent Bombay case. S. 30 has been so amended as to give the assessee a right of appeal against an order refusing to register a firm. The next group of amendment deals with the subject of refund. S. 48A defines the general power to make refunds. Power to set off amount of refunds against tax remaining payable is given by s. 49A ; and s. 49B gives power to representative of deceased person or disabled person to make claim on his behalf. A new section 50A has been added to provide appeal against an order refusing refund of income-tax which has already been paid. Liberal provisions have been made by providing references to be made to the High Court by amending s. 66 of the Act.

19. The Indian Railways (Amendment) Act.—The present Act gives additional powers to a railway company to provide and maintain a motor transport or air craft service as a feeder to its own railway. S. 2 empowers a railway company (other than the guaranteed companies covered by the statute 42 and 43 Vic., chap. 41) to frame a scheme for a motor transport or air service for passengers, animals or goods with a terminus at or near a station on the railway. This scheme must be submitted to the Governor General in council, who is required to consult the Local Governments concerned and is empowered to impose any modifications and conditions he may think fit. The Act requires the final scheme to be published in the Gazette of India and thereupon the railway company is empowered to inaugurate the new service in accordance with its terms and in accordance with all applicable enactments and rules relating to motor vehicles, air-craft and roads.

20. The Cotton Textile Industry Protection (Second Amendment) Act.—The present Act continues the existing protection granted to the industry by the Cotton Textile Industry (Protection) Act, 1930, as subsequently amended (Act IV of 1933), for a further period up to March 30, 1934.

21. The Indian Arbitration (Amendment) Act.—Under s. 19 of the Indian Arbitration Act, 1899, where any matter which falls within an agreement to arbitrate is the subject of legal proceedings, any party may apply to "the Court" to stay proceedings; and thereupon the Court may, after an inquiry, stay further proceedings, in order that the agreement to arbitrate may be enforced. The present Act makes it clear that "the Court" referred to in s. 19 is the Court before which the legal proceedings are pending.

22. The Cantonments (House-Accommodation Amendment) Act.—Under Ss. 15 (1) and 16 (2) of the Cantonments (House-Accommodation) Act, 1923, the owner of a house has the right, within a period of thirty days from the service of a notice of appropriation, to make a reference to a Civil Court, if he considers the rent offered to him to be insufficient or the repairs demanded from him to be excessive. Under s. 30 of the said Act, the owner or any tenant of a house in respect of which a notice of appropriation has been issued can appeal, within a period of twenty-one days from the date of the service of the notice, to the Officer Commanding the District against the appropriation itself. The amendments made by the present Act, which are in accordance with the wishes of the All-India Cantonment Association, shorten the time allowed for the appeal to the Officer Commanding the District (ten days); these also provide that where an appeal is made to the Officer Commanding the District under s. 30, the period of thirty days (within which a reference to a Civil Court can be made) must be reckoned from the date on which the owner received the notice of the result of the appeal.

23. The Murshidabad Estate Administration Act.—The Murshidabad Act, 1891, confirmed and gave effect to an indenture made on March 12, 1891, between the Secretary of State for India in Council and the Nawab Bahadur of Murshidabad which set at rest many matters which were the subject of considerable perplexity—the title of the Nawab Bahadur, the incidents of his tenure of various properties specified in the indenture and provision for his own maintenance and support, and that of his honour and dignity. The Act provides that in case the Nawab Bahadur or any of his lineal heirs male successors to the title contravene any of the terms of the indenture or by a course of extravagance or by waste or mismanagement of the immoveable properties included in the indenture disables himself from duly maintaining the dignity of his position the Secretary of State for the time being can lawfully enter upon the immoveable properties, take possession thereof and administer them for the benefit of the Nawab Bahadur during his lifetime. Under the powers so given the Secretary of State has during the lifetime of the present Nawab Bahadur of Murshidabad assumed charge of the estate and of the Government pension provided for in the indenture. Machinery for the exercise of such management by the Secretary of State was not provided for in the indenture. The present Act supplies this. The management will be exercised through a Manager, acting on behalf of the Secretary of State. The Manager will work under the supervision and control of the Governor of Bengal in which province the majority of the properties concerned lie. His powers and duties are defined by the Act which further provides machinery for the ascertainment and gradual liquidation of the liabilities contracted by the Nawab Bahadur. It also provides for the payment to the Nawab Bahadur of a sum sufficient for the maintenance of his position and dignity and affords him protection against the disabilities to which he is exposed by reason of his embarrassed circumstances.

24. The Indian Tea Control Act.—In October, 1932, the representatives of the Indian Tea industry approached the Government of India with a view to securing their support to an international scheme for the restriction of exports of tea. The condition of the industry was precarious and the collapse of many concerns imminent. Government, therefore, expressed their willingness to consider any practical

scheme that might be put forward. The Indian Tea Association, acting for the Industry, produced a scheme the main features of which were :—(1) that the exports of tea would be restricted to a percentage of the maximum exports from each producing country in any of the three years, 1929, 1930 and 1931; (2) that the restriction scheme would remain in force for five years; and (3) that during this period existing areas under tea would not be extended beyond half per cent. of the present planted area. The scheme also provided that the heads of agreement would be enforced in each of the contracting countries by the Government concerned. The present Act gives legislative sanction to the operation of the scheme.

Under s. 1 the Act remains in force till March 31, 1938. Ss. 3 to 8 relate to the constitution, powers, etc., of the Indian Tea Licensing Committee. The Committee consists of the following members :—(*a*) six members, one nominated by each of the following bodies, namely,—The Indian Tea Association, Calcutta, The Assam Branch of that Association, the Surma Valley Branch of that Association, the Dooars Planters Association, the Indian Tea Planters' Association, Jalpaiguri, and the Terai Indian Planters Association, Terai, acting together and the Darjeeling Planters Association and the Terai Planters Association, acting together; two members nominated by the Local Government of Assam; two members nominated by the United Planters Association of Southern India; and one member nominated by the Local Government of Madras. Ss. 11 to 24 deal with the control over the export of tea. Under s. 12 no tea can be exported overseas unless covered by a license issued by or on behalf of the Committee. Under s. 13 the Indian Overseas Export Allotment for the financial year 1933-34, that is, the total quantity of tea which may be exported overseas during that year, including tea exported overseas during that year before the commencement of the Act, must be 320,570,560 pounds avoirdupois. Under s. 14 the export quota of each tea estate for each financial year must be determined by the Committee. The total of all export quotas for any financial year must not exceed the Indian Overseas Export Allotment for that year. Ss. 15 to 17 deal with export licenses. Under s. 21 the Committee is authorised to charge and collect a license fee for every export license issued by it. Ss. 25 to 29 deal with the control over the extension of the cultivation. Under s. 25 as long as the Act remains in force, no one can plant tea in any land which was not planted with tea on March 31, 1933, save in pursuance of a written permission granted by or on behalf of the Committee. Under s. 26 the total area of land in British India in respect of which the permission referred to in s. 25 may be granted must not exceed 4,000 acres. S. 27 deals with the grant of permission to plant tea on any land for the first time. S. 28 provides for an appeal to the Local Government by an applicant aggrieved by any order of the Committee under s. 27. Ss. 30 to 35 deal with penalties and procedure.

25. The Indian Merchant Shipping (Second Amendment) Act.—The International Conference for the Safety of Life at Sea held in London in 1929, and the International Load Line Conference held in London in 1930, adopted, respectively, the International Convention for the Safety of Life at Sea, 1929, and the International Convention respective Loan Lines, 1930. India was represented at both Conferences. The present Act ratifies the two conventions by amending the Indian Merchant Shipping Act, 1923, in several respects.

26. The Dangerous Drugs (Amendment) Act.—As a result of the ratification of the International Convention for Limiting the Manufacture and Regulating the Distribution of Narcotic Drugs, the definition of "Manufactured Drugs" as given in the Dangerous Drugs Act, 1930, required amplification. The present Act amends s. 2 (*g*) (*ii*) of the original Act so as to provide for its being made to cover those drugs specified in Article I of the Convention which were not covered by the sub-section. The Act also empowers the Local Governments to frame rules restricting and regulating the manufacture and possession of prepared opium from opium lawfully possessed under s. 4 (*b*) of the Act.

27. The Indian Medical Council Act.—The General Medical Council in February, 1930, decided to withdraw temporarily the recognition of medical degrees of Indian Universities. By this action the International status of those degrees was endangered. To safeguard this status and to provide for the maintenance of uniform minimum standards of medical education in the country the Government of India, with the concurrence of Local Governments, convened a conference in June 1930 to consider the question of establishing an All-India Medical Council. The present Act establishes an Indian Medical Council to secure a uniform minimum standard of higher qualifications in medicine for all provinces and to arrange schemes of reciprocity with medical authorities of other countries.

S. 2 (*d*) defines "medicine". It includes surgery and obstetrics but does not include veterinary medicine and surgery. S. 3 defines the composition of the Council. It must consist of the following members :—(*a*) one member from each Governor's Province, to be nominated by the Local Government of the Province; (*b*) one member from each British Indian University to be elected by the Members of the Senate of the University from amongst the members of the medical faculty of the University; (*c*) one member from each province where a provincial medical register is maintained; (*d*) three members to be nominated by the Governor General in Council. As regards the President of the Council, for the first four years of the life of the Council, he must be a nominee of the Governor General in Council, thereafter he must be elected by the members of the Council from amongst themselves. A nominated President holds office at the pleasure of the Governor General in Council. Under s. 7 an elected President and other members hold office for a normal term of five years. Under s. 8 the Council must meet at least once in each year. Ten members of the Council form a quorum. S. 9 relates to the executive agencies of the Council. It requires the Council to elect a Vice-President, to constitute an Executive Committee and to appoint a Secretary. S. 10 lays down the constitution, powers and duties

of the Executive Committee, which will be the most important agent of the Council, discharging many of its duties, particularly in connection with the supervision of medical institutions. It must consist of seven members of whom five must be elected by the Council, the President and Vice-President of the Council to be *ex-officio* members. S. 11 deals with the recognition of medical qualifications granted by medical institutions in British India and s. 12 with the recognition of medical qualifications obtained outside British India. Ss. 13 and 14 provide for the settling of a scheme of reciprocity for the recognition of medical qualifications. Ss. 15 and 16 deal with the supervision of medical institutions in British India, which grant recognised medical qualifications. S. 15 empowers the Medical Council to call for such information and returns as it may think fit, in respect of such qualifications. S. 16 empowers the Executive Committee to appoint medical inspectors, who may attend and observe the conditions under which examinations for recognized medical qualifications are held. S. 17 provides for the withdrawal of recognition in the case of any medical institution in British India which has allowed its courses of study and examinations to fall below the required standards. S. 18 empowers the Council to make regulations, with the previous sanction of the Governor General in Council, covering all matters ancillary to the provisions of the Act. S. 19 provides for reports by the Council to Government and for their publication. S. 20 provides for the formation of a Commission of Inquiry in the event of the Council abusing its powers.

28. The Indian Tariff (Second Amendment) Act.—The present Act amends the Import Tariff so as to apply the rate of duty now prescribed for kerosene to all other mineral oils (excepting motor spirit) which evince, when tested by a standard lamp, a prescribed minimum illuminating capacity, and can therefore be used as substitutes for kerosene for burning in lamps. The Act empowers the Chief Customs Authority to prescribe a standard pattern of lamp as the one to be used in testing imported oils for the purpose of the new tariff entry.

COPYRIGHT.

There is no provision of law in British India for the registration of Copyright. Protection for Copyright accrues under the Indian Copyright Act under which there is now no registration of rights, but the printer has to supply copies of these works as stated in that Act and in the Printing Presses and Books Act XXV of 1867. The Indian Copyright Act made such modifications in the Imperial Copyright Act of 1911 as appeared to be desirable for adapting its provisions to the circumstances of India. The Imperial Act of 1911 was brought into force in India by proclamation in the *Gazette of India* on October 30, 1912. Under s. 27 of that Act there is limited power for the legislature of British possessions to modify or add to the provisions of the Act in its application to the possession, and it is under this power that the Indian Act of 1914 was passed. The portions of the Imperial Act applicable to British are scheduled to the Indian Act. The Act to which these provisions are scheduled makes some formal adaptation s of them to Indian law and procedure, and some material modifications of them in their applications, translations and musical compositions. In the case of works first published in British India the sole right to produce, reproduce, perform or publish a translation is, subject to an important proviso, to subsist only for ten years from the first publication of the work. The provisions of the Act as to mechanical instruments for producing musical sounds were found unsuitable to Indian conditions. "The majority of Indian melodies," it was explained in Council, "have not been published, *i.e.*, written in staff notation, except through the medium of the phonograph. It is impossible in many cases to identify the original composer or author, and the melodies are subject to great variety of notation and tune. To meet these conditions s. 5 of the Indian Act follows the English Musical Copyright Act of 1902 by defining **musical work** as meaning any combination of melody and harmony, or either of them, printed, reduced to writing, or otherwise graphically produced or reproduced."

India and the League of Nations.

India is a Founder-Member of the League of Nations and enjoys in it equal rights with other Member-States, a position which she mainly owes to the goodwill shown towards her advancement and aspirations by Great Britain and the Self-Governing Dominions of the British Empire. The League of Nations was established under the terms of the Peace Treaty which was signed in Paris in 1919 after the conclusion of the Great War. Great Britain and the Self-Governing Dominions in 1917 passed a resolution which set India upon the road that led to the high international platform on which she stepped.

India was represented at the Imperial War Conference of 1918, at the Imperial Conferences held in London in 1921, 1923, and 1926, and at the Imperial Economic Conference held in London in 1930. The report of the Inter-Imperial Relations Committee of the Imperial Conference, which was adopted by the Conference of 1926, stated the position of Great Britain and the Dominions to be "autonomous communities, equal in status, in no way subordinate to one another in any respect of their domestic or external affairs, though united by a common allegiance to the Crown, and freely associated as members of the British Commonwealth of Nations. India is not yet a Self-Governing Dominion to the extent indicated in this formula. The first stage in the direction of establishing Responsible Government in India was prescribed by the Government of India Act, 1919, but the Governor-General of India does not yet (to quote again from the Inter-Imperial Relations Committee) hold "in all essential respects the same position in relation to the administration of public affairs" in India as is held by His Majesty the King Emperor in Great Britain. And there are certain other respects in which India's Constitutional position in the Empire is not the same as that of the Self-Governing Dominions. India, for example, is not entitled to accredit a Minister Plenipotentiary to the Heads of Foreign States.

The position enjoyed by India in the Empire governed the position which she entered when, as one of the States of the Empire, she joined in the Paris Peace Negotiations in 1918-19. India's membership of the League of Nations places her in a unique position among all non-self-governing States, Dominions, or Colonies throughout the world. She is an original member of the League by virtue of para 1 of article I of the Covenant by which the League was established and which states that any fully self-governing State, Dominion or Colony not named in the Annexe may become a member of the League. She is the only original member which is not self-governing, and in virtue of the restriction under para 11 of article I, on the admission of members other than original members, she will, so long as the present constitution of the League endures, remain the only member which is not self-governing. As a member of the League, India was for the first time brought into direct and formal contact with the outside world as a separate entity. She was treated as if she had attained to the same kind of separate nationhood as that enjoyed by the Dominions.

India's Attitude.

On questions coming before the League, India has exactly the same rights as any other Member-State. The Secretary of State for India in His Majesty's Government is ultimately responsible for the appointment of Indian delegates and for their instruction, but in practice, he and the Government of India act jointly in consultation and agreement with one another. Partly as a result of her membership of the League and partly owing to resolution No. IX adopted by the Imperial War Conference in 1917, recommending *inter alia* recognition of the right of the Dominions and of India to an adequate voice in British foreign policy and foreign relations, India has been given the same representation as the Dominions at all international conferences at which the British Empire is represented by a combined Empire Delegation. On many occasions in fact she has taken the lead in forming world opinion towards the achievement of the League's aims. In particular in the international Labour organisation she has been successful in bringing Empire policy into line with her own on more than one occasion. In many of those conferences, particularly those of the League, Indian delegations have taken an independent line of action, sometimes directly opposed to the attitude of other parts of the British Commonwealth. One interesting case occurred in 1920 at the Genoa Maritime Conference when Indian delegates in the face of opposition from the Empire managed to secure a mandate for special treatment for Indian sailors in British shipping although there was a concerted move from the Empire delegation to get Indian lascars driven off British ships.

India's New Status.

It will be observed that the situation created by India's stepping from the Imperial Conference into the Paris Peace Conference and League of Nations in the manner in which she did was in certain respects highly anomalous and one impossible to harmonize with her constitutional position as defined in the Government of India Act. Nevertheless, as the Secretary of State, in a Memorandum presented to the Indian Statutory Commission by the India Office in 1929, showed, "It has been the deliberate object of the Secretary of State to make India's new status a reality for practical purposes within widest possible limits." It was not legally possible for the Secretary of State to relinquish his constitutional power of control, nor, consistently with responsibility to Parliament, could he delegate it: "But it has been his constant endeavour to restrict its exercise to a minimum, to keep even its existence as far as possible in the background, and to allow to the Indian Government the greatest possible freedom of action under the influence of their Legislature and of public opinion."

There are available many illustrations of these principles being followed in practice. India is given scope to pursue in the League of Nations an independent line of action within very wide limits, even though, as has occurred in some instances, it brings her into conflict with His Majesty's Government. In 1925, for example, at the conference on Opium and Drugs India so acted that the British delegation had to obtain fresh instructions from H. M.'s Government which resulted in India settling the question of Indian hemp to her own liking. In the event of such conflict within those limits, the Secretary of State acts, if he acts at all, as head of the Government of India rather than as a member of His Majesty's Government. He does not use his power to impose on the Indian Delegation an artificial solidarity with British Delegates, but, rather, with the consent of his colleagues of His Majesty's Government, he stands aside and allows representatives of India the same freedom as Dominion Delegates would enjoy in controversy with the Delegates of Great Britain. India has participated in all the Assemblies of the League, in the annual session of the International Labour Conference where because of her individual importance she plays a very predominant part, and in numerous Conferences on special subjects held under the auspices of the League as well as in some important non-League, International Conferences, including the Washington Conference on Naval Armaments in 1921, in Genoa Economic Conference in 1922, and the International Naval Conference held in London in 1930. India is also represented on several permanent League bodies, *e. g.*, the governing body of the International labour office, the Advisory Committee on Opium and Drugs, the Economic Committee, the Health Committee and the Committee of Intellectual Co-operation. It is interesting to note that since 1921 Sir Atul Chatterjee has been acting as Deputy Commissioner of the Governing Body of the International Labour Office and this position was preliminary to his being elected Chairman in 1932.

The **Personnel of the Indian Delegation** has from the outset largely been Indian in race, though owing to the constitutional organization of the Indian administration it has frequently been necessary for her to be represented by Englishmen. This has especially been the case when specialized experts were required The Indian character of the personnel has as rapidly as possible been increased and in 1929 the Indian Delegation to the annual Assembly of the League was for the first time led by an Indian (The Hon'ble Sir Mohammed Habibullah, Member for Education, Health and Lands in the Executive Council of His Excellency the Viceroy and Governor-General). In the following year the delegation was led by the Maharaja of Bikaner in 1931 by Sir B. L. Mitter; in 1932 by H. H. the Aga Khan; and in 1933 by Sir B. L. Mitter again. A convention has been established for the leadership being held by an Indian. While the delegations to the International Labour Conference are becoming almost entirely Indian in personnel, the workers' delegations always have been Indian. This is merely an expression of the general policy of the Secretary of State that an increasing number of Indians should be given the opportunity of being trained in the international field. An example of the increasing part being played by Indians in League work occurred in 1930 when, during the Assembly of that year and at the instance of Sir Jehangir Coyaji, a member of the Indian delegation, an important resolution was passed in reference to the need for an inquiry into world depression. The Indian Delegation to the League Assembly in 1932 consisted of H. H. the Aga Khan (Leader), Sir Prabhashankar Pattani (President of Bhavnagar State Council), Sir Denys Bray (Member of the Council of India), Members, and Sir Jehangir Coyajee (Head of the Department of History, Economics and Politics, Andhra University). In 1933, the Indian Delegation consisted of Sir B. L. Mitter (Leader), Sir Denys Bray, Sir Abdussamad Khan of Rampur and Sir Hormusji Mehta of Bombay.

The Secretary of State in his Memorandum to the Parliamentary Statutory Commission wrote:—"India's membership of the League has had the effect of stimulating her national self-consciousness and has laid the foundations of an informed public interest in international affairs..... India's representatives have not confined themselves merely to the role of spectators, but have played a prominent part in many of the meetings which they have attended. She has fully justified her position as a separate Member of the League by her co-operation in the economic and social spheres which form so large a part of its activities..... But in certain questions where special Indian interests are involved, the Indian Delegation can and does take an independent line, and may even find itself in opposition to other parts of the Empire.....But sometimes on non-political questions the British and Indian Delegations have remained in opposite camps. On such questions, when special Indian interests are at stake, India's right of independent action extends to speaking and voting against the views advanced on behalf of His Majesty's Government." Lord Reading, in a note at the end of his Viceroyalty, stated his conclusion that the system of consultation between the Secretary of State and the Government of India had worked satisfactorily and that the Government of India, without any definition of its problematical rights, already in practice obtained all the advantages which it might claim.

The year 1932 saw the opening of a League of Nations **Bureau in Bombay** in response to the demands of successive delegations to Geneva. Its purpose is to keep in touch with representative Indian opinion so that Geneva and India may be brought closer together. The Bureau is maintained by the League of Nations without any contribution by the Government of India.

In the Report of the last Indian Delegation, a recommendation was made for the appointment of a permanent Indian Delegate at Geneva.

Labour in India.

Growth of the Labour Problem.—India is and has always been a pre-eminently and predominantly agricultural country and over 70 per cent. of her people are dependent on the soil for their livelihood. Except in a comparatively few cases there is no settled and permanent labour force in most industrial centres in India. The vast majority of industries draw the labour they require from the village—labour which seldom breaks its contact with village life and periodically returns to renew its associations with it. This fact cannot be too strongly emphasised. If it is lost sight of it would be most difficult to understand how large bodies of comparatively low paid men and women can afford to participate in strikes involving complete stoppage of work and loss in wages for periods of half a year. Such strikes would be impossible if Indian industrial labour did not have agriculture to fall back upon as a subsidiary occupation during periods of prolonged industrial disputes. The figures for the 1931 Census show that the number of persons gainfully occupied in the whole of India amounts to 154 millions or 43.8 per cent. of the total population. Of this number 68 per cent. are men and 32 per cent. women. The proportion of the working population, *i.e.*, earners and working dependants, engaged in agriculture is over 102 millions or 66.4 per cent.

The emergence of Indian industrial labour as such may be considered to be associated with the year 1880. Its growth and development since that date may be divided, for purposes of broad generalisation, into four periods: (1) from 1880 to 1915; (2) from 1916 to 1921; (3) from 1922 to 1927; and (4) from 1928 to the present day. The first period marks the growth of factory development with a slow but steady decline in cottage industries. The total number of cotton mills in India rose from 58 to 275 and the number of persons employed from 40,000 to 260,000. The total number of jute mills rose from 22 to 65 and the number of persons employed from 27,000 to 216,000. There was a vast expansion in railways and many new industries were established. Labour was immobile, earnings in agricultural pursuits were extremely low, commodities were comparatively cheap, and industrialists were able to get all the labour they wanted by tapping the adjacent villages at any rates of wages they liked to offer so long as they were higher than those which could be earned by work in the fields. Both the men and the women employed were considered to be a part of the plant of the factory, child labour was exploited, and little thought was given to the human element behind the worker. Hours of work were excessive, no amenities were provided because the only thing that the worker was expected to do was to work, eat and sleep. The provision of housing was a necessary evil which had to be provided where factories were situated away from towns. The Factories Act was modelled more on the lines of providing against loss of life due to accident rather than from the grinding work which a factory worker was expected to do. The humanitarian employer was considered to be a pest who would ruin industry and all that industrialists thought of was the greatest return which could be obtained from the capital invested.

The second period emerged soon after the outbreak of the great war. Large contingents of Indian troops were sent overseas, and had to be supplied with adequate clothing and the munitions of war. Imports of manufactured articles into India were restricted owing to the bulk of the available British tonnage in ships having been commandeered for transport of men and materials to the various seats of war. Heavy demands were made by the belligerent countries for raw products. India secured the opportunity for which she had been looking for generations. Her credit expanded, her industries thrived and the returns on capital invested in every branch of trade and industry became phenomenal. Prices soared high. Owing to the influx of large bodies of persons to the towns, housing became hopelessly inadequate and rents rose to such an extent as to call for legislative restrictions. But nobody thought of those who were mainly responsible for the creation of the added wealth of India. Labour was still considered to be that inarticulate part of the plant of the factory which it had always been. The end of the War brought visions of an Utopia. Big commercial and industrial enterprises were floated. Agriculturists were securing high prices for their produce. Labour was in great demand not only in agriculture but also in commerce and industry. The successes which labour met with during the war in demands for increases in rates of wages impelled them to demand further increases with each increase in the cost of living. Where demands were not granted strikes were threatened. The influenza epidemic of 1918 which swept away large masses of the population of the country created a big gap in the available supply of labour, and almost all the strikes of the period for increases in wages were successful owing partly to the necessity for speeding up production and partly to the shortage in the available supply of labour.

The gradual demobilisation of the Armies of the War and the closing up of the various Munitions Works disbanded millions of men and women who rapidly spent the savings secured during the War. The pre-war industries in the belligerent countries could not be reorganised at once. The spectre of unemployment loomed large. Credit fell. With the fall in credit the demand for manufactured articles declined and prices began to show a marked downward tendency. The year 1922 may be considered as the beginning of this period of reaction and depression and the beginning of the third period in the history of Indian industrial labour. Labour all over the world demanded an improvement in the conditions of life and work. The creation of an International Organisation to deal with all questions connected with labour from an Inter-

national point of view and the commitment of India, as one of the signatories to the Treaty of Versailles, to the ratification and acceptance, as far as possible, of the Conventions and Recommendations adopted by the International Labour Conference have made it obligatory for her to fall into line with the other industrial countries of the world in ameliorating labour conditions. The beginning of this period, therefore, saw a radical revision of the existing Factory Law by an Amending Act passed early in 1922. The existing Indian Mines Act was replaced by another Act of 1923 during which year a Workmen's Compensation Act was also passed for the first time. A Trade Union Act was passed in 1926.

The depression in trade and industry which set in in 1922 has continued ever since. Various attempts were made by all classes of Industrialists to reduce the wages of labour in order to reduce costs of production. Concerted action taken by the Ahmedabad Millowners' Association to reduce the wages of operatives in the Ahmedabad cotton mills by 20 per cent. with effect from the 1st April 1923 was successful to the extent of an eventual cut of 15.625 per cent. being agreed to after a general strike lasting more than two months. A similar attempt made by the Bombay Millowners' Association in 1925 to reduce wages by 11¼ per cent. was, however, frustrated by a strike lasting for nearly three months which was eventually settled in favour of the workers by a maintenance of the existing rates on the removal of the Excise Duty of 3½ per cent. on cotton manufactures in India by a Special Ordinance issued by the Governor-General in Council. Similar attempts made in individual concerns in the Districts succeeded mainly for want of effective combination among the workers. No other organised attempts were made to effect reductions in wages. There were several reasons for this. The most important of these was that after the period of the decline in prices had set in after 1920, real wages, in comparison with the standard of life of the year 1914, began to improve and labour was determined not to let go the advantage gained in the struggles immediately following the end of the War. This period was one in which a considerable number of Acts in connection with labour were placed on the Statute Book. In addition to these, the Government of India had asked Provincial Governments to consider proposals for legislating with regard to prompter payment of wages. The enquiries held in 1926-27 into the question of Deductions from Wages or Payments in respect of fines indicated legislation on the lines of the Truck Acts. It was becoming obvious to the Industrial Employer that Government were most anxious to do all they could to improve labour conditions in India. The employers, as a whole, therefore, did not desire to precipitate matters by insisting on reduction in wages. It was imperative, however, that something should be done, and done quickly to reduce costs of production. The only way to do this without reducing wages was, in the view of the employers, to ask the worker to do more work during the existing hours of employment so as to enable the employer to dispense with a number of workers and thus to reduce his Wages Bill.

The fourth period beginning with the year 1928, therefore, saw the advent of **Rationalisation** or more efficient methods of working. Employers, particularly those in Bombay city, proposed to ask workers to mind more machines in return for a compensatory increase in wages. Some advanced firms controlling cotton mill agencies actually introduced various efficiency measures in their mills. The introduction of these measures necessitated reductions in the numbers employed. The beginning of this period coincided with the entry of the Communists into the Trade Union movement in India.

When the so-called Labour Group of the Indian National Congress failed to obtain acceptance of their ideas by the Congress, they formed in January 1927 a **Workers and Peasants Party,** one of whose objects was "to promote the organisation of trade unions and to wrest them from their alien control." Communist emissaries were sent out to India by the Third International to further war against Imperialism, destruction of capital and the creed of revolution. The Workers and Peasants Party started a paper called the "Kranti" (Revolution) in May 1927 which, however, had to cease publication at the end of the year owing to financial difficulties. The members of the Party took an active part in the strike of the operatives in the cotton mills in the Sassoon group early in 1928, but their attempts to bring about a general strike in the cotton mills in Bombay failed owing to the opposition of the Bombay Textile Labour Union which had been formed by Mr. N. M. Joshi in January, 1926. When another great group of mills in Bombay under the agency of Messrs. Currimbhoy Ebrahim and Sons sought to introduce efficient methods of work, the Communists saw their opportunity. All the operatives of the Currimbhoy group were brought out on the 16th April 1928; and the Communists, with the help of the turbulent elements in the industry brought about a complete stoppage of work by picketing, intimidation and stone throwing in all other mills in Bombay (except two mills at Colaba) by the 26th April. Owing to internal dissensions in another Union of cotton mill workers called the Girni Kamgar Mahamandal, they secured the support of Mr. A. A. Alwe, its President, and formed a new Union called the Bombay **Girni Kamgar Union** on the executive of which several prominent Communists were appointed. The Communists revived the publication of their paper the "Kranti" and they were successful, by holding almost daily meetings at which revolutionary speeches were delivered and by the publication of hand-bills, in capturing the imagination of the workers and keeping the strike going for a period of nearly six months. They also took an active part in the prolonged strikes of the same year in the Tata Iron and Steel Works at Jamshedpur and in the workshops of the Bengal-Nagpur Railway at Kharagpur. They actively associated themselves with the strike on the South Indian Railway and they secured an entry into several Unions connected with Municipalities, Port Trusts and other Public Utility Services. After the calling off of the General Strike in the Bombay Mills on the 6th October, 1928, they endeavoured to paralyse the cotton mill industry in Bombay by calling several

lightning strikes in individual mills on the flimsiest of pretexts, even though the terms of the settlement of that strike required that all disputes between the employers and employed on the interpretation of the terms of agreement should be referred to the Bombay Strike Enquiry Committee which had been appointed by the Government of Bombay to express opinions on the matters in contention.

Bombay has seen few riots and disturbances of the type which broke out in the City on the 3rd February 1929 and which resulted in the death of 149 persons and the destruction of property. The **Riots Enquiry Committee** appointed by the Government of Bombay found that the origin of the riots was the series of inflammatory speeches delivered by certain leaders of the Girni Kamgar Union during the General Mill Strike of 1928 and again during the Bombay Oil Strike which lasted from the 7th December 1928 till after the date of the riots.

In 1929 the Girni Kamgar Union succeeded in calling another General Strike in the Bombay Mills on questions connected with dismissals which they interpreted as a direct attack by the Millowners to undermine the Union. The strike, although not so complete in character as the strike of 1928, nevertheless lasted from 26th April to 18th September, 1929, and was called off only when the Court of Enquiry appointed by the Government of Bombay under the Trade Disputes Act had reported in unequivocal terms that the whole blame for this strike lay with the Bombay Girni Kamgar Union. But the Communist group was able to capture the **Indian Trade Union Congress** at the 11th Session held in Nagpur and to force the moderate elements, consisting of Messrs. Diwan Chaman Lall, N. M. Joshi, B. Shiva Rao, V. V. Giri, R. R. Bakhale, etc., to secede from the Congress on that body passing resolutions boycotting the Royal Commission on Labour in India and het International Labour Conference, by appointing the Workmen's Welfare League, a Communist organisation in England, astheir Agents for Great Britain, and the declaration of Independence and the establishment of a Socialist Republican Government of the Working Classes in India.

It is of importance to lay stress on the problems connected with the **Communist menace in India.** The object of the Communists is not so much the welfare of labour as the spread of revolution. Their ultimate aim is the destruction of capital and the replacement of the established Government by a dictatorship of the proletariat. The manner in which they can achieve this is by penetrating trade unions, by calling strikes in industries, by unduly prolonging them, by putting up strings of preposterous and absurd demands, by refusing conciliation or arbitration; and by sending masses of workers seething with discontent into the districts to preach their gospels of class hatred and class war to the ignorant masses in the villages of India. Fortunately for Industry thirty of the more prominent and avowed Communists all over India were arrested in March 1929 under Section 121-A of the Indian Penal Code for organised conspiracy, under the direction of the Communist International and other Associated bodies, to deprive the King of the Sovereignty of British India. The trial of these 30 persons in what is now historically known as the famous Meerut Conspiracy case lasted from 1929 to 1932 when some of the prisoners were released on bail pending final judgment. Judgment in the case was delivered at Meerut by Mr. Yorke, the Sessions Judge, on the 16th January 1933. One of the thirty accused died in prison, three were acquitted and the remaining 26 were sentenced to terms of imprisonment varying from transportation for life to three years. Muzaffar Ahmed was transported for life. Dange, Ghate, Spratt, Joglekar and Nimbkar were sentenced to transportation for 12 years; Bradley, Mirajkar and Usmani to transportation for 10 years; Sohansingh Joshi, Abdul Majid and Goswami to transportation for seven years; and Ayodhya Prasad, Adhikari, P. C. Joshi and Desai to transportation for five years, Chakravarti, Basak Hutchinson, Mittra, Jhabwalla and Saigal were sentenced to rigorous imprisonment for five years; and Shangal Huda, Alwe, Kasle, Gowrishankar and Kadam to rigorous imprisonment for three years. Ghose, Mukerjee and Banerjee were acquitted. All the convicted persons appealed and substantial reductions were made by the Allahabad High Court in the sentences passed by the Sessions Judge of Meerut. Muzaffar Ahmed's sentence of transportation for life was reduced to three years' imprisonment. The convictions of Ajodhia Prasad, P. C. Joshi, Basak, Adhikari and Shams-ul-Huda were maintained to the extent that their sentences were reduced to the terms of imprisonment already undergone by them and they were ordered to be released from jail. The sentences of Dange and Usmane were reduced to three years, that of Spratt to two, those of Ghate, Joglekar, Nimbkar, Bradley, P. C. Joshi, Majid and Goswame to one year each and that of Chakravati to seven months. The convictions of Desai, Hutchinson, Mitra, Jhabvala, Saigal, Kasle, Gauri Shankar, Kadam and Alwe were set aside and they were ordered to be released forthwith. Some of the prisoners who were released have made frantic efforts to regain their hold on Labour Unions. The good sense of the workers has prevailed in most cases, but the Communists have again succeeded in getting into some of the more important Unions,—notably the Railway Unions, and they are again endeavouring to capture the workers in the Textile Industry in Bombay. In the absence of strong leadership there are, however, several factions in their camps and different groups are working in the same industry.

The depression in trade which set in about ten years ago appears to have reached its zenith during the year 1933. The industry most affected was the Textile. Several cotton mills in Bombay were closed down—some of them permanently and their machinery was scrapped. The failure of Messrs. Currimbhoy Ebrahim & Sons who controlled ten Mills, aggravated the position and tens of thousands of workers were thrown out of employment as a consequence of the closure of the Mills under this agency. In many other cases, the alternative to closure was reduction in the wages in the operatives and over fifty cotton mills of

Bombay City reduced their dear food allowances of 80 per cent. for male piece workers and 70 per cent. for men time workers and all women by an average of about 25 per cent. One or two mills attempted working more machines to an individual with shorter hours of work; and, where workers refused, gave them the alternative of pre-war rates of wages for pre-war standards of work or more machines with higher pay. Strikes of comparatively short duration occurred in a few individual mills as a protest against these cuts in wages, but the absence of trade union organisation in the industry coupled with a fear of unemployment sent the workers back to work within a few days of their going out on strike.

ROYAL COMMISSION ON INDIAN LABOUR.

The British Government, in consultation with the Government of India, appointed on 24th May, 1929, a Royal Commission "to enquire into and report on existing conditions of labour in industrial undertakings and plantations in British India, on health, efficiency and standard of living of workers and on relations between employers and employed; and to make recommendations." The Royal Commission consisted of the Right Honourable Mr. J. H. Whitley as Chairman with the Rt. Hon. Mr. Srinivasa Sastri, P.C., Sir Alexander Murray, Kt., C.B.E., Sir Ibrahim Rahimtoolah, Kt., K.C.S.I., C.I.E., Sir Victor Sassoon, Bart., Dewan Chaman Lal, M.L.A., Miss Beryl M. Le Power Power, Deputy Chief Inspector, Trade Boards, England, and Messrs. N. M. Joshi, M.L.A., A. G. Clow, C.I.E., I.C.S., G. D. Birla, M.L.A., Kabeer-ud-din Ahmed, M.L.A., and John Cliff, Assistant General Secretary, Transport and Railway Workers Union, England, as members, and with Messrs. S. Lall, I.C.S., and A. Dibdin from the India Office, London, as Joint Secretaries. Mr. J. H. Green, M.B.E., was Assistant Secretary. Lt.-Col. A. J. H. Russell, C.B.E., I.M.S., was subsequently appointed as a Medical Assessor and Mr. S. R. Deshpande, B. Litt. (Oxon.), Assistant Commissioner of Labour, Government of Bombay, was appointed as a Statistician to the Commission. The Commission arrived in India on the 11th October 1929 and after visiting several places in India and examining several representatives of the Central and Provincial Governments, the Railways and Associations of Employers and Employed left for England on the 22nd March 1930. The Commission returned on the 11th October 1930 and after touring Ceylon and Burma went to Delhi in November.

The Report of the Commission was published in June 1931 and is a document of first rate importance which will be the text-book of social legislation and labour welfare for many years to come. Moreover, the value of its recommendations is enhanced by the fact that they are practically unanimous and represent the considered opinion of employers, workers, legislators and officials, all of whom were represented on the Commission. Every aspect of the labour problem in India has been considered and discussed and the recommendations number many hundreds and cover a very wide field.

A summary containing the principal recommendations of the Royal Commission, classified according to the subjects with which they deal, was given at pages 474 to 484 of the 1932 edition of this publication. The Government of India, in the Department of Industries and Labour, classified these recommendations under six different groups according as they involved or required: (1) Central legislation; (2) Administrative action by the Government of India; Provincial legislation; (4) Administrative action by Local Governments and Administrations; (5) Action by public bodies, *e.g.*, Municipalities, Universities, etc.; and (6) Action by employees and their organisations or by Workers, Unions; and the recommendations so grouped were forwarded by the Government of India to all Local Governments and Administrations under cover of a circular letter, dated the 30th September 1931, with a request that Provincial Governments should give careful consideration and examination to those recommendations in connexion with which they were required to initiate provincial legislation or to take administrative action and to bring such recommendations as fell within the last two groups to the attention of public bodies and organisations of the employers and the employed concerned. The Government of India published about the end of the year 1932, a first Report showing the action taken by the Provincial Governments up to the 15th July 1932, and by the Central Government up to the 30th September 1932 on the recommendations made by the Commission. Owing mainly to financial stringency, Provincial Governments have so far attempted little local legislation implementing the Commission's recommendations but the Government of India have not only passed six Acts—(1) Act II of 1932 repealing the Employers and Disputes Act, 1860; (2) the Tea Districts Emigrant Labour Act, 1932, which replaces the Assam Labour and Emigration Act, 1901, as amended by the Amending Acts of 1908, 1915 and 1927, and which came into force on the 1st April 1933; (3) the Trade Disputes Amendment Act. 1932; (4) the Children (Pledging of Labour) Act, 1933; (5) the Land Acquisition (Amendment) Act, 1933; and (6) the Workmen's Compensation (Amendment) Act, 1933; but they have also drawn up two other Bills for (1) amending and consolidating the Indian Factories Acts; and (2) a Bill for securing prompter payments of wages and for controlling deductions from wages in respect of fines. The Government of India have also submitted proposals to Local Governments and Administrations for initiating new legislation in connexion with the following matters:—

(1) The amendment of the Indian Mine Act for a reduction in the weekly and daily limits of hours of work, and for certain other matters;

(2) Employees' liability (Re: "Common Employment" and "Assumed Risk");

(3) Extension of Workmen's Compensation to Agriculture and Forestry ;

(4) Making illegal the Besetting of an Industrial Establishment for the recovery of debts ;

(5) Fixation of Hours of Work for Dock Labourers.

(6) Allotment of Seamens' Wages ;

(7) Exemption of Salaries and Wages from Attachment.

(8) Shortening wage periods ;

(9) Arrest and Imprisonment for Debt ; and

(10) The renewal and amendment of The Trade Disputes Act.

The Royal Commission made several recommendations for the control of those factories which do not use power and which are at present not regulated. The Government of India are at present engaged in formulating proposals for a new and a separate Act for the regulation of such factories. Other matters are to be shortly taken up. For a more detailed knowledge of the action taken administratively by the Provincial Governments, Public Bodies and Employers' and Workers' Organisations, the reader is referred to the recent report published by the Government of India as it is obviously impossible to give a recital of such matters in a compact book of reference such as the *Indian Year Book ;* but as it might be of considerable interest to the users of the *Year Book* to have a summary of the legislative proposals at present under consideration readily available, we propose to substitute in place of the summary referred to above, summaries of the more important changes already effected or proposed to be made in the near future. Other important recommendations made by the Royal Commission have also been included in the various chapters into which this note is divided. The changes effected in connexion with the Workmen's Compensation Act, 1923, and the changes proposed in connexion with other existing labour legislation and Recruitment for Assam will be dealt with under the various headings into which this chapter is divided. Summaries of the proposals for new or other legislation already enacted are given below :—

New Labour Legislation.

Proposal to make Besetting an Industrial Establishment for the purpose of collecting debts a criminal and cognisable offence.—One of the several recommendations of the Royal Commission is that the besetting of an industrial establishment for the purpose of collecting debts should be made a criminal and cognisable offence. In this connexion the Government of India invited the views of all Local Governments and Administrations in the Department of Industries and Labour Circular letter, dated the 27th August, 1932. The Government of India pointed out that the proposal aims at preventing two practices associated with the recovery of debts from industrial workers. One of these is the system whereby money-lenders are permitted by some employers to enter the factory and to collect their dues before the workman receives his pay. The other practice is for the money-lender to wait outside the factory gate and to secure payment before the workman can part with any portion of his wages. The objection to both these practices is that they tend to make the payment of interest and the repayment of debts the first charge on wages. When the dues are collected within the factory the workman has, as a rule, no means of resisting the deduction, and when the dues are collected at the gate an element of intimidation not infrequently enters into the transaction. The Government of India recognise that the Commission's proposal does not go far enough as it relates only to action in or near an industrial establishment ; but it appears to them to offer the possibility of stamping out the practice of recovering private debts at the pay desk and of checking at least the power of the money-lender to make his demands a first charge on industrial wages. As such the Government of India are disposed provisionally to support the proposal. Replies from the Local Governments were asked to be submitted by the 1st January 1933, and the matter is under the further consideration of the Government of India.

The Prohibition of the Pledging of the Labour of Children.—The Royal Commission found evidence in such widely separated areas as Amritsar, Ahmedabad and Madras of the practice of pledging child labour, that is, the taking of advances by parents or guardians on agreements, written or oral, pledging the labour of their children. In some cases the children so pledged were subjected to particularly unsatisfactory working conditions. The Commission considered that the State would be justified in adopting strong measures to eradicate the evil. The Government of India accepted this recommendation and introduced a Bill in the Legislative Assembly on the 5th September 1932, proposing to impose penalties on parties to agreements pledging the labour of children and on persons knowingly employing children whose labour has been pledged. The Bill was referred by the Assembly to a Select Committee of the House and the Committee presented their Report on the 19th September 1932. They introduced an important modification in the Bill by providing that "an agreement to pledge the labour of a child" which is made without detriment to a child and not made in consideration of any benefit other than reasonable wages to be paid for the child's services, and terminable at not more than a week's notice will not be an agreement within the meaning of the definition of such an agreement. The Bill was passed by the Central Legislature in February 1933, under the title of "Children (Pledging of Labour) Act." Sections 2 and 3 of the Act were brought into operation at once and the whole of the Act with effect from 1st July 1933.

Employers' Liability (Re : "Common Employment" and "Assumed Risk").—At page 315 of their Report, the Commission recommend that a measure should be enacted abrogating for all workmen the defences of "common employment" and "assumed risk" in civil suits for damages arising out of employment. Persons injured by accident may have a remedy by a suit for damages against their employers in the civil court, and it has been

suggested that the law there applicable is inequitable because two defences may be evolved by the employer to defeat claims which he should justly be called upon to meet. One is the defence of "common employment" by which an employer can plead that an accident was due to the default of a fellow-workman and the other is the defence of "assumed risk" by which an employer is not liable for injury caused to workmen through the ordinary risks of employment, and a workman is presumed to have assumed risks which were apparent when he entered upon his occupation. When the Indian Workmen's Compensation Act was first introduced, it had, in addition to the provisions for workmen's compensation, clauses designed to abrogate these defences in certain cases; but the Joint Select Committee of the Legislature deleted the clauses in question apparently because they were not satisfied that the doctrines, which were derived from the British Common Law, would be accepted by Indian courts. They observed at the same time that if the doctrines in question were so accepted and were regarded as inequitable, they should be removed for all workmen and not for the limited classes to which the Workmen's Compensation Bill was to apply. There is little evidence to show that the existing position gives rise to hardship, but it is possible that suits are not pursued because of the admitted ambiguity of the law, and the Royal Commission were of opinion that, as the defences in question are inequitable, there is need for ensuring that they cannot be invoked. The majority recommended that a measure for this purpose should be enacted and that it might follow the lines of the clauses deleted in 1923, but should, of course, be applicable to all workmen.

The Government of India in the Department of Industries and Labour issued a circular letter, dated the 3rd February 1932, addressed to all Local Governments of Governors' Provinces and the Chief Commissioners of Delhi and Ajmer-Merwara on the subject. The Government of India point out that the two main objections taken by the majority of the Select Committee to the proposal were (1) that it was uncertain that the Courts would accept the defences which the doctrines were designed to remove; and (2) that if the defences were inequitable they should be removed for all workmen and not only for specified classes. The latter objection, in their opinion, is met by the Commission's proposal. As regards the former, they state that the cases of the kind to which the proposed law would be applicable are naturally rare, but that in the only reported case which they have been able to trace (9 A L. J. 173) the doctrine of common employment was unhesitatingly applied. The Government of India incline to the opinion that the defences in question are inequitable and they are therefore not disposed to attach much weight to the fact that they are seldom likely to be invoked or to any remaining doubt that there may be as to the readiness of the Courts to apply them. The clarification of the law would in itself be, in their view, an advantage and they are disposed to favour legislation on the lines proposed by the Commission. The Government of India however requested that Local Governments should consider the possibility of limiting the scope of the law so as to exclude all workmen covered by the Workmen's Compensation Act; or, alternatively, to include only such of those workmen who are in receipt of more than Rs. 300 per month. The replies forwarded by the local Governments on the subject are under the consideration of the Government of India.

Amendment of the Land Acquisition Act, 1894.—A Bill further to amend the Land Acquisition Act, 1894, for certain purposes was introduced in the Legislative Assembly on the 12th September 1932. It was decided during the debate that the Bill should be circulated for the purpose of eliciting opinion thereon. The Government of India, accordingly, circulated a Bill for opinion to all Local Governments the Administrations under cover of Legislative Assembly Department letter, dated the 29th September 1932. It was based on the proposal of the Royal Commission on Indian Labour that the Land Acquisition Act be so amended as to enable land to be acquired when it is intended for the housing of labour either by companies or by other employers. The Royal Commission stated that in a number of instances brought to their notice land suitable for the development of housing schemes had been held at ransom by the owners, and that fantastic values were placed upon it as the result of the construction of factories and other industrial concerns in the neighbourhood. The provision of adequate housing for workmen is one of the urgent needs of industry and this Bill sought to give effect to that recommendation. The Bill was passed by the Indian Legislature in September 1933 under the title of the "Land Acquisition (Amendment) Act 1933."

Hours of Work of Dock Labourers.—There is at present no legal restriction on the hours of work of dock labour in India, and the Royal Commission who examined this question recommended that the normal daily hours prescribed by law should be fixed at nine and that overtime should be allowed up to a maximum of three additional hours on any one day, overtime being paid for at 33⅓ per cent. over ordinary rates. The Government of India have not been able to arrive at any definite conclusions regarding the practicability of controlling the hours of work in the present conditions of dock labour in India and feel a difficulty as to the form which the necessary legislation should take if the recommendations are finally accepted. They therefore addressed a circular letter in November 1932 to Local Governments who control Ports, major or minor, asking them to examine the question and to furnish the Government of India with their views. The Government of India have pointed out in their circular letter that if the necessary legislation takes the form of an amendment or an amplification of the Indian Ports Act, 1908, it would be straining the scope of the Act thereby, and that if it be framed as a separate Act there would be difficulties in the use of the term "employer" and in framing penal sections. They are disposed to the view that the most suitable method of giving statutory effect to the recommendations would be to amend the Indian Factories Act on the analogy of the Factory and Workshop Act, 1901, of the United

Kingdom, expanding the scope of the term "factory" so as to include docks, wharfs, quays, etc.

The circular letter of the Government of India also raises the question of minimum age for the employment of children in ports. As a result of the consideration given to the Washington Convention fixing the minimum age for admission of children to industrial employment, the Indian Legislature passed an Act in 1922 making it obligatory on Local Governments to frame rules under the Indian Ports Act of 1908 prohibiting the employment of children under the age of 12 years "upon the handling of goods at piers, jetties, landing places, wharves, quays, docks, warehouses and sheds." This enactment did not prevent children below the prescribed age being employed on the waterside of the ship as it was not clear whether the Act prohibited such employment or not. The matter was put beyond doubt by a subsequent amending Act which covered all employment in handling of goods "in any port subject to this Act." The Royal Commission considered that work of this kind is not suitable for children and a system of half time working is not practicable. They therefore recommended that the minimum age should be raised to 14 years. The Government of India are provisionally in agreement with this recommendation and also with another which suggests that the enforcement of these provisions should be entrusted to the factory inspection staff. Local Governments with major or minor Ports were asked to submit opinions after consulting the interests concerned. The majority of bodies consulted were not in favour of legislation regarding hours of work for dock labourers but favoured the raising of the minimum age of children employed within the limits of Ports. The whole matter is still under consideration of the Government of India in the Department of Commerce

Exemption of Salaries and Wages from Attachment.—The Royal Commission have made several recommendations in connexion with the indebtedness of industrial workers and have suggested various methods not only for reducing such indebtedness but also to protect the workers from unnecessary harassment in the matter of the repayment of their debts. Their first recommendation in this connexion refers to the recovery of debts through employers. The Commission state that under the Civil Procedure Code it is possible for a money-lender to secure the attachment of the wages of any one who is not a labourer or a domestic servant and they understand that the majority of workers in industry would not be regarded as labourers within the meaning of the Act. But in respect of certain classes of employers, particularly railway servants and the servants of local authorities, the law allows the money-lender to use the employer as his debt collector to a much larger extent. In such cases it is possible to attach half of the employee's salary or the amount by which that salary exceeds twenty rupees a month whichever is less. In some cases private employers are required to make similar recoveries although the legality of this is doubtful. Thus in the case of an employee in receipt of a regular salary, the money-lender can secure an order directing the railway administration to hand over, month by month, a large part of the employee's salary until the whole decree has been covered—a period which extends in some cases to years rather than months. The comparative security of railway service further increases the attraction of the railway servant for the money-lender, and all the evidence received by the Commission goes to show that the level of indebtedness in terms of wages is higher among railway servants than among industrial employees as a whole. The Commission, therefore, recommended that the salary and wages of every workmen receiving less than Rs. 300 a month be exempted entirely from the possibility of attachment. If, on examination, there are found to be objections to applying this exemption to every one employed on a salary less than Rs. 300 a month, the Commission consider that the definition of "workman" in the Workmen's Compensation Act might be suitable.

The Government of India in the Department of Industries and Labour issued a circular letter dated the 25th November 1932 to all Local Governments and Administrations inviting an expression of their views on the subject. The Government of India are of opinion that the Commission were disposed to favour the grant of such exemption to all persons receiving less than Rs. 300 a month, and they, therefore, consider that it is desirable to review the questions generally, and not solely with regard to industrial employees. Replies to their letter were asked to be submitted by the 1st April 1933 and the matter is under consideration by the Government of India.

Arrest and Imprisonment for Debt.—On page 232 of their Report, the Royal Commission recommend that, at least so far as industrial workers in receipt of wages or salary amounting to less than Rs. 100 per month are concerned, arrest and imprisonment for debt should be abolished except where the debtor has been proved to be both able and unwilling to pay. The form of the recommendation suggests that the Commission would have favoured a more general abolition for arrest and imprisonment for debt had their terms of reference been wider.

The present law on the subject is contained in Sections 51 and 55 to 59 of the Civil Procedure Code read with rules 37 to 40 in Order XXI. Under the substantive provisions of the Code a judgment-debtor other than a woman may be arrested and detained in prison in execution of a decree. But under rule 37 Order XXI, a court may, in lieu of issuing a warrant of arrest, issue a notice calling upon the judgment debtor to show cause why he should not be detained. Under rule 40 the Court may disallow his arrest and detention. There is thus no obligation on the Court at any stage to order either the arrest or the imprisonment of a debtor who is genuinely unable to pay; but when a judgment debtor is brought to court the burden of proving that he is unable to pay rests on him.

The important question for consideration is whether imprisonment for debt (where there is no contumacy) should be abolished generally. This question has been considered on various occasions in the past notably in the years 1881-

83. Opinion on the subject was deeply divided but the Government of India reached the conclusion that imprisonment for debt where no fraud was proved should disappear from the Indian Statute-book as soon as the conditions of the country permitted it. This consideration led to the passing of the Debtors Act, 1888 by virtue of which imprisonment for debt was abolished in the case of female debtors and in the case of other debtors the courts were granted a discretion which they did not previously enjoy to refuse to issue a warrant of arrest at the pleasure of a decree-holder and also to order the release of debtors who were genuinely unable to pay. No appreciable advance has been made since 1888 for the elimination of imprisonment of debt.

Following the recommendations of the Royal Commission the Government of India have given careful consideration to the various questions involved and they issued a comprehensive circular letter on the subject to various local governments for their opinions. Replies were asked for by the 30th November 1933 and the question whether arrest and imprisonment for debt where no contumacy is proved should be abolished either generally or for particular classes of persons is being considered by the Government of India.

Extension of Workmen's Compensation to Agriculture and industry.—In their recommendation No. 234, the Royal Commission suggested that the question of the inclusion of persons employed by the larger agricultural employers and of those employed in reserved forests deserves examination. The Government of India addressed a circular letter dated the 21st December 1931 to all Local Governments and Administrations inviting their views on the subject after consulting the interests concerned. Replies were requested by the 1st June 1932. In the light of the replies received, the Government of India arrived at the conclusion that no action is desirable at present on the question of the inclusion in the Workmen's Compensation Act of persons employed by the larger agricultural employers. The proposal for the inclusion of fresh employees is still under consideration.

Payment of Wages and Deductions.—The recommendations of the Royal Commission on Indian Labour in connexion with the disbursement of wages fall under three distinct catagories (1) Prompter payments; (2) a legal limitation of the wage period; and (3) the control of deductions from wages in respect of fines. The Government of India have implemented the Commissions' recommendations under the first and the third heads and they introduced the Payment of Wages Bill in the Legislative Assembly on the 1st February 1933. A motion for the circulation of the Bill was moved on the 14th February and was adopted. The Bill was then forwarded to all Local Governments and administrations for opinion after consuling the interests concerned. The Government of India hope to introduce a motion for the reference of the Bill to a Select Committee during the budget session of the Assembly early this year.

Section 3 of the Payment of wages Bill requires that wages in all factories controlled by the Indian Factories Act shall be paid before the expiry of the seventh day from the last day of the wage period in which the wages have been earned, unless the seventh day is a non-working day in which case wages should be paid on the first working day subsequent to such non-working day. Where the employment of any person is terminated by or on behalf of the employer, the wages due are to be paid before the expiry of the second day from the day on which his employment terminated. No provision is made in the Bill for the prompt payment of wages to those workers who terminate their employment themselves with or without giving notice, nor have the Government of India accepted the recommendation made by the Labour Commission that a week's notice on either side should be made legally binding both for the employers and the employed. Omission to provide for these matters raises a moot point as to whether the Common Law of Master and Servant with regard to contracts of employment is to stand or whether the new Bill is intended to set such law aside.

The deductions which an employer can make from the wages due to his workmen are defined in Section 4 of the Bill which states that notwithstanding the provisions of sub-section (2) of Section 47 of the Indian Railways Act, 1890, or of any other law for the time being in force, the wages due to an employed person shall be paid to him without deductions of any kind except those authorised by the Act. Deductions which are authorised by the Act may be of the following kinds: (1) deductions by way of fine; (2) deductions for damage or loss attributable to the worker's neglect or default; (3) deductions in respect of housing accommodation, tools or raw material supplied by the employer; and (4) deductions in respect of such other services supplied by the employer as the Local Government or the prescribed authority may be general or special order authorise. As this section stands framed, employers are presumably not permitted to effect deductions from wages for income-tax or for judgment-debts on the orders of courts. No deductions by way of fine are permitted in the case of wages due to children under fifteen years of age.

Deductions by way of fine are to be limited to half an anna in the rupee in any one month, and the recovery of a fine is not to be spread over over more than two consecutive wage periods. All deductions by way of fine are to be recorded in special registers maintained in such form as may be prescribed by the Local Governments, and the proceeds of all such deductions are to be expended only on such purposes as are beneficial to the persons employed in the factory or establishment as are approved by an authority to be prescribed.

Deductions for damage or loss attributable to a worker's neglect or default are permitted in addition to those which can be made by way of fine but such deduction is not to exceed the amount of the loss caused to the employer by the neglect or default of the employed person or where the damage or loss is to an article manufactured for sale, the wholesale price of that article. Section 6 of the Bill which covers these deductions would appear not only to permit a continuation of the practice to be foundin cerain centres of the textile industry in India

where employers hand over damaged material to the workers and effect deductions from their wages at the wholesale or the cost price of the finished article, but also to entitle an employer to both kept the damaged article and to deduct its value from the wages of the workman concerned. Deductions in respect of housing accomodation, tools, raw material or other services rendered by the employer cannot be made unless these services have been voluntarily accepted by the workmen.

The Act in the first instance is intended to cover all factory workers and railway employees but the latter are to be exempted from the operation of that part of the Bill which deals with prompter payment of wages. Local Governments, however, have power to extend the Act to any class of industrial undertakings. The administration of the Act is to be in the hands of the Factory Department for factories and the Supervisors of Railway Labour for railway employees. Regarding procedure and penalties, Local Governments are authorised to appoint Magistrates or other persons as primary courts for the hearing of complaints regarding claims. These primary courts can award compensation up to ten times the amount of the claim. Penal proceedings against an employer can only be launched with the sanction of the prescribed authority and only if the claim in the past instance has been successful. The penalties for offences under the Act are fines upto Rs. 500 and for offences under the Rules to be framed under the Act fines upto Rs. 100. No contracting out of the Act is to be permitted and appeals are not to be allowed.

With regard to the fixation of shorter wage periods of a week or a fortnight, the Government of India did not feel that they were on the same ground as they were with regard to prompter payments and the control of deductions and they have therefore made no provision in the Payment of Wages Bill to cover this matter. Instead, they addressed a circular letter to all Local Governments asking for opinions on the subject of the advisability of legislating for shorter wage periods. Replies to this circular letter were required to be submitted by the 30th October 1933. It is understood that where the monthly wage period exists the workers themselves are against the introduction of a shorter period as they are afraid that unless there is a universal change in accounting from monthly to fortnightly or weekly the shorter wage priod will not be of any material benefit; and that on the other hand weekly or fortnightly rents might be higher in total incidence than monthly rents and that in large towns like Bombay the thriftier workers will squander away their earnings more rapidly with quicker payments. The replies submitted by the various Local Governments to the Government of India are under consideration by that Government.

The modifications and amendments suggested by the Royal Commission on Indian Labour with regard to existing labour legislation will be dealt with in the respective sections dealing with the separate subjects.

INDUSTRIAL WORKERS IN INDIA.

In 1922 India obtained recognition by the League of Nations as one of the eight chief Industrial States in the world. The grounds on which this claim was based are stated in the Memorandum prepared by the India Officer which gave the following figures to illustrate the industrial importance of the country:—

> "28,000,000 agricultural workers (excluding peasant proprietors); 141,000 maritime workers, lascars, etc., a figure second only to that for the United Kingdom; over 20,000,000 workers in industries, including cottage industries, mines and transport; railway mileage in excess of that in every country except the United States."

The figures for the 1931 Population Census for India show that the number of Agricultural Labourers has increased to nearly 31½ million. This figure excludes cultivating owners (27 million), Cultivating Tenants (34 million) Landlords (3¼ million) and others (6¼ million). The number of earners plus working dependants in Industry, Trade, Transport and Mines amounts to twenty six millions. Nearly eleven Million persons are employed as domestic servants

The latest figures for the numbers employed in factories are those available in the All-India Report for Factories for 1932, which are reproduced in Summary Form in the tables given below:—

Growth of Factories.

Year.	Number of Factories.	Average Daily Number of Persons Employed.
1922	5,144	1,361,002
1923	5,985	1,409,173
1924	6,406	1,455,592
1925	6,926	1,494,958
1926	7,251	1,518,391
1927	7,515	1,533,382
1928	7,803	1,520,315
1929	8,129	1,553,169
1930	8,148	1,528,302
1931	8,143	1,438,487
1932	8,241	1,419,711

Age and Sex Distribution of Factory Labour.

Year.	Men.	Women.	Children.	Total.
1922	1,086,457	206,887	67,658	1,361,002
1923	1,113,508	221,045	74,620	1,409,173
1924	1,147,729	235,332	72,531	1,455,592
1925	1,178,719	247,514	68,725	1,494,958
1926	1,208,628	249,669	60,094	1,518,391
1927	1,222,662	253,158	57,562	1,533,382
1928	1,216,471	252,933	50,911	1,520,315
1929	1,249,165	257,161	46,843	1,533,169
1930	1,225,425	254,905	37,972	1,528,302
1931	1,373,372	231,183	26,932	1,431,487
1932	1,172,296	225,632	21,783	1,419,711

Statistics for 1932. (1) *By Provinces.*

Miscellaneous	84	8	8,735	172
Total	3,802	4,439	1,120,510	299,201

In 1931 for the first time since the publication of the above statistics the figures for the number of factories and the persons employed are classified according to perennial and seasonal factories. In 1932, the total number of perennial factories amounted to 3,802 with 1,120,510 workers and the number of seasonal factories amounted to 4,439 with 299,201 workers.

MIGRATION.

The principal occupation of India being agriculture there are naturally no large movements of population from one part to another. Where the migration figures are high it is generally in the small units. Thus Delhi has 41 per cent. of immigrants and Ajmere-Merwara 19, while in Ajmere City itself there are as many immigrants as there are natives.

Immigration influences the population of India very little. The 1931 census shows only 730,562 persons as born outside the country as against 603, 526 in 1921. As against this must be set off on account of emigration about one million persons who are estimated to have migrated during the decade 1921-1931.

In the case of India migration is however of more importance, varying in British India from 1,244,249 (net) immigrants into Assam to 15,536 (net) immigrants into the North West Frontier Province. In Assam immigration is the highest among all the provinces in India. On the other hand immigration from Bihar and Orissa is the greatest. In the past the tendency was for migration to take place from the Native States to British India but during the decade 1921-1931 this position has been revised and the trend of migration has been on the whole from British India to the States, where the density is generally lower. Among the States, Bikaner provides a most striking example of immigration from British India. In 1931, the number of immigrants in Bikaner was 161,303 or 58 per cent. of its increase in population. Of the immigrants about 54 per cent. were from British India.

Internal migration is of several periods (1) casual migration, involving minor movements between neighbouring villages; (2) *Temporary* migration which is mainly due to demand for labour on canals and public buildings and to pilgrimages and fairs; (3) *Periodic* migration which is caused by recurring seasonal demands; (4) *Semi-permanent* migration is that of persons who maintain constant contact with their homes, although earning their livelihood elsewhere. Such persons often leave their families at their native places during the period of migration where they themselves ultimately return from the place of migration; and (5) *Permanent* migration is that in which the migrants leaves one place for another for good. In addition mention may be made here of another form of migration which may be called *daily*.

The best example of casual migration is furnished by the Punjab and Delhi. Periodic migration is particularly heavy at harvest time and also at the changes of season when traders, herdsmen, graziers and labourers from Kabul, Baluchistan, Kashmir and the hills move down to the plains for the winter months. Temporary migration continues throughout the year.

Within the Provinces.—It is neither necessary nor feasible to deal with the various streams of migration between district and district of the same province or within a district. These movements vary according to times and seasons, but it may be useful to show the extent to which and the source from which some of the more important industrial centres draw their labour force.

Assam's immigration is generally speaking of the permanent type. There have however been some changes since 1921 in respect of the sources of Assam's labour supply. Madras is the only province showing any increase in emigration to Assam while there has been a great decrease in emigration to Assam from Bihar and Orissa. There has been a steady increase in labour obtained locally, indicating greater freedom and fluidity. On the other hand the whole complexion of the population of Assam is being altered by the permanent immigrants from Mymensingh in Bengal. The third class of immigrant in Assam is the *Nehali* but their numbers are decreasing.

Bihar and Orissa is typical of the rest of India in its immobility of labour, 959 persons out of every 1000 being born therein. It has, however, a higher emigration figure than any other province. The net loss to the province by emigration is 17,58,000. As in the case of Assam here also a change is however taking place and the loss by emigration is considerably less than in the previous decade. Emigrants have decreased by 1,97,000 and immigrants have increased by 79,000.

In the case of the United Provinces emigration has increased by a net balance of 1,58,000.

Madras is the third highest province so far as emigration is concerned but its emigration is mostly overseas. The 1931 figures show a very marked increase in emigration to Malaya.

In the Central Provinces there is a growth in 'Daily Migration.'

As between British and State Territory migration in 1921 was against the States and in favour of British India but this position was reversed in 1931. Whereas in 1921 the net loss to the States was 1,24,000; in 1931 the States gained 4,90,935 from British India.

As between British India and the French and Portuguese settlements the balance of migration is greatly in favour of British India.

The two most important countries for Indian emigration are Malaya and Ceylon. Recruiting of Indian labour to Malaya was however stopped in 1930. None the less in 1931 over 6 lakhs Indians were found in that country. In the case of Ceylon emigration of Indian labours continued in spite of the stump in the tea and rubber industries.

OCCUPATIONS OF THE PEOPLE.

At the 1931 Census several changes were made as regards the collection and presentation of occupational statistics. The principal amongst these was that a complete compilation of figures of subsidiary occupations was attempted for the first time. The Census however shows that instead of the proportion of non-working dependants to workers having been reduced by the new distinction between earners and working dependants, the proportion of non-working dependants has actually increased. Thus, while in 1921 out of every 100 persons 46 were workers and 54 dependants, in 1931, 44 were workers and 56 dependants. This increasing dependence is attributed partly to the difficulty of finding employment.

The proportion of earners to working dependants is about nine to two; *i.e.*, of the total working population 81.4 per cent. is in direct receipt of wages or other sources of income and the other 18.6 per cent. are helpers of the wage-earners.

The following table shows the distribution of occupations per 10,000 livelihoods according to classes and sub-classes:—

Class and sub-class.	Means of subsistence.	Total.	Principal Occupation.		Dependent Occupation.		Subsidiary Occupation.	
			Males.	Females.	Males.	Females.	Males.	Females.
A, B, C & D	*All Occupations*	10,000	5,772	1,649	454	1,242	673	211
A	Production of raw materials	6,584	4,081	1,103	344	610	375	71
I	Exploitation of animals and vegetation ..	6,560	4,066	1,099	343	610	372	70
II	Exploitation of minerals	24	15	4	1	..	3	1
B	Preparation and supply of material substances.	1,756	1,054	305	54	104	202	37
III	Industry	1,038	610	193	30	76	108	21
IV	Transport	165	118	10	7	4	24	2
V	Trade	553	326	102	17	24	70	14
C	Public administration and liberal arts ..	286	210	18	14	4	38	2
VI	Public force	56	49	..	1	..	6	..
VII	Public administration ..	69	55	2	2	1	9	..
VIII	Professions and liberal arts	161	106	16	11	3	23	2
D	Miscellaneous	1,374	427	223	42	523	58	102
IX	Persons living on their income	16	9	2	1	..	4	..
X	Domestic service ..	751	107	53	17	469	14	91
XI	Insufficiently described occupations	503	260	142	12	46	34	9
XII	Unproductive	104	51	26	12	8	6	1

The following table compares the distribution of occupations in 1931 with that disclosed by the 1921 census:—

Class or sub-class.	Means of subsistence.	Distribution of 10,000 workers in	
		1921.	1932.
A	Production of raw materials	7,241	6,734
I	Exploitation of animals and vegetation	7,217	6,711
II	Exploitation of minerals	24	23
B	Preparation and supply of material substances ..	1,759	1,665
III	Industry	1,075	997
IV	Transport	134	153
V	Trade	550	515
C	Public administration and liberal arts	283	269
VI	Public force	71	55
VII	Public administration	69	64
VIII	Professions and liberal arts	143	150
D	Miscellaneous	717	1,332
IX	Persons living on their income	13	14
X	Domestic service	173	708
XI	Insufficiently described occupations	406	505
X	Unproductive	125	105

Some of the differences revealed by the above table between 1921 and 1931 are no doubt due to changes in classification. But it is possible that the greater prevalence of unemployment in 1931 as compared to 1921 has contributed to the diversion of returns from definite to indefinite categories. A close examination of the detailed figures in the report however tends to show that there is a general tendency towards increase in what may be described as modernized occupations.

The following table classifies occupations by sex:—

Among careers in principal occupations the number of females per 1,000 careers is 222. Among working dependants on the other hand females number 733 to 267 males, while if principal and dependent occupations are taken together, the proportion of actual female workers to male is 317 to 683 in every 1,000.

During the 1931 census special returns from factories were not called for. It is seen, however, that the number of workers employed in organized factories is extraordinarily low for a population of the size of that of India, being only 15,53,169. The All-India figure for persons occupied in plantations, mines, industry and transport in 1921 was 24,239,555 while in 1931 it was 26,187,689.

Pasture and agriculture occupies 71 per cent. of the actual workers of India; or, if those who follow it only as a subsidiary occupation are excluded it accounts for 67 per cent. Industry occupies 10 per-cent. of India's workers as compared to 11 per cent. in 1921. The one industrial order in which a marked increase has taken place is production and transmission of physical force. Trade shows a decrease and so do 'professions and public force.' There has however been an increase in the category 'private income and domestic service.'

The 1931 census report contains an interesting analysis of castes by occupation. It shows that in the majority of cases about half the males retain their traditional occupation. About a quarter or less of the half of those that have abandoned their hereditary occupations as their principal means of subsistence retain them as subsidiary.

RECRUITMENT OF LABOUR.

The methods adopted for the recruitment of labour in India have received general condemnation even from employers and the Whitley Commission has much to say on the subject.

Recruitment, except in the case of special apprentices and higher paid workers employed on railways, is effected either through Sardars (Recruiters) or Contractors, or direct at the mill or factory gates. The difficulties in connexion with recruitment are due (1) to the want of a stable labour force at any particular town or centre, (2) to the general illiteracy of the Indian labourer, and (3) to the inherent attachment of the worker taking up industrial employment to his village life and home.

The contractor is sent out to overcome the innate conservatism of the Indian peasant. He is helped in his work by the poverty and indebtedness of the peasant and also by occasional bad harvests, but in addition he not infrequently indulges in fraud and misrepresentation by painting a rosy picture of the future that awaits the peasant in a town with its crowded bazaars and other amusements which are absent in the village. The essence of the system is the payment of an advance to the prospective labourer in order to enable him to free himself from his pecuniary difficulties. The contractor retains some form of control over his recruits and takes good care to recover the amount of the advance together with interest, which is generally calculated at an exorbitant rate. Generally, the employers do not deal directly with the labourers recruited by a contractor. The latter is paid a lump-sum from which he pays his men and retains a portion for himself. In the Central Provinces, however, it is reported that labour is actually purchased from private contractors at so much per head. The system of recruitment by contractors is most in use in Burma owing to the scarcity of labour in that province and the necessity of recruitment from distant places.

The method of recruitment through Sardars is also dependent on the payment of advances, which however are made at the cost of the employer. The Sardar is an operative already at work in the mill or plantation and is sent out to recruit labour from among his relations, acquaintances or neighbours. He is drawn therefore from the same class as the recruits themselves and can therefore be relied on to deal more fairly with them. Another advantage of this system of recruitment is that the men recruited are insured against unemployment and find work waiting for them at their destination. On the other hand, it does not infrequently happen especially in the Tea Gardens in Assam that the Sardar remits persons who are lured away from their homes by prospects of a bright future and who, on arrival, find that conditions of work and wages are not so bright as they imagined. It is, however, only in plantations that this form of recruitment has been used to any appreciable extent.

The recruitment of labour at the mill-gate or at the surface of mines is the form of recruitment which is gradually gaining in importance over the other two methods. The news of the very much higher rates of wages paid in towns (which to the villager sounds fabulous as he has no idea of the higher cost of living) spreads throughout the countryside and draws large crowds of would-be workers. They are to be found at convenient gathering places on the thoroughfares waiting to be picked up for employment.

The older hands also return from their village with groups of friends, relations and neighbours who come in the hope of finding employment in the mills. But the ignorance, simplicity and poverty of the Indian peasant render his exploitation an easy matter. The employer does not recruit himself the men required for his establishment but holds the overseer, jobber or mukadam responsible for the adequate supply of labour in the department. The latter takes the place of the contractor and exacts bribes from the new recruits. He also acts as a money-lender and thereby reaps a double harvest from the needy labourer. It would appear therefore that education and organisation are the only means by which Indian workers can escape from the clutches of intermediaries who like harpies are ever ready to prey on them.

In the coalfields in Bihar and Orissa unskilled labour is recruited by means of Sardars. The Sardar visits villages and brings the labour with him, and the labour brought by him forms his gang. He has to pay the labour *buckseesh*, *khoraki* and travelling expenses, and for this purpose he frequently receives advances either from the contractor or from the Company concerned. At the Bhowra colliery advances varying from Rs. 3 to Rs. 10 are paid to the recruits in addition to their travelling allowances and food. Such advances are seldom recovered and never if the gang maintains good attendance at work. The Sardar obtains remuneration for his services in various ways. Sometimes he is paid a commission and a salary, but generally he is paid a certain amount on each ton of coal raised by miners working in his gang. Independent recruiters are paid at 9 pies per tub raised. In the Central Provinces the recruiters or mukadams as they are called receive 3 pies per head per week from the individual labourers whom they recruit and wages from the employers.

The Tata Iron and Steel Company at Jamshedpur maintain an Employment Bureau where skilled and unskilled workers are registered and employed. Applicants for work assemble in a yard and daily requirements are selected by the officer in charge. No outside recruitment is done in the literal sense of the word, but in the event of special qualifications being required and no applicants being available, the post is advertised in a few leading newspapers.

The methods adopted by different Indian railways for the recruitment of unskilled labour are generally the same as those which obtain in other industries. In the case of workshopmen, a trade test is generally given and in every case a medical examination has to be gone through. Special apprentices for the higher grades are engaged by all Railways. The terms and conditions attached to apprenticeship in most cases are similar.

The Royal Commission on Indian Labour has made several recommendations with regard to the employment of the factory worker for the guidance of employees in general. We reproduce below some of the more important of these recommendations:—

(*a*) Jobbers should be excluded from the engagement and dismissal of labour.

(*b*) Whenever the scale of the factory permits it, a Labour Officer should be appointed directly under the General Manager. His main functions should be in regard to engagements, dismissals and discharge.

(*c*) Where it is not possible to appoint a whole time Labour Officer, the Manager or some responsible officer should retain complete control of engagements and dismissals.

(*d*) Employers' Associations in co-operation with trade unions should adopt a common policy to stamp out bribery.

(*e*) Where women are engaged in substantial numbers, at least one educated woman should be appointed in charge of their welfare and supervision throughout the factory.

(*f*) Workers should be encouraged to apply for definite periods of leave and should go with a promise that on their return at the proper time they will be able to resume their old work. Whenever possible an allowance should be given to the worker who goes on leave after approved service.

Messrs. E. D. Sassoon & Co., who control eleven cotton textile mills in Bombay and the Burma-Shell Corporation, have appointed Special Labour Welfare Officers to recruit labourers and look after their welfare. The acute trade depression has, however, prevented a more general adoption of this system but several firms are making noteworthy attempts to improve existing methods of recruitment in factories.

Recruitment for Assam: The Assam Labour and Emigration Act, 1901, was designed mainly to regulate the recruitment and engagement of indentured labour. It had not been possible for some years for any worker in Assam to be subjected to a penal contract and, in consequence of this and other changes, the law became entirely unsuited to present conditions. Attempts were made by amending Acts in 1908, 1915 and 1927 to adapt the Act to meet altering conditions. Substantial parts of the original Act were repealed and large numbers of rules framed in an endeavour to use the Act to regulate the recruitment of emigrants who are subject to no indenture. These changes proved inadequate and they made the law exremely confused. Large parts of the surviving provisions of the Act became completely ineffective and those provisions which were operative were open to weighty criticisms.

During the years 1926-1928 the Government of India carried on consultations with the Local Governments in regard to amending the law governing recruitment of labour for the Assam tea gardens. In the meanwhile, the Royal Commission on Labour had been appointed and they collected a large amount of evidence on the subject. The Commission recommended the replacement of the existing legislation by a new enactment and suggested that the power conferred by section 3 of the Assam Labour and Emigration Act of 1901 to prohibit recruitment for Assam in particular localities should be withdrawn immediately. They recommended that the new Act should provide (*a*) that no assisted emigrants from controlled areas should

be forwarded to the Assam tea gardens except through a depot maintained either by the Tea Industry or by suitable groups of employers and approved by the Local Government or by such authority as it may appoint; (*b*) that the Government of India should have power to frame rules regarding transit arrangements, in particular for the laying down of certain prescribed routes to Assam and for the maintenance of depots at necessary intervals; and (*c*) that in the event of the recrudescence of abuses, Government should have power to reintroduce in any area the prohibition of recruitment otherwise than by means of licensed *garden-sirdars* and licensed recruiters. Another recommendation of the Commission was that the Assam Labour Board should be abolished and in its place the Government of India should appoint a Protector of Immigrants in Assam to look after the interests of emigrants from other Provinces. With regard to the question of repatriation, the Commission recommended that every future assisted emigrant to an Assam tea garden should have the right after the first three years to be repatriated at his employer's expense and that the Protector should be empowered to repatriate a garden worker at the expense of the employer within one year of his arrival if it is found necessary on the ground of health, unsuitability of the work to his personal capacity or for other sufficient reason.

The Government of India framed a Bill called the Tea Districts Emgirant Labour Bill, based mainly on the recommendations of the Commission but with variations in respect of minor details. The Bill was introduced in the Legislative Assembly on the 11th March 1932 and was circulated to all Local Governments for opinion. It was then referred to a select Committee who presented their Report to the Assembly on the 5th September 1932. The Bill as amended by the select Committee was passed by the Indian Legislature in September 1932 and received the assent of the Governor-General on the 8th October 1932. The new Act came into operation from the 1st April 1933.

The Tea Districts Emigrant Labour Act, 1932, extends to the whole of British India including the Southal Parganas and repeals the Assam Labour and Emigration Act, 1901, and the subsequent amending Acts. The first object of the Act is to make it possible, on the one hand, to exercise all the control over the recruitment and forwarding of assisted emigrants to the Assam Tea Gardens as may be justified and required by the interests of emigrants and potential emigrants; and, on the other hand, to ensure that no restrictions are imposed which are not justified. Local Governments are empowered, subject to the control of the Government of India, to impose control over the forwarding of assisted emigrants (Chapter III) or over both their recruitment and their forwarding as occasion may dictate (Chapters III and IV). Employers will be prevented from recruiting otherwise than by means of certificated *garden sirdars* or licensed recruiters. It is made unlawful to assist persons under 16 to emigrate unless they are accompanied by their parents or guardians. With regard to the question of repatriation (Chapter II), every emigrant labourer, on the expiry of a period of three years from the date of his entry into Assam, will have the right of repatriation as against the employer employing him at such expiry (Section 7); and any emigrant labourer who before the expiry of three years from his entry into Assam is dismissed by his employer otherwise than for wilful and serious misconduct will also have the right of repatriation (Section 8 (1)). It will also be possible to claim repatriation within three years in the event of the emigrant failing in health, not being provided with suitable work or having his wages unjustly withheld or for any other sufficient cause (Section 10 (1)). Further, repatriation can be ordered at any time by a criminal court in the case of a labourer who has been assaulted by the employer or by his agent (Section 11). Where an employer fails to make all the necessary arrangements for the repatriation of a labourer working under him within fifteen days from the date on which a right of repatriation arises to an emigrant labourer the Controller may direct the employer concerned to despatch such labourer and his family or to pay him such compensation as may be prescribed within such period as the Controller may fix (Sections 13 and 15).

Section 3 of the Act makes provision for the appointment of a Controller of Emigrants with some staff and possibly one or more Deputy Controllers for supervising the general administration of the system which the Act seeks to establish; and the charges are to be met from an annual cess called the Emigrant Labour cess which shall be levied at such rate not exceeding Rs. 9 per each emigrant as the Governor-General in Council may, by a notification in the "Gazette of India," determine for each year of levy.

The provisions of the Act are intended to apply only to emigration for work on tea plantations in the eight specified districts in Assam in the first instance; but power is retained to extend its application to other industries and to other districts in Assam if necessary (Section 38).

Latest Statistics.—The Annual Report on the working of the Assam Labour Board during the year ending the 30th June 1932 is the latest available. The Report shows that the total number of persons recruited during the year was 49,857 as against 50,555 in the previous year. The average of advances to garden sirdars for each adult recruit fell in 25 and rose in 3 agencies as compared with the preceding year. No cases occurred in which the local Agents were found to be extravagant or indiscreet in the matter of giving advances to sirdars. The total number of garden sirdars prosecuted for offences in connexion with recruitment was 32 as compared with 69 in the previous year. The rate of cess on garden sirdars and emigrants was eight annas per head during 1931-32. The actual receipts from the cess amounted to Rs. 26,721-8-0.

Reforms in the Bombay Cotton Mill Industry.—In a circular letter dated the 8th January 1930 the Bombay Millowners' Association instructed all mills affiliated to the Association to introduce, wherever possible, a policy of direct recruitment of labour instead

of the existing practice of recruitment through jobbers. The introduction of a system for providing Discharge Certificates to operatives leaving service was also recommended. The certificates are to contain a record of the service of the operative concerned and in all cases of recruitment, the men presenting themselves for employment will be asked to produce their Discharge Certificates. Notices are to be posted at all mills stating (*a*) that all persons will be engaged by the Manager or by the head of the department concerned, and (*b*) that any heads of departments, assistants or jobbers accepting bribes from the workpeople will be instantly dismissed.

Several groups of mills are considering the possibility of employing labour officers who will be responsible for the direct recruitment of labour and for welfare work generally. The action taken by Messrs. E. D. Sassoon & Co. in this connexion has already been referred to above.

ABSENTEEISM AND LABOUR TURNOVER.

Though there is meagre statistical information available on this subject, it may be stated with a fair amount of accuracy that the Indian worker is more habituated to absent himself from work than his prototype in other countries. He has yet to get himself thoroughly adapted to the industrial environment in which he finds himself. The reasons for his absence are not always connected with his love of rest but in many cases absence is due to causes beyond his control such as sickness, domestic difficulties, etc. The effects which poor and indifferent housing have on his work have been dealt with in the Section on Industrial Housing.

The Factory Labour Commission of 1907 made an inquiry into the number of absent workers and came to the conclusion that the average worker took 2 days off every month and a further holiday of from 3 to 7 weeks every year. In addition, he receives the weekly holiday and from 4 to 10 Indian holidays during the year. The question of absenteeism received the attention of the Indian Tariff Board (Cotton Textile Industry) and it was urged in evidence before them that the efficiency of labour in Bombay was greatly reduced by the high percentage of absenteeism among the operatives. The Board came to the conclusion that Ahmedabad had a great advantage over Bombay in the matter of absenteeism, both in respect of a low rate throughout the year and also of the absence of the wide seasonal variations which were apparent in other centres of the textile industry. They therefore recommended that in order to minimise the effect of absenteeism there should be a general adoption of a system already in force in a few mills in Bombay under which a certain number of spare hands are entertained in each department, except the weaving. The Board said "The percentage of extra men in each department is not necessarily the same, but we were given to understand that spread over the whole of the mill, it usually worked out at about 10 per cent."

Messrs. E. D. Sassoon & Co. started last year in some of the cotton textile mills under their agency in Bombay, a system of decasualisation of their *badli* (or substitute) labour. By this system if absenteeism is estimated at 10 per cent. on a total labour force of 1,000 for any one unit substitute passes are issued to 100 workers and substitute work is limited to these ticket holders only. The system is one which deserves to be more generally adopted.

The Labour Office of the Government of Bombay publishes in the *Labour Gazette* every month statistics of absenteeism in the textile mills at the important centres of the cotton industry in the Bombay Presidency and in Engineering workshops of the Bombay and Karachi Port Trusts. If figures of absenteeism for each day during any month are examined it is found that they are higher on days immediately following pay day. The following table gives the figures for percentage absenteeism month by month for the year 1933 with averages for the whole year for cotton textile mills in three important centres of the Bombay Presidency.

PERCENTAGE ABSENTEEISM IN THE TEXTILE INDUSTRY.

Month.	Bombay.	Ahmedabad.	Sholapur.
January	9.60	3.55	13.73
February	10.31	3.54	14.69
March	10.26	3.59	14.49
April	10.41	3.93	15.00
May	9.57	3.92	14.62
June	9.16	3.55	15.43
July	8.93	3.28	12.61
August	8.85	3.55	13.09
September	8.11	3.69	12.76
October	9.21	3.62	14.03
November	7.89	3.73	13.93
December	8.40	3.36	17.07
Average for year	9.23	3.61	14.29

In the Electrical and Mechanical Departments of Railways, absenteeism generally amounts to 10 to 11 per cent. As in cotton mills, absenteeism is greater immediately after pay day. In Railways in Burma, absenteeism is lower and roughly amounts to 2·50 per cent.

Labour Turnover.—A charge is very often levelled against the Indian worker that owing to his migratory character, he changes his place of employment very frequently and that this results in a high rate of labour turnover. There is, however, very little information available regarding the average period of service or the rates of turnover at important industrial centres in India. In the case of the Empress Mills at Nagpur, it has been estimated that since 1908, the average period of continuous service of the employees amounted to 7·89 years. In another cotton mill in the Central Provinces the average duration of employment worked out at about 40 months while in the case of other factories it roughly amounted to about 30 months. Out of a total number of 3,700 workers engaged in the Pench Valley Coal Mines it was found that 1,550 workers were in employment for less than a year, 650 from 1 to 2 years, 700 from 2 to 3 years and 800 workers had more than 3 years' continuous service to their credit. In the manganese mines in the Central Provinces the average duration of employment comes to about 9 to 10 months for the whole of the labour force in any one year. One to two years is on an average the period of employment of workers in the Tata Iron and Steel Works. The total labour turnover during normal working for three years in the same Works amounted to 36·6 per cent., 31·3 per cent. and 24·1 per cent. respectively. In the Indian Cable and Construction Company in Bihar and Orissa, however, skilled labour has remained practically unchanged during the last five years but the unskilled workers recruited from the aboriginal class had changed to the extent of about 30 per cent. annually. In one of the mills at Cawnpore the average period of continuous service amounted to 8·87 years.

The Labour Office of the Government of Bombay conducted a special enquiry into the length of service of cotton mill workers in Bombay City in 1927-28. A sample of 1 in 10 tenements was decided upon and the information was collected on suitable schedules by the Lady Investigators of that Office from the inmates of such tenements who were reported to be cotton mill workers. Only the predominant working class localities were visited for the purposes of the enquiry and the total number of schedules accepted for final tabulation was 1,348.

Of the 1,348 workers, 988 or 73·29 per cent. were men and 360 or 26·71 per cent. were women.

Nearly 21 per cent. of the operatives began work in the mills before the 15th year, 38 per cent. between the 15th and the 20th year, 32 per cent. between the 20th and the 30th year and the remaining 9 per cent. joined the first mill after they had attained the age of 30.

Sixty-three per cent. of the workers were born in the Konkan and 27 per cent. in the Deccan while the rest came from different parts of the country. It is very significant that not a single worker gave his place of origin as Bombay City.

About 48 per cent. of the workers covered by the sample continued in the employment of the same mill without change, 34 per cent. served in two or three mills and 18 per cent. had served in 4 or more mills. The highest number of mills served by an individual was 15. The cause of leaving the mills was "for going to native place" in 26 per cent. cases, "low wages and for bettering prospects" in 21 per cent. cases, "absentee due to illness" in 14 per cent. cases and "retrenchment" in 10 per cent. cases. Other causes for leaving mills were unsuitable conditions of work, dismissal, strike, resignation, etc.

The approximate period of total service (including the period of non-attendance) was reported to be less than 5 years in 37·54 per cent. cases, 5 to 10 years in 23·37 per cent. cases, 10 to 15 years in 15·88 per cent. cases, 15 to 20 years in 9·13 per cent. cases and more than 20 years in 14·08 per cent. cases. The percentages of workers who had not changed mills was 67 in the case of operatives with less than 5 years' service and 42 for workers with 5 to 10 years' service. In the other service groups, the percentage of operatives working in the same mill varied between 25 and 45.

The actual active service was reported to be less than 5 years in 46·51 per cent. cases, 5 to 10 years in 24·26 per cent. cases, 10 to 15 years in 13·95 per cent. cases and 15 to 20 years in 7·20 per cent. cases. In the remaining 8·08 per cent. cases the actual service was more than 20 years.

A large number of workers in the age groups 15–20 and 20–25 had served for a period of less than 5 years while the most common period of service in the age group 25-30 was between 5 and 10 years. In the age group 30-35 about 30 per cent. of the workers had served for less than 5 years and 19 per cent. for a period of 5 to 10 years. Among workers of 35 to 40 years of age, the number of those falling in each of the first five service groups was between 16 and 20 per cent.

LABOUR IN FACTORIES.

The conditions of factory labour until 1913 were regulated by the Indian Factories Act of 1881, as amended in 1891. Under the chief provisions of the amended Act Local Governments were empowered to appoint Inspectors of Factories and Certifying Surgeons to testify as to the age of children. A mid-day stoppage of work was prescribed in all factories, except those worked on an approved system of shifts, and Sunday labour was prohibited subject to certain exceptions. The hours of employment for women were limited to 11, with intervals of rest amounting to at least an hour and a half; their employment between 8 p.m. and 5 a.m. was prohibited, as a general rule, except in factories worked by shifts. The hours of work for children (defined as persons below the age of 14) were limited to 7 and their employment at night-time was forbidden; children below the age of 9 were not to be employed. Provision was made for fencing of machinery and for the promulgation of rules as to water supply, ventilation, the prevention of overcrowding, etc.

The next Factory Act to be passed into law was Act XII of 1911. This Act extended the definition of "factory" so as to include seasonal factories working for less than 4 months in the year; shortened the hours within which children, and, as a general rule, women might be employed and further restricted the employment of women by night by allowing it only in the case of cotton ginning and pressing factories. It also contained a number of new provisions for securing the health and safety of the operatives, making inspection more effective and securing generally the better administration of the Act. The most important feature of the Act, however, was the introduction of a number of special provisions applicable only to textile factories. The report of the Factory Commission showed that excessive hours were not worked except in textile factories. The Act, for the first time, applied a statutory restriction to the hours of employment of adult males by laying down that, subject to certain exceptions, "no person shall be employed in any textile factory for more than 12 hours in any one day." It also provided in the case of textile factories that no child may be employed for more than six hours in any one day and that (subject to certain exceptions, which were factories worked in accordance with an approved system of shifts) no women may be employed before 5-30 a.m. or after 7 p.m. (the new limits laid down generally for the employment of women and children).

The Acts now in force.—The ratification by India of the Conventions adopted by the International Labour Conference held in Washington in 1919 necessitated radical revision of the Indian Factories Act of 1911. This was undertaken during 1921 and the Indian Factories Amendment Act, 1922, introduced a series of important reforms including the adoption of a 60-hours' week, the raising of the minimum age of children from 9 to 12, the prohibition of night work for women, the extension of the Act to a large number of small factories, drastic restriction of the exempting provisions, etc. The principal object of the amending Act of 1923 was the removal of a difficulty which had arisen in connection with the law relating to the weekly holiday. The experience gained during the three years which immediately followed the revision of the Act in 1922 indicated that the amending Act had worked smoothly and that the main principles followed in 1922 commanded general acceptance. It was not considered necessary, therefore, to modify any of the main principles of the Act; but several administrative difficulties had arisen in connection with some sections of the Act—one such difficulty relating to Section 21 which provided for intervals. Local Governments were asked in June 1925 to consider a possible solution of the difficulty and to bring to the notice of the Government of India any difficulties which might have arisen in connection with other provisions. On receipt of their replies, a conference of Chief Inspectors of Factories was convened. The conference recommended a number of alterations designed by allowing greater elasticity in some directions and by increasing control in others to make for smoother working. The Factories Amendment Act of 1926 was, therefore, passed on the recommendations of that conference and on the opinions received from the Local Governments. The more important alterations effected included the widening of the definition of "factories" so as to bring within the control of the Act such establishments as Electrical Generating Stations, water works, etc., the prevention of the issue of age certificates by Certifying Surgeons to children who are not fit for employment, the prevention of cleaning machinery in motion, even by men, in cases where Local Governments were of opinion that the work is attended by danger to the operatives; a clearer definition of the periods prescribed for intervals of rest; and, while still preventing the employment of children in two factories on the same day, the permitting of women to work in two factories on the same day provided that the limits for hours of work were not exceeded.

Hours of Work.—The Indian Factories Act prescribes a daily as well as a weekly limit to the hours of work in factories and provides for rest intervals and for a weekly holiday. Section 28 of the Act provides that no person shall be employed in any factory for more than 11 hours in any one day; and Section 27 provides that no person shall be employed in a factory for more than 60 hours in any one week. Section 21 of the Act makes it obligatory for the occupier of a factory to provide for each person employed a rest period of at least one hour at intervals not exceeding 6 hours, or at the request of the employees concerned two rest periods of half an hour each, at intervals not exceeding 5 hours, the total duration of the periods of rest on that day not being less than one hour for each period of 6 hours worked generally. With the previous sanction of the Local Government and at the request of the employees concerned the rest interval may also be reduced to half an hour for each male person provided that he is not employed for more than 8½ hours on each working day and is not required to work for more than five hours continuously. For children, Section 23 (*c*) provides that no child shall be employed in a factory for more than 6 hours in any one day. Section 21 (*b*) provides that for each child working more than 5½ hours in any one day a period

of rest of not less than half an hour shall be given and the period of rest has to be so fixed that no child shall be required to work continuously for more than 4 hours. Sections 23 (*b*) and 24 (*a*) further provide that no child or woman may be employed in any factory before half past five o'clock in the morning or after 7 o'clock in the evening. Under Section 25 a child cannot be employed in two factories on the same day but adults may be so employed in such circumstances as may be prescribed. Under the provisions of Section 26 every Manager of a factory has to fix specified hours for the employment of each person employed in such factory and no person is allowed to be employed except during such specified hours. The Governments of Madras, Bombay, the United Provinces, the Punjab and the Central Provinces are the only Local Governments which have prescribed the circumstances under which adults may be employed in more than one factory on the same day. The rules framed by these Local Governments invest the Inspector of Factories with the power to sanction such employment if he is satisfied that the adults concerned are not employed for more than 10 hours on any one day and that they receive the weekly holiday prescribed by Section 22 of the Act. In addition to the notice *re* hours of work for particular periods, every factory has to maintain a register of all persons employed in a factory in the form prescribed by the Local Government showing their hours of work and the nature of their respective employment.

Proposed Amendment of the Factories Act, following the Recommendations of the Royal Commission on Indian Labour.—The Royal Commission made several very important recommendations for substantial amendments of the Indian Factories Act, 1911, as amended by the Amending Acts of 1922, 1923, 1926 and 1931, firstly, for the reduction of the maximum limits of daily and weekly hours of work in perennial factories and for the better regulation of such hours; secondly, for the improvement of working conditions in factories; and thirdly, for a more effective observance, on the part of the factory owners, of the requirements of the Act. The Government of India, in the Department of Industries and Labour, issued a circular letter, dated the 10th June 1932, addressed to all Local Governments and Administrations forwarding a draft Bill intended to consolidate the present law regarding the regulation of power using factories and incorporating the majority of the Commissioners' recommendations. All Provincial Governments were asked to submit replies to this letter by the 1st December 1932. On receipt of the local Government's replies, the Honourable Member in charge of the Department of Industries and Labour of the Government of India made a tour of the more important industrial centres in India to discuss various questions arising out of the draft Bill with the representatives of Local Governments and associations of employers and workmen. On the conclusion of this tour, the Government of India convened a conference of Provincial Chief Inspectors of Factories and a final Bill was then drawn up which was introduced in the Legislative Assembly on the 8th September 1933. At the moment of writing, this Bill is under examination by a Select Committee of the members of both Houses in the Central Legislature and it is expected that the consolidated Factories Act will be passed during the budget Session of the Legislative Assembly in the Spring of 1934. If the Bill is passed into law it may be brought into operation either on 1st July 1934 or the 1st January 1935.

The Royal commission also made several suggestions with regard to the control of factories not using power nearly all of which are at present unregulated. The Government of India propose a new and separate Act in respect of such factories and they are at present engaged in drafting a Bill covering the Commissioners' recommendations in the matter.

The following are the more important additional matters proposed to be covered by the Consolidating Act :—

(*a*) A distinction is to be drawn between seasonal and perennial factories. A factory which is exclusively engaged in cotton ginning cotton or jute pressing, the decortication of groundnuts, or the manufacture of groundnut oil, or the manufacture of coffee, indigo, lac, rubber, sugar (including *gur*) or tea is to be a seasonal factory; provided that the Local Government may, by notification in the local official Gazette, declare any such factory in which manufacturing processes are ordinarily carried on for more than 180 working days in the year, not to be a seasonal factory for the purposes of the Act. The Local Government may also, by notification, declare any seasonal factory in which manufacturing processes are ordinarily carried on for not more than 180 working days in the year and which cannot be carried on except during particular seasons or at times dependent on the irregular action of natural forces, to be a seasonal factory for the purposes of this Act.

(*b*) Factory operatives are at present divided into two age groups : (1) Adults and (2) Children, *i.e.*, persons over 12 and under 15 years of age. It is now proposed to introduce a third age group of "Adolescents," *i.e.*, persons over the age of 15 years and under the age of seventeen years who have not been certified as fit for adult employment. Such "Adolescents" as have not been so certified are to be deemed to be children.

(*c*) It is proposed that the existing maximum limits of eleven hours per day and sixty hours per week should continue to be observed in the case of seasonal factories and that the maximum hours of work to be permitted in the case of workers in perennial factories should be reduced to ten hours per day and 54 hours per week subject to the proviso that persons employed on work necessitating continuous production for technical reasons and persons whose work is required for the manufacture or supply of articles of prime necessity which must be made or supplied every day may be employed for not more than 56 hours in any one week. The maximum hours of work permitted in the case of children is five hours per day both in seasonal and in perennial factories.

(*d*) The Bill proposes to introduce into the Act for the first time the principle of "spread-over," *i.e.*, the limitation of the period of the number of consecutive hours during which the daily limits of hours of work may be availed of by the owner or an occupier of a factory. The

spread-over in the case of adults is limited to thirteen consecutive hours and in the case of children to seven and a half consecutive hours; but the continuous period of eleven free hours in every twenty-four hours in the case of adults must include the hours between 7 p.m. and 6 a.m. in the case of women. The continuous period of sixteen and a half free hours in the case of children must include the hours between 7 p.m. and 6 a.m. Exemptions in the case of women are permitted in such cases as technical reasons require that work should be done at night, *e.g.*, in the fish curing industry.

(*e*) The existing provisions with regard to the control of artificial humidification are to be expanded. And the Bill also proposes to give power to Local Governments to authorise an Inspector to call upon Managers of factories to carry out specific measures for increasing the cooling power of the air where he is of the opinion that it is at times insufficient to secure operatives against danger to health or serious discomfort, provided that the cooling power can be appreciably increased without involving an amount of expense which would be unreasonable under the circumstances.

(*f*) With regard to welfare, the Bill includes provisions for the maintenance of (1) a sufficient and suitable supply of water for washing for the use of persons employed in processes involving contact with poisonous or obnoxious substances; (2) adequate shelters for rest in factories employing more than 150 persons; (3) rooms reserved for the use of children of women employed in factories employing more than 50 women and (4) first aid appliances. Powers are to be given to Local Governments to frame rules in respect of the last three matters. The Government of India, however, have not accepted the recommendation of the Royal Commission with regard to giving power to Local Governments to issue welfare orders as are issued by the Secretary of State in England under Section 7 of the Police, Factories, etc. (Miscellaneous Provisions) Act, 191 . They are of opinion that the matters to be covered by such welfare orders should have the approval of the Legislature and should not be imposed on factory owners by the Executive Government.

(*g*) Local Governments are to be given powers to make rules prescribing the fitness to be attained by children seeking employment in factories or in any class of factories, and when such a standard has been prescribed no child failing to attain it can be certified as fit for employment in a factory.

(*h*) Inspectors are to be granted power to call upon managers to carry out such tests as may be necessary to determine the strength or quality of any specified parts of the structure of factories if they are of opinion that, on account of any defect or inadequacy in the construction of any factory, the factory or any part thereof is dangerous to human life or safety; and Local Governments are to be empowered to make rules for the furnishing, by factories, of certificates of stability.

(*i*) The maximum amount of overtime that can be worked by virtue of any exemptions granted under the Act is to be limited and a time and a half is to be allowed in all cases where a worker in a seasonal factory works for more than 60 hours in any one week or where a worker in a factory other than a seasonal factory works for more than ten hours in any one day. But where a worker in a factory other than a seasonal factory works for more than fifty-four hours in any week, he is to be entitled, in respect of the overtime worked less any overtime in respect of which he is entitled to extra pay under the preceding sentence, to pay at the rate of one and a quarter times his ordinary rate of pay. Where a worker in a factory works on the weekly rest day he is to be entitled, in respect of the overtime worked to pay at the rate of one-and-a-half times the ordinary rate of pay.

(*j*) No exemptions are to be granted in respect of the provisions for spreadover, prohibition of night work between 7-30 p.m. and 5 a.m. and of the weekly limits of hours of work for women and persons under the age of sixteen years; but the grant of the existing exemption in the case of women employed in fish curing and fish-canning factories is to be permitted.

(*k*) The existing Sections 26, 35 and 36 are to be entirely recasted in order to provide more effective methods for the maintenance of records and registers of employment, the posting of notices, for the benefit of the workers, of their hours of employment, the prescribed abstracts of the Factories Act, weekly holidays, etc., and for the notification of these notices and any changes proposed to be made in them to Inspectors of factories.

(*l*) Higher penalties and fines are to be prescribed for occupiers or owners of factories who have been previously convicted for having committed the same offences.

The Local Governments were asked to submit their replies to the above proposals incorporated in the Draft Bill prepared by the Government of India, by the 1st December 1932. On receipt of the replies of the Local Governments, the Government of India recast their Original Draft Bill in order to give effect to the more important recommendations made by some of these Governments and a revised consolidating Bill was introduced in the Legislative Assembly on the 8th September 1933 on a motion to refer to Select Committee. The Select Committee set in Delhi from the 18th January 1934 onwards. At the moment of writing it is anticipated that the new Factories Act will be passed during the Budget Session of the Assembly this year.

LATEST FACTORY STATISTICS.

The latest statistics available in connection with the administration of the Indian Factories Act are for 1932. The data published in connection with the normal weekly hours of work show that for the whole of British India men were required to work for more than 54 hours a week in 1,787 perennial and 2,989 seasonal factories, above 48 and not above 54 in 622 perennial and 353 seasonal factories, and not above 48 hours per week in 1,369 perennial and 1,007 seasonal factories. In the case of those factories employing women 3,029 required female workers to work for more than 54 hours per week whereas 1,857 fixed their hours at below 48 per week. 652 factories had hours above 48 but not above 54. Out of the 995

factories employing children, 384 had hours below 30 for children and 611 above 30. The details in connection with the various provinces will be found in summary form in the All-India Factories Reports or in a more detailed form in the Provincial Reports themselves. The statistics of factories do not show the hours of work in particular industries.

All railway workshops come under the Indian Factories Act. Hours of work in railway workshops in all provinces generally average 8 per day and 48 per week. In most cases the hours are so arranged as to provide for a half day off on Saturday provided that a total of 48 hours is worked during any particular week.

Employment of Children.—By the Amending Act of 1922 the maximum age of children was raised from 14 to 15 years and the minimum age from 9 to 12. Section 23 of the Act provides that no child shall be employed in any factory unless he is in possession of a certificate granted by a Certifying Surgeon showing that he is not less than 12 years of age and is fit for employment in a factory and while at work carries either the certificate itself or a token giving reference to such certificate. Further, no child is allowed to be employed in any factory before half past five o'clock in the morning or after seven o'clock in the evening and no child is to be employed for more than six hours in any one day. The number of children employed in factories during the years 1922 to 1932 is shown in the following table :—

Year.	Total.
1922	67,658
1923	74,620
1924	72,531
1925	68,725
1926	60,094
1927	57,562
1928	50,911
1929	46,843
1930	37,972
1931	26,932
1932	21,733

An examination of the figures in the above table will show that the number of children employed rose from 67,658 to 74,620 in 1923. This was due to the fact that the tea factories in Assam which employed about 11,000 children were brought within the scope of the Act for the first time in that year. Further, the amendment of the Act in 1922 did not apply to children who were lawfully employed in a factory on or before the 1st July 1921 and it was not until 1924 that full effect was given to the new age restrictions for children.

There has been a steady decline in the number of children employed. In the textile mills in Bombay City there are none.

Employment of Women.—The number of women employed in factories during the years 1921 to 1929 increased steadily from 206,887 employed in 1922 to 257,161 employed in 1929. But the number of women employed since 1929 has fallen perceptibly; the figures for 1930, 1931 and 1932 being 254,905, 231,183 and 225,632 respectively. The increase in the employment of women was due partly to the restrictions imposed on the employment of children and partly to the inclusion within the scope of the Act of all quasi-agricultural factories, for example, in the tea gardens which are dependent on female labour to a larger extent than other factories. An important change which the revision of 1922 made in connection with the employment of women was the repeal of Section 27 of the Act of 1911 which permitted the employment of women at night in ginning factories. In view of this amendment the Government of India considered that they were in a position to ratify the Convention concerning the employment of women during the night adopted by the First International Labour Conference held at Washington in 1919 without undertaking any further legislation.

Overtime.—Section 31 of the Indian Factories Act provides that in those factories where exemptions are granted from the provision that no person shall be employed in a factory for more than 60 hours in any one week, every person employed in such a factory for more than 60 hours in any one week shall be paid, in respect of overtime worked, at a rate which shall be at least one and a quarter times the rate at which he is normally paid. In most of those factories which work normally less than 60 hours per week overtime is paid for at normal rates up to 60 hours per week and at a time and a quarter for overtime work over 60 hours. Some factories, however, pay either the full time and a quarter rate to be granted under the Factories Act for all overtime worked over and above the normal daily hours or even grant higher rates irrespective of the weekly limitation of 60 hours under the Act. No detailed statistics are available to show the number of workers who were paid overtime during any particular period except in the case of a few Railways and some of the larger industrial organisations.

LABOUR IN MINES.

The conditions of employment of labour in mines are governed by the provisions of the Indian Mines Act, 1923, which came into force with effect from the 1st July 1924 replacing the former enactment of 1901. The Act of 1901 contained provisions designed to secure safety in mines and it provided for the maintenance of an inspecting staff, but it contained no provisions regulating the employment of labour.

Section 23 of the Indian Mines Act of 1923 limited weekly hours of miners to 54 underground and to 60 aboveground but no limits were prescribed for daily hours. In a Bill further to amend the Act for certain purposes introduced by the Government of India in the Legislative Assembly in March 1927 it was proposed to fix the maximum limit for daily hours at twelve. There was a considerable body of opinion in favour of enforcing an eight-hour day and this was also the opinion of a minority of the Select Committee appointed by the Assembly to consider the Bill. The majority of the Committee however adhered to the principle of a twelve-hour shift as proposed in the Bill but agreed that an eight-hour shift should be gradually worked upto. They recommended to Government that after the new provisions had been in operation for three years, the position should be again reviewed as to whether an eight-hour shift could be introduced. A daily limit of 12 hours was thus imposed by the Amending Act of 1928 and this was to be brought into effect from April 1930.

Recommendations of the Royal Commission.

The Royal Commission on Labour which reviewed the whole position came to conclusions similar to those reached by the Select Committee. A minority of the Commission advocated the reduction of the daily limit to eight hours while the majority supported the recommendation of the majority of the Select Committee, and in addition suggested that weekly hours above ground should be limited to 54. In the meanwhile, the fifteenth session of the International Labour Conference adopted a Draft Convention concerning hours of work in coal mines, framed solely with reference to conditions in European countries. This Convention prescribes that the hours of work should be limited to 7½ per day in underground coal mines and to 8 hours a day and 48 hours a week in open coal mines. The Convention was placed before the Legislative Assembly on the 24th February and before the Council of State on the 2nd March 1932 and resolutions were adopted by both the Chambers to the effect that Government should examine the possibility of reducing the statutory limits for hours of work in mines and that the results of this examination should be placed before them.

Having regard to the above resolution and to the fact that nearly three years had elapsed since the Act of 1928 came into full effect, the Government of India have taken up the re-examination of the question. They are of opinion that the present is the most opportune time for effecting a reduction in hours of work in mines, and that nine hours would be as low a daily limit as is reasonable. They are provisionally disposed to agree with the Royal Commission's recommendation that the weekly hours above ground should not exceed 54. The Government of India particularly desire opinions on the question of regulating hours in mines and they addressed a circular letter, dated the 21st September 1932 to Local Governments inviting their views in the matter.

The circular letter of the Government of India also referred to the following recommendations of the Royal Commission on Indian Labour with which they were provisionally in agreement.

(*a*) No child under the age of 14 years should be permitted to work in or about mines.

(*b*) Minor accidents should be reported weekly to the Chief Inspector through the District Magistrate; and

(*c*) It should be made obligatory for Local Governments to publish reports of Committees and Courts of Inquiry appointed by them under the Act.

Number of Mines.—The following table gives the number of mines which came under the Act each year, classified according to the minerals raised:—

Year.	Number of mines.					Total Number of all mines.
	Coal.	Mica.	Manganese.	Tin and Wolfram.	Other minerals.	
1924	846	513	186	87	172	1,804
1925	810	571	214	204	212	2,011
1926	722	601	221	210	143	1,897
1927	644	630	220	200	298	1,992
1928	556	674	184	203	331	1,948
1929	548	498	125	186	375	1,732
1930	549	508	82	178	352	1,669
1931	540	342	56	136	343	1,417
1932	515	315	23	138	290	1,281

Number employed.—The number of persons employed in mines during the years 1924-1932 were as follows:—

Year.	Total No. of mines which came under the Act.	Number of persons employed.		
		Belowground.	Aboveground.	Total.
1924	1,804	167,779	90,498	258,277
1925	2,011	168,554	84,303	253,857
1926	1,897	189,371	70,742	260,113
1927	1,992	196,341	72,949	269,290
1928	1,948	197,398	70,273	267,671
1929	1,732	199,908	69,783	269,701
1930	1,669	191,915	69,752	261,667
1931	1,417	170,638	60,144	230,782
1932	1,281	151,924	52,734	204,658

The sex distribution of the persons employed in mines during the years 1926 to 1932 was as shown below:—

Year.	Number of males employed.			Number of females employed.		
	Underground.	In open workings.	On the surface.	Underground.	In open workings.	On the surface.
1926	86,343	43,306	51,967	31,889	27,833	18,775
1927	86,766	50,028	53,903	31,850	27,697	19,046
1928	86,155	51,005	52,430	31,785	28,453	17,843
1929	92,856	54,235	51,954	24,089	28,728	17,839
1930	101,649	50,396	52,709	18,684	21,186	17,043
1931	98,885	38,833	45,157	16,841	16,079	14,987
1932	96,196	30,256	39,899	14,711	10,761	12,835

Labour on Railways.—All railway workshops come under the administration of the Factories Act. The Indian railways employ nearly a quarter of a million workers in other occupations for whom provision for the control of their working hours has been made under the Hours of Employment Rules, 1930, framed under the Indian Railways Amendment Act, 1929.

The Conventions adopted by the International Labour Conference in 1919 and 1921 prescribed a 60-hour week and a weekly rest of not less than 24 consecutive hours for all workers in British India employed in factories, in mines and in such branches of railway work as may be specified for this purpose by the competent authority. The Indian Factories Act which was amended in 1922 to give effect to the Conventions limited the hours of work in factories to 11 in any one day and to 60 in any one week. Provisions were also made for intervals of rest and a weekly holiday. Similar limitations were imposed under the Indian Mines Act of 1923 in respect of colliery staff. Both these restrictions apply to factories and mines controlled by railway administrations. The application of the Conventions to other departments of railway administrations was found to be a problem beset with many difficulties and has been a subject of prolonged investigations. Orders were issued by the Railway Board in 1921 that the 60-hour week should be adopted for station staff not employed in connection with the working of trains. The Indian Railway Conference Association drew up a set of rules in 1927 and these received the general approval not only of the Railway Board but also of the Boards of Directors of the lines managed by companies. Subsequently, however, it was found that these rules while they aimed at applying the spirit of the Conventions did not adequately fulfil the statutory obligations imposed upon Government by the ratification of the Conventions. The whole question was therefore again exhaustively reviewed and a Bill amending the Indian Railways Act with the object of empowering the Governor-General in Council to make rules on the subject was introduced in the Legislative Assembly in the autumn session of 1929 and was referred for consideration to a Select Committee. The Amending Act was passed in the same year, and the Hours of Employment Rules were drawn up during the following year.

Working of overtime on Indian railways is more prevalent on construction than on the open line due to (1) the working season in the monsoon areas being confined to eight months in the year, (2) special measures taken to speed up all heavy work to avoid the locking up of capital; and (3) wet foundation work in bridges which necessitate continuous work. Usually overtime in such cases is paid at a rate fixed beforehand.

Seamen.—The Indian Merchant Shipping Act, 1923, provides that no seaman shall be "signed on" for service on a ship unless he enters into a contract in the manner specified with the Master of the ship. All agreements entered into between Masters and Seamen for service on foreign-going ships have to be signed in the presence of a Shipping Master. The agreement forms contain the rules and regulations provided for under the Act for maintaining discipline and for the fines which may be inflicted for the breach thereof.

CONTRACT LABOUR.

In most industrial concerns in India work in connection with building, loading and unloading, carting, receiving, and despatching of goods and work involving the employment of unskilled labour over which supervision is either difficult or costly is given out on contract. In the textile cotton industry work in connection with bleaching and dyeing is also generally done on contract at all centres. In the cotton mills in Ahmedabad work in the Mixing and Waste Room and the Yarn Bundling and Baling Department, in the Drawing—in Department and Beam Carrying is given out on contract in various mills. In certain printing presses in the Bombay Presidency, composing is given out on contract. In most cases no supervision is exercised over the labour engaged by the contractor to whom the contract is given. Perhaps the most efficient method of control and supervision over contract labour is that which obtains on several railways. This will be dealt with separately lower down. Exceptions to the general remarks made above are as follows.

In the coal mines in Bihar and Orissa contractors are employed by a large number of collieries to provide the labour required for cutting the coal and loading it on wagons. The contractors are paid at a fixed rate per ton for all coal loaded on wagons. In some cases, however, the rate paid per ton is increased either because coal is being extracted from difficult places in the mine or because the contractor has difficulties in maintaining his labour supply. The extent to which contractors are employed is considerable and probably more than half the coal raised in the Jharia coal fields is raised on the contract system. Definite figures are not available but the Indian Mining Association reports that 90 per cent. of the coal raised in the mines belonging to that Association in the Jharia coal fields is raised by contract labour. In some cases contractors are only employed to provide the labour for cutting the coal. The contractor is generally responsible only for raising the coal while the colliery supervising staff is responsible for seeing that the mines are run safely.

UNEMPLOYMENT.

The problems connected with unemployment in India are quite different from the problems which have arisen in highly industrialised countries like England, the United States of America and Germany. In the latter countries labour is divided into two fairly distinct classes (1) industrial, and (2) agricultural. During periods of depression in industry those workers who are thrown out of employment either on account of a temporary or a partial closing down of concerns cannot fall back upon agriculture for earning their livelihood. It is necessary to repeat here, in order to understand this question clearly, that more than 70 per cent. of the population of India derive their livelihood from various occupations in connection with agriculture. This does not mean that agriculture is a perennial source of employment. Considerable unemployment and distress occurs during periods when the monsoon fails. Even during those years when the monsoon is generally successful, there are usually parts of the country where the rainfall is deficient and there is not enough scope for the employment of all the labour available. Both the Government of India and the various Provincial Governments have devised various schemes for famine relief and the variations in the visitations of nature with their consequent periods of prosperity and distress have now been brought more effectively under human control than ever before in the history of India. It is not necessary to go into the details of the questions connected with famine relief in this section. The point which it is intended to bring out is that owing to the agricultural character of industrial labour in India, the problems connected with employment and unemployment are somewhat closely related to those connected with the success or the failure of the monsoon.

Speaking generally, the Indian labourer migrates to industrial centres when he finds that the yield of the land in his native place is not sufficient to maintain all the members of his family. A certain percentage of the workers employed in industry temporarily give up their employment during the sowing, transplanting and harvesting seasons. During periods of depression in trade and industry, industrial workers released from employment fall back upon agriculture and thus add to the existing pressure of the population on the land. If the depression in trade and industry synchronises with the failure of the monsoon, the amount of unemployment becomes considerable and the resulting distress is enormous. Various States have devised schemes of Employment Exchanges for the purpose of studying the problems in connexion with the demand and supply of labour to control the movements of labour and to place it where it is required. The Government of India and the various Provincial Governments have considered the question of creating Employment Exchanges in India several times during the last ten years, but opinion is unanimous that owing to the preponderatingly agricultural character of Indian labour it is practically impossible to devise any satisfactory scheme for the formation of Employment Exchanges.

India is a State Member of the International Labour Conference, and as such she is bound according to the terms of the Treaty of Peace, to ratify and adopt, wherever possible, any Convention or Recommendation adopted by the International Labour Conference. The consideration of industrial unemployment was thrust upon the Government of India by the Washington Convention, which was adopted

by the First International Labour Conference held in Washington in 1919. Each Member ratifying this Convention was required—

(*i*) to communicate to the International Labour Office all information, statistical or otherwise, concerning unemployment, including reports on measures taken or contemplated to combat unemployment;

(*ii*) to establish a system of free public employment agencies under the control of the central authority, and to appoint Committees, including representatives of employers and workers, to advise on matters concerning the operation of these agencies;

(*iii*) where systems of insurance against unemployment have been established, to make arrangements, upon terms to be agreed upon between the members concerned, whereby workers belonging to one Member and working in the territory of another shall be admitted to the same rates of benefit of such insurance as those of the latter.

In addition to this Convention, the First International Labour Conference also adopted a Recommendation which advocated—

(*a*) the abolition of employment agencies, which charge fees or which carry on their business for profit;

(*b*) the establishment of an effective system of unemployment insurance; and

(*c*) the execution of public works as far as practicable during periods of unemployment and in districts most affected by it.

The draft Convention was ratified by India but, in communicating this ratification to the International Labour Organisation at Geneva, the Secretary of State for India found it necessary "in order to avoid subsequent misunderstanding" to explain at some length the peculiar position of India in this matter and to emphasise the difficulties connected with a complete ratification by India owing to the predominantly agricultural character of the country. The Government of India, in addressing the local Governments on questions arising out of the draft Convention and Recommendation adopted by the International Labour Conference, invited views on the following points:—

(*i*) Advisability of creating Public Employment Agencies in congested areas to facilitate the migration of surplus labour to industrial areas where there is a shortage of labour.

(*ii*) Advisability of utilising Public Employment Agencies in connexion with recruitment for Assam.

(*iii*) Advisability of establishing Public Employment Agencies for the dissemination of information regarding employment during times of famine and scarcity to those in search of employment.

(*iv*) Advisability of appointing Committees representing employers and workers to advise on matters concerning the operation of Public Employment Agencies.

(*v*) Advisability of abolishing or controlling Employment Agencies which charge fees or which carry on their business for profit.

The replies of the local Governments indicated that in most provinces the demand for labour exceeded the supply, that, even in provinces from which there was a large migration of labour, no difficulty had been experienced in obtaining information with regard to the areas where labour was in demand, that the establishment of public employment agencies would serve no useful purpose, and that such agencies might excite suspicion and be liable to be misunderstood by the people. With regard to recruitment of labour for Assam, the local governments concerned were agreed that any experiment on the lines suggested would be risky. On the question of the abolition of control of employment agencies which charge fees or which carry on their business for profit, the replies of the local Governments indicated that employment agencies of this character were practically unknown in India. In the circumstances, the Government of India decided to take no further action on the draft Convention or Recommendation concerning unemployment.

Middle-class unemployment.—In recent years unemployment among the educated middle classes has been assuming alarming proportions and has attracted widespread public attention. In January 1926, a Resoltion was passed by the Legislative Assembly in the following terms:—

"This Assembly recommends to the Governor General in Council that he may be pleased to appoint a Committee with a non-official majority to investigate into the problem of unemployment in general, and among the educated classes in particular, and devise suitable remedies, whether by a system of industrial and technical education, or by a revision of the existing system of education, or by offering encouragement to the starting of new industries, or by opening new avenues of employment, or by the establishment of employment bureaux, or by all these or any other means; and that the said Committee do make a report on the latter problem as early as possible."

Similar Resolutions were also passed in some of the local Legislative Councils. The Government of India did not consider that the appointment of a Central Committee would serve any useful purpose, but in a circular letter drew the attention of the local Governments to the gravity of the problem of middle-class unemployment in India. As a result of the Resolutions passed by the local Councils, Committees were appointed by some of the local Governments. The reports of most of these Committees refer almost exclusively to middle-class unemployment, but the Punjab and the Bengal Committees also dealt with general unemployment. The Punjab Committee came to the conclusion that "there was no unemployment worthy of mention among the uneducated classes"; whilst the Bengal Committee observed as follows:—

"The labourer, if we may use the term, has not yet been divorced completely from the land, and he frequently possesses or has an interest in a small plot of land in his native place on the cultivation of which he can fall back in times of depression. Added to this is the fact that industrial labour is still comparatively scarce in Bengal and in fact had to be imported

from other provinces. The effect therefore of trade depressions on the industrial labourer in Bengal is so far very small."

Jute and Cotton Mill Industries.—In the jute mill industry in Bengal a large number of mills have, during the last two or three years, changed over from the multiple to the single shift system. It is estimated that on the single shift about 25 to 33 per cent. less labour force is required than on the multiple shift, but in spite of the changes no trouble has been reported with regard to unemployment. In the Bombay cotton mill industry, out of an average of about 140,000 workers employed during the years 1920 to 1927 approximately 20,000 have been thrown out of employment on account of the introduction of efficiency methods of work whereby spinners are required to mind two or three sides of a spinning frame instead of one and where the ordinary two loom weaver is required to tend three, four or six looms. The Bombay Strike Enquiry Committee dealt with this aspect of the question in their report and they recommended the creation of an Out-of-Work Donation Fund. This has been dealt with in the summary given with regard to the findings of this Committee in the Section on Conciliation and Arbitration. Owing to depression in trade and external competition several cotton mills are being compelled either to close down completely or to work with partial complements. At the beginning of February 1934, the total number of cotton mills which were closed in Bombay amounted to 27 and the number of workers thrown out of employment to 40,350.

INDUSTRIAL SAFETY AND INSPECTION.

As in other countries, the industrial progress of India has been accompanied by an alarming increase in the number of industrial accidents.

Statistics for 1932.—The numbers of accidents classified according to fatal, serious and minor in factories in each of the British Provinces in India in the year 1932 are shown in the following table :—

Province.	Fatal.	Serious.	Minor.	Total.
Madras	14	355	1,254	1,623
Bombay	37	1,331	4,204	5,572
Bengal	29	875	2,105	3,009
United Provinces	23	258	1,402	1,683
Punjab	6	42	1,043	1,091
Burma	17	212	1,440	1,668
Bihar and Orissa	20	329	1,465	1,814
Central Provinces and Berar	4	35	213	252
Assam	8	57	317	382
North-West Frontier Province	..	..	..	..
Baluchistan	1	..	39	40
Ajmer-Merwara	1	11	755	767
Delhi	2	9	87	98
Bangalore and Coorg	..	..	128	128
Total	162	3,513	14,452	18,127
Total for the year 1931	174	3,693	15,940	19,807

The explanation generally offered for the increase is that the Workmen's Compensation Act is operating as an inducement both for workpeople and employers to report accidents more frequently than in the past. But the increase in the number of serious accidents suggests that the problem is a serious one and that an organised "safety first" campaign is very desirable in India. Some progress along these lines has been made in Bombay in the mills and on the railways.

Factory Inspection.—The administration of the Indian Factories Act is entrusted to Factory Inspectors in each province. Where breaches of the Act are discovered the managers of factories are prosecuted and in most cases such prosecutions result in convictions. All provinces except Assam have Factories Departments. In the Bombay Presidency the full time factory staff consists of the Chief Inspector of Factories, three Inspectors, three Assistant Inspectors and one Woman Inspector. The Chief Inspector, two Inspectors and two Assistants have their headquarters in Bombay City. An Inspector and an Assistant are stationed in Ahmedabad. The Woman Inspector has her headquarters in Bombay but has jurisdiction over the whole Presidency. She deals with problems mainly affecting women. The Bombay Presidency is the only province in India which has a Lady Inspector of Factories. A part time Certifying Surgeon is stationed in Bombay and a full time one in Ahmedabad. They have been appointed as Divisional

Inspectors with powers under the Health and Sanitary sections of the Factories Act. They have also been granted powers under the provisions of the Bombay Maternity Benefit Act. The Director and Assistant Directors of Public Health have also been appointed as Divisional Inspectors under the Health and Sanitary sections of the Act. Their reports are sent to the Chief Inspector who passes orders on the same. Local Magistrates in the districts have ex-officio powers under the Employment sections of the Act.

Reporting of Accidents.—Section 34 of the Indian Factories Act requires the manager to report all accidents which cause death or bodily injury whereby the person injured is prevented from returning to his work in the factory during the 48 hours next after the occurrence of the accident. All classes of accidents namely, fatal, serious *i.e.*, accidents which prevent a person returning to work for 21 days or more, and minor are to be reported to the Inspector of Factories and to the District Magistrate and in cases of any accident resulting in death to the officer in charge of the Police Station. It is the duty of the Inspector of Factories to make an investigation as soon as possible into the causes of and the reponsibility for a fatal or serious accident, and to take steps for the prosecution of the person concerned if it is found that the death or serious injury resulted from any infringement of the provisions of the Act or of the rules framed under the Act. The Act also requires notice to be given of an accident which is due to any cause that has been notified in this behalf by a Local Government, even though no injury may have resulted therefrom to any person. So far notifications have been issued under this section only in Bombay, Bengal and Burma.

Accident Prevention.—The chief influences in the prevention of accidents are (a) the powers of Inspectors under the Factories Act to compel managers to erect adequate fencing and to take precautions against accidents; (b) the voluntary interest of managers in safety measures and safety precautions; and (c) the interest of insurance companies as a result of the operation of the Workmen's Compensation Act. In many provinces the existing rules made under the Factories Act cover "*Safety-First*" measures such as compelling certain classes of workers to wear tightly fitting clothes, to prohibit children from entering into certain parts of factories, etc. Steady progress has been made in the different provinces in respect of 'safety first' propaganda, but with wide differences in caste and religion and with the low standard of efficiency the problem of organisation of safety services in industrial undertakings is a matter of some difficulty in India. Particular attention was devoted in Bengal to the safeguarding of crowded machinery in the smaller factories and orders were issued during the year 1932 in that province to 52 factories to alter, repair or reconstruct their buildings. Safety pamphlets were compiled and issued by the Factory Departments in Bengal and Madras. Continued progress in the fencing of machinery and in the use of safety posters is reported to have been maintained in all provinces and increasing attention is being paid by employers throughout India to safety measures and to the inculcation in the factory employee of "Safety first" ideas. In Bombay a certain amount of ground had already been broken and the Factory Department in co-operation with organisations of industrial employers produced a set of four 'safety posters' some years ago and these have been very largely exhibited in the engineering workshops in the Presidency. Posters were also produced for the carding and spinning departments of cotton mills. The Red Cross Society was assisted in producing an All-India poster dealing with a universal risk connected with the wearing of loose-clothing which is ordinarily worn by the average Indian worker. Encouraged by the results of the posters introduced in Carding and Spinning sheds the Millowners' Mutual Insurance Association, Bombay, produced a set of posters for the weaving department early in 1931 and these are now in fairly general use. Little has, however, been done in the factories of the Bombay Presidency in the way of specific organisations to further the cause of safety. Factories, too, are not sufficiently large to warrant the employment of a safety engineer and reliance has almost totally been placed on the activities of the inspectorate in this particular direction. Safety Committees have, however, been established in two cotton mills representative of the two largest groups in Bombay, as an experimental measure. Similar Committees have been brought into existence in five mills in Ahmedabad and the Factory Department has secured promises from other factories to establish safety committees.

The railways are of course pioneers in the introduction and the continuance of active propaganda in "*Safety-First*" work in all departments. These activities cover railway workshops (which come under the Indian Factories Act) as well. There was marked improvement as regards minimising accidents in railway workshops as a result of the activities of safety committees which have been established in some of them. The success of safety committees which were established at the S. I. Railway workshops at Perambur and Golden Rock was demonstrated by the fact that at the latter works accidents decreased by 53 per cent. in 1932 as compared with 1931. A very comprehensive Safety First Organisation was established in the Parel, Matunga and Manmad Workshops of the G. I. P. Railway in 1929. The Railway administration has also distributed to the employees an illustrated pamphlet on 'Safety First' in which a chapter on workshop safety is included. The G. I. P. organisation is stated to be the best of its kind. Safety Committees have also been formed in the R. I. M. Dockyard and the Bombay Electric Supply and Tramways Company. In the United Provinces no industrial undertaking has yet introduced a safety service organisation. The Welfare Committees of the E. I. Railway Locomotive and Carriage Workshops, Lucknow, do at times discuss at their monthly meetings questions of safety brought forward by members. Safety posters, published by the Railway Administration, are displayed in all their workshops and the Indian Red Cross Society posters in all factories in the province. In furtherance of the 'safety first" movement in Bengal warning hooters or sirens have been installed in the

textile factories so as to warn employees before the power plant and machinery is set in motion. An instructive handbook entitled "Safety in Factories" dealing with general matters concerning the safety of factory operatives has been compiled and published. An agreement in regard to standard guards and safety devices for jute machinery has been signed by the Indian Jute Mills Association in regard to new machinery to be installed after July 1932. Posters supplied by the Indian Red Cross Society illustrating the suitable type of dress to be worn by operatives while working on transmission machinery were distributed to factories in the different provinces, and safety propaganda of various kinds is receiving increasing attention from the large factory owners and the inspecting staff. Perhaps the best known instance where first class "safety first" work is being carried on in India is that done by the Tata Iron and Steel Company at Jamshedpur. The Company has since 1920 subscribed to the British Industrial Safety First Association and has installed notice boards all over the plant exhibiting the posters supplied by that Association. The literature received from the Association is periodically broadcast throughout the world.

First-Aid and Medical Relief.—Some of the Local Governments have framed rules requiring the provision, under the charge of responsible persons and in readily accessible positions, of first-aid appliances containing an adequate number of sterilised dressings and some sterilised cotton in all factories employing 500 and more operatives. Most of the factories are situated within easy reach of Government hospitals or hospitals maintained by Local Authorities but many of the larger and enlightened employers are already maintaining their own medical staff and equipment which are easily available in cases of accidents. The Millowners' Association, Bombay, started classes for First Aid training in conjunction with the St. John Ambulance Association in 1931. These classes have been successful and facilities have since been provided for the training of men deputed by the Engineering Safety Committee also. In the Tata Iron and Steel Works at Jamshedpur boxes with first-aid supplies are maintained in each department and two first-aid hospitals in different parts of the plant are staffed with doctors and compounders in readiness to render first-aid to injured persons.

Mines.—The Indian Mines Act of 1923 empowers the Governor-General in Council to frame regulations for the safety of persons employed in mines (Section 29, clauses (k) to (p)). Local Governments are also empowered to frame rules under the Act to ensure the proper fencing of a mine for the protection of the public. In addition, the Chief Inspector of Mines may call upon the owner, agent or manager of a mine to frame bye-laws which are not inconsistent with the provisions of the Act, regulations or rules to prevent accidents and to provide for the safety, convenience and discipline of the persons employed in the mine (Section 32). The bye-laws, when approved by the Local Government, have effect as enacted under the Act. Further, Section 19 of the Act gives special powers to the Inspector of Mines to take action when any danger is apprehended which is not expressly provided for by the Act, regulations, rules and the bye-laws. The Governor-General in Council has framed two sets of regulations, namely, the Indian Coal Mines Regulations, 1926, which apply only to coal mines and the Indian Metalliferous Mines Regulations, 1926, which apply to all other mines. These regulations provide for the proper maintenance of shafts and outlets, roads and working places, haulage arrangements, fencing and gates; for the restrictions which have to be observed in raising or lowering persons or materials; for the precautions to be taken in the use of explosives; and for adequate ventilation and lighting.

During the year 1932 at Mines regulated by the Indian Mines Act, 1923, there were 163 fatal accidents, which is 26 less than in 1931, and 48 less than the average number in the preceding five years. In addition to the fatal accidents there were 600 serious accidents involving injuries to 613 persons, as compared with 591 serious accidents involving injuries to 613 persons in the previous year. No record is maintained of minor accidents. 200 persons were killed and 649 persons were seriously injured. The latter figure includes 36 persons injured in fatal accidents. The number of persons killed is 27 less than in 1931. 182 of the persons killed were men and 18 were women. In one case nineteen lives, in one case five lives and in sixteen cases two lives were lost. The causes of the fatal accidents have been classified as follows:—

	Number of fatal accidents.	Percentage of total number of fatal accidents.
Misadventure	110	67.48
Fault of deceased ..	22	13.50
Fault of fellow workmen..	10	6.13
Fault of subordinate officials	14	8.59
Fault of Management ..	5	3.07
Faulty Material	2	1.23
Total ..	163	100·00

Deaths occurring in each class of mines were as follows:—151 in coal mines, 24 in mica mines, 5 in silver-lead mines, 4 in tin and wolfram mines, 3 in limestone mines, 2 in stone mines, 4 in copper mines, and one each in Chromite, Iron, Salt and Manganese mines. Fifty-two persons lost their lives by falls of roof, 53 by falls of side, 29 by haulage, 19 on account of suffocation by gases, 13 by explosives, 7 by explosives and ignitions of fire damp, 6 in shafts, one by electricity, 7 by other accidents underground and 13 on the surface.

Railways.—The Railway Department conducts an intensive "Safety-First" propaganda every year which embraces the following among other activities:—

(1) Safety posters and safeguards are put up on prominent points both in English and in the vernacular. Some of these, *e.g.*, on the Bombay, Baroda and Central India Railway, are prepared from actual photographs of safe and unsafe methods of working in selected branches of manufacture and maintenance work in the railway workshops.

(2) An illustrated booklet was compiled by the Great Indian Peninsula Railway during the year 1926-27 which has been translated into a number of vernacular languages and distributed throughout the line on certain railways.

(3) Photographs and special articles are published in the Railway magazines for the instruction of the staff.

(4) Inspecting subordinates are instructed to take the opportunity, while visiting stations, of addressing the staff on "Safety-First".

(5) Coloured pictures showing the right and wrong way of doing a job are posted at various places for the benefit of the illiterate staff.

(6) A "Safety-First" film was prepared by the Central Publicity Bureau during the year 1927-28 and copies distributed to railways. The film is displayed weekly by the travelling cinemas of the railways.

(7) A "Safety-First" pamphlet has been prepared by the Central Publicity Bureau and is being issued to all railway administrations.

WORKMEN'S COMPENSATION.

The Workmen's Compensation Act of 1923 which was the first piece of social insurance passed in this country, came into force on July 1st, 1924. The Act covered ten classes of workmen. Some of these, such as members of fire brigades, telegraph and telephone linesmen, sewage workers and tramwaymen are small, and as the definition of seamen was limited to those employed on certain inland vessels, only a very small proportion of Indian seamen came under the Act. Compensation for seamen, however, has been secured by agreement between the Government of India and foreign steamship companies, under which the latter agree to the insertion in the ships' articles of a clause whereby the companies agree to pay compensation to injured Indian seamen on the same basis as if they were covered by the Act and all questions as to compensation are decided by Commissioners of Workmen's Compensation in India. An Indian seaman employed on a British ship legally comes under the English Act and the insertion of the clause referred to above does away with the practical difficulties which would arise if Indian seamen had to claim compensation in the English or other foreign courts. The five main classes of workmen covered by the Act are workers in factories, mines, docks and on railways, practically all of whom are included and those engaged in certain types of building work, notably the construction of industrial and commercial buildings and any other buildings which run to more than one storey. The most important classes excluded altogether are agricultural workers and domestic servants. Non-manual labourers getting more than Rs. 300 a month are excluded, except on the railways. Power was taken to include other hazardous occupations by notification from time to time. All occupations involving blasting operations were thus declared by the Governor-General in Council as hazardous occupations. Compensation is to be given as in the English Act, for personal injury by accident arising out of and in the course of employment. It is also to be given for diseases in certain cases. The provisions for diseases have been so framed that if a certain class of workmen contracts a scheduled disease, it will usually be extremely difficult for the employer to defeat a claim for compensation. On the other hand, other workmen will find it equally difficult to get compensation for disease, as they will have to prove that the disease arose "solely and directly" from employment. The diseases scheduled were anthrax, lead poisoning and phosphorous poisoning, but the list was made capable of extension. Mercury poisoning was thus added to Schedule III by notification, dated 28th September 1926.

In order to bring the Indian law into conformity with the provisions of the Draft Convention concerning Workmen's Compensation for Occupational Diseases adopted at the Seventh International Labour Conference held at Geneva in 1925, which had been ratified by India, necessary changes were made in sub-section (2) of section 3 and in the list of occupational diseases given in Schedule III of the Act. Certain occupations in connection with operations for winning natural petroleum or natural gas and in connection with the loading, unloading and fuelling of a ship in a harbour, roadstead or navigable water were also brought within the purview of the Act by notification issued by the Governor-General in Council in exercise of the powers conferred by sub-section (3) of section 2 of the Act.

The Amending Acts of 1929 and 1931.—The main features of the Amending Act of 1929 were (1) that the discriminating restrictions placed on workmen employed in the construction, repair or demolition of a building or bridge with regard to their ineligibility for compen-

sation except in the case of death or permanent total disablement has been removed; (2) that all payments to dependants of the deceased workmen (except advances to the extent of Rs. 50 for funeral expenses of the deceased workman and to the extent of a hundred rupees on account of compensation to any dependent) and any lump sums payable to minors should be paid through the Commissioner; (3) deposits of trivial amounts, *i.e.*, less than Rs. 10 have been done away with; (4) provision is made for the protection of lump sums payable to a woman or a person under legal disability by empowering the Commissioner to invest, apply or otherwise deal with them for the benefit of the woman, or of such person during his disability; (5) powers are vested in the Commissioner to recover any amount obtained by any person by fraud, impersonation or other improper means; and (6) the benefits of the Act are extended to (*a*) any person employed for the purpose of loading, unloading, fuelling, constructing, repairing, demolishing, cleaning or painting any ship of which he is not the master or a member of the crew, or (*b*) employed on a railway as defined in Sections 3 (4) and 148 (1) of the Indian Railways Act, 1890, by a person fulfilling a contract with a railway administration or (*c*) employed as an inspector, mail guard, sorter or van peon in the Railway Mail Service, or (*d*) employed in connexion with operations for winning natural petroleum or natural gas, as a rig-builder, driller, driller's helper, oil-well puller or bailing or cleaning oil wells or putting in and taking out casings or drill pipes in oil wells or (*e*) employed in any occupation involving blasting operations.

In 1931 the Act was further extended to cover workmen engaged in the construction, etc., of aerial ropeways.

The Amending Act of 1933.—The Royal Commission on Indian Labour made a number of recommendations for expanding the scope of the Workmen's Compensation Act, 1933 and on effecting improvements in it. The Government of India, in the Department of Industries and Labour, introduced a Bill in the Legislative Assembly on the 22nd February 1932 giving effect to the Commission's recommendations. The Bill was circulated for opinion to Local Governments in March 1932 and was referred to a Select Committee of the Legislative Assembly on the 23rd Sept. 1932. The Select Committee submitted its report in February 1933. The Bill was passed by the Legislature and the Act received the assent of the Governor-General on 9th September 1933. It came into force on 1st July 1933 but certain sections of the Amending Act were brought into operation from 1st January 1934 in order to give time to the industries covered for making the unnecessary insurance arrangements in view of the alterations made in the amounts of compensation payable. The principal amendments made in the Act are as follows:—

(*a*) The definition of "dependent" has been recast so as to divide dependents into two categories, placing in the first those who are in practically all cases actually dependent and in the second those who may or may not be in that position. Widowed daughters, widowed sisters and widowed daughters-in-law as well as illegitimate children have been included in the list of dependents.

(*b*) The scope of the Act has been extended so as to cover as completely as possible all workers in organised industries whether their occupations are hazardous or not and a step has been taken in the direction of extending the benefits of the Acts to workers in less organised industries when employment is subject to much risk. The distinction which existed between seamen employed in the ships registered in India and those in ships registered in foreign countries has been removed. Any person employed as the master or a seaman of any ship which is propelled by mechanical power or towed by a ship so propelled as well as in any other kind of ship whose net tonnage is 50 tons or more are brought within the scope of the Act. Not only workmen employed within the precincts of a factory but also men engaged in any kind of work incidental to or connected with work in a factory are entitled to the benefit of the Act. Other classes of workers included within the scope of the Act are, drivers of private motor cars, workers employed in handling explosives or in the construction of any building twenty feet or more in height or in the demolition of any tion, working, repair or demolition ordinarily aerial ropeway or in any occupation ordinarily involving outdoor work in the Indian Posts and Telegraphs Department, or in the operation of any ferry boat capable of carrying more than ten persons or in any estate which is maintained for the purpose of growing cinchona, coffee, rubber or tea; or in a lighthouse as defined in clause (*d*) of section 2 of the Indian Lighthouse Act, 1927; or in producing or exhibiting cinematograph pictures; or in the training, keeping or working of elephants or wild animals or employed as a diver.

(*c*) The waiting period has been reduced from ten to seven days.

(*d*) The scales of compensation for death and permanent total disablement which are graded according to seventeen wage classes, have been considerably enhanced and the minimum rate introduced represents an increase of over 100 per cent on that given under the original Act, while the maximum is increased by 60 per cent. The basis of calculation of the amount of compensation in the case of deaths or permanent total disablement is the same as before, *i.e.*, 30 months wages for the former and 42 months wages for the latter for adults. The maximum amounts of compensation for deaths and permanent total disablement have been increased from Rs. 2,500 and Rs. 3,500 to Rs. 4,000 and Rs. 5,600 respectively. In the case of minors there is no change in the amount of compensation for death but the maximum compensation for permanent total disablement has been prescribed at a uniform rate of Rs. 1,200 as against 84 months' wages or Rs. 3,500 whichever is less, in the original Act. The maximum limit to the amount of half-monthly payments in the case of temporary disablement to both adults and minors has been raised from Rs. 15 to Rs. 30.

(*e*) New provisions have been inserted into the Act enabling the interests of dependents in cases of fatal accidents to be better safeguarded by ensuring that (*i*) in as many cases as possible, fatal accidents are brought to the notice of Commissioners; (*ii*) where the employer admits liability, compensation is to be deposited promptly; and (*iii*) where the employer disclaims liability and there are good grounds for believing compensation to be payable, the dependents get the information necessary to enable them to judge if they should make a claim or not.

(*f*) A contractor has the right to be indemnified by his sub-contractor if he has had to pay compensation either to the principal or to the workman.

(*g*) An employer may make to any dependant advances on account of compensation not exceeding an aggregate of one hundred rupees, and so much of such aggregate as does not exceed the compensation payable to that dependant shall be deducted by the Commissioner from such compensation and repaid to the employer. Further, the Commissioner may deduct Rs. 25 from the amount of compensation payable, for the funeral expenses of a deceased workman and pay the same to the person by whom such expenses were incurred.

(*h*) The following four new industrial diseases have been added to Schedule III of the Act:—(1) Mercury poisoning or its sequelæ; (2) poisoning by benzene and its homologues, or the sequelæ of such poisoning; (3) chrome ulceration or its sequelæ; and (4) compressed air illness or its sequelæ.

Statistics.—The statistics regarding cases disposed of under the Act have been collected and published since 1st July 1924 on which date the Act came into force. These statistics relate to the more important classes of workers, *i.e.*, workers in factories, mines and docks and on railways and tramways. The total amount of compensation paid to these classes of workers was about 6¾ lakhs of rupees in 1925, 8¼ lakhs in 1926, 11 lakhs each in 1927 and 1928, 12½ lakhs in 1929 and 1930, 10½ lakhs in 1931 and 8¾ lakhs in 1932. The following table shows the number of cases, classified by nature of injuries, and the amounts of compensation paid in each year since 1924:—

Year.	Number of Cases.			Amount of Compensation paid for.		
	Fatal.	Non-Fatal.	Total.	Fatal Cases.	Non-Fatal Cases.	All Cases.
1924 *—						
Adults	249	3,898	4,147	82,085	66,248	1,48,333
Minors	2	19	21	375	1,516	1,891
1925—						
Adults	583	10,751	11,334	3,45,995	2,95,535	6,41,530
Minors	7	30	37	200	2,391	2,591
1926—						
Adults	631	13,387	14,048	4,25,935	3,94,385	8,20,320
Minors	3	45	48	460	695	1,155

Minors	1	19	20	200	688	888

* The figures for 1924 relate to only the six months from 1st July to 31st December.

The following tables set out the proportion of contested cases out of the total number of applications received by the Commissioners in each year:—

Year.	No. of Applications disposed of.	Number of contested Cases.	Percentage of contested cases to total disposed of.
1924	92	14	15·2
1925	539	100	18·6
1926	835	198	23·7
1927	1,223	281	22·9
1928	1,306	309	23·7
1929	1,385	278	20·7
1930	1,438	309	21·48
1931	1,367	296	21·66
1932	1,366	328	24·01

The details of agreements (*i*) disposed of, (*ii*) registered as filed and (*iii*) rejected on account of inadequacy are given below for each year:—

Year.	Number of Agreements.			
	Disposed of.	Registered as filed.	Registered after modification.	Not registered on account of inadequacy, etc.
1924	41	33		
1925	390	390	1	7
1926	591	583	3	6
1927	701	682	5	3
1928	887	855	12	7
1929	1,046	1,024	15	7
1930	1,007	950	14	8
1931	1,060	1,018	29	28
1932	993	942	18	34
			22	29

Effect on Industry.—A compulsory system of workmen's compensation enhances the cost of production but not to any appreciable extent. In the case of coal mines, the increase in cost has been estimated to be not more than annas four per ton of coal (*vide* para 39 of the Report of the Indian Coal Committee, 1925). However, the owners of many of the smaller coal mines have been compelled to close down their mines due mainly to the severe depression with which the industry has been faced. In the Punjab the proprietors of the coal mines in the Jhelum District are reported to be not satisfied with the privileges enjoyed by the miners under the Act as some of them have had to pay as compensation on a single accident more than they could earn during a month. An unexpected increase in the number of serious and fatal accidents may undoubtedly make a big hole in the profits of a concern but the remedy for this lies in accident insurance. Facilities for accident insurance are now being provided by a number of leading insurance companies in the country and the most important of these are the Claims Bureaux in Calcutta and Madras. The Calcutta Claims Bureau which represents many of the leading insurance companies operating in India deals with a large number of claims and offers valuable co-operation to the authorities in settling compensation claims. In Bombay, insurance companies were concerned with half the number of cases that came up before the Commissioner. Insurance Companies as a rule contest only cases involving questions of law or principle and are of benefit to all concerned. In these provinces insurance is widely resorted to by the employers especially in the Textile Industry. The Millowners' Mutual Insurance Association, Ltd., Bombay, is an organisation of employers one of whole objects is the Mutual insurance of members against liability to pay compensation or damages to workmen employed by them, or their dependants for injuires or accidents, fatal or otherwise, arising out of or in the course or employment. The Association has about 60 members and is controlled by a Board of Directors. In other Provinces accident insurance does not appear to have made much progress.

INDUSTRIAL HOUSING.

One of the most vital problems facing industrial employers in India to-day is that connected with the housing of the labour which they employ. The importance and the urgency of providing decent housing cannot be sufficiently emphasized.

The conditions of industrial housing in India are, in many cases, appalling and the majority of buildings, tenements or huts in which industrial labourers are housed are insanitary and more or less uninhabitable from Western points of view. Provincial Governments, Municipalities, Improvement Trusts and the larger employers have done a great deal to mitigate the evils resulting from an insufficiency of decent sanitary housing for labour, but a considerable amount still remains to be done before this question can be considered to have been satisfactorily solved.

Several commissions and committees of inquiry appointed by the Government of India and the Provincial Governments in connection with various subjects have dealt with the question of industrial housing. The Industrial Commission in 1918 urged that, in addition to the scheme followed by the Improvement Trust in Bombay, other measures should be adopted such as the refusal of permission with a few exceptions, to fresh industrial concerns to be established, the setting up of a special area for industrial development, the removal of the existing railway workshops from the City, supply of housing accommodation to employees by railways, Government departments and public bodies, improved communications with a view to creating industrial suburbs, and a definite programme of construction to be taken up by local authorities. The findings of other commissions and committees with regard to this question follow similar lines.

Labour Commission's Recommendations.—The Royal Commission on Indian Labour have made several recommendations in connexion with Industrial Housing. These recommendations fall under various categories; (1) Legislative Action by the Central Government; (2) Administrative Action by the Central Government; (3) Legislative Action by Provincial Governments; (4) Administrative Action by Provincial Governments; (5) Administrative Action by public bodies such as Municipalities, Improvement Trusts, etc., and (6) action by Employees'and Workers' organisations. The recommendations under the first head included a suggestion to amend TheLand Acquisition Act in such a way as to enable owners of industrial concerns to acquire land for the erection of workers dwellings. The Government of India introduced a Bill in the Legislative Assembly to amend the Land Acquisition Act in the manner suggested and this Bill was passed into law in 1933. The Commission's recommendations under the second head mostly concern Railways, and although the Railway Board agrees on the vital urgency of providing greater facilities for adequate housing it has come to the conclusion that no material advance can be made in this direction at present owing to financial stringency.

The Commission's recommendations with regard to legislative action by Provinces are of a very ambitious character. They include Town Planning Acts for the Bombay and the Bengal Presidencies providing for the acquisition and lay out of suitable areas for working class housing, the opening up and reconstruction of congested and insanitary areas, the "Zoning" of industrial and urban areas and Government grants and loans to approved schemes. For administrative action by Local Governments, the Commission recommend that they should make surveys of urban and industrial areas to ascertain their needs in regard to housing, and that they should then arrange for conferences with all interested parties in order that decisions may be taken as to practicable schemes and the methods whereby their cost should be shared. Where suitable Government land is available, Government should be prepared to sell or lease to those who agree to build houses within a specified period; and Government should announce their willingness to subsidise in this or other ways employees' housing schemes approved by them. The Commission further recommend that Government should insist that all local authorities should frame bye-laws laying down minimum standards in regard to floor and cubic space, ventilation and lighting and that the Governments themselves should draw up regulations for water supplies, drainage schemes and standards for latrines. For action by Public Bodies, the Commission recommend that the provision of working class housing should be a statutory obligation on every Improvement Trust and that it should be possible for Improvement Trusts to provide land, roads, sewers and sanitary conveniences for new areas but that street lighting and water mains should be a charge on Municipalities. Improvement Trusts should be placed in a position to recoup themselves from the enhancement of land values resulting from their activities. It has also been suggested that co-operative building societies and similar activities should be encouraged. In view, however, of the present acute financial stringency prevailing in all Provinces it is very doubtful whether most of the Provincial Governments will be in a position to do much in the matter of Industrial Housing.

Bombay Presidency.—The first attempt to improve housing conditions in Bombay City was made after the plague of 1896 when the heavy mortality and the great exodus that followed paralysed the trade and industry of Bombay. The Bombay Improvement Trust was established in 1898 "for the work of making new streets, opening out crowded localities, reclaiming lands from the sea to provide room for the expansion of the city and constructing sanitary dwellings for the poor and the police." Owing to its limited powers and the various

difficulties which it encountered the Trust had to content itself for the first few years of its existence with "slum-patching," the development of a few building sites, the construction of a few chawls and the development of main roads. In more recent years, however, the Trust has been able to do a considerable amount of good work in the direction of industrial housing and has built over 1,300 tenements for housing its own labour and 99 chawls containing about 9,000 tenements in all for housing labour in general. The Bombay Port Trust which engages on an average about 8,000 manual workers in all its departments has provided accommodation for a little over 3,000 of its workers. The Bombay Municipality has provided a large number of chawls for its employees as will be evidenced by the fact that nearly 75 per cent. of the seven and a half thousand scavengers employed are provided with quarters. Varying proportions of the numbers of employees in the other departments of the Municipality are also provided with adequate housing. According to the information collected by the Bombay Labour Office in 1925, 28 out of the 76 textile mills in Bombay City which furnished information for the enquiry had provided housing for their operatives. 7 out of these mills provided residential accommodation only for employees in the Watch and Ward Department and the rooms provided were given free of rent. In the 22 mills which provide partial housing for all classes of operatives, the number of workers who lived in the tenements provided amounted to 12,149 out of 64,720 employed. More recent information collected by that office during the year 1933 shows a position of *status quo*. The G.I.P. Railway owns 20 chawls containing 841 one-room tenements and the B. B. & C. I. Railway owns more than 300 one-room tenements for housing their employees.

No action was taken by the Local Government in Bombay City for housing general industrial labour till after the end of the war. A broad and comprehensive policy was drawn up just after the end of the war by the Government of Bombay under the personal inspiration of Lord Lloyd, then Governor of Bombay, for dealing with the problem. A Development Directorate was formed in 1920 to co-ordinate the various housing activities of Government, the Municipality, the Improvement Trust and the larger labour employing organisations. The original intention of the Directorate was to construct 625 chawls located in 3 industrial centres and to comprise of 50,000 tenements for working classes, within a period of 9 years from 1921 to 1929. The original estimated cost was 5½ crores of rupees and a "town duty" of a rupee per bale of cotton on all cotton entering Bombay was imposed under the City of Bombay Municipal and Improvement Act of 1920. The scheme was launched at a time when the industrial prosperity of the country was at its zenith and labour conditions in the City were abnormal. By the end of 1927, 207 chawls with 16,524 tenements were constructed but only 123 chawls with 8,234 rooms were occupied. These chawls unfortunately do not attract industrial labour in Bombay to live in them, the reasons attributed to the failure being the distance of the chawls from the mills, the absence of travelling facilities and other amenities of city life. The average economic rent per tenement worked out at Rs. 16 per month but the actual rents charged were fixed, on an average at barely 50 per cent. of the economic rent and accommodation can now be had in the chawls at Worli at Rs. 5 per room on all floors, except for a corner room for which an extra rupee is charged. The rents in the Naigaum and Sewri chawls are Rs. 7 per room on all floors and for those in the chawls at DeLisle Road Rs. 8 per room per month on all floors. One rupee extra is charged for corner rooms. The rents charged prior to 1st April 1929 were, however, higher for all centres. Frequent strikes in the cotton textile mills and general industrial unrest in Bombay City have been largely responsible for the non-occupation of the rooms in the chawls of the Development Department during the last two years and the figure for the number of tenements occupied on the 31st March 1933 was only 8,730 out of 16,524 rooms available.

Ahmedabad City.—Probably in no other industrial centre in India is the condition of the housing of the working classes so bad as it is in Ahmedabad. The Textile Labour Union at Ahmedabad published a pamphlet entitled "A plea for Municipal Housing for the Working Classes in the City of Ahmedabad" a couple of years ago for submission to the Ahmedabad Municipality. In this pamphlet the Union deals with 23,706 tenements observed and studied by it. The Union reports that there is absolutely no provision of water in the case of 5,669 tenements: 3,117 tenements have a supply of some sort from wells. Even those which are supposed to possess the advantage of Municipal water have a hopelessly inadequate arrangement in this respect—a tap or two in a compound for a group of 200 or more families. Bathing and washing accommodation has not been thought of except in one or two chawls erected by mills 5,360 tenements had no latrine accommodation. In most of the remaining tenements the Union reports that the arrangements are miserable in quality and grossly insufficient in quantity and that urinals are conspicuous by their absence. Only a few tenements are provided with any sort of drainage. No other drainage arrangement exists.

The evils of bad housing in Ahmedabad were considerably aggravated as a result of the flood of July 1927 in Gujarat which destroyed over seven thousand houses in the City of Ahmedabad. The bulk of these houses belonged to the working classes. The Union in the pamphlet referred to, reports that the situation which had arisen in consequence of the flood was grave beyond words. Of the thousands who had been unhoused many came to share with their relatives and friends the accommodation that was already heavily overcrowded. Hundreds were altogether without shelter. The relief operations that were then carried out included the construction of huts intended to provide temporary accommodation to a number of those who could make no arrangement of their own. The Relief Committee set up by the leading citizens of Ahmedabad for reconstruction work

recommended that the Municipality should take as early steps as possible to construct 5,000 sanitary tenements by raising a loan for the purpose.

In the opinion of the Labour Union the solution of the question of housing constitutes one of the obligatory duties of the Municipality and a growing appreciation of this aspect of the housing question on the part of the authorities has led to the incorporation in the City Municipalities Act (1925) under section 71, of a provision permitting City Municipalities to undertake provision of sanitary dwellings for the proper classes. Owing mainly to the efforts of Mr. Guzarilal Nanda, Secretary of the Ahmedabad Labour Union, the Ahmedabad Municipality has recently decided to construct model dwelings for the working classes and considerable progress is being made on co-operative lines to provide industrial labour in Ahmedabad with better housing.

A Census taken by the Bombay Labour office in the early part of 1931 showed that of 69 mills working in Ahmedabad, 34 provided housing accommodation for about 18 per cent. of their employees, the total number of tenements being 3,708 of which 3,057 are one roomed, mostly 144 square yards in area with a cubic space of 1,592 cubic feet, the average rent of which was Rs. 3-5-3 per month.

Bengal Presidency.—Housing is generally provided in Bengal by employers but the extent and quality of the housing depend on the cheapness and availability of land. In the more congested areas in Calcutta, Howrah and the nearer neighbourhood housing facilities are not provided on so big or so good a scale as in other areas. Most jute mills provide for their workers rooms constructed in the neighbourhood of the mills at rents varying from annas 8 to Re. 1 per room per month. The sizes of the rooms vary from 8′×8′ to 10′×10′ and in some cases to 12′×10′. In nearly all cases the rooms are constructed back to back and in most *pucca* floors and tiled roofs have been provided with narrow verandahs generally 4′ wide used for cooking purposes. Very often the rooms are dark and in none of them can sun light penetrate through. Ventilation is unsatisfactory owing to the method of construction and the only openings in the rooms are the doors. If windows are provided they are kept shut. No chimneys or openings are provided for the escape of smoke in the majority of the houses. Recent enquiries made into the condition of housing in Bengal show that drainage, water supply and conservancy arrangements in *bastis* are abominable. Government and other public agencies do not provide housing, as in Bombay, for industrial purposes but some Government and public concerns do provide quarters for their own employees.

Madras Presidency.—As a result of the exertions of the Labour Department of the Government of Madras, Co-operative Building Societies and a number of local authorities some houses have been built for poor workmen in Madras City. Out of 1,530 registered factories a little over 200 factories are reported to have provided housing for a small number of their employees. Almost all plantation estates in the Nilgiris, Malabar and Coimbatore provide "lines" for the cooly labour employed.

United Provinces.—Out of 330 regulated factories some 80 make provision for the housing of workmen and their families. Altogether about 5,400 single room and 1,045 double room tenements are provided by the employers. The McRobertsganj and Allenganj settlements of the British India Corporation at Cawnpore are about the only important examples of housing provided by employers for their workmen in that city. A scheme has however been launched by some of the owners of factories in Cawnpore for providing housing for some twenty thousand workmen and their families but it is still under discussion. Except as employers the Government of the United Provinces has done very little in connection with industrial housing. The Improvement Trust of Cawnpore has put up some temporary housing and the Improvement Trust of Lucknow has put up a model barrack in the area set apart as an industrial area. In the *bastis* or *hatas* where housing is provided by private landlords the type of tenement available is usually a small mud hut with a room at the back and a room or a verandah in front. The size and height vary. The usual size is 10′×8′. The normal height is 6′ to 8′. The only outlet for ventilation is the small main door. Even such tenements are reported to be shared by 2, 3 or even 4 families and as many as 10 persons may be found as inmates.

Central Provinces.—Housing is provided for about 7,500 workers by some of the larger factories and mills in the Central Provinces. Nineteen per cent. of textile labour and 7·5 per cent. of the labour employed in minor industries is housed. The Pulgaon Cotton Mill maintains a settlement covering an area of 15 acres on which the millhands are allowed to build their own houses on payment of a nominal ground rent of annas 4 per annum per 100 sq. ft. Probably the most magnificent scheme of industrial housing conceived in India is that launched by the Empress Mills under the agency of Messrs. Tata Sons Limited at Nagpur. These mills have leased a plot of 200 acres at Indora, a suburb of Nagpur, two miles from the mills. The scheme is based on a desire to establish a model village. The idea is to build houses of the bungalow type standing on their own ground in plots measuring 36′×53′ with the limitation that building will not be allowed on more than one-third of the space provided. The houses are let to the workers on the hire purchase system and it is expected that many of the workers will ultimately own them.

Bihar and Orissa.—All the collieries in the Jharia coal field are amply and efficiently equipped with approved types of houses. Their design, construction, ventilation and general amenities are governed by the Jharia Mines Board of Health. Workers recruited from villages within five miles from the mine frequently prefer to live in their own villages and walk backwards and forwards to their work. In five collieries employing about ten thousand workers 4,775 houses are provided, five of the worst equipped mines employing 424 workers

provide 156 houses and five normally equipped mines employing 3,084 workers provide 1,162 houses. In many cases more than one employee is accommodated in one *dhowra* or house. Very frequently a man and his wife and his family all of whom may be recorded as separate labourers in the figures of the mining population occupy one house. Every house must be licensed. Licenses are not given unless the standards are complied with. If labourers are found in occupation of unlicensed premises the management is liable to prosecution. No rent is however charged and subletting is not known.

The Tata Iron and Steel Works at Jamshedpur have built nearly 5,000 residential buildings. Of these, 301 are rented at over Rs. 20 per month. Sixteen are rated as hotels. The accommodation provided at present is insufficient and one of the problems the Company will have to face is the provision of a larger amount of housing.

Assam.—Free quarters are provided for all residential employees on tea estates. Such non-resident labour as is employed is casual labour which comes from the adjoining villages and lives in its own houses. In the mines and oil fields free quarters are provided for the labour force employed. A Committee of Inquiry appointed in 1921-22 recommended that endeavours should be made to house immigrants from different provinces together in hamlets instead of putting workers from all provinces indiscriminately into barracks or lines. The main objection to this recommendation is the want of land as all available land is under tea. The housing conditions in the coal and oil fields are reported as being quite satisfactory. In Assam the tea estates are regularly inspected by District and Sub-Divisional officers. Although the legal powers of interference have been curtailed by the abolition of indentured labour and the repeal of so much of Act VI of 1901 as related to such labour, still in practice the inspecting officers do invariably report on the condition of the lines. They call attention to the need of improvement and the management is generally ready to effect such improvements as are considered necessary.

Other Provinces.—No special remarks are necessary in connection with the question of industrial housing in other provinces. Generally speaking no industrial slums as such or any big urban inflammation due to the presence of agglomerations of factory or other workers is particularly noticeable and the housing of labour is not to be differentiated from the ordinary poor citizen. Except in those cases where Government action has been definitely indicated, the governments of the various other provinces in India have done nothing for the improvement of industrial housing.

Railways.—The general policy on railways is to provide residential quarters where it is necessary for special reasons to provide accommodation for certain classes close to their work and where conditions are such that private enterprise does not adequately meet the demand for housing the staff. The total expenditure incurred on housing provided by the principal railways since the commencement of operations amounts to nearly twenty-five crores, while the expenditure incurred during the last five years amounts to over seven crores. Notwithstanding this expenditure there is, at present, a considerable dearth of quarters on most railways. Endeavours are, however, continuously made to construct new houses in accordance with an annually pre-arranged programme as funds permit.

HEALTH.

No satisfactory statistics are available regarding health conditions of industrial workers, *e.g.*, morbidity rates among the workers, their average weight, height, etc., and in the absence of any sound statistical data it is not possible to generalise about these matters. The problems associated with health are always difficult; they are much more so in a country where both climate and the poverty and ignorance of the people contribute to recurring outbreaks of tropical and other epidemic diseases. The main cause of ill-health particularly among the workers in Bombay and Bengal, appears to be the prevalence of malaria in the localities in which they live. Major Covell, the Special Officer appointed by the Government of Bombay to enquire into Malarial conditions in Bombay City who submitted his report in 1928, says: "It (Malaria) is still present in certain quarters of the southern portion of the City to a serious extent, but the most intense malaria at the present time exists in the vicinity of the mills, more especially in Worli and Parel sections. In the northernmost portion of Worli section, malaria is also slight, but as soon as the edge of the mill area is reached the incidence of the disease rises abruptly and extends over the greater part of Worli and Parel. The correlation between the intensity of Malaria and the proximity of mills was most striking, especially in certain cases where a single isolated mill happened to be present, *e.g.*, the Victoria Mill in Chowpaty and the Colaba Land Mill in Colaba. The vast majority of the mills in Bombay are situated in the highly malarious area." The anti-malarial measures taken by the City Municipality have however resulted in a gradual reduction of the number of deaths from malarial attacks.

In the mines in the Madras Presidency, Malaria prevails in the Cuddapah district and at every change of season there is a prevalence of widespread fever. Malaria also prevails in the Thummaragudi mines throughout the year and the cold winds during the rainy season from Sandur Hills affect the health of the labourers in the mines of Tonasigeri. Tuberculosis prevails among industrial workers in the United

Provinces and Bihar and Orissa, and *Kala Azar* is common among workers in certain tracts like Bihar and Orissa.

The following table gives the birth and death rates and the rate of infant mortality per thousand of the population for some of the important industrial centres. The figures, however, relate to the whole population in most cases and as such are not likely to give an adequate idea regarding mortality, etc., among industrial workers. Besides, in certain cities like Bombay, it is customary for married working class women to leave the city for their confinement and register births in the mofussil:

A table showing (a) Birth-rate and (b) Death-rate per thousand of population and (c) Infant mortality for 1,000 registered births for certain important industrial centres.

Centre.	Period.	Birth-rate per 1,000 of population.	Death-rate per 1,000 of population.	Infant mortality per 1,000 registered births.
Bombay	1932	24.8	19.7	218.00
Ahmedabad	1929	47.02	49.90	331.65
Sholapur	"	44.03	34.53	228.73
Karachi	"	55.83	30.97	230.55
Nagpur	"	50.63	52.24	290.77
Amraoti	"	59.60	49.14	330.91
Akola	"	41.73	35.36	251.27
Cawnpore	"	36.94	52.70	420.34
Lucknow	"	43.98	75.81	469.22
Allahabad	"	46.31	38.44	258.79

The relation between overcrowding and infant mortality is brought out in the following table extracted from the annual report of the Municipal Commissioner for Bombay City:—

Infant Mortality by the Number of Rooms occupied in 1932.

Number of rooms.	Births.		Deaths.		Infant mortality per 1,000 births registered.	
	Number.	Percentage.	Number.	Percentage.	1931.	1932.
1 Room & under	10,201	35.3	4,472	71.0	438	529
2 Rooms ..	2,401	8.3	638	10.1	265	412

Total ..	28,894	100.0	6,298	100.0	218	272

Working conditions.—The factory department in Bombay has done much work in investigating the efficiency of different humidifying and ventilating plants in the weaving and spinning departments of Mills in Ahmedabad. As a result, all the new textile mills which have been constructed in Ahmedabad during the last five years are equipped with efficient ventilating and cooling systems and the benefits both to the workers and the processes involved are well recognised at that centre. There has been an extensive "uplift" in the older mills and there is hardly a mill that has not made efforts in the direction indicated. There has latterly been a marked tendency to increase the pace of improvements in the spinning departments and one group of mills has installed 12 expensive plants that effectively cool and humidify the atmospheres of the spinning as well as of the weaving departments." A few mills in Bombay City have also installed new cooling and humidifying systems. A few other mills provide vacuum stripping apparatus in the carding departments. A plenum system of blowing external air near the workers in the boiling department of a soap factory produced results gratifying both to the worker and the management and it is hoped to extend the method to a few industries where the removal of surplus heat is a difficult matter. An enquiry made into the effect of employment on the health of the dhobi bleachers in Ahmedabad revealed that although there was little history of rheumatism, some are adversely effected by working with bleaching solutions. Several workers were found to be suffering frim hyperaemia of the legs, but it was obvious later on that more care was being exercised by the contractors. Most of the dhobi work is done in uncovered tanks in the compounds and no shelters have been provided. It is said that the men are used to working in the hot Ahmedabad sun, but even the donkeys used so freely for load carrying take advantage of the shade when they are permitted to do so. The Bengal Report refers to the question of dust removal in Jute Mills and Tea factories and to the investigations made to determine at what stage dust or fluff impregnation could be regarded as definitely injurious. It is considered that where exhaust trunk extracting systems are deemed to be essential in all factories in an industry the necessity to instal such equipment should be promulgated by rule. The continued trade depression, however, precluded the issue of a general order by Government. The majority of firms find the initial cost of such installations prohibitive but a few concerns have provided mechanical ventilation in their factories. Although some improvement in ventilation has been effected during the year 1932, the bad design and unsuitability of the majority of the buildings occupied by the smaller factories is stated to be still the chief obstacle to all round progress. In regard to Cotton ginning factories the Punjab Report states that "ventilation was again far from satisfactory but apart from a drastic alteration in the method of gnning, little can be done to improve ventilation sufficiently to dispose of the dust in ginning rooms; the cost of such alteration is at present prohibitive." The Central Provinces Report mentions that ventilation arrangements have on the whole, shown satisfactory improvement in most perennial factories. In the present conditions, owners of ginning factories are unable to adopt the expensive system of ducts and exhaust fans to overcome the dust nuisance. The provision of ridge ventilation in cotton ginning factories has been a standard practice in the United Provinces in respect of new factories and is reported to have proved satisfactory when combined with a reasonable height of roof. Ventilation in other factories is steadily improving though the progress is not quite rapid due to depressed trade conditions. The extended use of electricity is steadily improving the general standard of lighting and is commended on with approval in the Provincial factory reports for the year 1932. The factory department in the province of Bihar and Orissa has compiled a little guide book to "Safety, Lighting and Ventilation in small factories," based on photometric observations, in order to help interested persons and builders of factories to so adjust the window area as to secure sufficient amount of natural lighting.

Extent of Medical Facilities provided.—The results of a recent enquiry into Welfare work conducted by the Labour Office shows that the provision of facilities for medical attendance and the supply of medicines is fairly general in all the larger labour-employing organisations in the Bombay Presidency. The Textile Labour Union in Ahmedabad is the only association of employees which provides medical facilities for its members. There are also Government, Municipal or charitable hospitals and dispensaries which are open to the public and which are used by the labouring classes. In the United Provinces, many of the larger employers maintain dispensaries but no hospitals. The Dufferin Fund, a private organisation aided by grants from Government and local bodies, maintains female hospitals at the more important towns. The Lady Chelmsford Maternity and Child Welfare League maintains a number of centres for child welfare and the treatment of maternity cases. Many of the employers in the Central Provinces and Berar have provided well-equipped dispensaries and medical facilities are within easy reach of the workers in almost all the factories and every important mining area in the Province. Some of the larger concerns in Bihar and Orissa and in the Punjab also provide medical facilities for their employees. In Madras only a few large factories provide dispensaries. Medical facilities in the plantations are fairly good. All the jute mills in the neighbourhood of Calcutta provide dispensaries but most of the doctors in charge are not registered medical graduates. Owing to financial stringency the Indian Jute Mills Association were unable to take any action on the welfare survey conducted by a lady doctor in the mill area and leprosy survey carried out by the school of tropical medicine. In spite of the general depression, the Julti Iron Works built a hospital with up-to-date equipment. In all the tea gardens in Assam and in Bengal medical attendance and medicine are provided for all classes of employees. The medical arrangements in a large number of estates are supervised by European medical officers. Well-

equipped hospitals are also provided for the labour force in the mines and oil-fields in Assam. Part-time medical attendance and medicines are provided by the employers in the Asansol Mines Board Area. Medical facilities are also provided in the mines in Madras. In the Jharia Mining Settlement eight hospitals are maintained by employers, the number of beds varying from 6 to 12 in each ward.

All the Provincial Factory Reports for the year 1932 record a year of normal health amongst factory workers. There was no dislocation of industry anywhere on account of epidemics during the year 1933 except perhaps to some extent in Poona on account of the severe epidemic of plague in that City which lasted from July to October. Continued improvement in general sanitary conditions in the larger factories is reported in all provinces. In Bombay concentration on several factories of the bazaar type has led to considerable improvements and a rise in the standard of neighbouring smaller concerns not yet amenable to this Act. The lack of municipal facilities for the disposal of trade waste in Ahmedabad is stated to be a cause of insanitary factory surroundings in that area. Conditions in the Dharavi Tanneries in the Bombay Presidency were investigated during 1932 and considerable improvements were effected. There was marked improvement in the sanitary conditions of factories in the Titaghur area in Bengal on account of the successful installation of a sewerage scheme. The Bihar and Orissa report states that the advisability and possibility of appointing. Medical Inspector of Factories was under consideration of the local Government. The United Provinces Report refers to occasional cases of persons suffering from obnoxious diseases being employed in food product factories and states that the Medical Officers of Health were asked to give this question attention in their capacities as Additional Inspectors of Factories with a view to stopping the practice.

Maternity Benefits.

In September 1924, Mr. N. M. Joshi made the first attempt in the Legislative Assembly to introduce a Bill to make provision for the payment of maternity benefits in certain industries. Under this Bill, the Local Governments were to be asked to establish a Maternity Benefit Fund and to make payments out of this Fund. The Bill, after circulation, was thrown out by the Assembly in August 1925.

The first Province in India to pass a Maternity Benefit Act was Bombay. The Act came into force on 1st July 1929. According to this Act, the payment of maternity benefits is an obligation which is imposed directly on the employer. The Annual Report on the administration of this Act for the year ending 30th June 1933 shows there were 11.7 claims paid per 100 women employed and the total amount of maternity benefit paid under the Act was Rs. 1,35,813. The Bombay Municipality has started since February 1928, a maternity benefit scheme by which benefit is given to halalkhore and scavenging women in the form of leave with full pay not exceeding 42 consecutive days, including the date of confinement, as certified by the Executive Health Officer, if the birth takes place in Bombay, and by a Police Patel or by hospital authorities if it takes place out of Bombay.

An Act was passed by the Central Provinces Council in 1930 on the same lines as that in Bombay. During the year 1932 benefits amounting to Rs. 12,394 were paid to 605 women workers.

In Assam, voluntary maternity benefit schemes have been adopted by almost every tea estate of repute. While pregnant women remain at work, they are put on light work on full rates of pay. During the period of advanced pregnancy and after childbirth leave on half pay is usually granted and in some cases full pay is allowed and a bonus at childbirth is often granted in addition. The bonus is in some cases conditional on the child being healthy. The Assam Railways and Trading Company, the next largest employers of labour in Assam, grants six months' leave on half pay provided the women have been examined by the medical officers and attend hospital once a week. The Assam Oil Company grants leave on half pay for three months. On some estates in Coimbatore District female coolies are fed free for a month before and a month after confinement. On other estates maternity benefit ranging from Rs. 3 to Rs. 5 is paid and in some other estates free feeding of the women for two weeks before and three weeks after confinement is arranged.

Labour Commission's Recommendations.—Among the more important recommendations made by the Royal Commission on Indian Labour in connexion with the health of the industrial worker are the following :—

(*a*) India should have an Institute of Nutrition.

(*b*) Local authorities should construct sanitary markets in all urban and industrial areas.

(*c*) Adulteration of Foods Acts should be in force in all Provinces.

(*d*) In industrial provinces Public Health Departments should be strengthened to deal with industrial hygiene and industrial disease.

(*e*) Women should be appointed to public health staff particularly in the more industrialised Provinces.

(*f*) Comprehensive Public Health Acts should be passed in all Provinces.

(*g*) Where piped water supplies are not available special precautions as to purity should be taken.

(*h*) Every provincial health department, every railway administration and all Boards of Health and welfare in mining areas should employ full time malariologists.

(*i*) A Government diploma for health visitors should be instituted as the recognised qualification required of all women aspiring to such posts.

(*j*) In the larger industrial areas Governments local authorities and industrial management,

should co-operate in the development of child welfare centres and women's clinics; and Government should give percentage grants for approved schemes.

(*k*) Maternity Benefit legislation on the lines of the Bombay and Central Provinces Acts should be enacted in all Provinces, and

(*l*) All methods should be explored that may lead to the alleviation of existing hardships arising from the need of provision for sickness.

Amendment of the Bombay Maternity Benefit Act.—It was represented to Government that the Act requires amendment in certain respects and the Royal Commission on Labour have also dealt with the question of maternity benenefit. Accordingly the Government of Bombay introduced in the Local Legislative Council on the 11th August 1933 a Bill to amend the Act. The Bill was referred to a select committee on the same day. The following changes in the Act were proposed in the Bill:—

(*a*) In place of the uniform rate of benefit of 8 as. a day provided in Section 5 of the Act, A rate of 8 as. a day in the Cities of Bombay, Ahmedabad and Karachi, and a rate of 8 as. a day or the average daily earnings whichever is less, for other places have been proposed. The average earnings are to be calculated over a period of three months ending on the date on which a woman worker gives notice under Section 6(1).

(*b*) The maximum period for which a woman shall be entitled to benefit is proposed to be raised from seven to eight weeks.

(*c*) The qualifying period of service is to be raised from 6 months to 9 months.

(*d*) The benefit is now payable in three instalments, one at birth of a child and the other two thereafter. The Bill provides for payments to be made either in two instalments, one before and the other after childbirth or in one lump sum payment after delivery.

(*e*) There is at present no time-limit within which the benefit may be claimed. It is proposed to prescribe a limit of six months after childbirth.

(*f*) The Bill permits employees to maintain a common combined muster for the purposes of this and the Factories Act.

The Select Committee did not agree to the proposed changes in the rate of benefit and deleted the clauses in the Bill relating to this question. The report of this Committee is to be considered during the Spring Session of the Bombay Lesgislative Council.

Under their rule-making powers under the Act, the Local Government made a new rule in December 1933 which makes an employer liable for paying maternity benefit in the event of his closing his factory. A woman entitled to maternity benefit is not to be deemed dismissed within the provisions of Section 8, if she is discharged on account of the closing of the factory in which she is employed.

WELFARE WORK.

(Excluding Health and Housing).

In 1926, the Government of India requested all Provincial Governments to collect full and comprehensive information with regard to the measures undertaken and the efforts made to ameliorate the conditions under which the workers live when they are not actually employed. The enquiry originated as the result of the Recommendation adopted by the Sixth Session of the International Labour Conference in connexion with the development of facilities for the utilisation of workers' spare time. The Labour Office conducted an enquiry in the Bombay Presidency, the results of which were published in the issue of the *Labour Gazette* for January 1927.

Apart from the few individual employers who have organised welfare work on modern lines, the first organised attempt to introduce welfare activities of a particular type was taken by the Bombay Millowners' Association early in 1930. In a circular letter dated 8th January, 1930, addressed to the mills affiliated to the Bombay Millowners' Association, this Association requested all mills in Bombay City to give their wholehearted cooperation to their efforts for devising machinery for the improvement of the relations between the management and labour by giving immediate effect, wherever it was possible, among other things, to those classes of welfare work which have been uniformly successful, *e.g.*, (*a*) periodical social gatherings of workpeople; (*b*) provision of free mill dispensaries as soon as financial considerations permit: and (*c*) the establishment of creches at all mills.

There are to-day 27 cotton mills in Bombay City which provide creche and in one of these mills the creche is for untouchables only. Fourteen of the mills which have creches have staffed the creches with both qualified nurses and *ayahs*. Light food such as milk, biscuits, etc. is given to the children in 17 cases and in 13 of them change of clothes also is provided for. Only seven working mills have no dispensaries for their workmen. A few mills keep patent medicines only. A large majority of the mills which maintain dispensaries have engaged full-time compounders. The E. D. Sassoon & Company have employed two male doctors and a lady doctor for the benefit of their employees and the company also have a staff for antimalarial propaganda. Nearly a third of the total number of the working mills in Bombay provide night schools for the education of their employees. The Sassoons also offer facilities to the workers for technical education. Facilities for recreation of a regular character such as games, wrestling, etc. are provided for by about ten mills. Occasiona recreational activities like cinemas, dramas

music, etc., are arranged for in a few mills while in a few others annual social gatherings are held. Tea shops are provided in a good number of mills while cheap grain shops for the benefit of the workers are run by four mills. The Sassoon group of mills allow their workmen to make purchases from their cloth shops at 10 per cent. discount on credit, recoveries being made from wages. The employees of 17 mills enjoy the benefits of provident funds while pension schemes for employees are in force in 9 mills. Co-operative credit societies are established in 23 out of the 65 working mills studied.

The Royal Commission on Indian labour have recommended that there should be a more general extension on the part of the employer of welfare work in its broader sense; and that in the larger jute and cotton industrial areas, mills and factories should organise in groups, each establishment having its own welfare centre and health visitor under the supervision of a woman doctor employed by the group.

Employment of Welfare Officers and Workers.—The All-India Industrial Welfare Conference of 1922 passed a resolution that social service organisations should be asked to take up the work of training welfare workers. The establishments of workers' committees in all industrial establishments was also urged but very little progress appears to have been made so far in this direction.

In the Bombay Presidency except in the case of the Sholapur Spinning and Weaving Mills in Sholapur and the Currimbhoy Ebrahim Workmen's Institute at Bombay, no other employers have employed any special welfare officers or workers to conduct their welfare activities. But Messrs. E. D. Sassoon & Co., Ltd., have appointed an England returned B. Sc. of the London University as a Labour Officer for all their eleven Textile Mills in Bombay City.

In Bihar and Orissa, the Tata Iron and Steel Company has recently appointed a welfare officer with an office and staff to co-ordinate the various welfare activities that have been carried on by the Steel Company.

In the Central Provinces and Berar, except at the Empress Mills, no regular staff of welfare officer and workers has been appointed.

In the United Provinces, the British India Corporation employ a full-time welfare superintendent and a trained staff consisting of 4 doctors, 5 nurses, 8 matrons, 8 compounders, about a dozen midwives, 19 teachers and 2 sergeant patrols.

In Bengal, attempts have been made by some mills to set up day and night schools but many of these schools are reported to have been closed owing to the lack of interest shown by the employees. Except for the facilities for technical training that are provided at the Icchapur Rifle Factory, the Cossipore Gun and Shell Factory and the Government Weaving School at Serampore there is little or no organised provision for industrial and vocational training in the industrial centres in Bengal.

The welfare centre inaugurated in Clive Jute Mills made good progress during the year 1932. The Indian Iron and Steel Company, Hirapur, established a Baby Clinic in the charge of a qualified nurse. The Burmah Shell Company's labour bureau and welfare department at Budge Budge continued to do excellent work. An instance of the progress made is stated to be the success of the night school conducted by the department. A number of workmen who attend the school were, until recently, absolutely illiterate but now many of them are able to fill up money order forms, write out an address, and read a telegram.

In Bombay, the Bombay Municipality has introduced compulsory education in F and G Wards which are chiefly peopled by millhands. In the Government factories at Kirkee, the Kirkee Education Society which is well supported by the factory authorities conducts six night schools. The Gokak Falls Mills Company maintains one night school for adult workers. In Ahmedabad one mill runs a school for half-timers and eight mills maintain schools for workers' children. Three mills in the Sholapur district and the Government workshop at Dapuri provide for the primary education of half-timers.

The Social Service League, Bombay, maintains 9 night schools and a Textile Technical School at Parel, for imparting practical and theoretical training to actual mill workers. The Bombay Y.M.C.A. conducts 14 night schools with an average daily attendance of about 200. The Ahmedabad Labour Union conducted in 1933, 16 day schools, 10 night schools, one Nursery school, one boarding school for boys and one boarding school for girls.

In Bihar and Orissa, the Tata Iron and Steel Company has established a Technical Institute at Jamshedpur to train in theory and practice certain selected students for positions in the operating departments. The Company also maintains twenty-two schools for the education of the children of its employees.

In Madras, seventy factories registered under the Indian Factories Act have provided schools for half-timers and in some cases for employees' children also. The Buckingham and Carnatic Mills maintain a day as well as a night school. The day school is an elementary school with 5 standards and has a technical section attached to it.

In Burma, very few firms provide facilities for education. The Burma Oil Company maintains schools in the Yenang-Yaung Oilfield for about 800 children and proposes to start a night school for its employees. The Burma Corporation makes an annual donation of Rs. 1,000 for the maintenance of the Anglo-Vernacular Middle School at Namtu and is also constructing a school at Baldwin for the education of the children of its employees.

In the United Provinces, the British India Corporation maintains four day schools for boys and girls, two night schools and two industrial classes, for employees. The Elgin Mills at Cawnpore, the United Agra Mills, Agra, and the B. N. W. Railway Workshops at Gorakhpur also provide for the education of the children of their employees. The Elgin Mills have built a permanent stage for dramas and purchased a cinema machine for the entertainment of their workers. Messrs. Begg Sutherland & Co.

e the managing agents for several large s, carry on welfare activities in providing free milk to supply pupils, dispensaries, ium and sports, library, recreational mes, etc.

Punjab, only the new Egerton Woollen mpany, Dhariwal, maintains a school.

e Central Provinces and Berar, the Mills in Nagpur have Nursery and classes for the children in the creches. the year 1932, 552 children received education in factory schools as against e previous year, the fall in attendance e to a general reduction in the number n employed. Créches are attached to n mills and one pottery works in this The educational work outside the nducted by the Young Men's Christian Association which has established 9 centres where the mill-workers reside. Of these, 8 centres have night schools. The Empress Mills also make annual contributions of about Rs. 3,500 to other schools where the children of the work-people study.

In Assam, some of the tea gardens maintain schools for children; but these schools are not popular as the labourers are generally recruited from the aboriginal tribes with whom education is at a discount particularly as it interferes with the earnings of their children who find employment in the gardens. The Assam Oil Company maintains a Middle English School and the Assam Railways and Trading Company provides a Middle English and a Primary School for the children of their employees. No industry provides schools for adult labourers.

Welfare Work on Railways.

ion.—Railways as a group are the mployers of labour in India and their ork is therefore being dealt with . All Railways provide facilities for recreation for their employees and their children. The number of recreational clubs or institutes provided on each railway are shown in the following table:—

Name of Railway.	Number of Institutes for	
	Europeans and Anglo-Indians.	Indians.
ern Railway	32	19
Railway	33	26
gal Railway	11	14
ways	15 in all.	
n Peninsula Railway	27	29 (2 for all nationalities).
roda and Central India Railway ..	17	12
pur Railway	14	19
Southern Mahratta Railway ..	24	7
n Railway	19 in all.	

te is regarded as a club provided way free of rent. The institutes eading room, indoor and outdoor and are generally self-supporting nts are made from fines' funds to urring expenses in deserving cases. s also undertake to recover the of the members through the i to remit them to the manager of The membership of the institutes on some railways.

mittees and athletic clubs have d on several railways, *e.g.*, d the East Indian Railways with promoting athletic sports among es and organizing tournaments. Railway Athletic Association he promotion and development ay athletic competitions of all kinds is a registered association and its membership is open to the Railway Board and its subordinate offices as well as to railways which are parties to the Indian Railway Conference Association. Inter-district or inter-divisional competitions are also run by local sports' committees with the idea of encouraging sports among all classes of staff. The inter-railway boxing, wrestling and football competitions are arranged in four groups. In 1931 the North Western Railway provided a stadium within easy reach of the living quarters of the Railway employees at Moghalpura.

The cinema shows and magic lantern lectures which have been recently organized for the recreation of railway employees are growing in popularity with the staff.

The East Indian Railway locomotive and carriage and wagon workshops, Lucknow, have Welfare Committees which meet monthly and dispose of matters brought forward by the various delegates. Such Committees have also been formed in the Perambur as well as the Golden Rock workshops of the South Indian Railway.

Education.—Almost all Railways provide facilities for the education of their illiterate staffs as well as the children of Railway employees. The progress made in this direction on each railway may be briefly stated as follows :—

The N.W. Railway have started three experimental schools for adult workers in the running locomotive sheds at Lahore, Sibsur and Kotri. The experiment has so far been confined to the locomotive staff as the majority of the staff in this branch are illiterate and education provides a great inducement in that wages can practically be doubled by qualifying for promotion to the higher grades of running staff. The East Indian Railway provide 37 schools for the employees of the Operating Department. The Eastern Bengal Railway provide 9 night schools for adult employees, the daily average attendance at these schools being 309. On the Burma Railways educational facilities for adult workmen have hitherto proved a failure and another experimental school has recently been opened for firemen.

The B. B. & C. I. Railway has recently opened classes for imparting instruction in the three R's at 3 centres on the Broad-Gauge and 3 on the Metre-Gauge systems. As an inducement to study, a bonus of Rs. 5 is paid to each man passing a simple test. On the E. B. Railway, the Locomotive Department holds classes at Lunding, Badarpur and Chittagong to assist drivers to qualify as "English speaking" which grade carries a higher pay. The only facilities given by the B. & N. W. Railway are first aid classes and subjects of a technical nature in the Locomotive Department. The Bengal Nagpur Railway provides 14 schools for imparting elementary training in reading, writing and rudimentary arithmetic to Indian drivers, shunters and firemen so as to enable them to make themselves personally acquainted with the rules and orders affecting train working. On the M. & S. M. Railway there are two night schools at Hubli and Guntakal respectively both of which receive financial support from the Company.

Schools for the education of adult workmen do not exist on the G. I. P. Railway but a school is established at Bina for imparting technical instruction and conducting refresher courses in Railway working.

For Workers' Children.—The facilities provided for the education of the children of railway employees are as under: —

About 100 schools for European and Anglo-Indian children and 130 schools for Indian children are maintained at suitable centres and the total number of pupils on the rolls is about 5,000 and 16,000 respectively. The total expenditure from revenue on the European and Anglo-Indian schools is Rs. 4 lakhs per annum and on the Indian schools Rs. 1.4 lakhs. The Railway Department also aids certain schools for children of railway employees. The total number of children in railway aided schools is about 4,000 (European and Anglo-Indian) and 8,000 (Indian) and the total annual grants made by the Railway are about Rs. 50,000 to each group. The Railway Department also gives direct financial assistance to its employees towards the education of their children in certain hill schools. The total expenditure on this account in 1927 28 was Rs. 3.5 lakhs for Europeans and Anglo-Indians and Rs. 28-8 thousands for Indians.

Facilities are also afforded by the grant of passes and concession tickets to enable the children to attend schools.

The present methods of assistance have recently evoked public criticism on the score of their being more favourable to European and Anglo-Indian employees than to the Indian and with a view to eliminating all trace of racial discrimination the Railway Board placed Mr. C. E. W. Jones, C.I.E., I.E.S., on special duty in 1927 with instructions to collect all facts and figures regarding the assistance given by railways for the education of the children of their employees. On a consideration of Mr. Jones' report the Board have now formulated their future policy on the following lines :—

All railway schools would be transferred to local authorities or private bodies, special grants being given out of railway funds where necessary. The assistance given by the Railway Department would be confined to employees who draw pay below a prescribed maximum and to parents who are obliged to send their children to boarding schools. The assistance would take he form of grants to the employees of a fixed proportion not exceeding one-half of the board and tuition fees, the proportion depending upon the pay drawn by the parent and falling with the increase in pay. The assistance would be open to all employees without distinction of community, race or creed.

Several company managed railways have also signified their willingness to adopt a similar policy. But the question is still receiving further consideration because of the representations received in connexion with the scheme.

Co-operation.—The Railway Administration have noticed that heavy indebtedness degrades the employee and impairs his efficiency and they have therefore encouraged the formation of co-operative credit societies and co-operative stores for all grades of employees.

Co-operative Credit Societies have been formed on all railways and are managed by committees generally elected from among the shareholders. But in some cases, the heads of the departments are required to be the chairmen of the committees and they have power to nominate some of the members of the committee.

who are the managing agents for several large concerns, carry on welfare activities in providing schools, free milk to supply pupils, dispensaries, gymnasium and sports, library, recreational programmes, etc.

In the Punjab, only the new Egerton Woollen Mills Company, Dhariwal, maintains a school.

In the Central Provinces and Berar, the Empress Mills in Nagpur have Nursery and primary classes for the children in the creches. During the year 1932, 552 children received primary education in factory schools as against 765 in the previous year, the fall in attendance being due to a general reduction in the number of children employed. Créches are attached to six cotton mills and one pottery works in this province. The educational work outside the mills is conducted by the Young Men's Christian Association which has established 9 centres where the mill-workers reside. Of these, 8 centres have night schools. The Empress Mills also make annual contributions of about Rs. 3,500 to other schools where the children of the work-people study.

In Assam, some of the tea gardens maintain schools for children; but these schools are not popular as the labourers are generally recruited from the aboriginal tribes with whom education is at a discount particularly as it interferes with the earnings of their children who find employment in the gardens. The Assam Oil Company maintains a Middle English School and the Assam Railways and Trading Company provides a Middle English and a Primary School for the children of their employees. No industry provides schools for adult labourers.

Welfare Work on Railways.

Recreation.—Railways as a group are the largest employers of labour in India and their welfare work is therefore being dealt with separately. All Railways provide facilities for recreation for their employees and their children. The number of recreational clubs or institutes provided on each railway are shown in the following table:—

Name of Railway.	Number of Institutes for	
	Europeans and Anglo-Indians.	Indians.
North-Western Railway	32	19
East Indian Railway	33	26
Eastern Bengal Railway	11	14
Burma Railways	15 in all.	
Great Indian Peninsula Railway	27	29 (2 for all nationalities).
Bombay, Baroda and Central India Railway ..	17	12
Bengal Nagpur Railway	14	19
Madras and Southern Mahratta Railway ..	24	7
South Indian Railway	19 in all.	

Each institute is regarded as a club provided by the Railway free of rent. The institutes provide a reading room, indoor and outdoor games, etc., and are generally self-supporting although grants are made from fines' funds to meet the recurring expenses in deserving cases. The railways also undertake to recover the subscriptions of the members through the paysheets and to remit them to the manager of the institute. The membership of the institutes is compulsory on some railways.

Sports committees and athletic clubs have been formed on several railways, *e.g.*, the G.I.P. and the East Indian Railways with the object of promoting athletic sports among the employees and organizing tournaments. The Indian Railway Athletic Association formed for the promotion and development of inter-railway athletic competitions of all kinds is a registered association and its membership is open to the Railway Board and its subordinate offices as well as to railways which are parties to the Indian Railway Conference Association. Inter-district or inter-divisional competitions are also run by local sports' committees with the idea of encouraging sports among all classes of staff. The inter-railway boxing, wrestling and football competitions are arranged in four groups. In 1931 the North Western Railway provided a stadium within easy reach of the living quarters of the Railway employees at Moghalpura.

The cinema shows and magic lantern lectures which have been recently organized for the recreation of railway employees are growing in popularity with the staff.

The East Indian Railway locomotive and carriage and wagon workshops, Lucknow, have Welfare Committees which meet monthly and dispose of matters brought forward by the various delegates. Such Committees have also been formed in the Perambur as well as the Golden Rock workshops of the South Indian Railway.

Education.—Almost all Railways provide facilities for the education of their illiterate staffs as well as the children of Railway employees. The progress made in this direction on each railway may be briefly stated as follows:—

The N.W. Railway have started three experimental schools for adult workers in the running locomotive sheds at Lahore, Sibsur and Kotri. The experiment has so far been confined to the locomotive staff as the majority of the staff in this branch are illiterate and education provides a great inducement in that wages can practically be doubled by qualifying for promotion to the higher grades of running staff. The East Indian Railway provide 37 schools for the employees of the Operating Department. The Eastern Bengal Railway provide 9 night schools for adult employees, the daily average attendance at these schools being 309. On the Burma Railways educational facilities for adult workmen have hitherto proved a failure and another experimental school has recently been opened for firemen.

The B. B. & C. I. Railway has recently opened classes for imparting instruction in the three R's at 3 centres on the Broad-Gauge and 3 on the Metre-Gauge systems. As an inducement to study, a bonus of Rs. 5 is paid to each man passing a simple test. On the E. B. Railway, the Locomotive Department holds classes at Lunding, Badarpur and Chittagong to assist drivers to qualify as "English speaking" which grade carries a higher pay. The only facilities given by the B. & N. W. Railway are first aid classes and subjects of a technical nature in the Locomotive Department. The Bengal Nagpur Railway provides 14 schools for imparting elementary training in reading, writing and rudimentary arithmetic to Indian drivers, shunters and firemen so as to enable them to make themselves personally acquainted with the rules and orders affecting train working. On the M. & S. M. Railway there are two night schools at Hubli and Guntakal respectively both of which receive financial support from the Company.

Schools for the education of adult workmen do not exist on the G. I. P. Railway but a school is established at Bina for imparting technical instruction and conducting refresher courses in Railway working.

For Workers' Children.—The facilities provided for the education of the children of railway employees are as under:—

About 100 schools for European and Anglo-Indian children and 130 schools for Indian children are maintained at suitable centres and the total number of pupils on the rolls is about 5,000 and 16,000 respectively. The total expenditure from revenue on the European and Anglo-Indian schools is Rs. 4 lakhs per annum and on the Indian schools Rs. 1.4 lakhs. The Railway Department also aids certain schools for children of railway employees. The total number of children in railway aided schools is about 4,000 (European and Anglo-Indian) and 8,000 (Indian) and the total annual grants made by the Railway are about Rs. 50,000 to each group. The Railway Department also gives direct financial assistance to its employees towards the education of their children in certain hill schools. The total expenditure on this account in 1927 28 was Rs. 3.5 lakhs for Europeans and Anglo-Indians and Rs. 28-8 thousands for Indians.

Facilities are also afforded by the grant of passes and concession tickets to enable the children to attend schools.

The present methods of assistance have recently evoked public criticism on the score of their being more favourable to European and Anglo-Indian employees than to the Indian and with a view to eliminating all trace of racial discrimination the Railway Board placed Mr. C. E. W. Jones, C.I.E., I.E.S., on special duty in 1927 with instructions to collect all facts and figures regarding the assistance given by railways for the education of the children of their employees. On a consideration of Mr. Jones' report the Board have now formulated their future policy on the following lines:—

All railway schools would be transferred to local authorities or private bodies, special grants being given out of railway funds where necessary. The assistance given by the Railway Department would be confined to employees who draw pay below a prescribed maximum and to parents who are obliged to send their children to boarding schools. The assistance would take he form of grants to the employees of a fixed proportion not exceeding one-half of the board and tuition fees, the proportion depending upon the pay drawn by the parent and falling with the increase in pay. The assistance would be open to all employees without distinction of community, race or creed.

Several company managed railways have also signified their willingness to adopt a similar policy. But the question is still receiving further consideration because of the representations received in connexion with the scheme.

Co-operation.—The Railway Administration have noticed that heavy indebtedness degrades the employee and impairs his efficiency and they have therefore encouraged the formation of co-operative credit societies and co-operative stores for all grades of employees.

Co-operative Credit Societies have been formed on all railways and are managed by committees generally elected from among the shareholders. But in some cases, the heads of the departments are required to be the chairmen of the committees and they have power to nominate some of the members of the committee.

WAGES.

It was in 1873 that one of the earliest attempts to collect wage statistics in India was made by issuing instructions to District Officers to submit half yearly returns showing the average monthly wages of certain classes of skilled and unskilled labour. The returns thus collected were utilized for compiling a series of comparable statistics of wages for selected Districts in each Province and these statistics were published in the publication "Prices and Wages" issued annually by the Director-General of Commercial Intelligence and Statistics. A reference, however, to Mr. Dutt's Report on an Enquiry into Rise of Prices in India would show that these statistics were found to be wholly unreliable and consequently these half yearly returns from District Officers have been discontinued since 1910. In their place a quinquennial wage census was adopted in all Provinces, except in the Central Provinces where an annual return was obtained from District Officers. The first quinquennial wage census was held in 1911-12 and the second in 1916-17. The statistics regarding wages continued to be published in "Prices and Wages" which gave the results of the quinquennial wage censuses in respect of a few urban and rural occupations. As the statistics were still far from satisfactory the third wage census, which was due in 1921-22, was abandoned except in Madras and the Punjab. In 1921 an attempt was made by the Government of India to hold an All-India census of industrial wages with the active and voluntary co-operation of employers, but nothing could be done partly because a number of employers either failed to submit returns or submitted incomplete returns and partly because neither the Central nor the Local Governments were able to provide the staff required for the purpose owing to financial stringency. The annual issues of Prices and Wages were also suspended in 1923 as a result of retrenchment and no regular official wage statistics are now published for British India as a whole.

In the United Provinces a scheme for a census of Industrial Wages to be taken along with the regular census was considered but was not carried through. A periodical survey of wages has been carried out every five years since 1912 in the Punjab. These surveys deal with the wages of certain classes of workers in three principal towns, in selected villages unaffected by urban conditions, and at certain Railway stations to secure a means of comparison with rural wages in the same neighbourhood. Beyond the figures of average monthly wages of certain classes of labour submitted by factories in all Provinces every year for inclusion in the annual Reports on the Administration of the Indian Factories Act, no regular and detailed statistics of industrial wages are available. In Madras quinquennial wages censuses have been conducted since 1908 showing the average wages of certain artisans (as well as farm servants employed in agricultural labour) in respect of homogeneous tracts and districts. These censuses, however, only relate to rural and urban wages and not to industrial wages. A thorough investigation of the conditions of labour, and particularly the rates of wages on tea estates in Assam, was made in 1921-22 by a Committee appointed by the Government of that Province. The Labour Office of the Government of Bombay conducted three enquiries into the wages of workers in the cotton mills in the Bombay Presidency in 1921, 1923 and 1926 respectively. Apart from these enquiries, the Labour Office has also conducted enquiries into (1) Wages of peons in Bombay, (2) Agricultural Wages, (3) Wages of Municipal workers, (4) Clerical Wages in Bombay City and (5) Wages of Printing Press Workers in selected Printing Presses in Bombay City. The results of all these enquiries have been published either in the form of special Reports or in the "Labour Gazette."

The Government of Bombay have now launched a general wage Census which is intended to cover in about two years, all factories, transport workers, workers in docks, municipalities and building trades, etc. The first part of the Census will be held for the month of May 1934 and will cover every perennial factory in the Bombay Presidency. The enquiry is to be conducted on the basis of the muster roll and essential information regarding the number of days worked during a pay period by each worker, his rate of wages and his earnings will be called for. Seasonal factories will be covered for one month of intensive working during the winter of 1934-35 and all non-factory industries and organisations will be covered between March and December next year. To the best of the knowledge of the Labour Office no other country in the world has attempted an enquiry into wages on such a gigantic scale and the results of the Census will be of a far reaching character.

WAGE RATES.

Agriculture.—Whether wages paid to agricultural labour in India have kept pace with the increase in the cost of living is, for several reasons, a very difficult question to answer. Firstly conditions vary so markedly between province and province that it is almost impossible to obtain accurate and comparable figures of wages for different classes of agricultural labour. Secondly there exists a variety of methods adopted for remunerating the workers engaged in different agricultural areas in India. For example, in the Punjab, there are four forms of wages, such as (*a*) purely cash wages, (*b*) cash wages with supplements which may consist of food, tobacco, lodging, bedding, clothing, etc., (*c*) purely grain wages, and (*d*) wages other than in cash or grain. In the Punjab the results of the last quinquennial wages survey which was held in December 1927 show that the following were the average daily wages of the three important classes of agricultural labour in rural areas in the Punjab :—

Carpenters ..	.. 16 to 32 annas a day.
Masons	.. 16 to 38 annas a day.
Unskilled labourers	.. 5½ to 16½ annas day.

As regards the last occupation it may be pointed out that the most frequent wage was between 7½ to 8½ annas. The Labour Office of the Government of Bombay published a Report in 1924 of an Enquiry into Wages in Agriculture which gave the average daily earnings of three classes of agricultural labour, *viz.*, skilled labour, ordinary labour and field labour in each of the 26 districts of the Bombay Presidency separately for urban areas and rural areas for each of 23 years from 1900 to 1922. The figures for each year from 1923 to 1932 have been published in the Bombay Administration Reports. The wages prevailing in other provinces for similar types of labour do not compare very unfavourably with wages in the Bombay Presidency for any particular year for which a comparison is made. This statement requires an important qualification. It is not meant that the money amounts actually paid are similar. The rates of wages in different provinces vary according to the extent of their industrialisation and money wages in provinces which are mainly agricultural are on a lower level than the money wages in Provinces which are highly industrialised such as Bombay and Bengal. There is no doubt whatever that wages considerably improved in all parts of India between 1918 and 1925. Taking the Bombay Presidency as a whole the downward tendency in the level of wages which set in 1925 and continued up to the end of 1927 was checked during the year 1928 during which period wages of all classes of agricultural labour, except field labour in urban areas and ordinary labour in rural areas, either remained stationary or showed a definite upward tendency, but there has been a sharp fall in agricultural wage rates during the last three years.

Comparison of conditions in India to-day with the pre-war year shows that during this particular period the condition of the Indian labourer has undoubtedly improved. This is amply proved by the figures given below showing the index numbers of daily average wages of skilled labourers, ordinary labourers and field labourers for urban areas and for rural areas for the Bombay Presidency.

AGRICULTURAL WAGES (NOMINAL).

Index Numbers for the Bombay Presidency (including Sind) 1913 - 100.

Year.	Urban areas.			Rural Areas.		
	Field Labour.	Ordinary Labour.	Skilled Labour.	Field Labour.	Ordinary Labour.	Skilled Labour.
1922	189	192	195	170	162	179
1923	200	200	196	171	171	187
1924	195	196	209	176	181	191
1925	221	208	224	206	181	211
1926	221	204	216	198	181	215

1928	191	192	212	186	175	210
1929	188	193	206	180	179	213
1930	174	179	198	171	173	205
1931	153	157	185	139	143	172
1932	144	151	180	131	135	165

The Cotton Textile Industry.—The most important centres of the cotton textile industry in India are situated in the Bombay Presidency. The main sources of information as regards the wages paid in this industry are the Reports of three Enquiries conducted by the Labour Office of the Government of Bombay, into Wages and Hours of Labour in the Cotton Mill Industry in the Bombay Presidency.

It is claimed that the 1926 Enquiry as compared with the previous two Enquiries, was more satisfactory in its method, more detailed in its scope and more accurate and reliable in its results as the information collected related to each individual worker and not to groups of workers in each occupation as was the case in the previous Enquiries. The results of this Enquiry give among other things, figures for average daily earnings of all occupations of cotton mill operatives, average monthly earnings for operatives covered in Bombay and Sholapur, the average number of days worked, the number of operatives working 'Full time' *i.e.*, working on all the working days during the Census month, the average earnings of those working full time frequency of attendance for the mills in Bombay the percentage absenteeism by departments and details regarding amounts of bonuses secured by the workers.

Wages in the Bombay and the Sholapur mills are paid monthly irrespective of the fact whether they are based on time rates or piece rates or fixed on a daily or a monthly basis or in any other manner. While in the case of the Ahmedabad mills wages are paid fortnightly or by 'haptas' referring to a period generally of 14 days for piece workers and to a period of 16 days for time workers. Wage periods of a week or 'haptas' of 8 days are also to be found.

Different systems are adopted at these three centres with regard to the methods of calculating wages. In the case of the mills in Bombay City there is first a "basic" rate to which was added a dearness allowance of 80 per cent. for male piece workers and 70 per cent. for male time workers and all female workers. Those mills which grant a good attendance bonus add the amount of the bonus granted, to the gross wage from which are deducted any fines that might be inflicted before arriving at the net wages payable. The term 'basic' in the case of the Bombay mills may be generally considered to apply to the pre-war year although in the case of some individual mills it might apply to any year between 1913 and 1918 in which year the first increase of 15 per cent. was granted as dearness allowance. This was increased to 35 per cent. on the 1st January 1919. The next increase granted on 1st February 1920 was 20 per cent. extra to male workers on time rates and to female workers both on time and piece rates, and 40 per cent. extra to male operatives on piece rates—the total percentages amounting to 55 and 75 respectively. On the 1st November 1920 the 55 per cent. was raised to 70 per cent. and the 75 per cent. to 80 per cent. During the year 1932 most of the working Mills in Bombay have reduced wages by effecting cuts in these allowances. There has been no uniformity in the matter and although in some mills allowance of 60 per cent. are granted these allowances in other mills have been reduced to 25 per cent. or less. The weighted average cut for the whole industry in Bombay amount to about 18 per cent.

In the Ahmedabad mills there is a complete lack of uniformity in the methods adopted for calculating the different additions and deductions before arriving at the final earnings. In Ahmedabad, the millowners and the local Labour Union have been recently engaged in examining a proposl by the owners to reduce wages by 25 per cent. but at the moment of writing no final decision has been reached in the matter although the question was considered by the Permanent Arbitration Board consisting of Seth Chamanlal Parekh and Mr. M. K. Gandhi.

The methods of calculating wages in Sholapur are different from those in Bombay and Ahmedabad. There are five items which go to make the full wage of an operative. These items are (1) the basic rate, (2) dearness allowance which is 35 per cent. in the case of all female workers and all male time workers and 40 per cent. in the case of all male piece workers, (3) the number of grace days granted for which payment is made, (4) bonus, and (5) the benefit derived for the grain concession. The Sholapur Millowners decided to reduce wages by 12½ per cent. with effect from 1st January but the proposal was met by a violent strike which at the moment of writing still continues.

The following table gives the average daily earnings by centres for all adult made operatives, all adult female operatives, all children and all adult operatives, covered by the 1926 Enquiry (*the averages for Bombay should, in all cases, be reduced by about* 18 *per cent. and those for Sholapur by* 12½ *per cent.*)

Centre.	Average daily earnings for.			
	Men.	Women.	Children	All adults.
	Rs.a. p.	Rs. a. p.	Rs. a. p.	Rs.a. p.
Bombay ..	1 8 0	0 11 11	..	1 5 3
Ahmedabad.	1 6 8	0 12 6	0 5 6	1 4 8
Sholapur .	1 0 5	0 6 8	0 4 0	0 14 8

The average monthly earnings of all workers in mills selected for the 1926 Enquiry at Bombay and Sholapur in the month of July 1926 in each age and sex group were as follows:—

Sex and Age group.	Centre.	
	Bombay.	Sholapur.
	Rs. a. p.	Rs. a. p.
Men	37 10 2	23 15 5
Women ..	17 12 4	9 15 7
Children ..	..	5 10 4
All adults ..	32 14 0	21 7 9

The following table shows by centres for each sex and age group the average monthly earnings of all operatives who worked on all the working days in the census months for Bombay and Sholapur and for Ahmedabad. The figures for Ahmedabad were arrived at by multiplying the average daily earnings by 27.

Average monthly earnings of Full Time Workers.

Jute Industry.

The jute industry holds the premier position amongst the industries in the Benga Presidency. The following table gives the average monthly wages of some important occupations in a jute mill. The figures are not the exact averages of wages of the total number of employees in the industry. They are averages obtained from the actual payments made in some representative mills.

Department.	Designation.	Average monthly wages.	
		Multiple shift.	Single shift.
	Men.	Rs. a. p.	Rs. a. p.
Roving Machines	Rovers	12 15 0	14 7 0
	Shifters	12 6 0	14 2 0
Spinning Frames	Warp spinners	13 4 0	16 14 0
	Weft spinners	16 0 0	17 10 0
Winding	Bobbin cleaners	10 0 0	11 0 0
	Warp winders (piece workers) ..	21 6 0	23 0 0
Weaving	Weft ,, (,, ,,) ..	26 8 0	28 2 0
	Hessian weavers (,, ,,) ..	28 3 0	31 0 0
Dressing and Beaming	Sacking weavers (piece-workers) .	29 5 0	32 1 0
	Beamers and dressers	28 8 0	32 0 0
Sack sewing workers Sewing machine	Machine sewers (piece)	21 11 0	25 10 0
Engineering Section Engine Staff.	Oilers	19 0 0	22 8 0
	Firemen	28 1 0	30 2 0
Workshop hands—	Mason	34 0 0	34 0 0
Machine shop fitting	Carpenters (Chinese)	85 0 0	93 5 0
	Carpenters (Indian)	30 0 0	33 2 0
Tin Smithy	Turners (Metal)	40 0 0	40 0 0
	Tin Smith	30 0 0	30 0 0
Blacksmith shop	Blacksmith	36 0 0	36 0 0
	Women.		
Batching Softners	Feeders	11 12 0	13 5 0
	Receivers	11 8 0	13 5 0
Teasers	Feeders	9 6 0	12 9 0
Preparing Breaker Carding Machines	Feeders	9 8 0	11 13 0
	Receivers	9 0 0	11 2 0
Finishing Carding Machines ..	Feeders	10 6 0	11 7 0
	Receivers	9 7 0	11 0 0
Drawing machines	Feeders	10 0 0	11 2 0
	Receivers	10 0 0	11 2 0
Roving machines	Feeders	10 6 0	11 6 0
	Sweepers	9 6 0	11 2 0
Twist Frames	Twisters	13 8 0	14 15 0
Weaving	Sweepers	12 1 0	12 10 0
Sack Sewing	Hand Sewers	18 5 0	14 11 0

It will be seen from the above table that there is an appreciable monetary advantage to workers in the single-shift system.

Wages in Mines.

The tables given below show the daily earnings in the month of December for each of the two years 1931 and 1932 for workers in the main occupations in coalfields and the other important mines in British India.

Daily earnings of underground workers in important coalfields in British India.

Gins and Presses.

The male coolies in the gin factories in Madras and the Punjab earn on an average annas 8 per day while the female coolies get only as. 5-1 and as. 6 respectively. In the Central Provinces the average daily earnings of male and female coolies are as. 10-2 and as. 5-10 respectively.

The average daily wages of female press coolies in Madras and the Central Provinces amount to annas 5-10 while those of male coolies amount to annas 9-6 and annas 13-10 respectively.

The Plantations.—Labour in the tea gardens in Assam is paid on a piece-work basis. In addition to the standard daily task which the worker must execute in order to earn his wages (called *Harira*) the labourer is given an opportunity at certain seasons to supplement his earnings by the performance of a second task the payment for which is known as *ticca*. In some cases where it is impracticable to prescribe a definite task as in leaf plucking at the beginning and the end of the season payment is made by time. A distinctive feature of work in the gardens is that the labourer usually brings his family with him and the wife and sometimes the children are also wage earners. The joint earnings of a family must always be taken into consideration. The average family of a labourer

has been calculated as consisting of one working man, one working woman, about three-tenths of a working child and non-working child and about two-tenths of an adult non-working dependant. The following table gives the average monthly earnings of the labourers in the tea gardens in Assam:

Table showing the average family monthly earnings in the tea gardens in Assam calculated on the average daily strength in 1914, 1922 *and* 1928.

Periods of Wage Payment.—There is a complete absence of uniformity as regards the periods for which payments of wages are made in the various important branches of organised industry in India. In scarcely any industry is there a single period of wage payment. Different systems are found in establishments belonging to the same industry and in the same district and within the same establishment different classes of workers are frequently paid for different periods. The month, the fortnight and the week are generally the periods of wage payment in Cement and Brick Works, Cotton Ginning and Pressing Factories, Flour Mills and Engineering Works. Monthly payment of wages is mainly adopted for workers in Printing Presses, Municipalities, Tramways and Railways. In the Cotton Mill Industry wages are calculated on a monthly basis in all the mills outside Ahmedabad. In the case of the Ahmedabad mills, wages of process operatives are calculated on a fortnightly basis and of workers in the maintenance department on a monthly basis.

In mines, tea gardens and rice mills the predominant periods of wage payment are a month and a week. In jute mills wages are calculated per week. Wages are calculated on both the monthly and the fortnightly basis in the Iron and Steel Industry, Sugar Mills and in Tanneries. The system of monthly payment appears to be universal in its application to supervisory and clerical staffs engaged in all different industrial establishments, while the most general system in the case of casual labour is of a daily payment of wages.

Periods elapsing before payment.—The "waiting period" or the time which elapses between the end of the period for which wages are earned and the date of payment varies considerably from industry to industry and from establishment to establishment in the same industry. It may be generally stated that the longer the wage period the more delayed is the payment of wages. Monthly wages are not paid so promptly as fortnightly wages, weekly wages are withheld for still shorter periods and daily wages of casual labour are nearly always paid on the day on which they are earned or on the following day. Speaking generally the average period of waiting may be considered to be 10 to 20 days in the case of monthly payments, 5 to 7 days for fortnightly payments, and 2 to 4 days in the case of weekly payments. Another factor which affects the period of waiting is the method of payments. Where workers are paid on piece rates, intricate calculations are required to ascertain the amount due, and consequently piece rate wages cannot be paid so promptly as wages of workers on fixed time rates of pay.

Indebtedness prevails to a very great extent among the labourers, but no reliable figures are available except those for the Bombay Presidency which were collected by the Bombay Labour Office during its enquiries into the workers' family budgets for different centres. From the statistics of the Empress Mills the percentage of labourers indebted appears to be more than 50. Though exact figures for the Punjab are not available it is reported that the volume of indebtedness amongst the agriculturists is greater than anywhere else in India. As regards urban and industrial labourers it may safely be assumed that a greater majority are in debt to their food suppliers. In Madras the indebtedness of the worker is heavy especially in the case of plantations where it is reported that 75 per cent. of the wages of the labourers are taken away by money lenders on pay days. The mine managers of the Jharia coalfields in Bihar and Orissa generally put this figure at one week's wages. It is also stated that the extent of indebtedness varies with caste and social custom. In Bombay City, interest on debts forms nearly three per cent. of the total monthly expenditure. Of the families considered for the Labour Office enquiry no fewer than 47 per cent. were in debt. The extent of the indebtedness of the family in debt is ordinarily the equivalent of two and a half months' earnings. The extremes were 14 months' and one-third of a month's earnings respectively. As regards single men, for whom 603 budgets were collected, 45 per cent. were in debt, the average expenditure on interest being as. 12-3 and the average expenditure on interest for those in debt being

1-11-2 per month. Enquiries for the Bombay Port Trust workers showed that over 80 per cent. of the families considered were found to be in debt. In the majority of cases the amount of debt varied from a month's income to four months' income. In Ahmedabad during 1926 about 69 per cent. of the families were in debt. The amount of debt varied from a few rupees to many times the monthly income. According to an enquiry made by the Labour Office in the year 1925 into the family budgets of cotton mill workers in Sholapur City, 63 per cent. of the cotton mill workers' families in Sholapur were in debt, the extent of which varied from less than a month's income to many times the monthly income. In 49 per cent. of cases, however, a family's debt was equal to between one and four months' of its income.

Bonus and Profit Sharing Schemes.—"The successful working of a profit sharing scheme pre-supposes the realisation by the worker of an identity between the various interests engaged in the concern and a conscientious effort on their part to do their best for its maximum success. The employers of labour do not feel that labour conditions in India are such as to justify the hope that this high ideal of co-operation will be realised in a substantial measure in practice." The only solitary concerns in which profit sharing schemes have been tried are the Tata Iron and Steel Company, and in the Buckingham and the Carnatic Mills. In 1928 the Tata Iron and Steel Company introduced a scheme under which a monthly bonus based on production is paid to all men drawing less than Rs. 300 per mensem or Rs. 10 per day, whose work contributes to the production obtained and who have been in the Company's service for at least six months. In the Buckingham and the Carnatic Mills a bonus is paid to the workmen on a basis relative to the dividend declared.

Bonuses are paid for a variety of reasons. Some concerns grant bonus for regular attendances and for economical utilization of material. In some collieries in Bihar and Orissa a worker is paid a sort of bonus for working six days a week. A bonus is also being granted for raising and loading extra tubs. The Tata Iron and Steel Company grant bonuses; (1) for general production, (2) for departmental output, and (3) regular attendance. This is paid to all employees drawing less than as. 8 per day. The Company has also introduced a 'Jack pot scheme.' The idea of this scheme is that if 50 men are required to perform certain duties connected with the operation of any unit and the full force is not present, the wages which would have been payable to the absentees are distributed amongst those present.

The system of paying bonus in addition to a cash wage either for better work or for better attendance used to obtain in several industrial concerns in the Bombay Presidency especially in cotton textile mills but, except in Ahmedabad where bonuses are paid for better attendance and for better efficiency, the majority of the mills which used to pay such bonuses have either consolidated these bonuses with pay or have abolished them altogether. In countries which have no legislation for the control of deductions which may be made from wages on account of fines, the bonus might be regarded as a voluntary gift paid by the employer to the worker who attends regularly without absence or produces work better than specified standards but in countries where 'truck" legislation exists, the bonus easily degenerates into a device whereby an employar tries to get round the Act which lays down percentages of wages beyond which deductions on account of fines shall not be made by dividing the wages into part wages and part bonus. In the Ahmedabad textile mills all weavers who produce 80 to 85 per cent. efficiency on quantity production are paid a bonus of eight annas per loom per fortnight. In this centre all damaged cloth is handed over to the weavers and its cost at whole-sale price is deducted from their wages. In the case of minor defects the weavers are fined. As the total estimated bonus of the deductions made from the Ahmedabad weavers' wages both on account of fines and damaged material handed over amounts to more than Rs. 15 lakhs annually, the efficiency bonus is not so profitable to the worker as it would appear to be. The good attendance bonus also operates very harshly in certain cases. In one mill in Western India, workers earning Rs. 30 or under a month are paid a bonus of 4 annas a week for a complete week's work and a further bonus of eight annas a month for a complete month's work. If a worker loses a day he loses twelve annas and if the day lost be a Saturday preceding a closed day he loses two thirtyones of his monthly wages.

Good attendance and efficiency bonuses are not granted in Government, local board and public utillity concerns.

WAGES ON RAILWAYS.

No information more recent to that for the year 1929 is available regarding wages paid on Indian Railways. In that year every individual system and the Railway Board, in the memoranda of written evidence submitted to the Royal Commission on Indian labour, gave statistics of rates of pay. The following information, therefore relates to the year 1929 but it is understood that all-round reductions have been made on almost all railway systems during the last two or three years.

Owing to the different types of grades of pay which are prevalent on the Railways it is not possible to give particulars for all of them. Scales of pay of some important classes of railway servants on some principal railways have therefore been set out in the tables below. The limits of pay given in the tables, show the minimum of the lower grade and the maximum attainable in the higher grade.

Statement showing scales of pay of important classes of Railway servants other than Workshop employees and Colliery Staff on the principal Railways.

Besides the usual pay the employees of the railways are granted allowances and perquisites for special work, climatic and local conditions, etc.

Amount sent to villages.—In the absence of a completely urbanised industrial labour force in India, the practice of remitting part of the wages earned by workers in industrial centres to their place of origin appears to be very common. But no authorised or statistical information for a definite period of time is available as regards the amounts sent by workpeople in this manner. If statistics pertaining to this subject were compiled, it would help a good deal in estimating the agrarian contact of Indian industrial workers. In the Central Provinces and Berar 80 per cent. of immigrants from the United Provinces leave their families behind in their villages to look after cultivation. These labourers are reported to be remitting more than 50 per cent. of their income home. The other immigrants in that province from Central India and the Bombay Presidency are said to be sending 25 per cent. of their earnings to their homes. Estimates of amounts sent by money order by the various post offices in the jute mill areas in Bengal are annually published in the reports of the Indian Jute Mills Association. The figure for 1928 comes to Rs. 1,73,57,816-1-2, but it does not purely represent the amounts sent by Jute mill employees only. Labourers from coal mines in Bengal coming from outside the coal fields are reported to send or take home to their villages from 30 to 40 per cent. of their earnings. In the case of the miner in the mining fields of Bihar and Orissa it is roughly estimated that he sends home all his savings which amount to about 8 annas to Re. 1-8-0 per week. Results of a special enquiry made in the case of an important cotton mill at Cawnpore in which wages are paid fortnightly showed that during the particular period of two weeks covered by the enquiry, 3.8 per cent. of the wages received by workmen was remitted by money orders through the office attached to that mill. In the course of its family budget investigation, the Labour Office of the Government of Bombay collected some information regarding remittance of amounts by workers' families. In Bombay City a large number of workers do not maintain an establishment, but live as boarders and though married keep their dependants in their villages. In the case of resident families the average monthly amount remitted comes to Rs. 1-11-1 which constitutes 3.2 per cent. of the family income which is Rs. 52-4-6 per month. In the case of persons living singly in Bombay City, the average monthly remittance comes to Rs. 11-7-1 which constitutes 36.2 per cent. of their monthly income. The labour force in Ahmedabad is not immigrant to the same extent as in Bombay and therefore remittances to dependants is not an important item in the worker's budget. It appears that nearly 7 per cent. of the working class families in Ahmedabad remit money to their dependants living away from them. The average for only those families remitting money comes to Rs. 6-6-9 per month. Sholapur draws its labour force from the immediate neighbourhood and the labour there is not of the same cosmopolitan character as in Bombay. Of the total number of families whose budgets were collected during the family budget enquiry at that centre only 6 per cent. reported that they had to remit money every month to their dependants in villages. The average of the amount remitted by such families comes to Rs. 4-12-7.

Deductions.—Deductions from wages on account of fines and for services rendered by an employer to his workmen is a subject which has been engaging the attention of the Government of India since 1926. In that year, the Government of India requested all local governments to make enquiries, in their respective administrations, as to the extent to which fines and other deductions were being realised by employers in India from their workpeople.

The views of the local governments were also invited on the desirability of taking any action, legislative or otherwise to counter any abuses which might be found to prevail. The Labour Office of the Government of Bombay conducted a very comprehensive enquiry into the subject covering all factories, railways, municipalities, transport services, commercial houses, shops, hotels, etc., and the results were published in the form of a special report. As a result of its investigations that Government came to the conclusion that fining was an abuse grave enough to require legislation for its control and recommended accordingly. The subject was again examined in 1928-29 by the Bombay Strike Enquiry Committee (The Fawcett Committee) in connexion with the standardised rules put up by the employers and the demands put up by the workers during the prolonged general strike in the cotton mills in Bombay City in 1928. The Committee recommended *inter alia*, that deductions from wages on account of fines should not exceed two per cent. of an operative's earnings during a particular pay period. The Millowners' Association, Bombay, accepted this recommendation and it is very noteworthy that almost all textile mills in Bombay which are affiliated to the Association have limited their monetary punishments within this limit. There is, however, no control on fining in textile mills in Ahmedabad. In that centre the work of 'cutlooking' or scrutinising manufactured cloth is often entrusted to contractors who often pay a lump sum every year to the mills for this privilege. Commissions varying from six annas to twelve annas in the rupee on all fines inflicted is paid by the mill to the contractor. The system is also closely linked up with that of handing over damaged cloth to the worker concerned and deducting its value at cost or wholesale price from the worker's wages. The cutlooker also receive commissions on the value of the cloth handed over. It is estimated that these deductions in the Ahmedabad cotton mills amount to nearly if not more than fifteen lakhs of rupees every year. The matter is a grave abuse and a scandal which calls for immediate legislative action. The action already taken by the Government of India in implementing the recommendations of the Royal Commission on Indian labour on the subject have already been dealt with elsewhere in this section.

The Royal Commission on Indian Labour have made several important recommendations in connexion with the income of industrial workers and the question of their indebtedness. In discussing the possible application to India of the minimum wage Convention adopted at the 1928 session of the International Labour Conference, the Commission are of opinion that the convention, "in referring to trades in which wages are exceptionally low, must be regarded as having in view trades in which wages are low, not by comparison with western or other foreign standards but by comparison with the general trend of wages and wage levels in kindred occupations in the country concerned." If the principle of the minimum wage is to be applied to India, they consider that it would first be necessary to create machinery for fixing minimum rates of wages in those trades in which wages are lowest and where there is no question of collective bargaining. The industries indicated for a careful study of conditions are mica, wool cleaning, shellac, bidi (the indigenous cigarette) manufacturing, carpet weaving and tanneries and those in which there is a strong presumption that the conditions warrant detailed investigation. Full information *re.* wages and conditions should be collected and if the surveys indicate 'Sweating' the trades should be demarcated and the number and the composition of wage Boards should be decided. In the setting up of wage boards important criteria for consideration should be the cost of enforcement; and a policy of gradualness should not be lost sight of. If the investigations appear to warrant minimum wage fixing machinery, the necessary legislation for setting up such machinery should be undertaken. These recommendations are under the consideration of the various Provincial Governments and the Government of Bombay have already initiated a general wage census to be completed in about two years in order to collect all possible information on the subject of wages in all types of industrial concerns in the Bombay Presidency.

COST OF LIVING AND STANDARD OF LIFE.

The publication of a cost of living index with a pre-war base for the working classes in Bombay City was started in the *Labour Gazette* from September 1921 and the scope and method of its compilation are described in the issues of the *Labour Gazette* for September 1921, September 1923 and April 1929. The index number is based on what is known as the aggregate expenditure method and includes in all 24 items representing food, fuel and lighting, clothing and rent. The table below gives the Bombay working class cost of living index numbers month by month from January 1918.

Bombay working class cost of living index numbers by months
(July 1914=100).

The Labour Office conducted in the year 1926 an enquiry into working class budgets in Ahmedabad and the results of this enquiry have been used in the construction of a cost of living index for that centre. The Ahmedabad working class cost of living index number has been compiled on a post-war base and has been published in the *Labour Gazette* since January 1930. Items representing food, fuel and lighting, clothing, house-rent and miscellaneous groups have been included in the index. The following table gives the index numbers from August 1927 to November 1933:—

Ahmedabad working class cost of living index numbers by months
(Average prices from August 1926 to July 1927=100.)

Month.	1928	1929	1930	1931	1932	1933	Month.	1928	1929	1930	1931	1932	1933.

Average for year ..	..	..	91	92	92	89

Standard of Life.—Very little information is available regarding the standard of living of the working classes in India. The most satisfactory method of obtaining this information is by means of a family budget enquiry in which information is collected regarding the composition, income and expenditure of the family. To enable general conclusions to be drawn from investigations of this type it is always necessary to conduct the enquiries by what is known as the extensive method, an attempt being made to secure the information from a large number of families so as to minimise the effect of the peculiarities of exceptional cases. The sampling method is often resorted to in conducting extensive family budget enquiries because of the impracticability of collecting data by the census method. It is essential that the sample should be representative in order to yield reliable results.

At the Third International Labour Conference of Labour Statisticians held at Geneva in October 1926, the Committee on family budgets passed a resolution that in order to provide adequate information with regard to actual standards of living, enquiries should be conducted generally at intervals of not more than ten years into the income, expenditure and conditions of living of families representative of large homogeneous sections of the population. It was also decided that for a complete enquiry information should be collected as to the district in which the family resides, the composition of the household, the industries and occupations of members of the family, the nature of the housing accommodation and the amount of each important item of family income and expenditure together with quantities of purchases, where practicable. It was agreed, however, that a less detailed investigation omitting the particulars of the family income would be sufficient where the sole object of the enquiry is to provide weights for the calculation of cost of living index numbers.

Family budgets were collected by the Labour Office for 3,076 working class families in Bombay City in 1921-22 and the report based on the results thereof was published in 1923. A new family budget enquiry in Bombay City was undertaken by the Bombay Labour office in 1932-33 and the results are in the process of tabulation. It is expected that the report of the enquiry will be published during the summer of 1934. Weights based on the results of this enquiry are to be used in compiling a fresh cost of living index number for Bombay on a new base period. The Labour Office collected 985 budgets of working class families in Ahmedabad in 1926 and 1,133 budgets of cotton mill workers in Sholapur in 1925. The reports based on the results of these enquiries were published in 1928. A small family Budget investigation for cotton mill workers in Bombay City was also conducted by the Labour Office in 1930 but the results of this investigation have not been published so far.

In the United Provinces a number of budgets were collected at Cawnpore with the object of compiling a cost of living index number. But the results of the enquiry were not found to be satisfactory and the province has not been compiling any cost of living index number.

The Labour Statistics Bureau, Rangoon, which was established by the Government of Burma in 1926, has made an extensive enquiry into the Standard and cost of living of the working classes in Rangoon and the report based on 4,309 budgets was published in 1928. The results of this enquiry have been separately analysed for Burmese, Telugu, Tamil, Uriya, Hindustani, and Chittagonian workers. Separate index numbers for each of the different classes of workers have also been published at the end of the report. 1,002 budgets for the working class families in Nagpur and 507 budgets for working class families at Jubbulpore were collected between September 1926 and January 1927 for compiling cost of living index numbers for these two centres. The figures for the Nagpur, Jubbulpore and Rangoon Indexes for the year 1933 have been given in the above table.

TRADE UNIONS.

The history of trade unionism in India is a history of recent years. It was not until 1918 that labour had begun definitely to organise itself. Previous to that year very little effort appears to have been made to establish organisations of labour. The earliest association of workers in India was the Amalgamated Society of Railway Servants of India and Burmah which had been registered under the Indian Companies Act and its main activities were in connexion with the provision of various benefits to its members, such as Legal Defence, Sickness Insurance, Life Assurance, etc. After the Indian Trade Unions Act, 1926, came into force this Association registered under it as a Trade Union with the new name of the National Union of Railwaymen of India and Burmah. The Bombay Postal Union, founded in 1907, mainly for the clerical classes employed in the Bombay Post Offices, a Union of warpers in the Ahmedabad cotton mills formed in 1917; the Clerks' Union, Bombay, established in April 1918 in order to organise the various classes of clerical labour employed in commercial and other offices in Bombay city; and the Madras Labour Union formed in 1918 for the textile workers in the three mills in the city of Madras, were the main labour organisations in existence at the end of the year 1918. In addition, there existed certain benevolent social institutions such as the Kamgar Hitwardhak Sabha and the Social Service League, whose activities were directed towards the betterment of the condition of the working classes. But these Societies were not composed of workers themselves.

The year 1918 may be said to be a landmark in the history of the Indian Trade Union movement, for from that year onwards there has been a more or less steady growth of trade unions despite the inevitable fluctuations in their prosperity. The economic circumstances of the time must be regarded as the dominant factor contributing to the establishment of trade unionism in India. In the two years following 1918, the epidemic of industrial strife assumed serious proportions and reached a climax towards the close of the year 1920. The number of labour unions also increased very rapidly and unions were formed of workers in all possible industries and occupations. Most of these Unions were, however, merely Strike Committees brought into existence either before or after particular strikes in order either to engineer or to conduct them. These Committees were either dissolved as soon as their purpose was served or remained dormant until another strike in the trade broke out. Most of the remaining Unions formed during the period 1918-20 were unstable and nearly 75 per cent of them died an early death in the following year. There was a definite check to the progress of the trade union movement in India during the next two or three years. But although individual Unions collapsed as rapidly as they were formed the movement itself showed signs of some permanence and vitality.

Perhaps the most important factor which retarded the growth in the movement immediately following the successes which met the earlier formations or Strike Committees, which they really were, was the definitely hostile attitude of the employers to all combinations of their employees. It was not until the passage of the Indian Trade Unions Act which made it morally obligatory on employers to recognise those Unions of their employees which had registered under the Act, that a change in the angle of vision was noticeable.

Nature of leadership.—The Indian Trade Union movement, in its early beginnings, was essentially an economic one, and to regard labour unions as being engineered solely by politicians as the result of their propaganda is to misread the origin of this movement. The Indian workman is predominantly illiterate and has even now few leaders from his own class to whom he can turn for guidance. In consequence, trade unions in India have been led by middle class men, especially professional lawyers and others, who have not perhaps in all cases made a distinction between economic and political considerations. In the words of Mr. A. R. Burnett-Hurst, "social workers did not take the initiative" but "allowed the lawyer-politician class to capture and control these bodies." Many of the so-called leaders of Indian Labour who were drawn from the lawyer-politician class often exploited the ignorance and credulity of the labour force for their own material advantage, or for the propagation of their pet political doctrine, in addition to looking after the welfare of the labourers. There were, however, several notable exceptions. Leaders like Mr. N. M. Joshi, Dewan Chaman Lal, the Rev. C. F. Andrews, Mr. M. K. Gandhi, Mr. V. V. Giri, Mr. B. Shiva Rao, Mr. R. R. Bakhale, M.L.C., Mr. Syed Munawar, M.L.C., and Miss Anasuya Sarabhai endeavoured to create Unions for the benefit of the workers and for the general improvement in the conditions of life and work of the labouring classes. During the last few years, however, the principles of communism have been disseminated amongst the masses of India by the members of the Workers and Peasants Party which is an agent in India of the Communist International. The Communists took advantage of the economic unrest prevalent in the country early in the year 1928 and usurped the leadership of the working classes within a short period of time and were able to assume control over the executives of the principal textile and railway unions in Bombay, Madras and Bengal. They captivated the minds of the workers by painting the existing conditions as black as possible and contrasting them with a supreme state of wealth and happiness which is promised under the regime of a dictatorship of a workers' proletariat. The discontentment amongst the workers over conditions of work was aggravated by the incessant preachings of revolutionary doctrines. The credulity of the Indian labourer has been of great advantage to these emissaries of revolution in creating in him a class hatred against the employers and also in instilling in his mind an abhorrence for the Government established by law in the country. These agitators, occupying positions of vantage, instigated several disastrous strikes in pursuance of purely political ends often with a callous disregard of the subsequent sufferings and losses inflicted on their ignorant and hapless dupes. But during the years 1929 and 1930 the workers began to lose their faith even in these Communist leaders after the failure of the prolonged general strike of the year 1929 in the majority of cotton mills in Bombay City. The sanity and sobriety of moderate leadership have no great attraction for the large majority of the labourers. The moderate leaders have, however, been fighting their battles for leadership with the extremist revolutionaries, and were for a time successful in keeping the latter under control. At the moment of writing, it has become impossible for the moderates and the avowed Communists to work shoulder to shoulder in the labour movement, and a split has occurred between the two, the Unions standing for constitutional progress rallying under the banner of the Moderates whilst those in favour of Communist principles have accepted the leadership of the Red Flag Organisations.

Progress of Trade Unions since 1918.—The trade union movement spread to various industries and occupations in India during the years following the Armistice, but a number of them passed out of existence very soon after they were started. The more stable Unions were of clerks, railway workers, postal employees, seamen and textile workers in Ahmedabad. The peculiar feature of the trade union movement in India is that it did not in the early stages of its progress make much headway in the more important manufacturing industries and this constituted a weak point in the movement. Whereas in other countries, the clerical employees organised themselves on the model of the industrial workers long after the latter had well organised themselves in strong Unions, in India the former have come up if not first, at least simultaneously with industrial unions and have established themselves more permanently.

The following figures illustrate the progress of the Trade Union Movement in the Bombay Presidency :—

Year.	No. of Unions.	No. of Members.	Year.	No. of Unions.	No. of Members.
1922	22	51,472	1928	94	198,072
1923	19	46,037	1929	99	196,748
1924	36	52,227	1930	93	128,393
1925	38	49,318	1931	97	115,657
1926	56	74,875	1932	100	111,526
1927	72	87,340	1933	105	115,469

The distribution of the membership as at 1st September 1933 by classes of industries was as follows:—

Class of Industry.	No. of Unions.	Membership.	Percentage of membership to total.
Textiles	17	40,116	34.74
Railways (including railway workshops)..	8	21,909	18.97
Seamen	3	29,138	25.24
Posts and Telegraphs	34	8,136	7.05
Municipal	6	2,495	2.16
Miscellaneous	37	13,675	11.84
Total ..	105	115,469	100.00

There are in addition two federations of Postal Unions, one of Railway Employees' Unions and a fourth which is a Central Union governing a number of individual Unions of textile workers in Ahmedabad. (For the constitution, membership and other particulars regarding these organisations, reference may be made to the issues of the Bombay *Labour Gazette*). The Central Labour Board and the Bombay Trades Council which had been included in the list of Federations in the Bombay Presidency are now defunct.

The Punjab has no heavy concentration of industrial labour and consequently the extent of organisation among both employers and employed is up to the present little. There is, however, a vague striving among the employed towards co-operation and combination especially for the purpose of demanding better remuneration and considering the question of resorting to direct action for enforcing their demands on their employers. No Communist influence has been noticeable in the Punjab where industrial disputes have been stated to have occurred as a result of the normal antagonism between employers and employed. The only large employers of labour in the Punjab are the N.-W. Railway Administration, and four out of the 19 registered Unions are of the employees of the various departments of the N.-W. Railway and cover, in all, about 13,000 members.

In the United Provinces, the number of Associations of workers is rather small, compared to its industrial importance. There are in all Councils which, under the Executive, are responsible for co-ordinating the work in the about 10 Unions, all of recent growth. Some of the Associations formed during the general upheaval following the War and especially during the days of Non-Co-operation have since died or become moribund. Organised labour forms a very small proportion of the total. Organisation of labour outside Cawnpore is almost non-existent and even in Cawnpore only about 10 per cent. of the labour is organised. There has been a growing interest of labour in trade unionism which appears to have the prospect of a rapid development in the future.

The Central Provinces and Berar have seven registered trade unions. The classes of workers who have been embraced by the Trade movement in this part of Indian are (1) Textile workers, (2) Press employees, (3) Scavengers, (4) Motor drivers, (5) Railway workers, (6) Postal employees and (7) Clerks. Trade unionism is stated to be yet in its infancy in this Province and the Labour Unions appear to have done little to improve the conditions under which their members work.

The trade union movement in **Madras** received a setback in 1921-22 as a result of the failure of the strike in the Buckingham and Carnatic mills. During the year 1922-23 most of the Unions were dormant and the only Union which showed signs of activity was the M. and S. M. Railway Workshop Employees' Union, Perambur. The trade union activities were revived in 1923-24 and the following Unions became once more active :—(1) The Madras Labour Union, (2) The Madras Tramwaymen's

Union, (3) The Corporation Scavengers' Union, (4) The S. I. Railway Employees' Union and (5) The Coimbatore Labour Union. The Madras Harbour Port Trust Workmen's Union was revived in 1925-26. A section of the workmen of the Buckingham and Carnatic mills organised a separate Union in 1925-26 called the Buckingham and Carnatic Mills Employees' Union, as a rivival to the Madras Labour Union which is an old organisation in the same industry. The Cordite Factory Labour Union, Aruvankadus came into prominence during 1926-27. Unions were newly formed for the employees of the Public Works Department workshops and the Government Central Press, Madras, while the Diocesan Press Employees' Union which had remained dormant was revived. The labourers working in the cotton ginning and pressing factories in Tiruppur, Coimbatore District, started a Union for their benefit. Most of the Unions included in their programme a demand for separate representation for Labour in the Legislative Council. The Oil Workers' Union and certain other Unions came into prominence only when there was an impending labour dispute. There were nineteen registered Trade Unions in the Madras Presidency at the end of March 1931.

Railways.—Labour Unions are, or have been, operation on ten of the Class I railways, on some of which as many as three or more operate at the same time. Most of them are registered trade unions and the majority have secured some measure of recognition from the respective railway administrations. Many railway trade unions came into existence during the period 1918-1921 but several of them were short-lived. Those unions which have managed to survive are actively looking after the interests of their members and show signs of improved organisation and usefulness especially in those where union committees are not dominated by communists. A noteworthy feature is that there is an increasing tendency in many railway unions to look for office-bearers and leaders from amongst members who are actually engaged in railway work. There can be no doubt that, within the last few years, the appointment of establishment and employment officers and special attention to welfare of railway labour have been due largely to trade union propaganda.

All-India Labour Association.—The following is a list of such All-India Federations of Trade Unions or All-India associations of workers for which some information is available.

The All-India Railwaymen's Federation—Though not a registered body under the Indian Trade Unions Act, this Federation has been taking an active part in collective bargaining with railway authorities. Having affiliated to it about twelve unions of men working on all but two of Class I railways and with a membership of nearly 1,00,000, it has been able to exercise considerable influence with the Railway Board and arrangements have been made for half-yearly conferences with the Board for the discussion of matters affecting wages and conditions of service of railway employees as a whole. The federation is taking continuous interest in bringing railway employees closer together and securing greater unity in the trade union movement in the country. At the last annual convention held in February 1933 and again at a special convention held in November 1933 the Federation devoted special attention to the question of reinstatement of retrenched staff, wage-cuts, the proposed statutory Railway Board, etc.

The National Union of Railwaymen of India, Burma and Bombay.—This Union was started by the Amalgamated Society of Railway Servants of India and Burma which came into existence as a sequel to the Great Indian Peninsula Railway Guards' strike in 1897. It was at first registered under the Indian Companies Act, but after the Indian Trade Unions Act came into being, it altered its name, redrafted its constitution and registered as a Trade Union. It has a membership of about 2,700. It provides for its members various voluntary and other benefits such as death, sickness, unemployment and life insurance benefits. It is the only trade union in Bombay which maintains a political fund.

The All-India and Burmah Covenanted Non-Gazetted Railway Services Association.—This Association, whose membership is limited to covenanted Europeans employed as foremen in railway workshops in India, was started in October 1926 with the object of securing for its members the benefits of the Lee Commission's recommendations. It submitted a memorial to the Viceroy on this question in November 1926. It has a membership of about 300 employees scattered all over India and it originally had its Head Office in Bombay. The Association registered with the Registrar of Trade Unions, Bombay Presidency, in March 1928, but transferred its Head Office to Punjab in 1929 and again to Madras during the year 1932-33.

The All-India Trade Union Congress.—This organisation was inaugurated in 1920 for two main purposes: (1) to co-ordinate the activities of the individual Labour Unions in India which till then remained incohate and were unable to take concerted action and (2) to recommend workers' delegates to the International Labour Conferences. When the Government of India had to select a Labour representative to attend the Washington Conference in 1919, there was no representative body of labour in India to be consulted and they therefore appointed Mr. N. M. Joshi as the Workers' Delegate. In order, therefore, that responsible Labour opinion in India might have a voice in the selection of the delegates to the International Labour Conferences, the All-India Trade Union Congress was organised and the first session of the Congress was held in Bombay on the 31st October 1920. Eight hundred delegates from different parts of India were present and sixty Unions were affiliated and 42 others expressed their sympathy with the Congress. It became a central organisation of the trade union movement in India but from the beginning it had a strong political colour. Its presidents and secretaries have all been politicians first and labour leaders next, with the exception of a few persons like Mr. N. M. Joshi. The Congress appointed itself a permanent body to meet once a year. It has a definite constitution, an elected Executive to carry on its work, and Provincial

respective provinces. The main object of the Congress is "to co-ordinate the activities of all the labour organisations in all the provinces in India and generally to further the interests of Indian labour in matters economic, social and political. It may also co-operate and federate with organisations of labour having similar objects in any part of the world."

The Executive Council of the Congress consists of a Chairman, the Vice-Chairman or Vice-Chairmen, the Treasurer, the General Secretary or General Secretaries, the Secretary or Secretaries and the Assistant Secretary or Assistant Secretaries as ex-officio members and not more than ten additional members including the ex-Presidents of the All-India Trade Union Congress, elected at the annual session of the Congress and the representatives elected by the affiliated unions on the following basis:—

1 Representative for unions with a membership upto 1,000;

2 Representatives for unions with a membership between 1,000 and 3,000.

3 Representatives for unions with a membership between 4,000 and 5,000.

4 Representatives for unions with a membership above 5,000

The individual Unions affiliated to the Congress are conceded full autonomy with regard to the management of their own affairs according to their rules.

The second Session of the Congress was held in 1921 at Jharia under the Presidentship of Mr. Joseph Baptista. The third Session was held at Lahore in 1923 with Mr. C. R. Das as President. The fourth Session held at Calcutta in 1924 was also presided over by Mr. C. R. Das. Out of the 43 resolutions passed at this Session some dealt with the recruitment of Seamen and their eligibility for securing compensation under the Workmen's Compensation Act. The fifth Session was held in Bombay in 1925 with Mr. Dhundiraj R. Thengdi of Nagpur in the chair. Mr. V. V. Giri of Berhampur was the President of the sixth Session held in Madras in 1926. Delhi was the centre where the seventh Conference of the Congress was held in 1927 and the President was Rai Saheb Chandrika Prasad. Dewan Chaman Lall, M.L.A., was the President of the Cawnpore Session of the Congress held in 1927. The ninth Session was held in 1928 at Jharia with Mr. M. Daud in the chair. It is significant that at this Conference Pandit Jawaharlal Nehru moved a resolution protesting against imperialism.

The tenth assembly of the Trade Union Congress which met at Nagpur in 1929 under the presidentship of Pandit Jawaharlal Nehru will remain as the most important land-mark in the history of organised labour in India. It marked the culmination of a long period of mischievous activity inspired by Moscow and fomented by Communist Agents in India resulting in a split between the genuine trade union leadership on the one hand and the votaries of communism on the other. The fundamental issue upon which the split in the Trade Union movement occurred was whether the labour movement in India shall be inspired and conducted for the betterment of the industrial workers or whether it shall be utilised as a means to promote and bring about revolution in the country. The proceedings at the Session made it impossible for the rival forces to carry on any longer under a common organisation. The reasons contributing to the ultimate split were as follows:—The Bombay Girni Kamgar Union and the G. I. P. Railwaymen's Union applied for affiliation, the former with a membership figure of 54,000 and the latter 45,000. The Bombay Girni Kamgar Union could produce no audited documents as required. However it was admitted a member on the basis of a membership of 40,000. The G. I. P. Railwaymen's Union was affiliated on a strength of 30,000 members. This meant that a large part of the voting power was vested in the representatives of these two Unions which were of communist persuasion. The Executive of the Congress was also captured by the revolutionaries, and resolutions for the boycott of the Royal Commission on Indian Labour, affiliation of the Congress to the League against Imperialism, the appointment of the Workers' Welfare League, a Communist organisation in England, as Agents of the Congress for Great Britain and the boycott of the International Labour Conferences at Geneva were passed both by the Executive Committee and the open session of the Congress. The moderate leaders of labour, including Messrs. N. M. Joshi, V. V. Giri, B. Shiva Rao, R. R. Bakhale and Dewan Chaman Lall seceded from the Congress and set up a separate federation under the name of the "All-India Trades Union Federation" in order to co-ordinate the activities of non-communist Trade Unions in India. Endeavours made to draw the seceders back into the fold of the All-India Trade Union Congress have not met with any success. The Labour Unions in Ahmedabad which draw their inspiration mainly from Mr. M. K. Gandhi and are the best organised and most successful trade unions in India have not during the fifteen years of the Trade Union movement in India shown any desire to become affiliated to the Congress.

The eleventh Session of the Trade Union Congress, held in Calcutta in July 1931, led to further disintegration in the ranks of labour and once again the Communists from Bombay were responsible. The Girni Kamgar Union had split into two parts, both bitterly opposed to each other. One led by Mr. S.V. Deshpande, General Secretary of the Trade Union Congress and the other by Mr. G. H. Kandalkar, President of the G.K.U. and a Vice-President of the Congress and both groups claimed to be the Girni Kamgar Union and therefore entitled to vote at the Congress. The President, Mr. S. C. Bose, a Congress politician, decided in favour of Mr. Kandalkar whereupon Mr. Deshpande and the representatives of a few other unions broke away from the Congress with the result that this organisation which should guide and control the Trade Union movement in India is a useless and effete body with no influence and a trifling membership.

The twelfth Session of the Congress was held at Madras on 10th and 11th September 1932 under the presidentship of Mr. J. N. Mitra. The report of the General Secretary stated that twelve new Unions from Madras affiliated themselves to the Congress and that the membership of the Congress covered Unions with more than a lakh of organised workers. The Conference adopted resolutions damanding the immediate and unconditional release of all the political prisoners including the Meerut undertrials; condemning leaders like Messrs. Jamnadas M. Mehta, V. V. Giri and N. M. Joshi for postponing a general strike on railways; and adopting the platform of unity formulated by the Bombay Girni Kamgar Union which included class struggle as one of its main planks.

The thirteenth Session opened at Cawnpore on 23rd December 1933. Mr. G. L. Kandalkar of the Bombay Girni Kamgar Union presided. The president declared that the Trade Union Congress would participate in the political movement only on condition that key industries like Railways and Banks were nationalised and their control transferred to councils of workers. There was a free fight between the votaries of the Indian National Congress which is a purely political body, and labour leaders and a pandemonium resulted. Several resolutions were passed at this session one of which authorised the Bombay Girni Kamgar Union to take steps to organise an All-India Textile Workers' Conference in Bombay to consider the question of wage-cuts in the textile industry and concert measures to defend the cause of the workers. Pandit Hariharnath Shastri of Cawnpore was elected President for 1934.

The National Trades Union Federation.—The Indian Trades Union Federation which was formed in 1929 by moderate leaders of labour like Mr. N. M. Joshi and others after the split in the Nagpur session of the All-India Trade Union Congress, held its first annual session at Madras on July 16 and 17, 1932, with Mr. V. V. Giri as President. The Federation claimed the allegiance of 40 unions in various parts of the country including Native States and a total membership of 78,000. The Conference adopted the provisional constitution of the Federation framed by the Committee of management and also considered the question of trade union unity.

Almost from the time of the unfortunate split which occurred at Nagpur in 1929, the necessity of bringing about trade union unity has been felt in almost every quarter. Efforts have been made since 1930 to bring the different groups together informally and to try to find a reasonable basis of agreement. Some Bombay unions formed a 'platform of unity' the main planks of which were (1) that the Trade Union is an organ of class struggle involving purely direct action; (2) that the Trade Union Congress should not be affiliated to the International Federation of Trade Unions, Amsterdam, and (3) that delegates should not be sent to the International Labour Conferences. In these efforts the railway unions which had remained aloof from the two rival national organisations took very great interest and the All-India Railwaymen's Federation convened in Bombay a representative conference in May 1931 when a committee was appointed for the purpose of considering and reporting upon the best methods of bringing about unity in the ranks of Indian labour. The platform of unity referred to was particularly examined by this committee whose suggestions for amendments were not approved by the extremist labour leaders belonging to the All-India Trade Union Congress. The All-India Trade Union Federation at its first session held in Madras however welcomed the efforts made by the Trade Union Unity Conference held under the auspices of the All-India Railwaymen's Federation and authorised its working committee to co-operate with other unions in facilitating the reconciliation of differing points of view. A special session of the All-India Trades Union Federation was held at Calcutta in April 1933 for the purpose of considering the question of Trade Union unity amongst other subjects, and a resolution was passed authorising the General Council to negotiate with the Provisional Committee of the National Federation of Labour (a new national trade union organisation formed by certain leaders of labour) on the question of trade union unity with a view to bring about amalgamation between the two organisations on a fair and equitable basis. As a result of these negotiations, the National Trades Union Federation came into existence on and from 10th May 1933 in place of the All-India Trades Union Federation and the National Federation of Labour.

The main objects of this Federation are: (*a*) to establish a socialist State in India, (*b*) to socialise and nationalise the means of production, distribution and exchange as far as possible, (*c*) to ameliorate the economic and social conditions of the working classes, and (*d*) to support and actively participate in the struggle for India's political freedom from the point of view of the working classes by all legitimate, peaceful and democratic methods such as legislation, negotiation, propaganda, etc., and, in the last resort, by strikes and similar other methods. Each affiliated union has to pay to the Federation an annual fee of Rs. 20 for 2,000 members and below, Rs. 10 for every additional 1,000 members or less upto 10,000 and Rs. 5 for every additional 1,000 members or less above 10,000.

The first session of the National Trades Union Federation was held in Bombay on the 24th to 26th Dec. 1933 with Mr. Mrinal Kanti Bose, the President of the Federation, in the chair. The number of unions affiliated to the Federation was reported at 50 and the total membership of individual members at 1,37,000. It was resolved to organise an All-India Textile Labour Federation to resist the employers' attacks on the workers in the textile industry, and to provisionally affiliate the National Trades Union Federation with the International Federation of Trade Unions for a period of two years in the first instance.

There was a split in the Federation at its first session held in Bombay. The representatives of several Bengal Unions walked out of the conference on the 26th December 1933 in

consequence of differences of opinion between them and Mr. N. M. Joshi and held a meeting on the same day under the presidency of Mr. Abdul Ghani and resolved to form an All-India federation of labour with the name and style of the *All-India Trades Union Federation* with headquarters at Calcutta. Mr. M. Daud, M.A., Bar.-at-Law, was elected President. It was proposed to draft a constitution and place it for adoption before the next session to be convened at an early date. Six unions, all situated in Bengal, with a total membership of 15,000 promised affiliation to the new body.

There are, in addition, the following All-India Associations in existence :—

(1) The All-India Postal and R. M. S. Association, (2) The All-India Postmen's and Lower-Grade Staff Union, (3) The All-India Telegraph Union, (4) The All-India Post and Telegraph Administrative Offices Staff Association, (5) The All-India Government Employees' Federation, (6) The All-India Currency Association, (7) The Central Body Military Accounts Association and (8) The National Federation of Textile Labour in India.

Trade Union Legislation.

In 1920 a Company owning a mill whose workers were on strike brought a suit against the leader of the local labour union which was conducting the strike and others, seeking to restrain them from inducing the plaintiff's workmen to break their contracts, and suing for damages for their actions in this respect. The Madras High Court to whom the suit was referred gave their decision granting an *interim* injunction restraining the defendants from inciting the plaintiffs' employees to continue the strike. The case was eventually withdrawn but the proceedings suggested that, in the absence of legislation, even legitimate trade union activity was attended by considerable peril. As a result of a resolution moved by Mr. N. M. Joshi and accepted by the Legislative Assembly in March 1921, Government were committed to take steps as soon as practicable to introduce such legislation as might be necessary for the registration and protection of Trade Unions. The Government of India, accordingly, formulated certain tentative proposals and circulated them for eliciting public opinion. The opinions expressed were by no means unanimous,—some considered the proposed legislation premature, while some others realised that legislation was necessary but at the same time considered Trade Unions as a pernicious and dangerous growth which should be rigidly controlled, and others again urged that sufficient protection should be granted to them. In August 1924, the Government of India circularised a draft Bill for opinion. The Bill conferred certain privileges only on registered Trade Unions and left the question of registration at the option of Trade Unions themselves. Provision was also made to ensure that the funds of a registered Trade Union are not expended on causes in which the bulk of the members have little interest. A regular audit of the funds was proposed to be made compulsory and the manner in which the executive should be composed was also provided for.

A number of amendments were made by the Select Committee and in the Legislative Assembly. A clause permitting registered Trade Unions to maintain funds for political purposes was added. The provision was on the model of the British Law on the subject and those members who contracted out of the liability to subscribe were not to be compelled to contribute to the Political Fund nor did failure to contribute involve any disability or disadvantage except in so far as the control and management of the Political Fund was concerned. The Bill was passed on the 8th February and received the assent of the Governor-General on the 25th March 1926. The Indian Trade Unions Act came into effect from the 1st June 1927.

Mr. N. M. Joshi introduced in the Leislative Assembly on the 9th February, 1928, a Bill to amend Section 43 of the Indian Penal Code in order to extend to the officers and members of unregistered Trade Unions the protection afforded by Section 17 of the Indian Trade Unions Act, 1926, which lays down that no officer or member of a registered Trade Union shall be liable to punishment under sub-section (2) of section 120B of the Indian Penal Code, in respect of any agreement made between the members for the purposes of furthering any such object of the Trade Union as is specified in Section 15, unless the agreement is an agreement to commit an offence. The Assembly, however, threw out the Bill.

A Bill was introduced in the Legislative Assembly on the 4th September 1928 with a view to amending Section 11 of the Indian Trade Unions Act, 1926. It was pointed out in the Statement of Objects and Reasons that the existing section 11 of the Act admitted of doubt in two respects namely : (1) It did not indicate clearly whether the first appeal lay to the judge appointed for the area within which the Registrar's office is situated or to the judge appointed for the area within which the head office of the trade union is situated. The amendment was intended to make it clear that the latter is the competent court ; (2) It did not indicate clearly what judge might be appointed to hear appeals in the Presidency towns and in Rangoon. The amendment was designed to make it clear that in such areas the appeal lies to the High Court and there is no second appeal. The opportunity was also taken to define clearly the powers of the High Court in second appeals. The Bill was passed and received the assent of the Governor-General on 25th September 1928.

Working of the Act.—The Act has now been in operation for nearly seven years. All-India Statistics on the workng of the Act for the year ending 31st March 1932 published in July 1933 show that there were 131 registered trade unions in the British Provinces in the whole of India during the year ending March 1932 as compared with 119 registered unions during the year ending 31st March 1931. The distribution of the registered Trade unions together with the figures for total membership

for all unions which submitted returns is as follows:—

Provinces.	Total No. of Unions registered.	Total memberships of registered Unions.
Ajmer-Merwara	2	34
Bengal	28	81,725
Bihar and Orissa ..	3	1,378
Bombay	32	68,306
Burma	1	56
Central Provinces ..	10	6,788
Delhi	4	3,482
Madras	23	42,402
Punjab	22	21,627
United Provinces ..	6	9,895
Total ..	131	235,693*

*These figures are for the Unions which submitted returns of membership. Ten Unions did not submit their returns in time for their membership figures to be included.

Only a few associations of employers have yet applied for registration. No Trade Union was registered in the provinces of Assam, Baluchistan, and Coorg up to the end of March 1932. The great inducement to register has been the predisposition of employers generally to recognise Unions that are registered. In the case of Associations of Government Servants, one of the conditions of their recognition by Government was that they should get themselves registered when the Trade Unions Act was brought into force. In view of the fact, however that certain difficulties have arisen in connexion with the application of the Act to Government servants, the question is under the consideration of the Government of India who have not yet formulated any definite conclusions. Pending the consideration of this question, Government have relaxed the provision contained in the existing rules for the recognition of Associations of Government servants which requires them to register under the Act.

A few Associations of Goverment employees have pressed for their registration under the Act and such of them as had complied with the requirements of the Act were duly registered in the Bombay Presidency and in certain other provinces also.

The registration of Trade Unions is not compulsory and although there is an increasing resort to registration there are still a large number of Unions which apparently regard the benefits of registration as an insufficient return for the obligations imposed on registered Trade Unions by the Act. Some progress, as a whole, was however visible in the trade union movement in India. Not only has the membership of the Unions increased but their financial position is also satisfactory. Organisation among women-workers in India continues to be slow. The figures for female membership of registered Trade Unions in successive years were as follows:—

Year.	Membership.
1927-28	1,166
1928-29	3,842
1929-30	3,299
1930-31	3,151
1931-32	3,454

The figure for 1931-32 represents 1.5 per cent. of the total membership of registered trade Unions.

Royal Commission's Recommendations.—With regard to Trade Unions, the Labour Commission recommended that every employers' organisation should set up a special committee for the purpose of giving continuous consideration to the improvement of the well being and efficiency of the workers in establishments controlled by its members; and that "recognition" of a Union should mean that the Union has the right to negotiate with the employer in respect of matters affecting either the common or individual interest of its members. The fact that a Union exists only of a minority of employees or the existence of rival Unions are not sufficient grounds for refusing recognition. With regard to the internal administration of Trade Unions the Commission recommend that Union leaders should endeavour to give as many members as possible some share in the work of the Union and that Trade Union organisers should endeavour to find suitable men within the Union to act as officials and should train them for the position.

With regard to the Trade Unions Act, the Commission recommended that it should be re-examined during the year 1934 and that all limitations imposed on the activities of registered Unions and their officers should be reconsidered so as to ensure that the conditions attached to registration are not such as to prevent any well-conducted *bona fide* Union from applying for registration. Section 22 of the Act should be amended so as to provide that ordinarily not less than two-thirds of the officers of a registered Trade Union shall be actually employed or engaged in an industry with which the Union is concerned.

INDUSTRIAL DISPUTES.

The weapon of the "strike" in industry first came into prominence in India during the period immediately following the close of the War when the majority of the strikes as shown in the introductory Section were designed to secure increases in wages commensurate with the rise in the cost of living. The epidemic of industrial strikes which characterised the period 1919-20 reached a climax in the winter of 1921. During this period strikes took place purely from economic causes and most of them ended successfully from the view-point of the workers, after a short struggle. After this period, however, they tended to be more prolonged and less successful and, partly owing to political causes, there were a number of fairly serious disputes in public utility services. In more recent years the machinations of the Communists have been increasingly responsible for the calling of general strikes and their undue prolongation.

Extent of Disputes.—All-India statistics of industrial disputes for each quarter and for each year have been compiled and published since 1920 by the Government of India in the Department of Industries and Labour.

The following tables show the number of disputes which occurred during the eight years 1925-33 in each province and in each class of industry respectively:—

Provinces.	No. of disputes in								
	1925.	1926.	1927.	1928.	1929.	1930.	1931.	1932.	1933.
Bengal	43	57	34*	60	35	34	47	27	29
Bombay	69	57	54	111	70	75	53	53	82
Madras	4	2	19*	7	12	11	15	14	6‡
Central Provinces & Bear	6	4	2	1	2	1	7	8	8
United Provinces ..	6	3	3	2	4	2	11	2	5
Bihar & Orissa	2	3	4*	8	2	4	1	1	..
Burma	3	1	3	7	4	3	10	4	5
Punjab	1	..	..	2	..	..	7	3	..
Assam	..	1	12	5	9	16	15	7	10
Ajmer-Merwara	..	..	..	..	..	..	..	..	2
Total ..	134	128	129	203	141†	148	166	119‡	146‡

* One strike extended to three provinces. † Includes 3 disputes in Delhi.

‡ One strike extended to two provinces.

Industries.	No. of disputes in								
	1925.	1926.	1927.	1928.	1929.	1930.	1931.	1932.	1933.
Cotton and woollen mills	69	57	60	110	78	68	75	54	87
Jute Mills	15	33	11	19	13	13	22	13	11
Engineering Workshops	7	4	6	11	7	10	5	3	1
Railways including Railway Workshops ..	6	3	3	9	4	9	8	6	3
Others	37	31	49	54	39	48	56	42	44
Total ..	134	128	129	203	141	148	166	118	146

The peak in respect of the number of industrial disputes (203) was reached in the year 1928. More than 50 per cent. of these disputes occurred in the Bombay Presidency while only about 30 per cent. occurred in Bengal. In none of the other provinces was there an average of at least one dispute per month during that year. The industry which was hit hardest was the cotton and woollen mill industry in which no less than 110 disputes took place during the year.

In 1933, 164,938 work people were involved in the 146 disputes and 2,168,961 working day were lost.

CONCILIATION AND ARBITRATION MACHINERY.

Prior to the passing of the Trade Disputes Act as an All-India measure early in the year 1929, there was, with the exception of a conciliation panel in Bengal, which will be dealt with lower down, no official machinery for conciliation and arbitration in industrial disputes in India. The Employers' and Workmen's (Disputes) Act which was passed in 1860 to make provision for the speedy termination of certain disputes between workmen engaged in railway and other public works and their employers and which was extended, in case of the Bombay Presidency, to the districts of Ahmednagar, Broach, Ahmedabad, Kaira, Poona, Sholapur, Surat and Thana in 1860 and 1861 and to Sind in 1872 dealt with individuals and did not provide any machinery for the settlement of disputes in other trades or industries. No records are available to show the extent to which this Act was made use of in India. The Act was repealed in March 1932. The only provinces in which *ad hoc* Committees have been appointed during the past fifteen years either to enquire into the question of providing machinery for the settlement of disputes or to deal with specific strikes are the Bengal and the Bombay Presidencies.

Bombay Presidency.—The first Committee to be appointed in the Bombay Presidency was the Industrial Disputes Committee appointed on the 18th November 1921 with Sir Stanley Reed as Chairman "to consider and report on the practicability or otherwise of creating machinery for the prevention and early settlement of industrial disputes." This Committee made several recommendations with regard to the standardization of wages, trade unions, the attitude employers should adopt towards Unions of their workers and the recognition of Unions, Works Committees, Welfare Work, Co-operative Societies, Housing of Labour, etc. Their recommendations were in the nature of measures that might contribute to the prevention of industrial disputes. With regard to the methods of settlement when such disputes either develop irreconcilable differences between capital and labour or else become a menace to the community, the Committee recommended the formation of an Industrial Court of Enquiry to be followed, if necessary, by an Industrial Court of Conciliation.

In pursuance of the recommendations made by the Industrial Disputes Committee, the Government of Bombay published a Bill to provide for enquiry into and settlement of trade disputes in the *Bombay Government Gazette* in May 1924. It was intended to introduce this Bill in the Bombay Legislative Council at the Poona session in July of the same year; but, in the meanwhile the Government of India asked the Local Government not to proceed with this measure because they themselves intended to introduce similar legislation for the whole of India. This, however, was not the first occasion on which the Government of India considered the question of the advisability of introducing legislation to provide for the settlement of disputes. In 1920 they circularised all Local Governments asking their opinions as to the advisability of providing legislation on the lines of the Industrial Courts Act 1919. The opinions obtained by provincial Governments were almost unanimous that labour was not properly organised and that therefore no useful purpose would be served by such legislation. The majority of the provincial Governments adopted the same view.

Bonus Dispute Enquiry Committee.—The next Committee to be appointed by the Government of Bombay was the Committee of Enquiry with Sir Norman Macleod, as Chairman to enquire into the general strike of the Bombay cotton mill workers of the year 1924 in connexion with the non-payment of an annual bonus for the year 1923 by the Bombay mills.

The findings of the Committee were:—

(1) That the mill workers had not established any enforceable claim, customary, legal or equitable, to the annual payment of a bonus; and

(2) that the results of the working of the mill industry as a whole for the year 1923 were such as to justify the contention of the millowners that the profits did not admit of the payment of a bonus.

Bombay Strike Enquiry Committee.—The third *ad hoc* Committee to be appointed in the Bombay Presidency was the Bombay Strike Enquiry Committee under the Chairmanship of Sir Charles Fawcett, Judge of the Bombay High Court, in connection with the general strike of the cotton mill workers in Bombay city of the year 1928 in pursuance of the agreement arrived at between the Bombay Millowners' Association and the Joint Strike Committee at a conference held under the Chairmanship of the Hon. Sir Ghulam Hussain Hidayatullah, General Member of the Government of Bombay, on the 4th October 1928.

This Committee sat for a continuous period of five and a half months and its Report was published on the 26th March 1929.

Some of the conclusions and recommendations of the Bombay Strike Enquiry Committee were as follows:—

(1) The proposals of the Millowners' Association (*a*) for standardization of wages, duties and numbers of operatives in a mill and (*b*) for Standing Orders for the operatives about the conditions of their employment were in the main fair and reasonable.

(2) While there was justification for the Association's proposal to make a cut of 7½ per cent. in weavers' wages, there were reasonable objections to be urged against its adoption in the present circumstances, and it was recommended that it should be dropped by the Association provided the Labour leaders undertook to co-operate in working the scheme for the standardization of wages.

(3) That part of the standardization scheme which is called the "Rational" or "Efficiency" system and which aims at reducing the number of operatives employed in mills while raising their wages and providing conditions favourable for the extra efficiency expected from the operatives was fair and reasonable.

(4) With regard to the Seventeen Demands submitted by the Joint Strike Committee some of the demands which were considered to be fair and reasonable were—

(*a*) That the Millowners shall not vary any of the present conditions to the disadvantage of the workers before securing the approval of the workers through their organisations.

(*b*) That the Millowners' Association shall not permit its individual members to vary the conditions of service to the disadvantage of the workers without the sanction of the Association.

(*c*) The rates of new varieties shall be fixed by the Millowners' Association in consultation with the representatives of the Workers' organisations.

(*d*) Notices in vernacular showing the rates of piece work in detail should be posted in the Departments for the information of the workers.

(*e*) That there should be no victimisation of men who had taken part in the strike or any Union activities.

Most of the above were eventually conceded by the Millowners' Association.

(5) The following demands were held to be unfair and unreasonable—

(*a*) The wages of those workers whose average monthly wage is less than Rs. 30 should be raised substantially.

(*b*) The newly introduced system of compelling the workmen (1) to take out and present tickets of attendance and (2) to clean machinery daily should be discontinued.

(6) The recommendations of the Committee for alleviating unemployment consequent on the introduction of efficiency methods of work were as follows :—

(*a*) The millowners should set up some machinery for taking note of all cases where workers are discharged on account of reduction of staff, and help them as far as possible to get suitable employment either in some other mill or in some other industry.

(*b*) The Millowners' Association should consider the advisability of a scheme for the payment of a gratuity to a worker, which may amount to say, four weeks or six weeks' wages according to his length of service payable in suitable cases to discharged employees who may need help during the waiting period while they are seeking employment. The formation of an Out-of-Work Donation Fund on a voluntary basis to be created by a system of setting aside a contribution by the Millowners of one anna per operative per month to which fund the operatives through their representatives should be invited to contribute one anna or at least half an anna per head per month was suggested.

(7) The Trade Unions should combine to arrange for the assistance of an expert technical adviser in dealing with disputes arising under the Standardisation Scheme.

(8) In view of the fact that several matters required adjustment in connexion with the scheme for wage standardisation after it had been brought into operation and with a view to avoiding strikes and lockouts, machinery was provided by "Mediation Rules" agreed to by both sides for setting up joint Committees to enquire into disputes arising under the scheme and to endeavour to arrange for their settlement.

Owing to the undue prolongation of the general strike in the Bombay Cotton Mills of the year 1929 and the consequent disruption of labour, it was not possible for the Bombay Millowners' Association to bring into operation the Mediation Rules recommended by the Bombay Strike Enquiry Committee for the simple reason that there are no recognised Unions representatives of Bombay Cotton Mill workers in the City. The Bombay Textile Labour Union, of which Mr. N. M. Joshi, M.L.A., is the President has barely 400 members. The recognition accorded by the Bombay Millowners' Association to the Bombay Girni Kamgar Union which claimed a membership of over fifty thousand after its registration in May 1928 was withdrawn by the Association on the publication of the reports of the Court of Enquiry appointed under the Trade Disputes Act to inquire into questions connected with the general strike of the year 1929 and the Riots Inquiry Committee. The Association has been giving anxious consideration to the practical steps which might be taken by mills to bring about better relations between employers and their workmen and for the prevention of accumulation of grievances. In a circular letter dated the 8th January 1930 addressed by the Association to all the mills affiliated to it, they issued instructions that all mills should take immediate steps whereby complaints and grievances of the workers may be attended to by the management concerned at once. For this purpose complaint boxes were to be placed in the compounds of all mills in which workers are invited to put in petitions regarding their grievances or suggestions for improvement of conditions of work. The mills have been requested to give sympathetic consideration to any complaints or suggestions made and to redress or give effect to them wherever possible. Further measures calculated

to improve the relations between the employers and the employed are under consideration. The Association have also devised measures for joint discussions between managers of mills and the Association on general questions relating to the internal administration of the mills.

The next Committee to be appointed in the Bombay Presidency was a Court of Enquiry appointed under the Trade Disputes Act in connexion with the general strike of cotton mill operatives in Bombay City of 1929. After a prolonged enquiry into the causes of and the conduct of this strike which lasted for nearly four months, the Pearson Court of Enquiry came to the unanimous conclusion that the whole of the blame for the calling and the continuation of the strike rested with the Bombay Girni Kamgar Union. The Report of the Court was published on the 16th Sept. and its moral effect was so great that the union called off the strike unconditionally on the next day.

Bengal.—Several special Committees were appointed by the Government of Bengal during the period of intense industrial unrest during the years 1920-21.

(1) As the result of a strike of taxi-drivers and professional drivers of private cars in Calcutta which was caused by objections to certain rules, particularly (*a*) a new rule requiring medical examination of applicants for professional driver's license, and (*b*) another rule forbidding the carrying of attendants in taxis, Government appointed a Committee of Enquiry into the existing licensing regulations and the control of taxicabs generally. The strike lasted from the 12th to the 20th January 1921, and ceased as a result of the institution of the inquiry. The Committee made a number of proposals for amendments in the existing regulations. These proposals were ultimately accepted and brought into effect on the 12th October 1921.

(2) As the result of a strike of drivers and conductors of Calcutta and Howrah tramways, which lasted from the 27th January to the 24th February 1921, Government appointed a Committee of Enquiry after the resumption of work by the strikers on the 8th March 1921. The men resumed work towards the end of February on condition (*a*) that the Calcutta Tramways Company would investigate their grievances and announce their decision within a week, and (*b*) that if the men were dissatisfied with the Company's decision, Government would appoint a Committee of Enquiry. There was general agreement between the Company and the men's representatives in regard to the majority of the Committee's recommendations. Some, however, of the Directors of the Company did not accept the terms. Another strike of the tramway employees of a much more protracted character broke out in 1922. It lasted from 20th December 1922 to 27th January 1923. No Committee of Enquiry was appointed, although the representatives of the men raised several points which arose from the previous inquiry. Work was resumed unconditionally.

(3) During a strike on the light railway of Messrs. Martin and Company in the 24 Parganas and Howrah which lasted from the 15th June to the 2nd July 1921, a special Conciliation Board was constituted by Government by a special resolution at the joint request of the employers and the employees concerned. The result of the Board's efforts was a compromise on most of the points raised by the workers, and as a result of the Board's recommendations it was agreed that joint works committees should be set up on the Howrah-Amta and Howrah-Sheakhala lines. Works Committees were established soon after the Board's report was published, but they failed to function owing to the men's indifference.

(4) The Bengal Legislative Council passed a resolution on the 4th March 1921 to the effect that Government should appoint a Committee to enquire into the general causes of the prevailing unrest and to suggest remedial measures. The report of the Committee was published on the 18th June 1921. The main recommendations of the Committee were—

(*a*) the establishment of joint works committees in industrial concerns;

(*b*) non-intervention of Government in private industrial disputes, which it was considered. should be settled by voluntary conciliation;

(*c*) the constitution by Government of a conciliation panel to deal with disputes in public utility services; and

(*d*) the appointment by Government of special conciliation bodies in the case of private industrial disputes, if both parties desired outside intervention.

As the result of the recommendations of this Committee, a conciliation panel was constituted under Government resolution dated the 29th August 1921. The panel contained thirty names, and was composed on a representative basis, leading public bodies being asked to recommend persons to serve on it. The panel was reconstituted every year till 1929, when it was superseded by the Trade Disputes Act. Several applications for Government intervention were received during the period of the panel's existence but in no case did Government consider that intervention was justified.

The Government of Bengal agreed with the Committee's view that there was no reason why voluntary conciliation boards, wisely constituted, should not achieve a large measure of success in labour disputes affecting public utility services, where the parties had come to a deadlock, and a solution of the disputes could only be found in the intervention of outsiders. The panel was intended to deal only with disputes affecting public utility services in Calcutta and its neighbourhood. In the settlement of ordinary labour disputes not directly affecting the public, the Committee held that it was not ordinarily the duty of Government to intervene in such disputes either directly or indirectly, but if both parties express a desire that their differences should be investigated by an impartial authority, the Governor in Council should to prepared to establish a conciliation board be deal with the matter, or to take such other action as might be suitable in the circumstances of the case.

TRADE DISPUTES LEGISLATION.

The history of the various proposals for legislation providing machinery for the prevention and settlement of industrial disputes in India covers a period of about ten years. The findings of the Industrial Disputes Committee appointed by the Government of Bombay in the year 1921 in pursuance of a Resolution moved in the Bombay Legislative Council for the appointment of a Committee "to consider and report on the practicability or otherwise of creating machinery for the prevention and early settlement of industrial disputes" has already been dealt with above. Mention has also been made of the action taken by the Government of Bombay under circumstances which led to its abandonment owing to the Government of India circularising a draft Bill as an All-India measure. The Bill circulated by the Government of India in August 1924 was very wide and comprehensive in scope and extent.

Nothing further was heard about this Bill until the end of 1925 when His Excellency the Viceroy in a speech at the Annual Meeting of the Associated Chambers of Commerce of India and Ceylon, at Calcutta, said: "The question of providing means of conciliation of trade disputes has been thoroughly explored but it would be premature to legislate on this question until the Trade Union Bill has become law." The Trade Unions Act was passed in the Legislative Assembly in March 1926 and was brought into operation with effect from the 1st June 1927.

In August 1928 the Government of India published their second Bill making provision for the investigation and settlement of trade disputes and for certain other purposes. This Bill was introduced in the Legislative Assembly with a motion for circulation on the 21st September 1928. The Bill differed in several important respects in comparison with the Government of India's original Bill of 1924. The main part of the Bill falls into three parts. Clauses 3 to 14 of the 1928 Bill related to the establishment of tribunals for the investigation and settlement of trade disputes. This part of the Bill was based generally on the British Industrial Courts Act of 1919 and its detailed provisions were adopted for the most part from clauses in that Act. The main difference was that, whereas the British Act sets up a Standing Industrial Court, the Conciliation Boards which the Bill proposed to establish were intended to be appointed *ad hoc* like the Courts of Inquiry, in order to deal with particular disputes. The object of Courts of Inquiry which would ordinarily be composed of persons having no direct interest in the disputes would be to investigate and report on such questions connected with the dispute as might be referred to them. The objects of Boards of Conciliation which would ordinarily include representatives of the parties to a dispute would be to secure a settlement of the dispute. Provisions were made so as to enable both Courts of Inquiry and Boards of Conciliation to enforce the attendance of witnesses and the production of documents. Neither party would be under any obligation to accept the finding of the Court or the advice of the Board; and in cases where the dispute is not brought to an end during the deliberations of the tribunal that had been appointed, reliance was to be placed on the force of public opinion which would be enabled by the publication of the report of the tribunal to arrive at just conclusions on the merits of the dispute.

The second part of the Bill consisted of clause 15 which related to public utility services. In accordance with the definition of "Public Utility Services" in clause 2 of the Bill, Clause 15 would be applicable to such railway services as would be notified by the Governor-General in Council. The clause made it a penal offence for workers employed on monthly wages in public utility services to strike without previous notice and also provided heavy penalties for persons abetting such an offence. The clause was based on the principle that persons whose work was vital to the welfare of the community generally should not be entitled to enter into a strike before sufficient time had been given to examine the merits of their grievances and to explore the possibilities of arriving at a possible settlement. Provisions of a somewhat similar type already exist in the Indian Post Offices Act, in a number of Municipal Acts in India, and the principle is one which is widely accepted in other countries.

Clauses 16 to 20 of the Bill contained certain special provisions relating to illegal strikes and lockouts. These clauses followed closely the provisions of sections 1, 2 and 7 of the British Trade Disputes and Trade Unions Act, 1927. They were to be applicable only in the case of the strikes and lockouts which satisfied both of two conditions: in the first place, the strike or lockout must have other objects than the mere furtherance of a trade dispute within the industry to which the strikers or employers belonged; and, in the second place, the strike or lockout must be designed to coerce Government either directly or by inflicting hardship on the community. If these conditions were satisfied, the strike or lockout would become illegal. Persons furthering the strike or lockout were liable to punishment and would be deprived of the protection granted to them by the Indian Trade Unions Act, while persons refusing to take part in it would be protected from Trade Union disabilities to which they might otherwise be subjected.

The motion for circulation was adopted in the Legislative Assembly and the Bill was circulated to all Local Governments for opinion. Some Provincial Governments recommended that questions connected with picketing and intimidation of the type which were entirely responsible for the undue prolongation of the general strikes in the cotton mills of Bombay City of the years 1928 and 1929 and the rioting in Bombay in the year 1929, should also be covered. The Bill was referred to a Select Committee of the Legislative Assembly in February 1929.

The Select Committee decided to limit the duration of the Act to five years. In connection with the definition of the term "Public Utility Services" they were of the opinion that the wide power enabling the Government to declare any industry, business or undertaking to be a public utility service was undesirable as well as unnecessary and the provision made for this in the draft Bill was omitted. Various proposals designed to lay upon the Government a definite obligation to convene a Court of Inquiry or a Board of Conciliation in cases where one of the parties so required were considered. But the Committee thought that unless both parties were agreed in desiring a reference it would be useless to fetter the discretion of the Government as to the time at which the matter was reported for action under clause 3. At the same time they held that no option should be left to the Government to refuse to appoint a Court or Board where the Government was assured that both parties were agreed as to the necessity as well as to the form which it should take. They therefore considered it necessary to provide that in every case a Court of Inquiry, where it consisted of one or more persons, should not include persons having an interest in the dispute or in any industry affected by it, and in this connection the Committee proposed a further definition of the term "An independent person." The clause relating to the publication of the findings of Courts and Boards was maintained on the lines of the English Act so as to make it quite clear that every report of a Court or Board, whether final or *interim*, must be published, and that only the publication of such information or evidence as the appointing authority thought fit should be left to its discretion. It was considered inadvisable to forbid the representation of parties before Courts and Boards by legal practitioners subject only to exceptions and they redrafted the clause in such a manner as to permit that such representation would ordinarily be permissible subject, however, to such conditions and restrictions as might be provided by the rules.

The Select Committee accepted the principle underlying the clause in connection with strikes in public utility services but they held that the clause as originally drafted was open to certain criticisms. For example, it was pointed out that many persons are actually employed upon a daily wage which is in practice paid monthly; also that the clause as provided would appear to penalise abstention from work on the part of a particular individual; and further that the clause was one-sided and inflicted no penalty upon an employer who locks out his workmen. The latter point was considered as one which should certainly be met as by the nature of his employment a casual or day-to-day labourer must be entitled to cease work at any moment and be similarly liable to dismissal and it was agreed that he should therefore be excluded altogether from the operation of this clause. The Committee adopted a suggestion made by the Government of Bombay which made it clear that the cessation of work must be in the nature of a strike as defined in the Bill and it was provided that in order to render it a penal offence the strike must be in breach of a definite contract between the employer and the workmen. The Committee added a collateral provision penalising an employer for locking out his workmen in breach of any contract. The Committee adopted the clause in connection with illegal strikes but with some amendments which, in their opinion, would restrict its scope without materially impairing its effectiveness. In sub-clause 2 of this section they made it clear that, for the application of money to be illegal it must not merely tend to further or support the strike, but have the direct effect of so doing. This was intended to exclude a case in which money is spent upon the relief of the dependants of strikers. A further sub-clause, borrowed from a similar provision from the English Act of 1927 explaining the circumstances in which a group of workmen should be deemed to be within the same trade or industry was added. The penalties provided for the instigation of an illegal strike were modified. With regard to clause 20 of the draft Bill, the Committee held that there was no sufficient justification for giving an option to the Government to apply for injunctions restraining the expense of the funds of a Trade Union in connection with an illegal strike. It was considered that under clause 16 such expenditure had been declared illegal and the persons properly interested in seeing that the funds were not mis-spent are the members of the Trade Union concerned. The Committee were of the opinion that the Bill had not been so altered as to require republication and they recommended that it should be passed as duly amended by them.

The Select Committee as such did not deal with the question of making provision for picketing and intimidation in their report but in a minute of dissent Sir Victor Sassoon, Bart., stated that the alteration of the law relating to picketing was one for which, in his opinion, the time was ripe. Picketing of any kind should be rendered illegal while a Court or Board is sitting and the law on picketing at any time should be altered to render it illegal at or near a workmen's house as under the English Law. There appeared to be some doubt as to whether legislation of this kind should take place in this Bill or by an Amending Bill to section 503 of the Indian Penal Code. It had been stated that if an amendment of this kind were passed in the Select Committee it would delay the Bill. As he did not desire to delay the acceptance of the provisions of this Bill he did not press the point which was raised by other members of the Select Committee. Sir Victor Sassoon, however, thought that suitable action should be taken by Government either when the Bill came up before the House or by bringing out an amending Bill to the Indian Penal Code to deal with this most important and necessary point. The action taken by the Government of Bombay in connection with the passing of an Intimidation Act has been dealt with in the chapter on Industrial Disputes.

The Bill as amended by the Select Committee was passed by the Legislative Assembly on the 8th April 1929 without any change and received the assent of the Governor-General on the 12th April 1929.

During the period of nearly five years for which the Act has been in operation, it has only been made use of on four occasions:

once by the Government of Bombay when they appointed a Court of Enquiry in the year 1929 to enquire into the general strike in Cotton Mills in Bombay City in that year, twice by the Government of India who appointed a Board of Conciliation in 1930 in connexion with a dispute in the Bombay, Baroda and Central India Railway which arose over the question of the transfer of a number of workmen from the Railways' workshops in Bombay to the new workshops which they were starting in Dohad, and another Court of Enquiry in 1931 to enquire into and report on the grievances of the large numbers of workers who were retrenched on all Indian Railways during that year; and once by the Government of Burma.

Royal Commission's Recommendations.—The Royal Commission on Indian labour were of opinion that some statutory machinery will be permanently required to deal with trade disputes and that it will be necessary to consider the form which such machinery should take before the Trade Disputes' Act expires in 1934. They recommend that the possibility of establishing permanent courts in place of *ad hoc* tribunals under the Act should be examined and also that the question of providing means for the impartial examination of disputes in public utility services should be considered. The Commission also recommended that Section 13 of the Trade Disputes' Act should be amended so as to provide that no prosecution or suit shall be maintainable on account of any breach of the section or any damage caused thereby, except with the previous sanction of the Government which appointed the tribunal. Act XIX of 1932, giving effect to this recommendation was passed by the Indian Legislature in September 1932.

In May 1933, the Government of India issued a circular letter to all Provincial Governments inviting opinions, after consultation with the interests concerned as to (1) whether the Indian Trade Disputes Act, 1929, should be converted into a permanent measure, and (2) what amendments, if any, should be made in the Act. The Government of India were provisionally disposed to accept the Royal Commission's recommendation to include "Inland Water Services" within the definition of a "Public Utility Service" but not "Tramway Services" because the later generally have no monopoly in transport in the areas in which they run. Opinions were also specifically invited on the following five questions: (1) whether any statutory provision should be made in the Act for the appointment of Conciliation Officers; (2) whether a permanent Industrial Court on the lines of the British Industrial Court should be framed in each Province; (3) whether strikes or lockouts should be prohibited during the pendency of a Court of Enquiry or a Board of Conciliation; (4) whether awards of Boards of Conciliations should be made binding on both employers and the employed; and (5) whether picketing either by itself or when it is resorted to while a strike has been referred to a Court or Board should be made illegal. The Government of India were also disposed to accept the recommendation made by the Commission to omit the words "between an employer and any of his workmen" in Section 3 of the Act because as this Section stands at present it requires notices of the appointment of a tribunal appointed under the Act to be sent to every individual employer affected by a dispute. The Government of India requested all local governments to send them their replies by 1st November 1933. At the moment of going to press the Legislative Assembly passed a bill introduced by the Government of India to convert the Trade Disputes Act into a permanent measure. As regards the various amendments in the provisions of the Act it is understood that the Government of India propose to introduce another bill in the Assembly sometime later. Indian labour in general has been very badly let down by the communist agitators who dominated labour platforms all over the country in 1928 and 1929 and to-day there are few labour leaders in India who can command respect and adherence from both the employers and the employed. Great labour leaders like Mr. N. M. Joshi, M.L.A., have, during the last two or three years, been engaged in fighting the cause of labour either before the Round Table Conferences in connexion with India's political future or in the Legislative Assembly in connexion with Bills and proposals for new labour legislation.

With regard to the action which should be taken by Provincial Governments the Commission recommended that every Provincial Government should have an officer or officers whose duty it would be to undertake the work of conciliation and to bring the parties privately to agreement. The Commissioner of Labour in Madras, the Director of Industries in the Punjab, the Director of Statistics and Labour Commissioner in Burma and Deputy Commissioners and the Director of Industries in the Central Provinces have already been entrusted with powers as Conciliation Officers.

INDIA AND INTERNATIONAL LABOUR CONVENTIONS.

The Preamble to Part XIII of the Treaty of Versailles refers to the fact that "the failure of any nation to adopt humane conditions is an obstacle in the way of other nations which desire to improve the conditions in their own countries." In order to establish universal peace based on social justice, the Peace Treaty not only laid down general principles in regard to questions affecting labour which were recognised by the High Contracting Parties to be of "special and urgent importance," but also brought into being the **International Labour Organisation** which was entrusted with the task of securing, as far as practicable, the observance of these principles. The International Labour Conference has been discussing various questions connected with industrial, agricultural and maritime labour since 1919 and has recorded its findings in conventions and recommendations. The Conventions and Recommendations adopted by the Conference are not automatically binding

on the State Members, but they have to be submitted to the Legislature of each country, and this secures the regular examination both by the Executive Governments and the Legislatures of schemes which international opinion considers necessary and desirable for the amelioration of labour conditions. During the seventeen Conferences that have been held, 40 Conventions have been adopted. Out of these the following thirteen have been ratified by India :—

1. Hours of work (1919).
2. Unemployment (1919).
3. Night work of Women (1919).
4. Night work of young persons in Industry (1919).
5. Rights of Association (Agriculture) (1921).
6. Weekly Rest in Industry (1921).
7. Minimum age of stokers and trimmers (1921).
8. Medical Examination of Young Persons employed at Sea (1921).
9. Workmen's Compensation (Diseases) (1925)
10. Equality of Treatment (Accidents) (1925).
11. Inspection of Emigrants on board ship (1926).
12. Seamen's Articles of Agreement (1926).
13. Weight of Packages transported by vessels (1929).

In addition to the Conventions dealt with above, the International Labour Conferences have also adopted numerous Recommendations.

The Seventeenth Session of the International Labour Conference held at Geneva from the 8th to 30th June 1933 adopted conventions in respect of (*a*) employment agencies, (*b*) widows and orphans' insurance and (*c*) invalidity and old age insurances. It also adopted Recommendations in connection with the first two subjects.

GOVERNMENT ADMINISTRATION.

During pre-Reform days Labour was not a question to which the Central or Provincial Governments in India gave the same attention as they did to such subjects as education, health or justice. After the amendment of the Indian Factories Act of 1891 in 1911, the appointment of the **Indian Industrial Commission** in May, 1916, may be considered to be the first milestone in the progressive interest taken by Government in questions connected with labour. The active participation of India in the Great War led to the 'creation of an unprecedented opportunity' and 'the emergence of an unprecedented need' for a definite industrial policy for India as a whole. The examination of various industrial questions by the Industrial Commission included, to a certain extent, the examination of questions connected with labour as well. Previous to this date no provincial or All-India inquiries of a general character were held into conditions of labour with the exception of some quinquennial censuses into agricultural wages. No information was available in 1919 as to the rates of wages which were paid in industry, and, for that matter, very little information in this direction is available even to-day. Indian labour secured its first opportunity with her participation in the signing of the treaty of peace and her becoming a live member of the international comity of nations. The participation by India, in the first International Labour Conference held at Washington in the year 1919 made it necessary for the Government of India and the Governments of the more industrialised provinces not only to consider the question of the representation of labour in the Central and Provincial Legislatures but also to allocate to special departments or offices the administration of labour questions.

Under the Devolution Rules (Schedule I, Part 2, Rule 26) industrial matters included under the heads factories and welfare of labour fall within the scope of the provincial legislatures. Under the same rules "regulation of mines" and "inter-provincial migration" are central subjects. A Labour Bureau was established by the Government of India in the year 1920 but it was abolished in March 1923 on the recommendation of the Indian Retrenchment Committee. The administration of labour matters since then has been in the hands of the Department of Industries and Labour with a Member of the Viceroy's Council holding the portfolio. Amongst Local Governments, the Bengal and the Madras Presidencies were the first in the field for the creation of special Labour Officers, but it was the Government of Bombay who took the lead in the field for the creation of a proper Labour Office for the collection and compilation of all kinds of statistics in connexion with prices, cost of living, wages, etc.

Bengal.

The Government of Bengal appointed a Labour Intelligence Officer in the year 1920. Labour laws were to be administered in the Commerce Department, but the Revenue Department continued the administration of the Assam Labour Immigration Act. The Labour Intelligence Officer was to keep a record of industrial disputes in the Presidency and also the number of labour organisations. From time to time, as circumstances permitted, he was to conduct special inquiries. He was, however, not provided with an adequate staff for the purpose. The Labour Intelligence Officer is also the Deputy

Secretary to the Government of Bengal in the Commerce Department and since the bringing into effect of the Indian Trade Unions Act, 1926, he has also been appointed Registrar of Trade Unions. The Royal Commission on Indian Labour have recommended that Bengal should have a properly staffed Labour office on the same lines and with at least the same staff as the Labour office of the Government of Bombay.

Madras.

The Government of Madras appointed a Labour Commissioner in the same year, *viz.*, 1920, to watch and study at all times the conditions of labour particularly industrial labour throughout the Presidency and to keep Government informed by periodical reports of its movements and tendencies and of the existence of any disputes between employers and employed. The settlement of labour disputes and prevention of strikes are features of his work but his interference in such disputes is limited to tendering his offices to settle them. In the case of disputes affecting the internal administration of a railway he may interfere only if both sides agree to his intervention but he must obtain the previous sanction of Government in each case. He is also the Protector of Depressed Classes in which work most of his time is occupied. On a par with the Labour Intelligence Officer, Bengal, the Labour Commissioner in Madras has also no special statistical office to deal with labour statistics and no reports have been published of any special inquiries into questions connected with industrial labour in the Presidency. Since the creation of the Office the conduct of periodic censuses into agricultural wages is, however, placed in his hands.

The Bombay Labour Office.

The real pioneer work in the field of labour information and statistics in India during the last thirteen years has been done by the Labour Office of the Government of Bombay which was established in April 1921. In the Government resolution announcing the establishment of this office the following were declared to be its functions:—

"(1) *Labour Statistics and Intelligence.*—These relate to the conditions under which labour works and include information relating to the cost of living, wages, hours of labour, family budgets, strikes and lockouts, and similar matters;

"(2) *Industrial Disputes.*—As experience and knowledge are gained and the activities of the Labour Office develop it will promote the settlement of industrial disputes when these arise; and

"(3) *Legislation and other matters relating to labour.*—The Labour Office will advise Government from time to time as regards necessary new legislation or the amendment of existing laws."

When the Labour Office was first started it was placed in charge of Director of Labour. The post of the Director of Labour was, however, abolished in 1926 and the labour office was placed under the charge of the Director of Information whose designation was changed to Director of Information and Labour Intelligence. With a view to implementing the recommendation of the Royal Commission on Indian Labour in the matter, the Government of Bombay in May 1933 again changed the designation of the Director of Information and Labour Intelligence to "Commissioner of Labour and Director of Information." With this change in designation the administrative control of the Factory and Boiler Departments was transferred from the Collector of Bombay to the Commissioner of Labour and the Commissioner of Labour was also appointed ex-officio Commissioner for Workmen's Compensation and Registrar of Trade Unions. In addition to the Commissioner there are three gazetted officers attached to the Labour Office. Two of these are Assistant Commissioners of Labour at headquarters in Bombay and the third who is called the Labour Officer at Ahmedabad is stationed at that centre. There are also three full time Lady Investigators but these are not gazetted appointments. The Assistant Commissioners, the labour Officer and all the Investigators receive conveyance allowances. The office staff contains two Statistical Assistants, three senior clerks, eight junior clerks, two stenographers, one typist, one cashier, one despatcher, one daftari and five peons in Bombay and one peon in Ahmedabad. The activities of the office comprise (1) prices and cost of living, (2) wages and hours of labour, (3) rents, (4) economic and social conditions of various communities, (5) unemployment, (6) industrial disputes, (7) trade unions, (8) other industrial and labour intelligence, (9) international labour intelligence, (10) labour legislation, (11) the *Labour Gazette*, (12) library, and (13) office organisation.

The *Labour Gazette* has been published monthly from September 1921. It is intended to supply complete and up-to-date information on Indian labour conditions and especially the conditions existing in the Bombay Presidency, and to supply to local readers the greatest possible amount of information regarding labour conditions in the outside world. The *Labour Gazette* circulates to many different countries and is perhaps the only publication of its kind in India from which foreigners interested in labour and economic conditions in India can obtain accurate and up-to-date information. It has also hitherto been practically the only medium through which the work and publications of the International Labour Office have been made regularly available to people in India. A substantial grant is allowed by the Local Government to the Labour Office for the purchase of books and the Labour Office has accumulated a very useful and fully catalogued library on labour, industrial and economic matters. The Labour Office library is open to research workers in Bombay. In addition to books, the library contains bound copies of all the more important periodical received from Labour Ministries. International organisations and research organisations in various parts of the world.

The Labour Office has conducted several **special inquiries**, the results of which have either been published in the form of special reports or as special articles in the *Labour Gazette*. Among the inquiries the results of which have been published in the form of reports

are three inquiries into wages and hours of labour in the Cotton Mill Industry in the Bombay Presidency for the years 1921, 1923 and 1926: four reports of inquiries into family budgets three of which related to working class family budgets in Bombay, Ahmedabad and Sholapur and the fourth to middle class family budgets in Bombay City. The remaining reports dealt with inquiries into agricultural wages in the Bombay Presidency, an inquiry into deductions from wages or payments in respect of fines and an inquiry into middle class unemployment in the Bombay Presidency. Other special inquiries related to wages of peons and municipal workers, welfare work, rentals in Bombay and Ahmedabad, maternity cases among women operatives, methods of wage payments, creches, clerical wages in Bombay City, incidence of sickness among cotton mill operatives, infant mortality, etc. In the *Labour Gazette* statistics are regularly published for working class cost of living index numbers for Bombay, Ahmedabad and Sholapur, wholesale prices index numbers for Bombay and Karachi, retail food prices for five important centres in the Bombay Presidency, for industrial disputes in the Bombay Presidency and for Workmen's Compensation, prosecutions under the Indian Factories Act, and the employment situation. A new working class index number has been compiled for Ahmedabad and statistics with regard to this have been published in the issues of the *Labour Gazette* since January 1930. A working class cost of living index number for Sholapur has also been published. Quarterly information is also collected with regard to all known Trade Unions in the Bombay Presidency and full information is published in the *Labour Gazette* every three months. The present staff of the Labour Office is as follows:—

Commissioner of Labour and Director of Information, Commissioner of Workmen's Compensation and Registrar of Trade Unions.—Mr. J. F. Gennings, C.B.E., Bar-at-Law, J.P.

Assistant Commissioners of Labour.—Mr. S. R. Deshpande, B. Litt. (Oxon), and Mr. N. A. Mehrban, B.A., F.S.S., Mr. Mehrban is also assistant to the Registrar of Trade Unions, Bombay Presidency.

Labour Officer at Ahmedabad:—Mr. A. S. Iyengar, B.A., LL.B.

Lady Investigators.—Mrs. K. Wagh, Miss G. Pimpalkhare and Miss S. Dabholkar. (These are non-gazetted appointments.)

The Commissioner of Labour and Director of Information has six offices under his charge: (1) The Labour Office; (2) the Information Office; (3) the Office of the Commissioner for Workmen's Compensation, (4) the office of the Registrar of Trade Unions, (5) The office of the Chief Inspector of Factories; and (6) the office of the Chief Inspector of Boilers. In the case of the Office of the Registrar of Trade Unions one Asst. Commissioner of Labour has been appointed as Assistant to the Registrar of Trade Unions and the office work is done by a Statistical Assistant and a junior clerk from the staff of the Labour Office. The Information Office is under the administration of the Home Department. The Labour Office was under the administration of the Home Department till the year 1925, but it was transferred to the General Department and is now under the control of the Political and Reforms Department.

Central Provinces.

The Department of Commerce and Industry is the administrative authority which deals with all labour questions. The Revenue Department deals with mines. The Department of Industries under the Director of Industries is in immediate charge of all matters relating to labour. He is also Registrar of Co-operative Credit Societies and Registrar of Trade Unions. The Factory Office is under the general supervision of the Director of Industries. There is no special Labour Office or Labour Officer in the Central Provinces but the factory staff is utilised for collecting such information on labour questions as may be required from time to time. A Board of Industries consisting of representatives of the employers and the employed has been in existence since the year 1914 and all matters affecting the interests of labour are considered by this Board. But the Board acts purely in an advisory capacity.

Other Provinces.

In Burma a Labour Statistics Bureau with a Special Officer in charge was set up in 1926. This Bureau has conducted an extensive investigation into the standard and cost of living of the working classes in Rangoon, the Report of which was published in 1928. In the Punjab the Director of Industries is the administrative officer for all acts concerned with labour. In the United Provinces almost all departments of the Local Government deal with labour questions. Labour as such is with the Home Member, electricity is with the Finance Member, the factory staff is under the immediate control of the Director of Industries who is under the Minister of Education and Industries and Boiler Inspection is under the Public Works Department. The Registrar of Co-operative Societies of the United Provinces has been appointed Ex-officio Registrar of Trade Unions in the Province. In Assam the main question connected with labour is that concerning the recruitment of labour for the tea plantations from other provinces. As inter-provincial migration is a Central subject, the Local Government are not very actively interested in the special consideration of other labour questions.

Representation on Legislatures.—The Government of India nominates one member for labour interests in the Legislative Assembly. Since the last reforms were brought into operation Mr. N. M. Joshi, of the Servants of India Society, has been continuously nominated as labour member in the Legislative Assembly. In the Bombay Presidency the Local Government had provided one seat for labour, and Mr. S. K. Bole was nominated as the labour member in the first two Councils after the reforms. In 1927 the Local Government increased the number of seats for labour to three but the principle of nomination was maintained. The three persons representing labour interests in the Bombay Legislative Council at present are Messrs. S. K. Bole, Syed Munwar and R. R. Bakhale. In the

Central Provinces, Mr. R. W. Fulay, a Nagpur pleader, has been nominated as a representative of urban factory labour. In Bengal there have been two nominated members to represent labour interests since the introduction of the reforms. The Assam Government reserves one seat for the nomination of a member to represent labour but it has been found impracticable to find any one who could adequately represent this constituency and therefore the seat is vacant in the present Assam Legislative Council.

Relation between Central and Local Governments.—It has already been stated above that under the Devolution Rules, factories, settlement of labour disputes and welfare of labour are reserved subjects. These subjects are, however, subject to central legislation. The provincial legislatures are not debarred from initiating legislation on these matters but they can only do so with the previous sanction of the Governor-General in Council. The actual administration of the Acts passed by the central legislature under the above heads falls on the Local Governments who have to bear the entire cost of administration, as it is not permissible under the constitution to incur any expenditure from central revenues on the administration of provincial subjects. This constitutional position is perhaps, to some extent, responsible for the opposition shown by some of the Local Governments to labour measures on which their opinions have been invited by the Government of India during recent years. The Governor-General in Council exercises control over the administration of the Acts passed by the legislature in two ways: in the first place he is vested by Statute with the general power of superintendence, direction and control, and, secondly, these Acts in most cases either reserve certain powers to him to make the powers conferred on Local Governments subject to his control. The general principle observed by the Government of India has been to grant to the provinces as free a hand as possible in the administration of the various All-India Acts.

Effect of differences in Law in Indian States and British India.—Few Indian States have any labour legislation but most of them are of little industrial importance. The only States which have more than 8,000 persons employed in factories and mines are Hyderabad, Mysore, Indore, Baroda, Jammu and Kashmir, Gwalior and Travancore. Most of these States have a Factories Act which, however, is much below the standard of the corresponding Act in British India. In recent years there has been a tendency on the part of certain capitalists to endeavour to evade the provisions of the Factory Law in British India by establishing mills or factories in the territories of Indian States.

Recommendations of the Royal Commission.—The most important recommendation made by the Royal Commission on Indian Labour in connexion with Government administration of matters connected with labour is for the setting up of an Industrial Council which would enable representatives of employees of labour and of Governments to meet regularly in conference to discuss labour measures and labour policy. It is suggested that the Council should meet annually and its President should be elected at each annual session. The Secretary of the Council should be a permanent official responsible to it for current business. The functions of the Council would be (1) the examination of proposals for labour legislation referred to it and also to initiate such proposals; (2) to promote a spirit of co-operation and understanding among those concerned with labour policy, and to provide an opportunity for an interchange of information regarding experiments in labour matters; (3) to advise the Central and Provincial Governments on the framing of rules and regulations; and (4) to advise regarding the collection of labour statistics and the co-ordination and development of economic research. If Labour Legislation is made a Central subject in the new constitution of India, the Royal Commission recommend that the authority finally responsible for such legislation must be the Central Legislature. If Labour legislation is to be decentralised, some co-ordinating body will be necessary. The decisions of the Council could not be given mandatory power, but in certain circumstances it might be made obligatory for Provincial Governments within a specified time to submit proposals for legislation to their respective legislatures for a decision as to their adoption or rejection.

The Commission recommended that Labour Commissioners should be appointed both for the Central and in all the Local Governments except Assam. Labour Commissioners should be selected officers who should hold the appointment for a comparatively long period. They should be responsible for the publication of labour statistics, should have the right to enter all industrial establishments and should be generally accessible both to employers and labour and should act as conciliation officers. Where there is danger of establishments being transferred to Indian States in order to escape regulation, an effort should be made to obtain the co-operation of the adjoining states. The Commission also recommended that the possibility of making labour legislation both a federal and a provincial subject should receive adequate consideration; and that if federal legislation is not practicable, efforts should be directed to securing that, as early as possible, the whole of India participates in making progress in labour matters. For States in which there is appreciable industrial development, the Industrial Council should offer a suitable channel for co-operation.

With regard to the question of representation of labour on the legislatures the Royal Commission recommended that if special constituencies are to remain a feature of the Indian constitution labour should be given adequate representation in the Central and Provincial legislatures. The method which is most likely to be effective in securing the best representatives of labour is that of election by registered trade unions. A special tribunal should be set up in each province to determine before election the weight which should be given to each registered trade union. The question was examined by the Indian Franchise Committee and so far as the Provincial Councils are concerned the communal award of His Majesty's Government has given effect to the Labour Commission's recommendation. The Franchise Committee recommended a combination of trade union constituencies and special constituencies.

Domestic Servants.

The relationship of master to servant in India is a subject to which attention is frequently directed in the Press by complaints about the alleged deterioration of domestic servants and the hardships to which employers are subjected by the boycotting action of discharged servants. The remedy most commonly propounded for misbehaviour on the part of servants is registration with a view to checking the use of false testimonials, or "chits," and to enabling masters to obtain certain information as to the character of the persons they employ. This mode of procedure is of German origin, for the old Prussian Servants' Ordinances (Gesindeordnung) were supplemented in 1854 by a law, applying only to agricultural labourers and domestic servants, which punishes breach of contract, and since then various State laws dealing with domestic servants have been passed in Germany. The conditions are not, however, analogous for the servant keeping class in India is proportionately larger than in Europe, as also is the number of servants kept by each individual.

The first attempt in the East to deal with the problem by legislation was made in **Ceylon.** The act dealing with the registration of domestic servants in that Colony is comprised in Ordinance No. 28 of 1871. It extends to all classes of domestic servants, hired by the month or receiving monthly wages, and the word 'servant' means and includes head and under-servants, female servants, cooks, coachmen, horsekeepers and house and garden coolies. The Act came into operation in 1871 and empowered the Governor to appoint for the whole of the Island or for any town or district, to which the Ordinance is made applicable, a registrar of domestic servants, who is to be under the general supervision and control of the Inspector-General of Police. A registry is kept by the registrar of all domestic servants employed within his town or district, and he has to enter therein the names of all the servants, the capacities in which they are employed at the time of such registration, the dates of their several engagements and such memorandum of their previous services or antecedents as they may desire to have recorded in the register. But the registrar must, previous to his entering all these details, satisfy himself as to the credibility of the statements made to him. Any person, who may not have been a domestic servant before, but who is desirous of entering domestic service, has to submit an application to the registrar, and if the registrar is satisfied that there are reasonable grounds to believe that the applicant is a fit and proper person to enter domestic service he shall enter his name in the register, recording what he has been able to learn respecting the person's antecedents together with the names of any persons who are willing to certify as to his respectability. If the applicant is unable to produce satisfactory or sufficient evidence as to his fitness for domestic service the registrar may grant him "provisional" registration, to be thereafter converted into "confirmed" registration according to the result of his subsequent service. If the registrar is satisfied that the applicant is not a fit and proper person he should withhold registration altogether, but in such a case he must report his refusal to register to the Inspector-General of Police.

Every person whose name has been registered in the general registry is given a pocket register containing the full particulars of the record made in the general registry. No person can engage a servant who fails to produce his pocket register or whose pocket register does not record the termination of his last previous service, if any. On engaging a servant the master has to enter forthwith in the pocket register the date and capacity in which such servant is engaged and cause the servant to attend personally at the registrar's office to have such entry inserted in the general registry. Similarly, in case the master discharges a servant he must insert in the pocket register the date and cause of his discharge and the character of the servant. Provided that if for any reason he be unwilling to give the servant a character or to state the cause of his discharge he may decline to do so. But in such a case he must furnish to the registrar in writing his reasons for so refusing. If the servant on dismissal fails to produce his pocket register the master must notify that fact to the registrar. Whenever any fresh entry is made in the pocket register the servant is bound to attend the registrar's office to have such an entry recorded in the general registry. Every servant whose name is registered shall, if he subsequently enters service in any place not under the operation of the Ordinance, attend personally at the nearest police station on his entering or leaving such service and produce his pocket register to the principal officer of police at such station in order to enable the police officer to record the commencement or termination of the service. The police officer has then to communicate it to the registrar of the town or district in which such servant was originally registered.

Various **penalties of fine** as well as of imprisonment are imposed for violation of any of the acts required to be done or duties imposed by the Act on the various persons mentioned below. As respects masters if they fail to fulfil any of the duties imposed on them by the Act they expose themselves to a liability of their being fined to the extent of Rs. 20. Similarly a servant, who fails to fulfil any of the duties imposed on him by the Act is liable to pay a fine not exceeding Rs. 20. But in case he gives any false information to the registrar or to any other person on matters in which he is required by this Ordinance to give information, he is liable to a fine not exceeding Rs. 50 or to imprisonment, with or without hard labour, not exceeding 3 months. A fee of 25 cents is charged to the master on engaging a new servant, a like fee of 25 cents is charged to the servant on his provisional registration, or on registration being confirmed, or for registration of previous service or antecedents. But in case of loss or destruction of the pocket register the servant has to pay one rupee for the issue of a duplicate pocket register.

A similar Ordinance (No. 17 of 1914) has been introduced in the **Straits Settlements,** where its operation has been limited to such local areas as may be declared by the Governor in Council, and its application within such areas has been restricted to the class of householders who are expected to desire the benefit of the provisions.

Sea Routes between India and Europe.

The Indian port for the direct journey to and from Europe is Bombay. There are ordinarily five lines of steamers by which the journey to and from the West *via* Bombay can be performed, either by sea all the way, or—and in some cases only—by sea part of the way and by rail across Europe. They are the P. & O., the Anchor Line, the City and Hall Line and the Lloyd Triestino. The Natal line steamers are available for Western passages only, the steamers sailing round the Cape on their Eastward voyages. There are ordinarily other services between Calcutta and the West, by steamers sailing round Ceylon, and several lines connect Colombo with Europe. Of the latter the Orient, the Messageries Maritimes, the Bibby Lines, N.Y.K., Australian Commonwealth, and Royal Dutch Lines are the chief besides the P. & O. The Bibby and Henderson services extend to Rangoon. The new railway between India and Ceylon greatly increases the importance of the Colombo route for Southern India. The shortest time between London and Bombay is 15 days *via* Marseilles. The following are the fares which are convertible at approximately current rates of exchange:—

Peninsular and Oriental S. N. Co.

Fares from Bombay or Karachi.	1st Saloon.				2nd Saloon.

By the **British India S. N. Co.** fares to London by sea from Madras are:—Single 1st saloon £60; 2nd saloon £44. Return £105 and £77.

By the **Anchor Line** fares to Liverpool from Bombay or Karachi are:—1st saloon Rs. 800 single and Rs. 1,400 return. To Marseilles:—Rs. 747 and (return from Liverpool) Rs. 1,354.

By Ellerman's **"City" and "Hall" Lines** fares from Bombay or Karachi to Liverpool, are:—

Cabin class (Minimum) Marseilles Single Rs. 453, Return Rs. 787, Liverpool Single Rs. 493, Return Rs. 867.

Calcutta to London:

1st class Single Rs. 760, Return 1,333, 2nd class Single Rs. 627, Return Rs. 1,093, Cabin class, Single Rs. 653, Return Rs. 1,147.

By **Bibby Line** fares from Rangoon to London:

1st saloon single £68 return £117.

Rangoon to Marseilles, 1st saloon single Rs. 840. Rangoon to Marseilles, 1st saloon return Rs. 1,470.

The Bibby Line fares from Colombo are as follows:—

Colombo Marseilles single Rs. 710, return Rs. 1,240. Colombo London single Rs. 760, return Rs. 1,335.

The Bibby Line steamers carry 1st class passengers only.

By **Henderson Line** fares from Rangoon to Liverpool, 1st saloon are:—single Rs. 775 return (available for 4 months) Rs. 1,150, (available for 2 years) Rs. 1,375.

By **Lloyd Triestino Line** fares from Bombay to Brindisi, Venice or Trieste are:—1st class £65, 2nd class £45. Return rates available for 2 years at one and three-fourth fares. 100 days return tickets. 1st class, £86 and 2nd class, £65.

Sailings from Bombay Twice Monthly.

INDIAN TRAIN SERVICE.

The distances and railway fares from Bombay to the principal centres of other parts of India are as follow:—

CIVIL AVIATION.

The development of internal aviation services in India was first essayed by Lord (then Sir George) Lloyd, during his Governorship of Bombay (1918-23). Lord Lloyd succeeded in securing the inauguration of a postal mail service between Karachi and Bombay. This was carried in R.A.F. machines. The use of these aeroplanes complicated the matter from the outset. The service was not warmly supported by the public. The effort failed.

The general attitude of the Government of India for some time after this was that as no air services in the world had yet been run without a Government subsidy and as India had no money available for such a purpose, a general development of air services in India must await more prosperous times. The pressure of external conditions in favour of Indian aerial enterprise gradually increased. The inauguration of French and Dutch postal services across India, as well as the institution of a regular weekly between England and Karachi, and the general increase of civil aviation in all parts of the world and of visits of flyers of different nations to India, stimulated both Government and public opinion. India became a party to the International Air Convention and under this was obliged to provide ground facilities for aircraft from other countries.

The problem of internal air services was freshly taken up by the Government of India in the Department of Industries and Labour when Sir Bhupendranath Mitra was member of Government for that portfolio. Force of circumstances had already necessitated the appointment of a Director of Civil Aviation and the first holder of the post was Lt.-Col. F. C. Shelmerdine, O.B.E.

Non-official members of the Assembly, under the leadership of Dr. Moonje, then an elected member, for some time strongly pressed Government to institute a practical system for the training of young Indians in Civil Aviation. They foresaw that the development of civil aviation in India was only a matter of time and their great desire was to prevent it following in the wake of the mercantile marine and the commissioned ranks of the army, in which Indians came to the fore under modern conditions only in time to be faced with competition by Britishers who were first in the field. The upshot of this agitation was an arrangement by which young Indians might be sent to England for training with a view to their future employment in the Civil Aviation Department as aerodrome officers, inspectors of aircraft and engines, etc. Eight lads were dispatched for the opening of this system. Others followed and results have been successful. These men are not trained primarily as commercial pilots, but a development of their training, if they show special aptitude and desire to adopt a pilot's career, is always in view. This is a wise precaution and some of them take pilot's certificates. All of them receive a certain amount of training as pilots and they also go through a post-graduate course at the Imperial College of Science and Technology and a period of attachment to selected aircraft works and to the London Terminal Aerodrome at Croydon. The course lasts for two years and three months, during which time the men receive scholarships amounting to £240 per annum. A condition of eligibility for these scholarships is that applicants must possess a B.Sc. degree in engineering or physics.

Interior Postal Service.—Sir Bhupendranath Mitra was in due course obliged to reconsider the question of assisted internal aerial services in India. An arrangement was made by which the Imperial Airways' Service between Croydon and Karachi was, on 30th December 1929, extended to New Delhi, mails from and for Europe being carried to and fro each week. This conveyance of mails between New Delhi and Karachi was performed under a special arrangement, the chief point of which was that the service was conducted by the Postal Department of the Government of India

and that Imperial Airways chartered to them machines for the purpose. This meant, in effect, that the Western service of the Airways Company continued to Delhi, but that technically the service from Karachi eastwards, belonged not to them but to the Government of India. Passengers as well as mails were carried. On the expiration of the period for which the contract on these lines was arranged, the Government of India decided not to renew their charter with Imperial Airways and adopted the alternative course of contracting with the Delhi Flying Club to carry the weekly Karachi-Delhi air mails —here no passengers to and fro. This, like the earlier special arrangement with Imperial Airways, was obviously a transitional plan. It came into operation early in 1932. It filled the need of the moment, pending the development of a permanent scheme.

Before Sir Bhupendranath Mitra could critically develop the matter, he was succeeded in charge of the Departmental portfolio by Sir Joseph Bhore and the latter entered with enthusiasm into the problem. Its solution was largely assisted by a great deal of spade-work carried out by Col. Shelmerdine before he resigned his appointment as D.C.A. in order to take up the corresponding one in England. A scheme was worked out under the direction of Sir Joseph Bhore for the institution of a weekly air-service between Karachi and Calcutta in connection with the weekly arrivals and departures of air mails conveyed by Imperial Airways, Ltd., from and to England. If the Government of India had at this time taken no steps towards the organisation of a service of the kind, they would have been unable to prevent Imperial Airways or some other non-Indian concern from establishing one and the authorities in India were determined that civil aviation within India should be Indian in character, either through the development of private enterprise or through the institution of Government-owned services.

The arrival of acute financial stringency following on the world depression, necessitated the abandonment of the Government Karachi-Calcutta service in 1931. Four Avro-10 aeroplanes had already been purchased for the service and they were sold, one of them being purchased for the use of Their Excellencies the Earl and Countess of Willingdon, who had newly arrived in India on the appointment of the Earl to be Viceroy. Efforts were then directed to alternative methods of attaining the desired result and in 1933 an arrangement for the purpose was carried through. In the new scheme there was organised in India a company known as Indian National Airways, Ltd. Its successful institution was largely the result of the efforts of Mr. R. E. Grant Govan, O.B.E., of New Delhi. This Company received the assistance of Imperial Airways, Ltd. Into the programme thus devised there also entered the Government of India. The upshot of this was the institution of **Indian Transcontinental Airways,** Ltd., a corporation of which 51 per cent. of the capital is contributed by the Government of India and the remainder by Indian National Airways and Imperial Airways, Ltd. Its business is solely to conduct between Calcutta and Karachi a fortnightly service to connect, at Karachi, with the Imperial Airways Western Air Service and at Calcutta with the service organised by Imperial Airways to cover the distance between Calcutta and Singapore, at which point another service is being organised under the auspices of the Australian Government to carry on to Australia.

In the alternative weeks between the fortnightly flights of the Indian Transcontinental Airways machines, the Trans-India Service is carried by Imperial Airways. The new Karachi-Calcutta route was inaugurated during the summer of 1933 and the extension by Imperial Airways to Singapore was established in the following winter. The Australian extension is not yet in operation.

Indian National Airways, besides being concerned in this trunk service also undertake the development of branch or feeder internal services. They have hitherto established weekly services each way between Calcutta and Rangoon and Calcutta and Dacca, respectively. Meanwhile, private enterprise for the development of internal air services strongly developed in Bombay City and before the institution of Indian National Airways there was established by Tata, Sons & Co., a weekly service each way from Karachi *via* Bombay to Madras. Various important developments by both these organisation are contemplated.

Instruction in Aviation.—Instruction in Aviation is given in India only through Clubs founded for the purpose. There are nine of these. Above them is the Aero Club of India and Burma, Secretary Wing Commander A. R. C. Cooper, which exercises control and general co-ordination of activities under the Director of Civil Aviation with the Government of India. The nine instructional clubs are the Delhi, U.P., Bengal, Madras and Bombay Flying Clubs, Karachi Aero Club, Northern India Flying Club, Lahore, Jodhpur and Kathiawar Flying Club. (A Punjab Flying Club at Lahore, lost its three aeroplanes in crashes and had to wind up. Its place has been taken by the Northern India Flying Club). The institution of two other clubs in the C.P. and Hyderabad Deccan respectively is in prospect.

The Club movement dates from March 1927, when, as a result of the interest taken in the subject by Sir Victor Sassoon, Bt., M.L.A., it was discussed by the Indian Legislative Assembly. An encouraging atmosphere was thus created and in the same month the Aero Club of India was formed, composed of about 40 members of the Assembly. Its first meeting was held in Simla in September of the same year and during the next three months 100 more members of the Assembly and 197 other members joined. Strong committees were then formed in Delhi, Calcutta, Bombay and Allahabad, with the object of developing interest in the movement and in order to utilise the Government grants which were at this time proposed and the formation of local clubs followed. The Aero Club entered into an agreement with the Royal Aero Club of Great Britain and thereby became its official representative in India and Burma.

The Government of India, in December, 1927, received from Sir Victor Sassoon a letter saying that subject to a grant of Rs. 30,000 to the Aero Club for the year 1928-29 and a grant of Rs. 20,000 to each club, formed, he would bear any deficit between the Club's income and expenditure until the grants became available. This they agreed to and they further announced that they would provide for each club an initial equipment of two aeroplanes, a spare engine and a contribution towards the cost of a hanger where no hanger was already available. These grants commenced as from the 1st April 1928, and were to continue for two years. Agreements were entered into between the Secretary of State and the Aero Club and between him and the provincial clubs, laying down the conditions of financial assistance. Moth aeroplanes manufactured by the De Haviland Aircraft Co. were selected as the training machines. Eight of these arrived in December 1928, and training with them began in January 1929.

The first Indian air-race was flown over a Delhi-Agra-Jhansi-Lucknow-Agra-Delhi course in February 1932, and was very successful. There was a similar race over approximately the same course in February 1933, when the entries were good and included two competitors who specially came out from England for the contest and the event was again completely successful. The 1934 race was flown with Cawnpore as its centre.

Director, Civil Aviation.—Mr. F. Tymms, M.C.

Deputy Director, Civil Aviation.—Mr. A. T. E. Eadon.

THE SUEZ CANAL.

The report of the Suez Canal Company for 1932 reflects an aggravation of the economic crisis throughout the world. Traffic receipts at £137,000,000 were less by 15 per cent. against which a further reduction in working expenses was secured of £26,000,000, making a total reduction of £45,000,000 or 20 per cent on the working cost of 1930. In order to provide a gross dividend of 510*f.* per share it was necessary to draw on the extraordinary reserve for £11,000,000. The volume of traffic at 28,340,000 tons was less by 5.6 per cent. than the total for 1931 and of the last tonnage 15,721,294 or about 55½ per cent. was accounted for by British shipping. The weight of goods transported through the Canal was only 23,632,000 tons against 25,332,000 tons in 1931, and thus fell below the average of the three years immediately preceding the war. Many vessels which, when trade was on a larger scale, would have been sent laden through the Canal, had to be despatched from the United Kingdom to Australia in ballast, and were directed, in order to save expenses, to proceed by the long sea-route.

Improvement Schemes.—It was announced in 1914 that from and after January 1st, 1915, **the maximum draught of water** allowed to ships going through the **Suez Canal** would be increased by 1 ft., making it 30 ft. English.

The maximum permissible draught of ships using the Canal was 24·4 feet in 1870; in 1890 ships drawing 25·4 feet could make the passage; and during the following 24 years the increase has been at the average rate of about 1 foot every six years, thus bringing the maximum draught authorized to 29 feet.

The scheme of improvement adopted by the Company on the recommendation of the International Consultative Committee of Works, the British representatives on which are Sir William Matthews and Mr. Anthony Lister, is a comprehensive one, and the details suggest that it will meet the needs of the big ship.

A 40 Feet Channel.—The declared policy of the Canal Company in regard to the deepening of the Canal is to offer a slightly greater depth of water than that available in ports east of Suez. It is claimed that, with the exception of Sydney, there is no eastern port which at low tide has a greater depth of water than that now provided in the Canal throughout the full length of nearly 105 miles. In any case the work in hand should meet the needs of any ship likely to be built for the eastern trade during the next few years.

When the Canal was opened in 1869, the width was 72 feet and the depth about 26 feet 2 inches, in June, 1913, the width at a depth of 32 feet 8 inches had been increased to a minimum of 147 feet 6 inches over a length of about 85 miles. and to a width of 328 feet over a distance of about 20 miles. The latest scheme makes provision for a depth of 40 feet throughout and for a widening up to 196 feet 8 inches in the south section, and the cutting of an appropriate number of sidings in the north and central sections, where a minimum width of 147 feet 6 inches is believed to be sufficient for the requirements of the immediate future.

The work of enlarging the capacity of the Canal presents no special difficulty on the engineering side. A good deal of sand is occasionally driven into the channel at Port Said during storms, but a remedy for this will be found in extension of the west breakwater by about 2,700 yards at a cost of over £6,000,000. The construction of this extension, which has been in hand for the past two years, is making satisfactory progress. The Suez Roads are being adequately dredged in accordance with an agreement between the Egyptian Government and the Company.

Almost up to the end of 1915 the works for extending the jetty to the west of Port Said, works of capital importance for the **protection of the entry** to the Canal were pushed on uninterruptedly. In November, however, for want of hydraulic lime, the manufacture of artificial rocks for this jetty was interrupted. The submarine foundations in stone and rubble of the new jetty were, as a matter of fact, completed to a length of 2,500 metres; the protective blocks were laid for 1,040 metres, and cemented for over 800 metres. The protection of the Channel is thus secured, and there is no need of any apprehension as to its future.

Travel in India.

Thirty years ago, a tour in India was possible only to the wealthy, the leisured and those who had friends in the country. The cost of the journey was very high, the methods of transportation were very slow; and the facilities for travel were so indifferent that he was a bold man who consigned himself to the mercies of the country without a sheet of letters of introduction. Now the mail which is posted in London on Thursday night, reaches Bombay in 14 days, and the passenger can travel by the same route and with the same speed as the mail. It is also possible to reach Bombay in 11 days from Genoa or Venice by means of the Lloyd-Triestino line. A dozen lines have covered the sea route between Europe and India and Ceylon with a plexus of regular services while Imperial Airways have a weekly service from Croydon to Karachi and from there the Indian State Air Service takes you to Delhi and before long it is hoped to Calcutta. The Indian Railways provide facilities on the trunk lines equal to many of the best services in Europe and the Indian hotel has grown into a really comfortable caravanserai.

The traveller to India has a choice of many ports by which he may enter. To the majority of visitors from Europe and the West, Bombay provides their first glimpse of India, while others enter by Calcutta, Madras and Karachi and *via* Colombo.

Owing to its geographical position Bombay is known as the Gateway of India through which for more than a century, the import and export trade of India has largely passed. Ash-purple against the dawn, the spurs of the Western Ghats, thrones of mystery, stand sentinel about the inner sanctuary of Bombay Harbour. Among and above these mountain heights Wellington fought the battles which earned for him his early military greatness. Every schoolboy knows the story of the Mahratta campaigns; they are but one—the Mahrattas —of the races within races that populate this vast country where two hundred and twenty-two different vernaculars are spoken. There is never an end to the land of India. You will find life in its most up-to-date form and next to it the customs and habits of a nation which have not changed for hundreds of years. Life will surge past you in a picturesque procession. You will hear a medley of strange sounds—the tinkle of the temple bells, the throb of the drum, the chant of the 'muezzin' announcing that God is Almighty and Mohammed is his Prophet, the song of the Sharma, the cry of the wild beast in the jungle. The tropical sun blazing like a ball of molten gold in a turquoise sky, the silver moon sailing across the purple vault of heaven will awaken in you feelings which you have never known before. If the visitor seeks variety and picturesqueness, there is no region in all the world so full of vivid colour, of populous cities, of buildings designed by master architects of bygone days, of diverse races, of absorbing subjects for study and observation such as the customs, religions, philosophy and art of one of the oldest civilisations.

To the true lover of nature, the botanist and the naturalist, India can offer every charm in forest, mountain, valley, cultivated plain, and wild waste.

To the sportsman, it can furnish sport such as few countries can give; the tiger in the forest, the great mahseer in many rivers, the wily snipe on the jheels, the strong winged duck, the jinking pig and many another kind.

To the mountaineer, the Himalayas offer the highest mountains in the world and some of the few famous peaks which are still unclimbed.

To the statesman, businessman or politician who seeks rest and change without idleness, India presents a sense of busy administration, a nation in the making and an experiment such as has never before been tried.

Bombay itself is cosmopolitan like many of the world's great ports and in it you will find jostling each other in the streets representatives of half the races of mankind. The Towers of Silence and the Caves of Elephanta are among the sights to be seen. Elephanta is one of those delightful islands which are freely scattered upon the waters over which Bombay reigns as Queen.

But Bombay is a gateway and through it many interesting trips await the visitor and northwards to Delhi he has the choice of two routes either by the G. I. P. Railway *via* the Ellora and Ajanta Caves, Sanchi, Gwalior, Agra and Muttra or by the B. B. & C. I. Railway *via* Baroda and through Rajputana with its famous cities of Mount Abu, Udaipur, Ajmer and Jaipur to Agra and Muttra. If you decide to go by the G. I. P. Railway route, you will find at Ajanta frescoes which rival many of the old frescoes found in Europe while at Ellora are the most wonderful caves in the world, mountains cut into colossal sanctuaries. You will be able to compare the work of the Buddhists, the Jains and the Brahmins and learn more of Indian mythology than many hours of study will give you. At Sanchi are Buddhist buildings dating back to 150 B.C. The stone carvings are remarkable and are well worth a visit. As you proceed further north, Gwalior is reached. The great Fort of Gwalior has been described by Fergusson as "the most remarkable and interesting example of a Hindu palace of an early age in India." Seventy miles further on lies Agra and of all the romantic cities of India, Agra must surely come first for it contains that crowning glory in marble, the **Taj Mahal.** Generations have come and gone since that far day when that most splendid of emperors Shahjehan bowed his head before his wife's coffin in the vault of the finished Taj. The building is better known than any other in the world. Visit it by moonlight and later by

daylight if you must. By moonlight its seduction is irresistible. Sit on the steps by the entrance gate and watch the moon drift above the trees and the ring of silver light stealing round the base of the dome and creeping gently upwards to the pinnacle. See it also in the fading evening light when amber and rose and gold, the sun sinks in the west behind the crenelated ramparts of Agra Fort. If you must visit it in the broad light of noonday then forget the first view from the gateway and wander awhile about the gardens where you will find exquisite glimpses of snowy structures so light and graceful that they seem to rest on air; of buoyant cupola and climbing campanile. Here is grandeur as well as beauty.

The Taj Mahal, however, is only one of the many interesting sights of Agra, and its Fort, Itmad-ud-Daulah's Tomb, Akbar's Tomb, 5 miles from Agra, and Fatehpur Sikri, the deserted city of Akbar about 23 miles distant are all well worth a visit. No other fortress in the world presents so great an appearance of knightly splendour, of proud and noble dignity or, with a more sovereign grace, crowns its red bastions with so wonderous a collection of palaces, mosques, halls of state, baths, kiosques, balconies and terraces as Agra Fort, a mile and a half in circumference, with walls 70 feet high faced with red sandstone. The vigorous style of decorative architecture that Akbar introduced into his red sandstone palaces was embellished by his grandson Shah Jahan who was largely responsible for the delicate inlay work and the low reliefs in white marble. There are no buildings to equal these except those found in the Palace in Delhi Fort which Shah Jahan built when he transferred his headquarters to Delhi. Akbar's vigorous but supremely attractive style appears at its best in Fatehpur Sikri which he built in his joy at the realisation of his fondest hopes when his son Jahangir was born.

There in the year 1569 A.D. on a lonely eminence, Akbar founded his city and there began to rise as if by magic those great battlemented walls, the magnificent palaces and courtyards, the great mosque and the other superb specimens of the skill of the Moghul stone-masons which stand to this day a source of endless wonder and admiration to visitors.

The traveller moves northward past Muttra and Brindaban, famous places of Hindu pilgrimage due to their association with the birth and early life of Lord Krishna, until Delhi is reached. **Delhi,** the capital of India, in days gone by and now the Imperial Capital of India, has no rival in greatness, as all men know that he who holds Delhi holds India. Here the visitor will find much that will interest and enthrall him. Here he can trace the growth and fall of dynasty after dynasty, here he will find some of the best examples of the work of the Moghal Period at its zenith as he wanders with muffled feet in the great courtyard of the largest mosque in India, the Juma Masjid, or in Shahjahanabad, the Fort and Palace of Shahjahan whose halls rival those of the palace in Agra Fort with their delicate inlay work in marble and their gardens. Here are crumbling memorials of the Mutiny, Hindu Rao's house, the Kashmir Gate beneath which some still salute dead Home and Salkhed as they pass, the tree encumbered sites of redoubt and battery, Nicholson's grave, Asoka's pillar, the site of the great Durbar.

Kutab, the first of the so-called seven cities of Delhi with its Kutab Minar, 238 feet in height, erected in the 12th century A.D. of red and cream sandstone overlooks the plain where many of the pages of history were written. The Kutab Minar, tapering from the base to the summit, is divided by five corbelled balconies while on the fluting is carved an intricate design in which are introduced verses from the Koran. In the main courtyard stands the famous pillar of solid wrought iron devoid of rust and dating back to about 400 A.D. Visitors to Delhi should not miss seeing the Kutab for it is unique in India.

New Delhi, the eighth city of Delhi, is worthy to rank with its seven predecessors, Kutab, Siri, Tughlakabad, Jahanabad, Firozabad, Puarana Qila and Shahjahanabad, the present day Delhi. Here you find an example of town planning carried out by some of the leading architects and engineers in the world on a site where they could start with a free hand.

If you decide to take the route northwards from Bombay *via* Rajputana, then you will see another but equally interesting side of India. Rajputana, the land of chivalry, attracts the visitor as few places do. Alone at **Udaipur** is there, in its perfection, the fairy palace of one's childhood, just such a long cataract of marble terraces and halls falling into the waters of a mountain encircled lake, as the illustrator of an Andrew Lang fairy book delights to draw.

Mount Abu, the Rajput Olympus, combines the delights of a hill station with one of the historic homes of the gods. The Dilwara Temples, the masterpiece of Jain architecture, contain some of the finest carvings in India. Forests of marble columns, carved and polished till they resemble Chinese ivories, are linked by flying arches that twist and twine from pillar to pillar like exquisite creepers, softening outlines and producing the effect of a symphony of graceful movement.

Northwards from Delhi is the Punjab and the North-West Frontier Province whence most of the recruits for the Indian Army come. Here you will find Amritsar, the home of the Sikhs, Lahore, one of the most ancient and famous cities of India, the Khyber Pass, the historic gateway into India from the North, the flourishing cities of the Canal Colonies which have risen up since British Engineers have harnessed the waters of the Punjab "the Land of the Five Rivers" which formerly ran to waste and many another city. Through the Punjab also you will travel to reach Kashmir, famous since the days of the Moghul Emperors.

The glory of Amritsar is the Darbar Sahib (the Golden Temple). The pavements of the sacred tank are all of marble from Jaipur and the tank itself contains a sheet of water 510 feet square. In the midst approached by a marble causeway, rises the Golden Temple, nearly cubical in form and decorated with wonderful richness.

Lahore grew in importance with the dawn of Moghul supremacy when Babar, the founder

of that dynasty, made it a place of Royal Residence, reminiscences of which are to be found to-day in the pleasure gardens, tombs, mosques and pavillions of Moghul architectural beauty which have won undying fame for that dynasty here and elsewhere in India.

Khyber Pass, the great natural highway into India through the almost impregnable mountain barrier of the North-West Frontier, is rich in historical association and has from time immemorial been the route by which conquering hosts have passed into India to disturb the peace of her people and continually alter their destiny. It is still the great trading route between India and the Central Asian States. On Tuesdays and Fridays when the continual string of caravans of great shaggy camels laden with merchandise, accompanied by stern, strong and picturesquely dressed men with their women and children from Central Asia are moving to and from Afghanistan, the pass presents a most interesting and unique sight.

Kashmir, described by poets as "an emerald set in pearls" is a land of rich forests and upland pastures, of slow flowing rivers and glittering mountain torrents, ringed with an almost unbroken girdle of mountain snow capped all the year. If you can imagine Venice set in the heart of Switzerland, that is Srinagar, the capital of Kashmir. Life is good as you glide along the face of the lakes in a houseboat when the lotus flower is out and the banks are one mass of colour with the snow-capped mountains in the background. When days are warm on the lakes, a trip can be made up the valleys and you can live in Arcady and see the bear in his native haunts and the mountain deer on the hill tops.

For those who have arrived at Delhi *via* Bombay an interesting return trip can be made *via* Benares and Calcutta. Many visitors, however, enter India *via* Calcutta and from here also many interesting tours can be made.

Calcutta, one of the first trading ports of the British East India Company in India, was founded by Job Charnock; it is now the second largest city in the Empire. Its public buildings, the Indian museum, the Fort, the Jain Temple, the Hindu bathing ghats along the river front, the Hindu shrines, are all worthy of attention.

Before winding your way towards Delhi trips should be made to Darjeeling to see the roof of the world and Mount Everest, the highest mountain and to Puri, the home of the famous temple of Jagannath. The ambition of every visitor to Darjeeling is to see Mount Everest, the world's highest peak, and, in order to do so they must travel some 7 miles away, past Ghoom station to Tiger's Hill (8,514 ft.) as from Darjeeling the mountain is not visible. The best time to see sunrise on Mount Everest is in the early Spring or late Autumn. Then at the end you will find a view unequalled in any other part of the world. Twelve peaks over 20,000 feet with the awe-inspiring Kanchanjunga in the centre are spread out before you.

Puri also is an easy run from Calcutta. There in front of the gate of the temple is the famous black marble pillar, one of the most beautifully worked things in India with a tiny figure of the Dawn on its capitol. Incongruous as it may seem, in Puri all caste vanishes. The significance of this can be understood only by those who know India. Once a year the image of Vishnu is carried in procession upon the famous Jagannath cars to the Garden Temple. These cars, 45 feet high, standing on solid wooden wheels, seven feet in diameter, are dragged along by the devotees.

Twenty miles north of Puri, along the sea coast, or 54 miles by motor road stands the Black Pagoda at Konarak, the temple of the Sun God Surya.

On the road to Delhi, the visitor will travel through the Gangetic plain, one of the most fruitful areas of India. Here he will find cities sacred to the Hindus such as Budh Gaya and Benares, cities intimately connected with the mutiny like Lucknow and Cawnpore and other flourishing cities.

Budh Gaya is one of the most famous and most interesting of all the sacred sites of the Buddhists for it is the scene of the "Great Renunciation" and the Enlightenment of Gautama afterward named Buddha. It marks the site of his long penance and his final victory over worldly desire.

Benares is reputed to be the oldest city in India, but there is no authentic record how old it is except that it is mentioned in those two great Hindu epics, the Mahabharata and the Ramayana, which deal with events long before the Christian era. Benares is, however, one of the most holy cities in India for the Hindu, and its spiritual significance is shown in the quotation: "Happy is the Hindu who dies in Benares, for he is transported at once to Siva's Himalayan Paradise on Mount Kailasa, north of Lake Manasa, where the great three-eyed ascetic seeing the past, the present and the future, sits in profound meditation."

Benares rests on the banks of the Ganges and floating down the river in a boat the sight of Aurangzeb's Mosque and the many picturesque temples and ghats recalls to one's imagination through the dim vistas of time the endless processions of devout people wending their way down the narrow lanes to the temples with fragrant garlands to hang round the necks of the gods or to wreathe in solemn devotion the emblem of Siva's divinity.

About 4 to 5 miles away from Benares lies Sarnath where Buddha preached his first sermon after obtaining divine wisdom at Gaya and in the adjoining Deer Park is a Museum of Archæology of vivid interest.

Lucknow is a city hallowed by memories of a grim struggle, of heroic deeds and noble sacrifice; its appeal to the Westerner is influenced by its historical connections, its beautiful buildings and the mysterious glamour so closely associated with the East. Legend connects the founding of the city with Lakshmana, son of King Dasaratha of Ayodhya and brother of Rama, the mythical hero of the Ramayana, the epic poem of the Hindus; but Lakshmanpur or Lucknow as it is now called was at its greatest under the five Kings of Oudh (1732-1856).

All visitors wend their way to the Residency and pay homage to the gallant band who held it during the Mutiny against terrific odds

until relieved by Sir Colin Campbell. The deeds of Lawrence who was in command until he was killed and of Havelock who made his historic but unsuccessful attempt to rescue the garrison and was himself besieged are well-known.

Cawnpore is one of the most important industrial cities of India and here you will find up-to-date factories, a symbol of the West with the teeming bazaars where business is still carried on as it has been done for generations.

Northern and Central India is, however, not the only interesting part of India and the South can show you sights unlike those in any other part of the World. South India is a land of temples, full of the most wonderful carving while Mysore, one of the most progressive Indian States, can show you fine buildings, falls higher than Niagara and wonderful scenery.

Madras is the capital of the Madras Presidency and the third largest town in India, and the Presidency includes that part of India which was one of the first in which English and other foreign nations settled. The visitor will still find in the large houses belonging to the merchant Princes with their far spreading compounds, in the conveyances still used by the local inhabitants and in the scenery, which is the India of the old picture books, traces of what India used to be when first the English settled there.

Mysore commemorates in its name the destruction of Mahashasura, a minotaur or buffalo headed monster by Chamundi, the form under which the consort of Siva is worshipped as the tutelary goddess of the ruling family. Mysore State is a picturesque land of mountain and forest presenting the most diversified and beautiful scenery. The Capital which bears the same name as the state is a city with many fine buildings and a visitor to India who wishes to see the working of an up-to-date Indian States situated among wonderful scenery cannot do better than visit Mysore. Elephants range throughout the southern forests and from time to time keddah operations are undertaken when wild elephants are captured in stockades. Tigers, leopards and bears are numerous and bison are found in certain forests. The famous Gersoppa Falls present one of the most beautiful sights of wild untarnished nature to be found in India. Many of the temples contain examples of the finest carving, and Seringapatam famous as the capital of Tippu Sultan and about nine miles from Mysore is well worth a visit. For those who are travelling from Bombay to Colombo an interesting trip can be arranged *via* Mysore.

At **Madura** and Trichinopoly will be found examples of some of the best and most interesting work in South India.

Madura has been aptly described by European scholars as the "Athens of South India" and from time immemorial has been the abode of South Indian culture in all its aspects.

It contains one of the finest and largest temples in South India and unlike many other temples the tourist is allowed to wander without restrictions over most of it. Near Shiva's shrine and in the hall of Mantapam of a Thousand Pillars can be seen some of the finest carving in stone in all the world. The workmanship is so fine, the chiselling so delicate that one is lost in silent admiration as one looks at the representations of the Hindu Pantheon and at the graceful figures of men, women and animals.

Trichinopoly is noted for its rock temple and about three miles away is Srirangam with its famous temple which is claimed as the earthly abode of Vishnu the Lord of Creation.

No one visiting India should miss the opportunity of seeing **Burma** for it is a country of extraordinary charm, a country of contrasts. Whatever be your hobby, whatever be your interest, be it sport, history, ethnology or botany, or should you be merely fond of beautiful scenery you will find a greater variety in Burma than in probably any other country. You can see huge snowy ranges and alps spangled with rhododendrons and flowers unknown to science. You can find magnificent jungles almost impenetrable to man, bordering rushing torrents, or yet against you can see emerald green paddy fields and great winding rivers in the plains. Should you be adventurous and seek the wilder regions, you will find great gaps in the frontier unvisited by civilised men and peopled by head hunters, Chins, Nagas and the fierce Black Lisu. Yet you will also find civilisation in the big cities like Rangoon and Maymyo. Rangoon, the capital, is of special interest in that it possesses the famous Shwe Dagon Pagoda, the Sacred Golden Pagoda visited by more pilgrims than any other Buddhist Temple in Indo-China.

This short account of India is not intended to be comprehensive and does not even mention many of the interesting places to be visited, but it is hoped that it will give some indication of the wonderful pageantry, the magnificent buildings of an older age, the sport, and the many things of interest which India and India alone can offer.

December, January and February are the most pleasant months for a visit to India. The days are pleasantly cool and except on the seaboard the nights are cold. India speaking broadly has no winter except in the far north. It is a land of sunshine and colour. But the traveller arriving before November or staying in the country beyond the month of March must expect to find the tropical sun asserting its sway unless he wends his way to fair Kashmir or to one of the hill stations of India; Simla, the summer capital of India, Darjeeling the delightful or one of the many others situated among the hills of India.

Standard Tours.

The planning of an itinerary for an Indian or Burman tour will depend upon the port of arrival, the port of departure, personal desires of the party and the time available. Any of the leading tourist agencies such as Thos. Cook & Son, Ltd., the American Express Co., Cox's & King's (Agents) Ltd., Army & Navy Stores, Grindlay & Co., etc., and the Publicity Officers of all the more important Railways as well as the Manager, Indian Railways Publicity Bureau, 57, Haymarket, London, and the Resident

Manager, Indian Railways Publicity Bureau, "Delhi House", 38 East 57th Street, New York, will work out tours to suit the convenience of individual parties. Many of the leading tourist companies will also arrange for inclusive and conducted tours. There are certain places, which are very well-known such as Delhi, Agra, Benares, Darjeeling, Jaipur, the Khyber Pass, Kashmir and Mysore, but there are innumerable other places almost as well known containing sights which cannot be equalled in other parts of the world. Puri, Lucknow, Amritsar, Udaipur, Mount Abu, Gwalior, Ellora and Ajanta Caves and Madura are a few of them while in Burma, Mandalay and, the famous old cities of Ava and Amarpura nearby are well worth a visit.

A selection of itineraries for long and short tours in India and Burma is given below. These show what can be seen in certain periods of time, but they can be varied to suit individual parties or taken in the reverse direction.

Tour No. 1.—4 weeks.—Bombay, Udaipur, Jaipur, Peshawar, Lahore, Amritsar, Delhi, Agra, Cawnpore, Lucknow, Benares, Darjeeling and Calcutta.

Alternatives (*a*) Puri and Konarak in place of Darjeeling.
(*b*) Gwalior, Sanchi, Ellora and Ajanta Caves in place of Jaipur and Udaipur.

		1*st*	2*nd*	Servants 3*rd.*
Total fare (approximate) on the basis or return tickets at 1½ single fares Calcutta—Darjeeling and Delhi—Peshawar.	Rs.	361–8	186–4	65–12
	£	27	14	5
	$	120	62	20

Tour No. 2.—2 weeks.—Bombay, Udaipur, Jaipur, Delhi, Agra, Gwalior, Sanchi and Bombay. Alternative: Benares in place of Gwalior and Sanchi.

		1*st*	2*nd*	Servants 3*rd.*
Total fare (approximate)	Rs.	192	96	32
	£	15	7–10	2–10
	$	69	34	11

If the alternative is taken, the fares are increased by about one-quarter.

Tour No. 3.—1 week.—Delhi, Lahore, Amritsar, Peshawar and Delhi.

		1*st*	2*nd*	Servants 3*rd.*
Total fare (approximate) on basis of return tickets at 1½ single fares.	Rs.	90	45	16–2
	£	7	3–10	1–5
	$	25	13	4

Tour No. 4.—10 days.—Bombay, Poona, Mysore, Madras, Trichinopoly, Madura and Colombo.

		1*st*	2*nd*	Servants 3*rd.*
Total fare (approximate)	Rs.	212	107	39
	£	16	8	3
	$	66	34	12

NOTE.—If extra time can be allowed at Mysore, Somnathpur, Gersoppa Falls and Ootacamund can be visited.

Tour No. 5.—2 weeks.—Colombo Madura, Madras, Mysore, Ootacamund, and Colombo.

		1*st*	2*nd*	Servants 3*rd.*
Total fare by train (approximate).	Rs.	222	124	45
	£	20	10	3–10*
	$	63	32	11

NOTE.—An interesting trip can be made after leaving Ootacamund *via* Cochin where the white Jews live, along the backwaters to Alleppey and Quilon by motor launch and motor car, down to Trivandrum, the capital of Travancore, by train, and by motor car to Cape Comorin, the southernmost point of India and, back *via* Trivandrum and Madura to Colombo. This would take about seven days.

* Motor Mysore-Ooty from Rs. 75 additional per car.

Tour No. 6.—1 week.—Rangoon, Mandalay, Gokteik Viaduct, Mandalay—Rangoon.

	1st	2nd	Servants 3rd.	Revised fare by rail.
Total fare (approximate).	Rs. 70	35	12	1st ret. 102-3-0
	£ 5	3	1	2nd ,, 51-2-0
	$ 25	13	4	3rd ,, 17-2-0

NOTE.—Many interesting trips off the beaten track can be made in Burma, but special arrangements are necessary.

For any visitor landing in Calcutta, it is possible to visit Benares, Agra, Delhi, Jaipur, Bombay, Mysore, Madras, Trichinopoly and Madura and still reach Colombo on the 14th day, but this entails sightseeing by day and travelling most nights and is not recommended for the ordinary visitor. A very attractive tour can, however, be worked out for a similar trip over a period of four weeks either allowing more time at the more important places or including other of the places mentioned in Tours 1 and 4 such as Darjeeling, Puri, the Khyber Pass, Lahore and Amritsar, Udaipur, etc.

Travelling in India is not expensive when the long distances travelled are taken into consideration. The first, second and Indian servants fares are shown at the end of each tour. Hotel expenses average about Rs. 15 (22/6 or 5¼ dollars) per person a day except when special rates are charged during certain special periods, while a motor car for the day can be hired for Rs. 25 to Rs. 30 (38/6 to 45/or 9 or 11 dollars) a day in most places, except when long distances have to be covered. Where the distances are short, tongas and two-horsed landaus can be used and the daily charges vary from Rs. 3-8 to Rs. 9 (5/- to 13/6 or 1¼ to 3¼ dollars). Guides with a good knowledge of English can be obtained from Rs. 5 to Rs. 10 (7/6 to 15/- or 2 to 4 dollars) a day.

HOTELS IN INDIA, BURMA, CEYLON AND MALAYA.

AGRA.—Cecil, Laurie's Great Northern, Imperial.
AHMEDABAD.—Grand.
ALLAHABAD.—Grand.
BANGALORE.—New Cubbon, West End, Lavender's, Central.
BARODA.—The Guest House.
BENARES.—Clark's, de Paris.
BHOPAL.—Bhopal Hotel.
BOMBAY.—Grand, Majestic, Taj Mahal, Regent.
CALCUTTA.—Continental, Grand, Great Eastern, Spence's.
CAWNPORE.—Civil and Military, Berkeley House.
COONOOR.—Glenview.
DARJEELING.—Grand (Rockville), Mount Everest, Park.
DELHI.—Cecil, Clarke's, Maidens, Swiss.
GWALIOR.—Grand.
GULMARG (Kashmir)—Nedou's.
JAIPUR.—Jaipur, Kaiser-i-Hind, New.
JODHPUR.—Jodhpur State Hotel.
JUBBULPORE.—Jackson's.
KARACHI.—Carlton, Bristol, Killarney, North Western.
KHANDALLA.—Khandalla.
KODAIKANAL.—Carlton, Wissahickon.
KURSEONG.—Clarendon.
LAHORE.—Faletti's, Nedou's.
LUCKNOW.—Carlton, Burlington, Hiltons, Royal.
MADRAS.—Connemara, Bosotto, Spencer.
MAHABLESHWAR.—Race View.
MATHERAN.—Rugby.
MOUNT ABU.—Rajputana.
MUSSOORIE—Cecil, Charleville, Hakman Grand Savoy.
MYSORE.—Metropole, Carlton.
NAINI TAL.—Grand, Metropole, Royal.
OOTACAMUND.—Savoy.
PATNA.—Grand.
PESHAWAR.—Deans Hotel.
POONA.—Majestic, Napier, Poona, Connaught House.
PURI.—B. N. Railway Hotel.
QUETTA.—Stanyon's.
RAWALPINDI.—Flashman's.
SECUNDERABAD.—Montgomery's, Percy's.
SHILLONG—Pinewood.
SIMLA.—Cecil, Grand, Clark's, Corstorphan's.
SRINAGAR (Kashmir).—Nedou's.
SHIVAPURI.—Shivapuri.
UDAIPUR.—Udaipur.

Burma.

RANGOON.—Allandale, Minto Mansions, Royal Strand.
MAYMYO.—Lizette Lodge.
KALAW.—Kalaw.

Ceylon.

ANURADHAPURA.—Grand.
BANDARAWELA.—Bandarawela, Grand.
COLOMBO.—Bristol, Galle Face, Grand Oriental.
GALLE.—New Oriental.
HATTON.—Adam's Peak.
KANDY.—Queen's, Suisse.
NUWARA ELIYA.—Carlton, Grand, Maryhill St. Andrew's.
MOUNT LAVINIA.—Grand.

Malaya.

IPOH.—Station, Grand.
KUALA LUMPUR.—Empire, Station.
PENANG.—Eastern and Oriental, Runnymede.
SINGAPORE—Adelphi, Europe, Raffles, Sea-View, Riviera.

Hill Stations.

In India especially during the months of April and May, and at Christmas time, everybody tries as much as possible to take a holiday in the hills. Being anything from 2,000 to 8,000 feet above the level of the sea and difficult of access for motor traffic, the hill stations are delightfully cool and peaceful. Here one can usually ride, walk, play tennis and golf, or simply laze in beautiful surroundings and forget all about the trials of work and prickly heat. These are the principal hill stations in alphabetical order:—

Darjeeling. (8,000 ft.)—From Darjeeling the highest mountain peaks in the world can be seen. The temperature averages 2° above that of London all the year round; that is, it neither exceeds 80° in summer nor falls below 30° in winter. Darjeeling is the summer seat of the Government of Bengal. To reach it, the traveller must start from Calcutta by taking train to Siliguri, a journey of 10 hours. From Siliguri the journey is completed either by motor or hill railway in about 6 hours. The principal hotels in Darjeeling are the Mount Everest, the Grand (Rockville), and the Park.

Kangra Valley.—The Kangra Valley is situated about 100 miles east-north-east of Lahore at the foot of the Dhaula Dhar Range of the Himalayas. There are magnificent landscapes and many historic temples and buildings. The visitor must take train from Lahore to Pathankot where he changes over the newly-opened narrow-gauge railway running between Pathankot and Jogindarnagar in Mandi State. Places to stay at are Dalhousie, Dharmsala and Kangra. The best hotels at Dalhousie are Stiffle's Grand View and the Arraumoor; and at Dharmsala the Switzes's.

Kashmir.—Perhaps the most famous beauty spot in the world can be reached by taking train (either G. I. P. or B. B. & C. I.) from Bombay to Rawalpindi (about 48 hours) whence the remainder of the journey is accomplished by motor. The average height of the valley is about 6,000 feet, and it is entirely surrounded by the lofty, snowy outer ranges of the Karakoram and Himalaya. Visitors usually stay either at Srinagar or Gulmarg. At Srinagar one can live at Nedou's Hotel or in boarding houses, or one can hire a houseboat and live on the River Jhelum. At Gulmarg Nedou's is the only hotel. As at Srinagar visitors usually take up their quarters in wooden huts rented through the Srinagar agencies or in tents.

Kodaikanal. (7,000 ft).—Regarded by many as the most beautiful of South India's hill stations, is situated on the precipitous southern side of the Palni Hills overlooking the plains. Reached by metre-gauge from Madras to Kodaikanal Road and thence by a 4 hours' motor run. The Carlton is the principal hotel. There are also boarding houses.

Matheran. (2,500 ft).—The nearest hill station to Bombay, ideal for walkers and any body wanting rest and quiet. Reached by taking train from Victoria Terminus, Bombay, to Neral (about 1½ hours) whence Matheran may be reached by hill railway (2 hours) or by pony, rickshaw, or on foot by a good walker. Stay at the Rugby Hotel.

Mahableshwar. (4,500 ft.—Until recently, when expenditure had to be cut down, the summer seat of the Government of Bombay. Those who do not motor the whole way from Bombay, a distance of about 180 miles, usually take train to Poona and then hire a car from Poona to Mahableshwar. Mahableshwar is noted for its delightful vegetation: orchids and lilies bloom in April and May. Hotels:—Race View and Frederick.

Mount Abu. (4,500 ft.)—An ideal place for combining the pleasures of a mountaineering holiday with the interests of an archæological excursion. Reached by B. B. & C. I. trains to Ahmedabad, thence by metre-gauge to Abu Road, whence the journey is completed by car. The Rajputana Hotel is recommended. There is also a Dak Bungalow containing four furnished rooms, permission to use which must be obtained from the Assistant Engineer, P.W.D., Mount Abu.

Murree. (7,000 ft.)—The summer headquarters of the Northern Command. Magnificent views and walks. Visitors take train to Rawalpindi whence they complete the remaining 37 miles by car. The principal hotels are the Cecil and the Viewforth.

Mussoorie. (7,500 ft.)—Much frequented on account of its exceptionally fine climate. Reached from Bombay by G. I. P. or B. B. & C. I. trains to Dehra Dun, a journey of 35 hours, where it is necessary to change over to motor which reaches Mussoorie about two hours later. The leading hotels are the Cecil, Charleville, Hackman's Grand, and the Savoy.

Naini Tal. (6,500 ft.)—Is the summer residence of the Governor of the United Provinces. From Bombay there are two ways of getting there. The first is to take either G. I. P. or B. B. & C. I. train to Muttra, thence by metre-gauge to Kathgodam, and thence by motor (2 hours). The second route which takes about 5 hours longer is to take G. I. P. train to Lucknow and then change over to the metre-gauge railway. The Grand, Metropole and Royal are the best hotels.

Ootacamund.—Familiarly known as Ooty is situated on the famous Nilgiri Hills at an altitude of 7,500 feet. The mean average of temperature for the year from sunrise to sunset is 57.33 degrees. Ootacamund is the administrative centre of the District and the seat of the Madras Government for six months of the year

from April to September. Reached either by taking train to Mysore (40 hours from Bombay) and then changing to motor-car for five hours, or by taking train to Mettupalayam *Via* Madras and thence by hill railway to Ootacamund. The principal hotels are the Savoy and Cecil.

Pachmari. (3,500 ft.)—Situated on a plateau in the Mahadeo Hills, is the summer quarters of the Government of the Central Provinces. A delightful hot-weather health resort. Reached by G. I. P. railway to Pipariya *Via* Jubbulpore, and a two hours' motor journey. The best hotel on the Hill.

Simla. (7,000 ft.)—The summer headquarters of the Government of India, is situated on several small spurs of the lower Himalayas. Towards the end of September, and in October and November Simla enjoys the best climate in the world. Reached from Bombay by taking G. I. P. or B. B. & C. I. train to Kalka and thence either by hill railway or motor. There are many good hotels and boarding houses. The leading hotels are the Cecil, Clarks, Corstorphans, Grand, Gables (at Mashobra) and Wildflower Hall (Mahasu).

CLIMBING IN THE HIMALAYAS.

Owing to their immensity and the time and cost involved in undertaking expeditions into the Himalayas a great deal of mountaineering and exploration remains to be done in the world's highest mountain range. There are over fifty summits of 25,000 ft. and of these only one, Kamet (25,447 ft.) has been scaled, whilst there are immumerable lesser summits of such formidable difficulty, owing to the comparatively recent geological formation of the range, that judged by modern mountaineering standards the majority are inaccessible. The highest peak is Mount Everest, which by latest measurements is 29,141 ft. Next come Kanchenjunga and K2, both about 28,150 ft., though which is the higher of the two is not certain.

Pioneer Climbers.—Mountaineering in the Himalayas began some eighty years ago when surveyors crossed high passes and scaled peaks in the course of their work. Among these pioneers must be mentioned the Schlagintweit brothers, who in 1855 reached a height of 22,329 ft. on the Eastern Ibi Gamin, one of the subsidiary peaks of Kamet, whilst I. S. Pocock of the Survey of India set up a plane table at 22,040 ft. in the same district. Another notable early explorer was the famous botanist Sir Joseph Hooker who, in 1849, explored the Sikkim valleys of Kanchenjunga and made attempts to climb Kangchenjau, 22,700 ft. and Pauhunri, 23,180 ft. Some remarkable explorations were also carried out by the Pandits of the Survey of India. Among these men was Babu Sarat Chandra Das who traversed the Jonsong La, 20,200 ft.

Later in the nineteenth century came Sir Martin (now Lord) Conway who, in 1892, made explorations in the Karakoram Himalayas, particularly in the region of the Baltoro Glacier the greatest of Himalayan glaciers, and climbed a peak of 23,000 ft. Sir Francis Younghusband also made explorations in the Karakorams and accomplished the first crossing of the Karakoram Pass. The Duke of the Abruzzi also made a number of expeditions into this range and reached a height of 25,000 ft. on the Bride Peak. Mountaineering developed rapidly in the "nineties", and a bold attempt was made by A. F. Mummery, Professor N. Collie and Brigadier-General the Hon. C. G. Bruce to climb Nanga Parbat. In a final attempt on the mountain Mummery and his two Gurkhas were lost. In 1899 D. W. Freshfield made the first circuit of Kanchenjunga and explored the Nepal side of the mountain.

A New Phase.—Meanwhile, thanks to Brigadier-General Bruce, Gurkhas, and later Sherpas and Bhotias were trained for mountaineering and, with the advent of first class porterage, Himalayan mountaineering entered on a new phase. Dr. and Mrs. Bullock Workman made a number of expeditions into the Karakorams and W. W. Graham made a number of remarkable ascents, with Swiss guides, including an ascent of Kabru, 24,000 ft., which has been the subject of much controversy. Kabru was later attempted by two Norwegians, Messrs. Rubenstein and Monrad Aas who got within a few feet of the top.

The present century opened with a number of remarkable ascents by Dr. A. M. Kellas, who died during the 1921 Everest expedition. He climbed several great peaks including Kangchenjau, Pauhunri and Chomiomo and made expeditions to the Central Himalayas where, with Colonel H. T. Morshead he reached in 1920 an altitude of 23,500 ft. on Kamet.

In 1907 Brigadier-General Bruce, Dr. T. G. Longstaff and A. L. Mumm explored the Garhwal Himalayas and reconnoitred Kamet. After this Longstaff, with the Swiss guides Alexis and Henri Brocherel, ascended Trisul, 23,406 ft. which, until the Jonsong Peak, 24,344 ft., was climbed in 1930 remained the highest summit reached. In 1911 and 1912 attempts were

made to climb Kamet by C. F. Meade and his Swiss guides and a height of 23,500 ft. was gained. Captain Morris Slingsby also attempted Kamet at this time.

Attempts on Kanchenjunga.—The first attempt on Kanchenjunga was made in 1905 but ended in disaster, Lieut. Pache and three porters being killed by an avalanche. The second attempt in 1929 was made by a solitary American, E. F. Farmer, who lost his life. In the same year a determined attempt was made by a party of Bavarian Mountaineers led by Paul Bauer. A height of over 25,000 ft. was reached on the north-east spur before bad weather forced the party to retreat.

In 1930 a fourth attempt was made by an International expedition led by Professor G. Dyhrenfurth. The party attempted the mountain from the Nepal side, but were repulsed by an ice avalanche which killed one of the porters. Subsequently, they ascended a number of peaks including the Pamthang Peak, 23,200 ft. and the Jonsong Peak 24,344 ft.

The fifth attempt in 1931 was made by Bauer and his party, but failed at a slightly greater elevation than was attained in 1929. One of the party H. Schaller and a porter were killed by a fall during the expedition.

In the summer of 1931 a party of young British climbers led by Mr. F. S. Smythe succeeded in reaching the summit of **Mount Kamet** (25,447 ft.) the highest mountain peak, though not the highest altitude ever reached by man.

Mount Everest.—A description of the attempts to climb **Mount Everest,** the highest mountain in the world, may be divided under three headings: the reconnaissance expedition of 1921; the first attempt in 1922, and the second in 1924. A still further attempt is being made at the time of writing, in April, 1933.

The preliminary expedition for the reconnaissance of the approaches to Mt. Everest, carried out its work in the most complete manner under the leadership of Lt.-Col. C. K. Howard-Bury. The approaches to Mt. Everest on all its northern faces were thoroughly examined, and relations were established with all the local authorities. On the information and experience of the reconnaissance expedition the second expedition to Everest was organised and set off the following year under the leadership of Brig.-Gen. the Hon. C. G. Bruce. Capt. G. I. Finch and Capt. J. G. Bruce succeeded with the help of oxygen in reaching the height of 27,300 ft. During this expedition seven men were killed when an avalanche swept them over an ice cliff some 60 feet high.

The 1924 expedition was again commanded by Brig.-Gen. Bruce. But owing to his ill health Lt.-Colonel E. F. Norton took on the command. Lt.-Col. E. F. Norton and Dr. T. H. Somervell reached a height of 28,200 feet. Then a final attempt was made by G. L. Mallory and A. C. Irvine. They were assisted by a supporting party consisting of N. E. Odell and J. de V. Hazard. On June 6th they left the 25,000 feet camp with three porters who carried loads for them up to 26,800 ft. On June 8th they left camp for their attempt and were never seen again. On June 10th for the third time Odell climbed up to the 27,000 feet camp but could find no sign of Mallory and Irvine, and communicating with Norton evacuated the mountain.

The expedition of 1933 followed a successful effort by Lt.-Col. J. L. R. Weir, Political Officer in Sikkim, to obtain the permission of the Tibetan Government for a further attempt to climb the mountain. An **Everest Committee** was formed under the aegis of the Royal Geographical Society and the Alpine Club and Mr. Hugh Ruttledge, formerly of the I.C.S., accepted its invitation to take charge of an expedition. Included in it as members were Mr. F. S. Smythe, leader of the successful Kamet Expedition of 1931, and Capt. E. St. J. Birnie, E. E. Shipton and Dr. C. R. Greene climbed Kamet with Mr. Smythe in 1931. The Expedition reached Calcutta in February and forthwith proceeded to its main task.

The expedition established its base camp in the Rongbuk Valley on April 17th and on April 21st. Camp I was established. Thenceforward the expedition was dogged by exceptionally bad pre-monsoon weather which greatly hindered the establishment of camps and made the ascent to the North Col. 23,000 ft. prolonged and arduous work. Camp IV, 22,800 ft. was not established until the middle of May after a 40 feet ice wall on the North Col slopes had been climbed. The expedition was equipped with wireless which enabled weather reports to be received from the meteorological authorities at Alipore. One installation was at Darjeeling, one at the base camp and a third at Camp III, 21,000 ft. Camp III was linked to the North Col by field telephone so that messages could be received up to 23,000 ft. from the plains of India in a short space of time.

Owing to a series of blizzards and high winds Camp V was not established until May 22nd. But it was pitched at 25,500 ft. several hundred feet higher than previously. The party was then cut off for three days by a furious blizzard and eventually had to retreat to Camp IV. The Camp was re-established on May 28th and on May 29th. Wyn Harris, L. Wager and J. L. Longland continued the ascent and finally pitched Camp VI at 27,400 ft., 600 ft. higher than in 1924, after a magnificent effort on the part of the porters. Longland then brought the porters down but had a terrible time in a blizzard and only by exercising great mountaineering skill steered them down to Camp V. The following morning Wyn Harris and Wager made a reconnaissance of the route to the summit and failing to discover a route along the crest of the north-east ridge finally followed the same route as Norton in 1924. They were stopped by dangerous conditions at 28,100 ft. and returned to Camp VI where they met Shipton and Smythe who had come up from Camp V, after which they descended to Camp V. The following morning Shipton and Smythe were unable to leave Camp VI owing to a high wind but on June 1st they made their attempt on the summit.

An hour and a half after leaving the Camp Shipton had to return owing to some internal trouble. Smythe carried on alone and reached approximately the same point as Wyn Harris

and Wager before he was forced to retreat owing to the deep powdery snow resting on the steep slabs. Shipton descended to Camp V the same day in very bad weather and Smythe spent a third night at Camp VI descending to Camp IV next day in a blizzard. Owing to frostbites, strained hearts, and high altitude deterioration the party had to retire to the base camp. A week later they returned to Camp III to make another attempt. Owing, however, to the breaking of the monsoon this had to be abandoned and the expedition returned to Darjeeling.

Aerial Expedition.—An interesting aside to the exploration of Everest was an aerial expedition undertaken in 1933 for the purpose of photographing the mountain from the air. This venture was financed by Lady Houston. Major L. V. S. Blacker, formerly of the Guides, was its leader and in charge of its survey work, Lord Clydesdale chief pilot, Flt. Lt. A. McIntyre second pilot and Major P. T. Etherton its London manager. Two specially equipped aeroplanes, adaptations of the well-known Wapiti, were provided. A special point in their equipment was the provision of compressed oxygen for supply through gas masks to the aviators at high altitudes. The expedition was not permitted to fly across the Tibetan frontier, so as to circle Mt. Everest, but both machines successfully flew over the peak and several good photographs were taken of it. By permission of the Nepal Government a line of flight from Purnea, the base of the expedition, across Nepal territory to Mt. Everest, was taken and along this good survey photographs as the somewhat poor visibility at the time of the flight, in April, permitted.

An interesting mountainflight of which details were published in 1933 was one from Risalpur to Gilgit and back, undertaken by the R. A. F. at Risalpur in the course of its routine duties in October, 1932. The expedition was commanded by F. Lt. Isaac and was made by five of the machines ordinarily in use by the Force. The distance from Risalpur by way of the Indus Valley and past Nanga Parbat to Gilgit is 286 miles. It was covered in 2 hrs. 20 mins. on the outward flight and in 2 hrs. 5 mins. on the return journey. From Gilgit the machines further proceeded upon flights over the Hunza, Nagar and Rakiot areas. Brilliant photographs of Nanga Parbat and Rakaposhi, as well as of other places of importance or interest, were taken.

The year 1932 saw a well organised expedition to Mount Nanga Parbat. It was conducted by Dr. Merkl, of Munich, and included Lt. R. N. Frier, of the Gilgit Scouts, who acted as transport officer, an American Mr. Rand Herron and Miss E. Knowlton, of Boston, U.S.A. Several determined attempts to reach the summit of the mountain in August were brought to an end by the break-up of the weather before they attained success.

Mr. Hugh Ruttledge carried out during 1932 a valuable reconnaissance of the S. E. flanks of the great circular curtain of Nanda Devi.

Lt.-Col. C. F. Stoehr, R.E., and Lt. D. M. Burn, R.E., lost their lives on 12th August, 1932, while climbing on Panjtarni, near Pahlgam, in Kashmir.

Several expeditions have lately been made, into the Himalayas by members of the Himalayan Club, especially expeditions into Sikkim by members of its Eastern Section.

The Himalayan Club—Was founded on 17th February 1928, at New Delhi with the object of encouraging and assisting Himalayan travel and exploration, and extending knowledge of the Himalayas through science, art, literature and sport. The initiation of this Club was due to the Hon'ble Sir Geoffrey Corbett, Secretary, Commerce Department of the Government of India, and to Major Kenneth Mason, M.C., R.E., Assistant Surveyor-General. Its membership is over 350, including three lady members and its president is H. E. Sir Malcolm Hailey, who has, however, recently sent in his resignation on the ground that he now resides too far from the Club Headquarters. Maj.-Gen. W. L. O. Twiss is Hon. Secretary.

The New Capital.

The transfer of the capital of India from Calcutta to Delhi was announced at the Delhi Durbar on December 12, 1911. It had long been recognised as necessary, in the interests of the whole of India, to de-provincialise the Government of India, but this ideal was unattainable as long as the Government of India were located in one Province, and in the capital of that Province—the seat of the Bengal Government—for several months in every year. It was also desirable to free the Bengal Government from the close proximity of the Government of India which had been to the constant disadvantage of that Province. To achieve these two objects the removal of the capital from Calcutta was essential: its disadvantages had been recognised as long ago as 1868, when Sir Henry Maine advocated the change. Various places had been discussed as possible capitals, but Delhi was by common consent the best of them all. Its central position and situation as a railway junction, added to its historical associations, told in its favour; and, as Lord Crewe said in his despatch on the subject, "to the races of India, for whom the legends and records of the past are charged with so intense a meaning, this resumption by the Paramount Power of the seat of venerable Empire should at once enforce the continuity and promise the permanency of British sovereign rule over the length and breadth of the country."

The foundation stone of the new capital was laid by the King Emperor on December 15, 1911, the finally selected site being on the eastern slopes of the hills to the south of Delhi, on the fringe of the tract occupied by the Delhi of the past. The land chosen is free from liability to flood, has a natural drainage, and is not manworn. It is not cumbered with monuments and tombs needing reverent treatment, and the site is near the present centre of the town of Delhi. A Committee consisting of Surgn.-General Sir C. P. Lukis, Mr. H. T. Keeling, C.S.I., A.M.I.C.E., and Major J. C. Robertson, I.M.S., was appointed to consider the comparative healthiness of the site and of an alternative one to the North of the existing city. Their report, dated 4th March, 1913, states that "the Committee, after giving full consideration to the various points discussed in the above note, is bound to advise the Government of India that no doubt can exist as to the superior healthiness of the southern site, the medical and sanitary advantages of which are overwhelming when compared with those of the northern site."

The Town Plan and Architecture.—A report by a Town-Planning Committee, with a plan of the lay-out, was dated 20th March, 1913. Work was begun in accordance with it and its main lines have been followed throughout. The central point of interest in the lay-out, which gives the motif of the whole, is Government House, and two large blocks of Secretariats. This Government centre has been given a position at Raisina hill near the centre of the new city. Sir Edwin Lutyens is the architect for Government House and Sir Edward Baker for the Secretariats. The former building is estimated to cost approximately Rs. 140 lakhs and the latter groups were originally estimated to some Rs. 124 lakhs. The provision made in the design of the Secretariats for extensions in case if used has already partly been utilised. The Secretariat personnel has largely increased in the past few years and numerous additional rooms had to be provided to make room for Army Headquarters, which moved into the new capital at the end of the Simla season, 1929. To the east of the forum, and below it, is a spacious forecourt defined by an ornamental wall and linked on to the great main avenue or parkway which leads to Indrapat. Across this main axis runs an avenue to the shopping centre. Other roads run in different directions from the entrance to the forum. The axis running north-east towards the Juma Masjid forms the principal approach to the new Legislature Chambers. They are officially described as the Council House and the road is named Parliament-street. The railway station for the new city finds its place about half way between the old and new cities off the road through Paharganj, which lies to the west of Old Delhi in the direction of The Ridge. The main roads or avenues range from 76 feet to 150 feet in width with the exception of the main avenue east of the Secretariat buildings where a parkway width of 1,175 feet has been allowed. The principal avenues in addition to the main avenues are those running at right angles to the main east to west axis.

For a temporary capital, for the use of the Government of India during the period of the building of the new capital an area was selected along the Alipur Road, between the existing civil station of Delhi and the Ridge. The architecture and method of construction were similar to those adopted in the exhibition buildings at Allahabad in 1910; but the buildings have outlasted the transitional period for which they are intended. Army Headquarters were still housed in them in the winter until the season 1929-30. They are now occupied for various purposes including the temporary accommodation of Delhi University.

In October, 1912, by proclamation, there was constituted an administrative **enclave of Delhi** under a Chief Commissioner. This enclave was entirely taken from the Delhi district of the Punjab and its total area is 573 square miles. On the basis of the Census of 1911, the population of the area originally included in the Province was 398,269 and of the new area 14,552, or a total of 412,821. The population of the Municipal town of Delhi was 2,29,144. The plans of the New Capital allow for a population within it of 70,000. Its present population is approximately 40,000. Sites have been allotted for forty Ruling Princes and Chiefs to build houses for their own occupation during their visits to the new city, and several of these habitations have been erected.

There was, as regards architecture, a prolonged "battle of the styles" over Delhi. Finally, to use the language of the architect, it has been the aim "to express within the limit of the medium and of the powers of its users, the ideal and the fact of British rule in India, of which the New Delhi must ever be the monument." The inspiration of the designs is manifestly Western, as is that of British rule, but they combine with it distinctive Indian features without abandoning the architect's aim to avoid doing violence to the principles of structural fitness and artistic unity.

Cost of the Scheme.—It was at first tentatively estimated that the cost of the new capital would be four million sterling and that sum was given in the original despatch of the Government of India on the subject. Various factors have since then increased the amount, the chief of these being the immense rise in prices since the war, and the Legislative Assembly were informed by Government on 23rd March 1921, that the revised estimates then amounted to 1,307 lakhs of rupees. This amount includes allowances for building new Legislative Chambers and Hostels for Members of the Indian Legislature, which were not allowed for in the earlier estimates. The New Capital Enquiry Committee, in its report published in January 1923, estimated the total expenditure at Rs. 1,292 lakhs including Rs. 42 lakhs for loss by Exchange. Actual expenditure upto approximately the end of 1929 was Rs. 14 crores. This may be taken as the figure for the completion of the main project.

The Project Estimate contains certain items such as land, residences, water supply, electric light and power, and irrigation on which recoveries in the form of rate or taxes will, in addition to meeting current expenditure, partially at any rate cover the interest on the capital

outlay, whilst there are other items on which some return on account of the sale of leases, general taxes and indirect receipts is secured.

Progress of the work.—The construction of New Delhi was made at satisfactory speed, having regard to the curtailment of the Budget allotment in consequence of the war and the absence of officers and other establishments at the war. The Secretariats were so far advanced that there were transferred to them from Calcutta in October, 1924, the offices of the Accountant-General, Central Revenues, and the headquarters of the Royal Air Force in India were also housed in them in the winters of 1924-25 and 1925-26. The residential buildings for Government officers and staff of various grades were then nearly completed. The whole of the civil side of Government moved from old Delhi into their quarters in the new Secretariats on coming down from Simla in November, 1926. All Government Departments, including the Army Departments and Army Headquarters and R. A. F. Headquarters, have their offices in the new City buildings, of which the builders have already had to carry-out the first section of the extension provided for in the architects' plans. The Members of H. E. the Viceroy's Executive Council including H. E. the Commander-in-Chief, live in their new official residences in the new capital. H. E. the Viceroy took up his residence in the new Government House there on 23rd December 1929. His Excellency until then resided in the Delhi season at Viceregal Lodge in Old Delhi. The Government of India in 1927 devoted special consideration to the question whether their ordinary annual 5 months residence in Delhi should be extended each year to 7 months and early in 1928 decided in consultation with the India Office to endeavour to stay in Delhi for half of each year, the new order being introduced for trial in 1928 by keeping the Secretariat in New Delhi till mid-April and bringing it down Simla from again in mid-October. The experiment was not very successful and was not repeated till 1932-33, when Retrenchment Committees had strongly recommended a longer stay in Delhi in order to extract rent for a longer period from the seasonal official occupants of its residential buildings, the rents in Delhi being higher than those for residences in Simla. It remains to be seen whether the consequent profit will exceed the additional general expense of keeping staff down in the heat.

Art Decorations.—The Government of India in 1927 approved a scheme for the encouragement of Indian artists by providing facilities for the decoration of certain buildings in New Delhi. The outlines of the scheme are briefly as follows. A certain number of domes and ceilings in the New Secretariat Buildings at Delhi suitable for decoration were selected. The various schools of art in India, as well as individual artists, were invited through local Governments, to send in by the beginning of March 1928 small scale designs for approval by a Committee. After approval by the Committee both as regards the design and colour the pictures were to be drawn out and painted to full size on canvas, and, if finally approved by the Committee, fixed according to the marouflage process *in situ*. Other techniques, such as fresco or tempera, were optional. Artists or schools of art, who sent in small scale drawings, had to bear the initial expense of preparing them. When these were approved by the Committee, the out-of-pocket expenses paid in addition to a suitable honorarium Government undertook to pay for the finished pictures done from approved sketches but give no guarantee that the finished paintings will permanently be preserved. Government intimated that historical or allegorical subjects would be given preference over religious ones, and English artists living in India were barred from competition, the work being strictly reserved to Indian artists. Numerous artists submitted designs, especially those of Western India, and with such satisfactory results that the specially appointed Expert Committee approved of nearly all. A great deal of painting has now been completed and the work is continually progressing. Government, meanwhile, instituted a scheme for sending selected artists to Europe for finishing studies to enable them the better to join in the work, and this is in operation.

Opinion of the Legislature.—Considerable discussion regarding the new works took place in the Assembly in 1921. The following unofficial resolution was carried:—"This Assembly recommends to the Governor-General in Council that in the interests of economy and of general convenience alike the execution of the programme of New Delhi works may be expedited and the necessary funds provided or raised so that the Secretariat and Legislative buildings and connected works including residences may be completed as early as practicable."

A non-official Member in the Legislative Assembly on 28th September, 1921, at Simla, moved a recommendation to Government "to appoint a Committee to inquire into the possibility of establishing a permanent Capital of India in a place possessing salubrious and temperate climate throughout the year." This proposal was ridiculed by several of his non-official colleagues and was eventually rejected without a division.

H.R.H. the Duke of Connaught, on 12th February, 1921, laid the foundation stone of a large group of parliamentary buildings on a site close to the south-east of the Secretariats. The building is an imposing pile circular in shape, consisting in the main of three horse shoe-shaped Chambers for the Chamber of Princes, Council of State and Legislative Assembly respectively and surmounted by a large dome over a Central Library connecting all three Chambers.

H.E. the Viceroy (Baron Irwin) proceeded in state to the new Legislative buildings henceforward to be known as the Council Buildings and formally declared them open on 18th February 1927. The India legislature began its sessions in them next day.

During 1928, official and public attention became focussed on the need to effect drastic improvements in some of the crowded areas of the old city and to provide for its expansion and for suburban developments. This led to

the examination of the possibilities of the area lying between the old and new cities and of the desirability of driving connecting roads through the City walls in order to give access outwards in this direction. The old city is now rapidly expanding in a westerly direction, *i.e.*, towards and up the Ridge, which runs behind both cities and the spaces between the two cities are being developed and utilised. So far the plan for a direct thoroughfare from the midst of the new city through the old city wall to the middle of the old city has not been proceeded with and consequently the magnificent thoroughfare, name Parliament Street, which was constructed for the purpose in New Delhi remains in a truncated condition. The Delhi Municipal Committee late in 1933 declined to co-operate in a completion scheme, on the ground that it would result in changes in property values in the old city to the disadvantage of many owners. The Medical Officer of Health of the old city in his latest reports gravely stresses the ill effects of its overcrowded state and in this he is borne out by the Municipality in its reports.

H. E. the Viceroy on 10th January 1930 laid the foundation stone of a large European and Indian General Hospital to be built in the course of the next few years at a cost of Rs. 75 lakhs for the service of both old and new cities. This would provide 254 beds and the necessary laboratories and administrative and residential quarters. No progress has yet been made with the building work on which has for financial reasons been postponed.

All-India War Memorial.—H. R. H. the Duke of Connaught on 10th February, 1921, laid the foundation stone of an All-India War Memorial at the southern end of the Central Vista. The place chosen is a fine position in the centre of the circular Princes' Park and the construction of the building was for economy's sake proceeded with slowly. The memorial was formally inaugurated by Lord Irwin in February, 1931.

The Memorial takes the form of a triumphant arch spanning Kingsway, the avenue running down the centre of the Vista. It is generally similar to the Arc de Triomphe in Paris but is simpler. The monument reaches a height of 160 feet and the inner height of the arch is 87 feet 6 inches and its breadth 70 feet. Over the arch on both fronts appears in capital letters the single word INDIA and this is flanked on each side by the initials MCM (*i.e.* 1900) whilst immediately below them on the left hand are the initials XIV (*i.e.*, 14) and on the opposite side the figures XIX (*i.e.*, 19). Above the Arch is a circular stone bowl 11½ feet in diameter. A column of inoffensive chemical smoke ascends from this on ceremonial occasions and anniversaries and is illuminated by electric light reflections after dark. The memorial is solely Indian in purpose and bears the names of British and Indian officers and N.C.Os. men of the Indian regiments who fought on the Indian Frontier in the Great War (those fought on other fronts being commemorated by memorials erected in those countries).

Public Institutions.—It was proposed during 1914 that a higher college for Chiefs should be established at Delhi and in this connexion a conference of Chiefs and Political Officers was held at Delhi at which the Viceroy presided. The proposal is still under consideration. To implement it would require an estimated capital outlay of Rs. 12½ lakhs.

The Government of India further in the Spring session of their Legislature in 1922 introduced and carried a Bill for the establishment of a unitary, teaching and residential **University of Delhi**, the buildings for which would be erected in the new capital. The plan was to provide a local university on the model recommended for Dacca University by the Calcutta University Commission. The provision of funds for the complete realisation of the university must be a matter of time and it was, therefore, decided to commence work with the existing colleges in their present buildings and to permit them gradually to modify their organisation. The initial work of organisation was quickly effected by the Executive Council. Unfortunately the inability of the Government of India to allot considerable funds was a severe handicap. It was hoped that H. E. the Viceroy would be able to lay the foundation-stone of the university buildings in November, 1922, but this proved impracticable. The general question of the finances of the University was in 1927 the subject of inquiry by a special Committee appointed by Government. For the time being the University was housed in the temporary buildings in old Delhi occupied by the Civil Secretariat until 1929 and in 1931 Old Viceregal Lodge was allocated to it for its future home.

The new city was the scene of notable inauguration ceremonies in February, 1931. The first of these was the unveiling of four **"Dominion Columns"** suitably placed about the great place between the two Secretariat blocks. The columns are of red stone, surmounted each by a gilded merchantman of the old style in full sail. The columns are designed to resemble the historic ones erected in various parts of the land by Asoka and were presented by Canada, Australia, New Zealand and South Africa. The first two and fourth of these Dominions sent their own representatives to perform the ceremony of unveiling. New Zealand nominated a Member of the Government of India to act in her behalf for the same purpose. The second great ceremony was the inauguration of the **War Memorial.** This was performed in State by His Excellency the Viceroy in the presence of representatives of every unit of the army in India of the Royal Air Force and of a large concourse of official and other spectators. There was a large popular fête on the ground lying below the old Fort and between it and the river Jumna. Their Excellencies the Viceroy and Lady Irwin arranged a programme of festivities at The Viceroy's House. A New Delhi Municipal Committee with its own permanent official Chairman and Secretariat was established in 1932.

Freemasonry in India.

In 1728 a dispensation was granted by the Grand Lodge of England to Geo. Pomfrett, Esq., authorising him to "open a new Lodge in Bengal." Of this personage nothing further is known but under Capt. Farwinter, who in the following year succeeded him as Provincial Grand Master of India, a Lodge was established in 1730, which in the Engraved Lists is distinguished by the arms of the East India Company, and is described as "No. 72 at Bengal in the East Indies." The next Provincial Grand Masters were James Dawson and Zech. Gee, who held office in 1740; after whom came the Hon. Roger Drake, appointed 10th April 1755. The last named was Governor of Calcutta at the time of the attack made on the settlement by Surajah Dowlah in 1756. Drake missed the horrors of the Black Hole by escaping and was accused of deserting his post, but, though present at the retaking of Calcutta by Admiral Watson and Clive, it is improbable that he resumed the duties of his masonic office after the calamity that befell the settlement.

The minutes of the Grand Lodge inform us that William Mackett, Provincial Grand Master of Calcutta, was present at the meeting of that body, November 17th, 1760, and we learn on the same authority that at the request of the "Lodges in the East Indies" Mr. Cullin Smith was appointed P. G. M. in 1762. At this period it was the custom in Bengal "to elect the Provincial Grand Master annually by the majority of the votes of the members present, from amongst those who passed through the different offices of the (Prov.) Grand Lodge and who had served as Dep. Prov. Grand Master." This annual election as soon as notified to the Grand Lodge of England was confirmed by the Grand Master without its being thought an infringement of his prerogative. In accordance with this practice, Samuel Middleton was elected (P. G. M. circa) in 1767; but in passing it may be briefly observed that a few years previously a kind of roving commission was granted by Earl Ferrars in 1762-64 to John Bluvitt, Commander of the "Admiral Watson," Indiaman "for East India where no other Provincial Lodge is to be found." Middleton's election was confirmed October 31st, 1768, and, as the dispensation forwarded by the Grand Secretary was looked upon as abrogating the practice of annual elections, he accordingly held the office of D. G. M. Unfortunately the records of the P. G. L. date back only to 1774, and thus much valuable information is lost to us. This Grand Lodge continued working until 1792 when it ceased to meet. It seems that the officers were selected from only two Lodges much to the dissatisfaction of the other Lodges, and resulted in most of the dissatisfied bodies seceding and attaching themselves to the Athol of Ancient Grand Lodge. In 1813 at the Union both the Ancients and Moderns in Calcutta combined and gave their allegiance to the **United Grand Lodge of England** and have since been working peaceably under the Provincial Grand Lodge of Bengal which was revived in that year and in 1840 created a District Grand Lodge.

Madras.—The earliest Lodge in Southern India (No. 222) was established in Madras in 1752. Three others were also established about 1766. In the same year Capt. Edmund Pascal was appointed P. G. M. for Madras and its Dependencies and in the following year another Lodge was established at Fort St. George. In 1768 the Athol (or Ancients) invaded this District and in 1782 established a Provincial Grand Lodge and both these Provincial Grand Bodies continued working peaceably side by side until the Union. Indeed, though not generally known, these two Grand Bodies made an attempt at coalition long before any such movement was made by their parent bodies, the Grand Lodge of England, and the Ancient Grand Lodge, and Malden in his History of Freemasonry in Madras states that in a great measure they succeeded. At the Union in 1813 all the bodies in Madras gave their allegiance to the United Grand Lodge. One event worthy of note was the initiation in 1774 at Trichinopoly of the eldest son of the Nawab of Arcot, Umdat-ul-Umra, who in his reply to the congratulations of the Grand Lodge of England stated "he considered the title of English Mason as one of the most honourable that he possessed." This document is now stored in the archives of the United Grand Lodge.

Bombay.—Two Lodges were established in this Presidency during the 17th century, Nos. 234 at Bombay in 1758 and 569 in Surat in 1798, both of which were carried on the lists until the Union when they disappeared. A Provincial Grand Master, James Todd, was appointed but there is no record that he exercised his functions and his name drops out of the Freemasons' Calendar in 1799. In 1801 an Athol Warrant was granted (No. 322) to the 78th foot which was engaged in the Maratha War under Sir Arthur Wellesley. In 1818 Lord Moria was asked to constitute a Lodge to be known by the name of St. Andrew by eight Masons residing there and also to grant a dispensation for holding a Provincial Grand Lodge for the purpose of making the Hon. Mountstuart a Mason, he having expressed a wish to that effect. The Petitioners further requested "that his name might be inserted in the body of the warrant, authorising them to instal him after being duly passed and raised a Deputy Grand Master of the Deccan." Of the reply to this application no copy has been preserved. Lodge Benevolence was established in Bombay in 1822.

In 1823 a Military Lodge "Orion-in-the-West" was formed in the Bombay Artillery and installed at Poona as No. 15 of the Coast of Coromandel. It seems from Lane's records that in 1830 it was discovered that this Lodge was not on the records of the United Grand Lodge of England. A Warrant was subsequently issued bearing date 19th July 1833. According to the early proceedings of this Lodge, members were examined in the Third Degree and passed to the chair in the Fourth Degree for which a fee of three gold mohurs was charged. In the following year a second Lodge was established at Poona by the Provincial Grand Lodge of Bengal which however left no trace of its existence. In 1825 the civilian element of "Orion" seceded and formed the "Lodge of Hope" also at Poona No 802.

Here "Orion" unrecognized at home, aided in the secession of some of its members, who obtained a warrant, on the recommendation of the parent Lodge, from the Grand Lodge of England. Two years later it was discovered that no notification of the existence of "Orion-in-the-West" had reached England, nor had any fees been received, although these including quarterages had been paid into the Provincial Grand Lodge, Coast of Coromandel. It was further ascertained that in granting a warrant for a Bombay Lodge the Provincial Grand Master of Coromandel had exceeded his powers. Ultimately a new warrant No. 598 was granted as already stated in 1833. Lodge "Perseverance" was started in Bombay No. 818 in 1828. Up to this time the jurisdiction of the Grand Lodge of England in India had not been invaded: but in 1836 Dr. James Burnes was appointed by the Grand Lodge of Scotland, P. G. M. of Western India and its Dependencies. No Provincial Grand Lodge however was formed until 1st January 1838. A second Scottish Province of Eastern India was started which on the retirement of the Marquis of Tweedale was absorbed within the jurisdiction of Dr. Burnes, who in 1846 became Provincial Grand Master for all India (including Aden) but with the proviso, that this appointment was not to act in restraint of any future sub-division of the Presidencies. Burnes may be best described as being in 1836, in ecclesiastical phrase as a Provincial Grand Master "in partibus infidelium" for whatever Lodges then existed throughout the length and breadth of India were strangers to Scottish Masonry. But the times were propitious. There was no English Provincial Grand Lodge in Bombay and the Chevalier Burnes, whom nature had endowed with all the qualities requisite for Masonic Administration, soon got to work and presented such attractions to **Scottish Freemasonry** that the strange sight was witnessed of English Masons deserting their mother Lodges, to such an extent that these fell into abeyance, in order to give support to Lodges newly constituted under the Grand Lodge of Scotland. In one case, indeed, a Lodge "Perseverance" under England went over bodily to Scotland, with its name, jewels, furniture, and belongings, and the charge was accepted by Scotland. This Lodge still exists in Bombay and now bears No. 338 on the Register of Scotland. From this period, therefore, Scottish Masonry flourished, and English Masonry declined until the year 1848 when a Lodge St. George No. 807 on the Rolls of the Grand Lodge of England was again formed at Bombay, and for some years was the solitary representative of English Masonry in the Province. In 1844 Burns established a Lodge "Rising Star" at Bombay for the **admission of Indian gentlemen** the result of which is seen at the present day. Thus the seed planted at Trichinopoly in 1774 by the initiation of Umdat-ul-Umra has borne fruit, resulting in the initiation of thousands of Indian gentlemen of all castes and creeds, and which has gone far to establishing that mutual trust between West and East, a distinguishing characteristic of Speculative Freemasonry. A Provincial Grand Lodge was re-established in Bombay in 1860, and converted into a District Grand Lodge in 1861.

The Grand Lodge of England.—All three Constitutions of the United Kingdom, the United Grand Lodge of England, the Grand Lodge of Ireland and the Grand Lodge of Scotland hold jurisdiction in India. By far the largest is the first: the next largest is the third and the number of Lodges under Ireland is as yet small. The Grand Lodge of England divides its rule under Five District Grand Masters independent of each other and directly subordinate to the Grand Master of England by whom they are appointed.

Bengal.

79 Lodges. Rt. Wor. Bro. Eric Studd, P.G.D., M.L.A., Dis. G. Master; Dy. D. G. M., Edward A. H. Blunt, C.I.E., O.B.E., I.C.S. Assist. D. G. M., F. W. Hockenhull, P.G.D.

Madras.

35 Lodges. Dis. G. M., Rt. Wor. Bro. Sir Archibald Young G. Campbell, K.C.I.E., C.S.I., C.B.E., I.C.S., P.G.D.; Dy. D. G. M., Dewan Bahadur P. M. Sivagnanam Mudaliar, P.G.D.

Bombay.

50 D.G.M. Rt. Wor. Bro. W. A. C. Bromham, P.G.D.; Dy. D.G.M., R. H. Middleton.

Punjab.

34 Lodges. Rt. W. Bro. Rev. Canon G.D. Barne, M.A., C.I.E., O.B.E., V. D., Lord Bishop of Lahore, District Grand Master; Col. F. A. Finnis, C.B., O.B.E., Dy. D.G.M.

Burma.

20 Lodges. Rt. W. Bro. Dr. N. N. Parekh, P.G.D., District Grand Master. S. G. Grantham, Dy. D. G. M.

The Grand Lodge of Scotland exercises its rule through a Grand Master of all Scottish Freemasonry in India, who is elected by the Brethren subject to confirmation by the Grand Master Mason of Scotland. Dr. Sir Temulji B. Nariman, Kt., is the present incumbent of the office, and controls 78 Lodges. Under him the several districts are in charge of the following Grand Superintendents:—

Lt.-Col. R. W. Castle, C. M. G., G. Supdt., Northern India.

G. Lindsay, G. Supdt., Centra India.

The Hon'ble Lt.-Col. Sir Terence H. Keyes, C.S.I., C.M.G., K.C.I.E., G. Supdt., Southern India.

L. H. Emeny, G. Supdt., Eastern India.

F. B. Ady—Burma.

The Grand Secretary is R.W. Bro. Khan Bahadur J. C. Mistree, J. P., 17, Murzban Road, Fort, Bombay.

The Grand Lodge of Ireland granted a warrant to establish a Lodge at Kurnal in 1837, but it was short lived. An attempt was made in 1869 to establish a Lodge in Bombay, but on the representation of the Grand Secretary of England, to the Deputy Grand Secretary of Ireland that it would be objectionable to create a third masonic jurisdiction in the Province, there being two already, *viz.*, English and Scottish, the Grand Lodge of Ireland declined to grant the warrant. In 1911, however, a warrant was sanctioned for the establishment of Lodge "St. Patrick" and since that year three other Lodges have sprung into being, one of which is now defunct.

The Grand Lodge of Ireland has no District Grand Master in India at present, the Lodges corresponding direct with the Grand Lodge in Dublin. There are eleven Lodges, 6 in Calcutta, 3 in Ceylon and 2 in Bombay.

Royal Arch Masonry.—Under England, the District Grand Master in any District is nearly always created also Grand Superintendent, who generally appoints his Deputy as Second and another Companion as Third Principal.

Under Ireland there is no local jurisdiction and under Scotland the office is elective subject to confirmation.

The five English Districts are constituted as under:—

Bengal.

30 Chapters. Grand Supdt. Most Ex. Comp. Eric Studd, M.L.A. (P. A. G. Soj.)

Madras.

18 Chapters. Grand Supdt. Sir Archibald Young. G. Campbell, K.C.I.E., C.S.I., C.B.E., V.D., I.C.S.

Bombay.

26 Chapters. M. Ex. Comp. W. A. C. Bromham, Grand Superintendent.

Punjab.

20 Chapters. Most. Ex. Comp. Rev. Canon G. D. Barnes, C.I.E., O.B.E., V.D., Lord Bishop of Lahore, Grand Superintendent.

Burma.

7 Chapters. Most Ex. Comp. Dr. N. N. Parekh, Grand Superintendent.

Royal Arch Masonry under Scotland has a separate constitution to Craft Freemasonry. The District Grand Chapter of India is at present ruled by M. E. Comp. A. M. Kajiji under whom there are about 30 Chapters in India. The Grand Secretary of all Scottish Freemasonry in India is also District Grand Scribe E. of Scottish R. A. Masonry.

There is one Irish Chapter in Calcutta.

Mark Masonry.—Under England, Mark Masonry is worked under the Grand Mark Lodge of England and Wales, and divided into separate Districts; but in most cases the District Grand Master is also District Grand Mark Master.

Bengal.

25 Lodges. Rt. W. Bro. Eric Studd, P. G. M. O., District Grand Master.

Bombay.

18 Lodges. Rt. W. Bro. W. A. C. Bromham, P.G.D., District Grand Master.

Madras.

14 Lodges. Sir Archibald Young G. Campbell, K.C.I.E., C.S.I., C.B.E., V.D., I.C.S., District Grand Master.

Punjab.

20 Lodges. Rt. W. Bro. Lt.-Col. H. L. O. Garrett, M.A., F.R.H.S., District Grand Master.

Burma.

5 Lodges. Rt. W. Bro. Nasarwanjee Nowrojee Parakh, M.D., District Grand Master.

The Mark degree is incorporated with the Royal arch degree in Irish Chapters. Mark degree is worked in some S. C. Lodges, but mostly in R. A. Chapters, in which the Excellent R.A.M. and other degrees can be obtained. S. C. Chapters insist upon candidates being Mark Master Masons before exaltation. Mark degree in Craft Lodges is conferred by the Rt. Wor. Master in S. C. Craft does not recognise the ceremony of Rt. W. Mark Master. This is confined strictly to Chapters. Each Chapter has a Lodge of M. M. M. working under its charter. Separate charters for Mark Lodges are only issued by the G. Chapter of Scotland.

Other Degrees.—There are many side degrees worked in India, of the Ancient and Accepted Rite, no degree higher than the 18° is worked in India under England, but under Scotland the 30° is worked. The Knight Templar Degree is also worked in several places under both English and Scottish jurisdiction. There are fourteen 18th Degree Chapters working in India.

Roman Eagle Conclave No. 43, Bombay.
St. Mary's Commandery No. 43, Bombay.
R. A. Mariner, Nos. 80, 203, 207, 220, 232, 233 298, 468, 474, 497 and 642, Bengal Dist.
R. A. Mariner, 72, 514, 662, Bombay, and 483, Jubbulpore, Bombay Dist.
R. A. Mariner, 61, 81, 82 and 106, Madras Dist.
R. A. Mariner, 98, 193, 219, 279, Punjab Dist.
Secret Monitor, 14, 21, 36, 37, 40 and 42, Madras.

Benevolent Associations.—Each District works its own benevolent arrangements which include the Relief of Distressed Masons, educational provision for the children of Masons and maintenance provision for widows in poor circumstances.

All information will be given to persons entitled by the District Grand Secretary in each District. The names and addresses of **District Grand Secretaries** are given below:—

D. G. S., Bengal.

F. C. Temple, 19, Park Street, Calcutta.

D. G. S., Bombay.

Khan Bahadur Palanji N. Davar, P.A.G.R., P.D.G.W., Freemasons' Hall, Ravelin Street, Fort, Bombay.

D. G. S., Burma.

H. Friedlander, D.G.S., E.C., Rangoon.

D. G. S., Madras.

S. T. Srinivasa Gopala Chari, P. A. G. Reg., Freemasons' Hall, Egmore, Madras.

D. G. S., Punjab.

G. Reeves Brown, R.A.G., D.C., Freemasons' Hall, Lahore.

Scottish Constitution.—For information regarding the Benevolent Funds application should be made to Khan Bahadur Jehangir C. Mistree, J.P., 17, Murzban Road, Bombay.

Scientific Surveys.

Zoological Survey of India.—It was established in 1916, when the Zoological and Anthropological Section of the Indian Museum was converted into a Survey on a basis similar to that of the Geological and Botanical Surveys. The Indian Museum itself dates back to 1875, and at the outset the Zoological and Anthropological collections consisted almost entirely of material handed over by the Asiatic Society of Bengal, whose members had been accumulating systematic collections since 1814. Organised zoological investigation in India has thus been in continuous progress for nearly 120 years. From the foundation of the Museum in 1875 to the time when the Zoological and Anthropological Section was established as a separate Survey, the Curator (or as he was subsequently termed, the Superintendent) of the Indian Museum has been a zoologist, and among the officers who have held the appointment have been such well-known members as Anderson, Wood-Mason, Alcock and Annandale.

With the exception of the Director (Lieut.-Colonel R. B. Seymour Sewell, I.M.S.) all the officers are Indian. The main functions of the Survey are to investigate the fauna of India and to arrange and preserve the section in the Zoological and Anthropological galleries of the Indian Museum. In addition the Survey issues two series of publications upon Zoological research, namely *The Records* and *The Memoirs* of the Indian Museum.

Mammal Survey.—The Survey was instituted in the year 1912 with the object of making as complete a study as possible of the occurrence and distribution of Mammals in India, Burma and Ceylon, and with the further object of supplementing the collection of Indian Mammals at the Bombay Natural History Society's Museum and at the British Museum as well as at the Natural History Museums in India, the primary object of the Survey being the furtherance of our knowledge of Indian Mammalian Fauna. Up to 1891 Naturalists in India had to rely for information on Dr. Jerdon's "Mammals of India" published in 1874. In 1884 R. A. Sterndale published his Natural History of Indian Mammals a purely popular work which did not add much to Jerdon's book. In 1881 a memorial prepared by Dr. Slater, Hon. Secretary to the Zoological Society, and signed by Darwin, Hooker, Huxley, and other well-known scientists, was presented to the Secretary of State for India. The memorial recommended that a series of Volumes dealing with the Fauna of India should be prepared and Dr. Blanford should be appointed its Editor. The memorial resulted in the publication in 1888-1890 of the Volume on Mammals in the "Fauna of British India" Series and since 1891 this volume has been the standard work on *Indian Mammals*. Blanford's book was however based on the information then available and the shortcomings of the book have been revealed in the light of more recent research. Further knowledge in regard to distribution and classification and the discoveries of new species have rendered Blanford practically obsolete.

To remedy this defect, at the instigation of the authorities of the British Museum, the Bombay Natural History Society decided to institute what is now known as the Mammal Survey. Mr. W. S. Millard, then Hon. Secretary of that Society, issued in an appeal to its members to enable the Society to engage the services of trained European collectors so as to make a systematic collection of the mammals of India, Burma and Ceylon. The response to the appeal resulted in over a lakh of rupees being raised between 1911 and 1920, partly by subscriptions from the Society's members, contributions from Indian Princes, and grants from the Indian Government, the Government of Burma, Ceylon, Malay States, and the Provincial Governments. Subscriptions were also received from a few Learned Societies and Institutions in England and America. By the outbreak of the war the Survey had been carried on over large areas of the country, the districts covered being—In Western India a portion of Sind, the whole of Gujarat, Kutch and Kathiawar; the Southern Maharatta Country and Kanara in Southern India; in Coorg and Mysore; in the centre large tracts of the Central Provinces and some districts of Bengal and Behar; in Northern India the Society's collectors had worked over Kumaun, Darjeeling and Sikkim and the Bhutan Duars. In Burma, collections were made along the Chindwin river, in Central Burma and in the Shan States, Pegu and a portion of Tennaserim. The whole of Ceylon was also systematically surveyed.

The material, which up to the outbreak of War comprised some 17,000 specimens, was forwarded to the British Museum where the collections were scientifically worked out by the late Mr. R. C. Wroughton, formerly Inspector General of Forests, Mr. Oldfield Thomas, F.R.S., Curator of Mammals at the British Museum, Mr. Martin C. Hinton and others. The results of their researches were published in a series of scientific papers in the journal of the Bombay Natural History Society. The enormous mass of material then collected resulted in the discovery of large numbers of new forms and species and by increasing our knowledge of the distribution of Indian Mammalia has enabled the revision of Blanford's Mammalia to be undertaken and early in 1921 the Secretary of State for India commissioned Mr. R. C. Wroughton, since deceased, and Mr. M. C. Hinton to undertake the work.

When demobilization rendered it possible t work of the Survey which had been in abe ance during the war was resumed and a colle tor, Mr. C. Primrose, was sent to Assam a the Mergui Archipelago and Mr. Oldfield Thom has written very appreciatively of his wo among those islands. Mr. Primrose then beg working inland but owing to the impractica

The Grand Lodge of Ireland has no District Grand Master in India at present, the Lodges corresponding direct with the Grand Lodge in Dublin. There are eleven Lodges, 6 in Calcutta, 3 in Ceylon and 3 in Bombay.

Royal Arch Masonry.—Under England, the District Grand Master in any District is nearly always created also Grand Superintendent, who generally appoints his Deputy as Second and another Companion as Third Principal.

Under Ireland there is no local jurisdiction and under Scotland the office is elective subject to confirmation.

The five English Districts are constituted as under:—

Bengal.

30 Chapters. Grand Supdt. Most Ex. Comp. Eric Studd, M.L.A. (P. A. G. Soj.)

Madras.

18 Chapters. Grand Supdt. Sir Archibald Young. G. Campbell, K.C.I.E., C.S.I., C.B.E., V.D., I.C.S.

Bombay.

26 Chapters. M. Ex. Comp. W. A. C. Bromham, Grand Superintendent.

Punjab.

20 Chapters. Most. Ex. Comp. Rev. Canon G. D. Barnes, C.I.E., O.B.E., V.D., Lord Bishop of Lahore, Grand Superintendent.

Burma.

7 Chapters. Most Ex. Comp. Dr. N. N. Parekh, Grand Superintendent.

Royal Arch Masonry under Scotland has a separate constitution to Craft Freemasonry. The District Grand Chapter of India is at present ruled by M. E. Comp. A. M. Kajiji under whom there are about 30 Chapters in India. The Grand Secretary of all Scottish Freemasonry in India is also District Grand Scribe E. of Scottish R. A. Masonry.

There is one Irish Chapter in Calcutta.

Mark Masonry.—Under England, Mark Masonry is worked under the Grand Mark Lodge of England and Wales, and divided into separate Districts; but in most cases the District Grand Master is also District Grand Mark Master.

Bengal.

25 Lodges. Rt. W. Bro. Eric Studd, P. G. M. O., District Grand Master.

Bombay.

18 Lodges. Rt. W. Bro. W. A. C. Bromham, P.G.D., District Grand Master.

Madras.

14 Lodges. Sir Archibald Young G. Campbell, K.C.I.E., C.S.I., C.B.E., V.D., I.C.S., District Grand Master.

Punjab.

20 Lodges. Rt. W. Bro. Lt.-Col. H. L. O. Garrett, M.A., F.R.H.S., District Grand Master.

Burma.

5 Lodges. Rt. W. Bro. Nasarwanjee Nowrojee Parakh, M.D., District Grand Master.

The Mark degree is incorporated with the Royal arch degree in Irish Chapters. Mark degree is worked in some S. C. Lodges, but mostly in R. A. Chapters, in which the Excellent R.A.M. and other degrees can be obtained. S. C. Chapters insist upon candidates being Mark Master Masons before exaltation. Mark degree in Craft Lodges is conferred by the Rt. Wor. Master in S. C. Craft does not recognise the ceremony of Rt. W. Mark Master. This is confined strictly to Chapters. Each Chapter has a Lodge of M. M. M. working under its charter. Separate charters for Mark Lodges are only issued by the G. Chapter of Scotland.

Other Degrees.—There are many side degrees worked in India, of the Ancient and Accepted Rite, no degree higher than the 18° is worked in India under England, but under Scotland the 30° is worked. The Knight Templar Degree is also worked in several places under both English and Scottish jurisdiction. There are fourteen 18th Degree Chapters working in India.

Roman Eagle Conclave No. 43, Bombay.

St. Mary's Commandery No. 43, Bombay.

R. A. Mariner, Nos. 80, 203, 207, 220, 232, 233 298, 468, 474, 497 and 642, Bengal Dist.

R. A. Mariner, 72, 514, 662, Bombay, and 483, Jubbulpore, Bombay Dist.

R. A. Mariner, 61, 81, 82 and 106, Madras Dist.

R. A. Mariner, 98, 193, 219, 279, Punjab Dist.

Secret Monitor, 14, 21, 36, 37, 40 and 42, Madras.

Benevolent Associations.—Each District works its own benevolent arrangements which include the Relief of Distressed Masons, educational provision for the children of Masons and maintenance provision for widows in poor circumstances.

All information will be given to persons entitled by the District Grand Secretary in each District. The names and addresses of **District Grand Secretaries** are given below:—

D. G. S., Bengal.

F. C. Temple, 19, Park Street, Calcutta.

D. G. S., Bombay.

Khan Bahadur Palanji N. Davar, P.A.G.R., P.D.G.W, Freemasons' Hall, Ravelin Street, Fort, Bombay.

D. G. S., Burma.

H. Friedlander, D.G.S., E.C., Rangoon.

D. G. S., Madras.

S. T. Srinivasa Gopala Chari, P. A. G. Reg., Freemasons' Hall, Egmore, Madras.

D. G. S., Punjab.

G. Reeves Brown, R.A.G., D.C., Freemasons' Hall, Lahore.

Scottish Constitution.—For information regarding the Benevolent Funds application should be made to Khan Bahadur Jehangir C. Mistree, J.P., 17, Murzban Road, Bombay.

Scientific Surveys.

Zoological Survey of India.—It was established in 1916, when the Zoological and Anthropological Section of the Indian Museum was converted into a Survey on a basis similar to that of the Geological and Botanical Surveys. The Indian Museum itself dates back to 1875, and at the outset the Zoological and Anthropological collections consisted almost entirely of material handed over by the Asiatic Society of Bengal, whose members had been accumulating systematic collections since 1814. Organised zoological investigation in India has thus been in continuous progress for nearly 120 years. From the foundation of the Museum in 1875 to the time when the Zoological and Anthropological Section was established as a separate Survey, the Curator (or as he was subsequently termed, the Superintendent) of the Indian Museum has been a zoologist, and among the officers who have held the appointment have been such well-known members as Anderson, Wood-Mason, Alcock and Annandale.

With the exception of the Director (Lieut.-Colonel R. B. Seymour Sewell, I.M.S.) all the officers are Indian. The main functions of the Survey are to investigate the fauna of India and to arrange and preserve the section in the Zoological and Anthropological galleries of the Indian Museum. In addition the Survey issues two series of publications upon Zoological research, namely *The Records* and *The Memoirs* of the Indian Museum.

Mammal Survey.—The Survey was instituted in the year 1912 with the object of making as complete a study as possible of the occurrence and distribution of Mammals in India, Burma and Ceylon, and with the further object of supplementing the collection of Indian Mammals at the Bombay Natural History Society's Museum and at the British Museum as well as at the Natural History Museums in India, the primary object of the Survey being the furtherance of our knowledge of Indian Mammalian Fauna. Up to 1891 Naturalists in India had to rely for information on Dr. Jerdon's "Mammals of India" published in 1874. In 1884 R. A. Sterndale published his Natural History of Indian Mammals a purely popular work which did not add much to Jerdon's book. In 1881 a memorial prepared by Dr. Slater, Hon. Secretary to the Zoological Society, and signed by Darwin, Hooker, Huxley, and other well-known scientists, was presented to the Secretary of State for India. The memorial recommended that a series of Volumes dealing with the Fauna of India should be prepared and Dr. Blanford should be appointed its Editor. The memorial resulted in the publication in 1888-1890 of the Volume on Mammals in the "Fauna of British India" Series and since 1891 this volume has been the standard work on *Indian Mammals*. Blanford's book was however based on the information then available and the shortcomings of the book have been revealed in the light of more recent research. Further knowledge in regard to distribution and classification and the discoveries of new species have rendered Blanford practically obsolete.

To remedy this defect, at the instigation of the authorities of the British Museum, the Bombay Natural History Society decided to institute what is now known as the Mammal Survey. Mr. W. S. Millard, then Hon. Secretary of that Society, issued in an appeal to its members to enable the Society to engage the services of trained European collectors so as to make a systematic collection of the mammals of India, Burma and Ceylon. The response to the appeal resulted in over a lakh of rupees being raised between 1911 and 1920, partly by subscriptions from the Society's members, contributions from Indian Princes, and grants from the Indian Government, the Government of Burma, Ceylon, Malay States, and the Provincial Governments. Subscriptions were also received from a few Learned Societies and Institutions in England and America. By the outbreak of the war the Survey had been carried on over large areas of the country, the districts covered being—In Western India a portion of Sind, the whole of Gujarat, Kutch and Kathiawar; the Southern Maharatta Country and Kanara in Southern India; in Coorg and Mysore; in the centre large tracts of the Central Provinces and some districts of Bengal and Behar; in Northern India the Society's collectors had worked over Kumaun, Darjeeling and Sikkim and the Bhutan Duars. In Burma, collections were made along the Chindwin river, in Central Burma and in the Shan States, Pegu and a portion of Tennaserim. The whole of Ceylon was also systematically surveyed.

The material, which up to the outbreak of War comprised some 17,000 specimens, was forwarded to the British Museum where the collections were scientifically worked out by the late Mr. R. C. Wroughton, formerly Inspector General of Forests, Mr. Oldfield Thomas, F.R.S., Curator of Mammals at the British Museum, Mr. Martin C. Hinton and others. The results of their researches were published in a series of scientific papers in the journal of the Bombay Natural History Society. The enormous mass of material then collected resulted in the discovery of large numbers of new forms and species and by increasing our knowledge of the distribution of Indian Mammalia has enabled the revision of Blanford's Mammalia to be undertaken and early in 1921 the Secretary of State for India commissioned Mr. R. C. Wroughton, since deceased, and Mr. M. C. Hinton to undertake the work.

When demobilization rendered it possible the work of the Survey which had been in abeyance during the war was resumed and a collector, Mr. C. Primrose, was sent to Assam and the Mergui Archipelago and Mr. Oldfield Thomas has written very appreciatively of his work among those islands. Mr. Primrose then began working inland but owing to the impracticabi-

lity of continuing his work in Burma during the monsoon, he was transferred to Gwalior where H. H. the Maharaja kindly accorded permission to work in his territories.

After working a portion of the Eastern Ghats the next move was to the Kangra District in the North-West Himalayas and then on to the Punjab Salt Range. Two other collectors worked in Southern India. Permission was once more obtained from the Nepal Government for a collector to resume the Survey work in that country. The work in Nepal was brought to a successful close early in 1928 with a representative collection of interesting mammals and birds.

Botanical Survey.—The Botanical Survey Department of the Government of India is under the control of a Director who is also Superintendent of the Royal Botanic Garden, Calcutta. There is a staff at headquarters of two officers for systematic work and at the Indian Museum a curator who is engaged in the development and maintenance of the Industrial Section. The Director holds administrative charge of the Government of India's cinchona operations in Burma, of quinine manufacture in Bengal and of the distribution of cinchona products to the Government of India's area of distribution in Upper India.

The existence of the Botanical Survey, like that of the Geological Survey, has both a cultural and an economic justification. On general grounds it is obvious that a progressive Government should acquaint itself with the physical facts of the area it administers, and although apart from the cinchona operations, the activities of the Survey cannot be said to have much immediate economic applicability—consisting as they do of investigations and researches into the systematics, physiology, ecology, and histology of plant life—the work accomplished in pure botany at the Royal Botanic Garden during the last century and a half has exercised a profound and far-reaching influence upon the development of Agricultural Science and Forestry in India.

Survey of India.—The first authoritative map of India was published by D'Anville in 1752, when the exploration of the then unknown India was still largely in French hands. It had been compiled from routes of solitary travellers and rough charts of the coast.

The Survey of India may be said to have been founded in 1767—ten years after the battle of Plassey—when Lord Clive formally appointed Major James Rennel the first Surveyor General of Bengal, at that time the most important of the East India Company's possessions, though there were earlier settlements in Madras and Bombay.

Rennell's maps were originally military reconnaissances and latterly chained surveys based on astronomically fixed points, and do not pretend to the accuracy of modern maps of India based on the rigid system of triangulation commenced at Madras in 1802 and since extended over and beyond India. Even now, however, the *relative* accuracy of these old maps makes them valuable in legal disputes, as for instance in proving that the holding of a Bengal landowner was a river area at the time of the Permanent Settlement of 1793, so that he is debarred from its benefits.

From these beginnings, this department has gradually become primarily responsible for all topographical surveys, explorations and the maintenance of geographical maps of the greater part of Southern Asia, and also for geodetic work.

Geodesy means the investigation of the size, shape and structure of the earth, and the geodetic work of the department consists of primary (or geodetic) triangulation, latitude, longitude and gravity determinations. From these the exact "figure" of the earth is obtained, whereby points fixed by triangulation can be accurately located on its curved surface. This system of fixed points holds together all topographical and revenue surveys, and the existence of such a system from the early days of the department has obviated the embarrassments caused in other countries where isolated topographical surveys have been started without a rigid framework, with the inevitable result that they could not be fitted together.

A geodetic framework is, therefore, essential in any large survey, but there are a number of other activities, all of them ultimately utilitarian which can be suitably combined with its execution, and the following are some of these which are carried out in India:

Precise levelling for the determination of heights;

Tidal predictions and publication of Tide Tables for forty-one ports between Suez and Singapore.

The Magnetic survey;

Observation of the direction and force of gravity;

Astronomical observations to determine latitude, longitude and time;

Seismographic and meteorological observations at Dehra Dun.

Indian geodesy has disclosed by far the largest known anomalies of gravitational attraction in the earth's crust, which have recently led to a reconsideration of the whole theory of isostasy.

Topographical Surveys.—In the past this department used to carry out the large scale revenue surveys for most of India, and was still conducting this work for Central and Eastern India and Burma in 1905.

Though revenue survey is primarily a record of individual property boundaries and is concerned with the surface features, ground levels and exact geographical position essential to a topographical survey, it was on the whole found economical to carry out both surveys together.

By 1905 however, all the Provinces had taken over the revenue surveys, for which they had always paid, and the Survey of India was enabled to concentrate its energies on a complete new series of modern topographical maps in several colours on the 1-inch to 1-mile scale.

This new series had been rendered necessary by the natural demand for more detailed information to be shown on maps, especially as regards the portrayal of hill features by contours, proper classification of communications and—more recently—air traffic requirements.

It was intended that this 1905 survey should be completed in twenty-five years, and then revised periodically every thirty years. Owing however to the war and more recent retrenchments only

two-thirds of the programme had been completed by 1932, in spite of a reduction of scale for the less important areas.

Although new surveys covering from thirty to sixty thousand square miles—an area comparable to that of England—are carried out every year, the maps of a large part of the country are still over 50 years old, printed mostly in black only, and have hill features shewn by roughly sketched form lines or hachures; such changes in town sites, canals and communications as have been embodied in them have not been surveyed on the ground but entered from outside information.

Owing to the serious financial situtation in 1931, the establishment of the department was severely cut down and its annual expenditure halved, in consequence of which the modern survey of India cannot now be completed before 1950.

The obsolescence of the present series of modern maps of India is shewn in the second index map at the end of this report.

Large Scale Surveys.—Surveys and records of international, state and provincial boundaries have always formed an important item of topographical work, and in recent years numerous Guide Maps have been published of important cities and military stations where the 1-inch to 1-mile scale is inadequate.

Miscellaneous.—While expending on topographical and geodetic work all funds allotted by Imperial Revenues, the department is prepared to undertake or aid local surveys, on payment by those concerned, such as

Forest and cantonment surveys;

Riverain, irrigation, railway and city surveys;

Surveys of tea gardens and mining areas, with such control levelling as is necessary for these operations.

Administrative assistance is also given, and executive officers, lent in aid of the revenue surveys of various Provinces and States.

The Printing Offices at Calcutta and Dehra Dun also carry out work for other Government departments, such as special maps, illustrations for Reports and all diagrams for patents.

The Mathematical Instrument Office of this department assists all Government departments, as well as non-officials, by maintaining a high standard of instrumental and optical equipment and by manufacturing and repairing instruments which would otherwise have to be imported from abroad.

Military Requirements and Air Survey.—The department is also responsible for all survey operations required by the army, and is in a position to meet the rapidly increasing complexity of modern military requirements, especially in air survey.

In view of its high military importance, air survey work for civil purposes is receiving all possible encouragement and assistance, and the latest methods of mapping from photographs taken from the ground are being studied experimentally.

The flying and photography for air mapping done by this department are at present carried out by the Royal Air Force or the Indian Air Survey Company, a commercial firm with headquarters at Dum Dum.

Administration is by the Surveyor General under the Education, Health and Lands Department of the Government of India.

The Headquarters Office is at Calcutta under the Assistant Surveyor General, and there are four Directors, one for the Map Publication and other technical offices at Calcutta, and three for three of the five Survey of India Circles into which the country is divided; the other two Circle areas (covering Burma and South India) are administered personally by the Surveyor General.

Of the three Circle Directors, one also administers the Geodetic Branch at Dehra Dun in addition to his topographical survey Circle.

Any enquiries regarding surveys, maps or publications may be addressed either to the Headquarters Office or to the Survey Director or Independent Party concerned, whose addresses are Director, Map Publication, Calcutta; Director, Geodetic Branch, Dehra Dun; Director, Frontier Circle, Simla; Director, Eastern Circle, Shillong; Officer in charge, No. 6 (South India) Party, Bangalore; and Officer-in-Charge, No. 10 (Burma) Party, Maymyo.

Indian Science Congress.—The Indian Science Congress was founded largely owing to the efforts of Prof. P. S. Macmahon and Dr. J. L. Simonsen. These two gentlemen worked jointly as Honorary General Secretaries of the Congress till 1921. The Asiatic Society of Bengal undertakes the management of the Congress finances and publishes annually the proceedings of the Congress. The objects are (1) to encourage research and to make the results generally known among science workers in India, (2) to give opportunities for personal intercourse and scientific companionship and thus to overcome to some extent one of the chief drawbacks in the life of workers in science in India, (3) to promote public interest in science; for this end the Congress is held at different centres annually, and evening lectures open to the public form an important part of the proceedings of each Congress.

The Congress, which is progressive and vigorous, meets in January each year, the proceedings last for six days. The Head of the Local Government is Patron of the Congress; the Congress session is opened by a Presidential Address delivered by the President for the year. The President is chosen annually, the different sections being represented in turn. The sections are (1) Agriculture, (2) Physics and Mathematics, (3) Chemistry and Applied Botany, (4) Zoology and Ethnography, (5) Botany, (6) Geology, (7) Medical Research; when the sections meet separately each section is presided over by its own President also chosen annually. The mornings are devoted to the reading and discussion of the papers, the afternoons to social functions and visits to places of interests, in the evenings public lectures are delivered.

The Indian Research Fund Association.—This Association, which is a much older body than the National Research Council in England, was constituted in 1911 with a sum of rupees five lakhs (£33,000) set aside as an endowment for the prosecution and assistance of research, the propagation of knowledge and experimental

measures generally in connection with the causation, mode of spread and prevention of communicable diseases. It can claim to be amongst the pioneers in organised medical research on a large scale and has been referred to by other countries in very complimentary language. Still better, it has been copied by several other nations.

During 1929 the constitution of the Governing Body was altered by the Government of India. It was considered that, in view of the largely increased activities of this Association, the Governing Body, which had hitherto most expeditiously and economically conducted the business of the Association should be now made more representative in character. It was accordingly enlarged by including two non-official members from the Legislative Assembly, one from the Council of State, two from the Medical Faculties of the Universities and one non-medical scientist. The creation of a Recruitment Board in India for selecting the personnel employed by the Association and of a Consultative Recruitment Board in England also came under the consideration of Government. It was further decided that the Governing Body of the Indian Research Fund Association should be the co-ordinating agency for the research activities of the All-India Institute of Public Health which is being built at Calcutta and of the proposed Central Medical Research Institute.

The Conference of **Medical Research Workers** is drawn from all parts of India and consists of experts in their particular lines of research, discussed yearly the general policy of research work in India as well as the detailed schemes which are proposed to be undertaken by the Indian Research Fund Association in the following year. The results of these discussions are available to guide the members of the Scientific Advisory Board of the Indian Research Fund Association in making their recommendations for the programme of the following year. The Advisory Board also met in December and examined all the proposals for research work and recommended a scheme of research for the guidance of the Governing Body of the Indian Research Fund Association.

The official organ of the Association is the "Indian Journal of Medical Research," which has a wide international circulation. The Association also publishes "Indian Medical Research Memoirs," which are supplementary to the "Journal".

Since its inception a great number of inquiries have been carried out under the auspices of the Association and great expansion of its activities has taken place from small beginnings.

The principal inquiries are the **Malaria Survey** of India, which is a Central organisation, located at Kasauli and Karnal, plague research at the Haffkine Institute, Bombay, kala-azar by a commission in Assam, bacteriophage by Dr. Asheshov at Patna, nutritional research by Colonel McCarrison at the Pasteur Institute, Coonoor, and indigenous drugs and drug addiction by Lt.-Col. Chopra at Calcutta.

The Malaria Survey of India, which now enjoys international recognition, is constantly called upon to advise as to the best methods for malaria prevention in India. As part of the activities of this organisation and in commemoration of Sir Ronald Ross' intimate association with India, an experimental malaria station was opened in Karnal in January 1927 and is known as The Ross Field Experimental Station for Malaria. Besides carrying out experiments in connection with the prevention of malaria, annual classes are held at which candidates from all over India are shown the latest methods for dealing with the malaria scourge and are instructed how these methods should be applied. In connection with the Malaria Survey of India and in order to assemble all facts relating to malaria, a new publication has been started known as the "Records of the Malaria Survey of India," of which up-to-date four number have been issued.

The programme for each year involves an expenditure of Rs.10 lakhs or more and the institution of 40 or 50 investigations.

Geological Survey.—The ultimate aim of the Geological Survey of India is the preparation of a geological map of India upon the accuracy of which the solution of most geological problems ultimately depends. Maps accompany the reports on the various areas in the publications of the Department and a large amount of information is made available to the public. Such maps represent pioneer work which enables prospectors and mining engineers to cut short their preliminary investigations and to start where the Geological Survey has left off. During the preparation of the geological map and the general survey of the country, mineral deposits of importance are sometimes discovered. Such discoveries are published without delay and every endeavouris made to induce private firms to take up the exploitation of the mineral discovered. Collections of minerals, rocks and fossils are accumulated and exhibited in the public galleries of the Indian Museum, situated in Calcutta. Some of the most interesting and scientifically valuable additions to the collections in recent years have been the remains of anthropoid apes of great age discovered at different places in the Siwalik Hills, a range which for hundreds of miles runs parallel to the Himalayas, at a short distance below the foot hills of the latter, and is largely composed of Himalayan detritus. The Geological Survey helps in the spread of geological education in India by the presentation of mineral, rock and fossil specimens to educational institutions. The knowledge gained concerning the geological structure of India and the composition of the rocks that compose the strata enables the department to help in the solution of engineering problems connected with the selection of sites for dams for reservoirs, the safety of hill slopes and the suitability of particular building stones for particular purposes. The Department is also often able to advise on problems concerned with the supply of water. As a result of the knowledge gained concerning the structure and disposition of the mineral deposits of India, the Department is also in a position to give advice concerning the conservation of the mineral resources of the country. The Geological Survey also undertakes the examination and identification, without fee, of any minerals, rocks and fossils sent in by private observers. The publications of the Survey include the Memoirs, Records and Palæontologia Indica. The Survey headquarters are in Calcutta.

Posts and Telegraphs.

POST OFFICE.

The control of the Posts and Telegraphs of India is vested in an officer designated Director-General of Posts and Telegraphs whose office is attached to the Department of Industries and Labour of the Government of India. For the efficient working of the Department a representative of the Finance Deptt.—the Financial Adviser, Posts and Telegraphs—has been attached to the office of the D. G. P. & T. The Financial Adviser not only controls the finances of the Dept. but also assists the D. G. generally in examining matters containing financial implications in which the former is assisted by the Deputy Director-General, Finance. The superior staff of the Direction, in addition to the Director-General himself, consists on the postal side of one Senior Deputy Director-General, one Deputy Director-General (postal services), five (including one temporary) Asstt. Deputy Director-General and one Personal Assistant to the Director-General.

For postal purposes, the Indian Empire is divided into nine circles namely, Bengal and Assam, Bihar and Orissa, Bombay, Burma, Central, Madras, Punjab and North-West Frontier, United Provinces and Sind and Baluchistan. Each of the first eight is in charge of a Postmaster-General and the Sind and Baluchistan Circle is controlled by a Director of Posts & Telegraphs. The Central Circle comprises roughly the Central Provinces and the Central India and Rajputana Agencies.

The Postmasters-General are responsible to the Director-General for the whole of the postal arrangements in their respective circles, including those connected with the conveyance of mails by railways and inland steamers. All the Postmasters-General are provided with Deputy and Assistant Postmasters-General. The nine Postal Circles are divided into Divisions, each in charge of a Superintendent of Post Offices or Railway Mail Service as the case may be and each Superintendent is assisted by a certain number of officials styled Inspectors.

Generally there is a head post office at the head-quarters of each revenue district and other post offices in the same district are usually subordinate to the head office for purposes of accounts. The Postmasters of the Calcutta, Bombay, and Madras General Post Offices and of the larger of the other head post offices are directly under the Postmasters-General. The Presidency Postmasters, indeed, have one or more Superintendents subordinate to them. When the duties of the Postmaster or a head office become so onerous that he is unable to perform them fully himself a Deputy Postmaster is appointed to relieve him of some of them, and if still further relief is required, one or more Assistant Postmasters are employed. The more important of the offices subordinate to the head office are designated sub-offices and are usually established only in towns of some importance. Sub-offices transact all classes of postal business with the public, submit accounts to the head offices to which they are subordinate incorporating therein the accounts of their branch offices, and frequently have direct dealings with Government local sub-treasuries. The officer in charge of such an office works it either single-handed or with the assistance of one or more clerks according to the amount of business.

Branch offices are small offices with limited functions ordinarily intended for villages, and are placed in charge either of departmental officers on small pay or of extraneous agents, such as school-masters, shopkeepers, land-holders or cultivators who perform their postal duties in return for a small remuneration.

The audit work of the Post Office is entrusted to the Accountant-General, Posts and Telegraphs, who is an officer of the Finance Department of the Government of India and is not subordinate to the Director-General. The Accountant-General is assisted by Deputy Accountants-General, all of whom, with the necessary staff of clerks, perform at separate head-quarters the actual audit work of a certain number of postal circles.

In accordance with an arrangement which has been in force since 1883, a large number of sub-post offices and a few head offices perform telegraph work in addition to their postal work and are known by the name of combined offices. The policy is to increase telegraph facilities everywhere and especially in towns by opening a number of cheap telegraph offices working under the control of the Post Office.

The **Inland Tariff** (which is applicable to Ceylon and Portuguese India except as indicated below) is as follows :—

	When the postage is prepaid.	When the postage is wholly unpaid.	When the postage is insufficiently prepaid.
Letters.	Anna. Pies.		
Not exceeding two and a half tolas ..	1 3	Double the prepaid rate (chargeable on delivery).	Double the deficiency (chargeable on delivery).
Every additional two and a half tolas or part of that weight	1 3		
Book and pattern packets.			
Every 5 tolas or part of that weight ..	0 6		

Postcards.

Single .. .. .. 9 pies.

Reply .. .. .. 1 anna 6 pies.

(The postage on cards of private manufacture must be prepaid in full.)

Parcels (prepayment compulsory).

Parcels not exceeding 800 tolas in weight:—

	Rs. a.
Not exceeding 20 tolas	0 2
Exceeding 20 tolas but not exceeding 40 tolas	0 4
For every additional 40 tolas or part of that weight	0 4

Registration is compulsory in the case of parcels weighing over 440 tolas.

These rates are not applicable to parcels for Portuguese India.

In the case of parcels for Ceylon a registration fee of 3 annas is chargeable on each parcel in addition to the rates shown above.

Registration fee.	Rs. a.
For each letter, postcard, book or pattern packet, or parcel to be registered	0 3

Ordinary Money Order fees.

On any sum not exceeding Rs. 10 ..	0 2
On any sum exceeding Rs. 10 but not exceeding Rs. 25	0 4
On any sum exceeding Rs. 25 upto Rs. 600	0 4

for each complete sum of Rs. 25, and 4 annas for the remainder; provided that, if the remainder does not exceed Rs. 10, the charge for it shall be only 2 annas.

Telegraphic money order fees.—The same as the fees for ordinary money orders *plus* a telegraph charge calculated at the rates for inland telegrams for the actual number of words used in the telegram advising the remittance, according as the telegram is to be sent as an "Express" or as an "Ordinary" message. In addition to the above a supplementary fee of two annas is levied on each inland telegraphic money order.

In the case of Ceylon the telegraph charge is calculated at the rates shown below:—

Express—Rs. 2 for the first 12 words and 3 annas for each additional word.

Ordinary.—Re. 1 for the first 12 words and 2 annas for each additional word. Telegraphic money orders cannot be sent to Portuguese India.

Value-payable fees.—These are calculated on the amount specified for remittance to the sender and are the same as the fees for ordinary money orders.

Insurance fees.

	A. p.
Where the value insured does not exceed Rs. 100	0 3
Where the value insured exceeds Rs. 100 but does not exceed Rs. 150	0 4
Where the value insured exceeds Rs. 150 but does not exceed Rs. 200	0 5
For every additional Rs. 100 or fraction thereof over Rs. 200 and upto Rs. 1,000	0 2
For every additional Rs. 100 or fraction thereof over Rs. 1,000	0 1

As regards Portuguese India see Foreign Tariff.

Acknowledgment fee.—For each registered article 1 anna.

The Foreign Tariff (which is not applicable to Ceylon or to Portuguese India except in respect of insurance fees for parcels and parcel postage) is as follows:—

Letters.

To Great Britain and Northern Ireland, Egypt), including the Sudan) and all British Colonies, Dominions and possessions except Palestine and Transjordan.	2½ annas for the first ounce and 2 annas for each additional ounce or part of that weight.
To other countries, colonies or places.	3½ annas for the first ounce and 2 annas for every additional ounce or part of that weight.
Postcards, Single	2 annas.
„ Reply	4 annas.

Printed Papers.—½ anna for every 2 ounces or part of that weight.

Business Papers.—For a packet not exceeding 10 ounces in weight .. .. 3½ annas.

For every additional 2 ounces or part of that weight .. .. ½ anna.

Samples.—1½ annas for first 4 ounces and ½ anna per 2 ounces thereafter.

Parcels.

(i) Parcels not exceeding 20 lbs. in weight and addressed to Great Britain and Northern Ireland are forwarded as mails to the British Post Office, the rates of postage applicable to such parcels being as follows:—

For a parcel—	*Via* Gibraltar. Rs. a. p.	Overland. Rs. a. p.
Not over 3 lbs.	1 8 0	1 13 6
Over 3 lbs., but not over 7 lbs.	2 12 0	3 1 6
„ 7 „ „ 11 „	3 15 0	4 2 6
„ 11 „ „ 20 „	6 3 0	7 3 0

These parcels are delivered by the post office and the postage paid carries them to destination.

(*ii*) Parcels which exceed 11 lbs. but which do not exceed 50 lbs. (the maximum allowed) in weight are forwarded from India through the medium of the P. & O.S.N Co., and are delivered at destination under arrangements made by that Company. The postage charge applicable to such parcels is twelve annas for each pound, or fraction of a pound. The parcels are delivered free of charge *within a radius of one mile from the Company's Head Office in London*; if addressed to any place beyond that radius, carrier's charges are levied from the addressees on delivery. Parcels thus forwarded through the P. & O. S. N. Co. cannot be insured during transit *beyond* India, but must, if they contain coin, etc., be insured *during transit in India*. No acknowledgment of delivery can be obtained in respect of these parcels, nor can such parcels be transmitted to Great Britain and Northern Ireland under the value-payable system.

Limits of Weight.

Letters.—4 lbs. 6 oz.

Printed Papers and Business Papers—To Great Britain and Northern Ireland, and the Irish Free State, British Australasian Colonies, Hong-kong, the Straits Settlements, Togo (British), the Union of South Africa, Rhodesia, and the Bechuanaland Protectorate—5 lbs.

To Ceylon—No limit.

To all other destinations—4 lbs. 6 oz.

Samples—To Great Britain and Northern Ireland, and the Irish Free State, Hong-kong, the Straits Settlements, Togo (British), the Union of South Africa, Rhodesia, and the Bechuanaland Protectorate—5 lbs.

To Ceylon—200 tolas.
To all other destinations—1 lb. 2 oz.
Parcels.—11 lbs. or 20 lbs.

Limits of Size.

Letters—1½ feet length by 1½ feet in width or depth. If in form of roll, 2½ feet in length and 4 inches in diameter.

Printed Papers and Business Papers—To Ceylon—2 feet in length by 1 foot in width or depth.

To all other destinations—1½ feet in length by 1½ feet in width or depth.

If in form of roll, dimensions in all cases are 30 inches in length and 4 inches in diameter.

Samples.—To Great Britain and Northern Ireland, and the Irish Free State, Ceylon, Hong-kong, the Straits Settlements, the Union of South Africa, Rhodesia and the Bechuanaland Protectorate—2 feet in length by 1 foot in width or depth.

To all other destination—1½ feet in length by 8 inches in width and 4 inches in depth.

If in form of roll, dimensions in all cases are 1½ feet in length and 6 inches in diameter.

Money Orders.—To countries on which money orders have to be drawn in rupee currency, the rates of commission are as follows:—

	Rs.	a.
On any sum not exceeding Rs. 10 ..	0	3
On any sum exceeding Rs. 10 but not exceeding Rs. 25	0	6
On any sum exceeding Rs. 25	0	6

for each complete sum of Rs. 25 and 6 annas for the remainder, provided that, if the remainder does not exceed Rs. 10, the charge for it shall be only 3 annas.

To countries on which money orders have to be drawn in sterling, the rates are as follows:—

						Rs.	a.
On any sum not exceeding £1						0	4
,, ,, exceeding £1 but not exceeding £2						0	7
,, ,, ,,	£2	,,	,,	£3		0	10
,, ,, ,,	£3	,,	,,	£4		0	13
,, ,, ,,	£4	,,	,,	£5		1	0
,, ...	£5	..	..	..		1	0

for each complete sum of £5 and 1 rupee for the remainder, provided that if the remainder does not exceed £1, the charge for it shall be 4 annas; if it does not exceed £2, the charge shall be 7 annas; if it does not exceed £3, the charge shall be 10 annas; and if it does not exceed £4, the charge shall be 13 annas.

Insurance fees (for registered letters and parcels only).

For insurance of letters and parcels to Mauritius, British Somaliland, the Seychelles, and of parcels to Iraq, Zanzibar and Portuguese India.

	Annas.
Where the value insured does not exceed Rs. 180	4½
For every additional Rs. 180 or fraction thereof	4½

For insurance of letters and parcels to Great Britain and Northern Ireland and to British Possessions and Foreign countries (other than those mentioned above) to which insurance is available.

	Annas
Where the value insured does not exceed £12	4½
For every additional £12 or fraction thereof	4½

Acknowledgement fee.—3 annas for each registered article.

Magnitude of business in Post Office.—At the close of 1932-33 there were 106,480 postal officials, 23,800 post offices, and 167,170 miles of mail lines. During the year, 1,121 million articles, including 42½ million registered articles were posted; stamps worth Rs. 62.4 millions were sold for postal purposes: over 36.7 million money orders of the total value of Rs. 762 millions were issued, a sum of Rs. 192 millions was collected for tradesmen and others on V. P. articles; over 3·8 million insured articles valued at 1,095·7 millions of rupees were handled. Customs duty, aggregating over 8·3 million rupees was realised on parcels and letters from abroad, pensions amounting to Rs. 16·4 millions were paid to Indian Military pensioners and 15,000 lbs. of quinine were sold to the public. On the 31st March 1933, there were 2,737,000 Savings Bank accounts with a total balance of Rs. 434·5 millions and 84,700 Postal Life Insurance policies with an aggregate assurance of Rs. 158·5 millions.

TELEGRAPH DEPARTMENT.

Telegraphs.—Up to 1912 the telegraph system in India was administered as a separate department by an officer designated Director-General of Telegraphs who worked in subordination to the Government of India in the Department of Commerce and Industry. In that year it was decided to vest the control of Posts and Telegraphs in a single officer as an experimental measure with a view to the eventual amalgamation of the two Departments.

In pursuance of this policy an experimental amalgamation of the two services was introduced in the Bombay and Central Circles from the 1st July 1912. The fundamental principles of this scheme which followed closely the system in force in the United Kingdom and several other European countries were that the traffic and engineering work of the Telegraph Department should be separated, the former branch of work in each Circle being transferred to the Postmaster-General assisted by a Deputy Postmaster-General and a suitable number of attached officers and the engineering branch being controlled by a Director of Telegraphs. Subordinate to this officer there were several Divisional Superintendents who were assisted by a number of attached officers.

In 1914 the complete amalgamation of the two Departments was sanctioned by the Secretary of State and introduced from 1st April. The superior staff of the Direction, in addition to the Director-General himself, consists on the engineering side of a Chief Engineer, Telegraphs, with one Personal Assistant. For traffic work there is a Deputy Director-General, with two Assistant officers. In the Circles the scheme which has been introduced follows closely on the lines of the experimental one referred to above. For telegraph engineering purposes India was divided up into five Circles, each in charge of a Director. For Burma special arrangements were considered necessary and the engineering work is in charge of the Postmaster-General who is a Telegraph officer specially selected for the purpose. These six Circles were divided into twenty-one Divisions each of which is in charge of a Divisional Engineer. On the 1st July 1922 Sind and Baluchistan circle was formed with its headquarters at Karachi. This circle is in charge of a Director of Posts and Telegraphs. On the 31st March 1924 there were 7 Circles and 20 Divisions. With a view to complete fusion of the three branches of work on the lines of the Burma Circle, the engineering work of the Bombay and Central Circles was brought under the control of the respective Postmaster General in 1925 and this unification proved an unqualified success and was gradually extended to other circles. The fusion was completed in March 1930. The telegraph traffic and the engineering branches in the circles are now controlled by the Postmasters-General.

There is also a Wireless Branch attached to the Director General's office, which is in administrative control of all wireless work in the Department. The Director of Wireless is in charge of this branch and is assisted by two officers.

The audit work of the Telegraph Department is, like that of the Post Office, entrusted to the Accountant-General, Posts and Telegraphs, assisted by a staff of Deputy and Assistant Accountants-General.

Inland Telegrams and Tariff.—Telegrams sent to or received from places in India or Ceylon are classed as Inland telegrams. The tariff for inland telegrams is as follows:—

	For delivery in India.		For delivery in Ceylon.	
	Private and State.		*Private and State.*	
	Express.	Ordinary.	Express.	Ordinary.
	Rs. a.	Rs. a.	Rs. a.	Rs. a.
Minimum charge.	1 8	0 12	2 0	1 0
Each additional word over 12..	0 2	0 1	0 3	0 2

The address is charged for.

Additional charges.

Minimum for reply-paid telegram	Minimum charge for an ordinary telegram.
Notification of delivery	Minimum charge for an ordinary telegram.
Multiple telegrams, each 100 words or less	4 annas.
Collation	One half of the charge for an ordinary telegram of same length.

		Rs.
For acceptance of an Express telegram during the hours when an office is closed.	If both the offices of origin and destination are closed ..	2
	If only one of the offices is closed .	1
	If the telegram has to pass through any closed intermediate office an additional fee in respect of each such office	1
Signalling by flag or semaphore to or from ships—per telegram	The usual inland charge *plus* a fixed fee of 8 ans.	
Boat hire	Amount actually necessary.	
Copies of telegrams each 100 words or less	4 annas.	

Press telegrams.	For delivery in India. Express. Rs. a.	For delivery in India. Ordinary. Rs. a.	For delivery in Ceylon. Express. Rs. a.
Minimum charge ..	1 0	0 8	1 0
Each additional 6 words over 48 in respect of India, each additional four words over 32 in respect of Ceylon ..	0 2	0 1	0 2

The address is free.

Surcharge on telegrams.—A surcharge of two annas or one anna according to the class of telegram "*Express*" or "*Ordinary*" is levied on every Inland "Sent" telegram. This surcharge does not apply to press telegrams nor to telegram to Ceylon.

Foreign Tariff.—The charges for foreign telegrams vary with the countries to which they are addressed. The rates per word for telegrams to countries in Europe, America etc. are as follows:—.

	Ordy. Rs.a.	Defd. Rs.a.	D.L.T Rs. a.
Europe via I. R. C.			
Great Britain and Northern Ireland	0 15	0 7½	0 5
Irish Free State	1 0	0 8	0 5½
Belgium	1 2	0 9	0 6
Holland	1 2	0 9	0 6
Germany	1 4	0 10	0 7
Switzerland ..	1 4	0 10	0 7
Spain	1 4	0 10	..
France	1 3	0 9½	0 6½
Italy City of the Vatican.	1 5	0 10½	..
Other Offices	1 4	0 10	0 7
Norway.—			
Svalbard	1 7	0 11½	..
Other Places	1 4	0 10	0 7
Bulgaria	1 5	0 10½	0 10
Russia	1 5	0 10½	0 7
Turkey	1 5	..	..
Czecho-Slovakia ..	1 5	0 10½	0 7
South Africa via I. R. C.— Zanzibar			
Union of South Africa and S. W. Africa ..	1 15	0 15½	0 8½
America via I. R. C.—			
N. A. Cables.			
Ontario, Quebec, Nova Scotia, etc.	1 11	0 13½	0 9
Manitoba	2 1	1 ½	0 11
Vancouver B.C.	2 3	1 1½	0 12
New York, Boston, etc.	1 11	0 13½	0 9
Philadelphia, Washington, etc.	1 13	0 14½	0 10
Chicago	2 0	1 0	0 11
San Francisco, Seattle, etc.	2 3	1 1½	0 12
Buenos Aires	3 7	1 11½	..
Rio de Janeiro	3 10	1 13	..
Valparaiso	3 7	1 11½	..
Havana	2 5	1 2½	..
Jamaica	3 4	1 10	..

Urgent Telegrams—

Rate double of ordinary rate.

Daily Letter Telegrams—

Minimum charge for 25 words.

Ordinary rate telegrams may be written in Code.

Telegrams are accepted at all Government Telegraph Offices.

Usual rules apply regarding Registration Reply Paid, etc.

Full lists published in Posts and Telegraphs Guide.

Radio-Telegrams.—For radio-telegrams addressed to ships at sea from offices in India or Burma and transmitted *via* the coast stations at Bombay, Calcutta, Karachi, Madras, Port Blair or Rangoon the charge is thirteen annas per word in nearly all cases.

The following are the charges (excluding supplementary charges) for radio-telegrams from Offices in India or Burma transmitted *to ships at sea* through the coast stations mentioned in the preceding paragraph:—

	Total charge per word. Rs. a.
(1) All Government or Private Radio-telegrams, excepting those mentioned in (2) to (4) below ..	0 13
(2) Radio-telegrams to His Britannic Majesty's Ships of War or Ships of the Royal Indian Marine ..	0 8
(3) Radio-telegrams to Spanish or Swedish ships ..	0 12

The sender of a radio-telegram may prepay a reply. He must insert before the address, the instruction "R. P." followed by mention in Rupees and annas of the amount prepaid, *e.g.*, R.P. 7-8. This expression counts as one word.

DAILY LETTER-TELEGRAMS.

Daily Letter-Telegrams in plain language, which are dealt with telegraphically throughout are accepted on any day of the week, and are ordinarily delivered to the addressee on the morning of the second day following the day of booking. They are subject to the conditions prescribed for Deferred Foreign telegrams with certain exceptions as stated below.

The charge for a Daily Letter-Telegram is ordinarily one-third of the charge for a full rate telegram of the same length and by the same route subject to a minimum charge equal to the charge for 25 words at such reduced rate including the indication DLT.

The late fee system does not apply to Daily Letter-Telegrams and such telegrams are not accepted during the closed hours of an office.

On Indian lines Daily Letter-Telegrams are transmitted after Deferred Foreign telegrams.

The only special services admitted in daily letter telegrams are Reply paid, Poste Restante, Telegraph restante and telegraph redirection under orders of the addressee.

Growth of Telegraphs.—At the end of 1897-98 there were 50,305 miles of line and 155,088 miles of wire and cable, as compared with 107,160 miles of line including cable and 587,574 miles of wire including conductors respectively, on the 31st March 1933. The numbers of departmental telegraph offices were 257 and 115 (including 19 Radio offices), respectively, while the number of telegraph offices worked by the Post Office rose from 1,634 to 4,274.

The increase in the number of paid telegrams dealt with is shown by the following figures:—

		1897-98.	1932-33.
Inland ..	Private ..	4,107,270	11,711,350
	State ..	860,382	8,52,069
	Press ..	35,910	679,701
Foreign ..	Private ..	735,679	2,249,685
	State ..	9,896	28,556
	Press ..	5,278	71,894
		5 754.415	15,593,255

The outturn of the workshops during 1930-31 represented a total value of Rs. 10,53,500.

Wireless.—The total number of departmental wireless stations open at the end of 1932-33 was thirty, *viz.*, Akyab, Allahabad, Bassein, Bombay, Calcutta, Cheduba, Chittagong, Delhi, Diamond Island, Jodhpur, Jutogh, Karachi, (two stations), Lahore, Madras (3 stations), Nagpur, Peshawar, Poona, Port Blair, Quetta, Rangoon (4 stations), Sandheads (two pilot-vessels), Sandoway and Victoria Point, of which only Cheduba Port Blair and Victoria Point booked telegrams direct from the public.

Seven of these stations were designated coast stations for communication with ships at sea and ten worked as aeronautical stations in connection with regular air services.

The Duplex high-speed service between Rangoon and Madras continued to work satisfactorily, the wheatstone system being employed generally for this circuit.

Telephones.—On the 31st March 1933 the number of telephone exchanges established by the Department was 317 with 19,025 straight line connections and 3,084 extension telephones. Of these exchanges, 169 were worked departmentally. The number of telephone exchanges established by Telephone Companies was 25 with 35,200 connections.

The total staff employed on telegraphs, telephones and wireless on the 31st March 1933 was 13,500.

Posts and Telegraphs.—The capital outlay of the Indian Posts and Telegraphs Department during and to the end of the year 1932-33 was Rs. 19,37,750 and Rs. 15,82,84,000 respectively. The receipts for the year ended 31st March 1933 amounted to Rs. 10,55,40,000 and charges (including interest on capital outlay) to Rs. 10,97,30,000, the result being a net loss of Rs. 41,90,000.

Sanitation.

The history of the sanitary departments in India goes back for about sixty years. During that period great improvements have been effected in the sanitary condition of the towns, though much remains to be done; but the progress of rural sanitation which involves the health of the great bulk of the population has been slow, and incommensurate with the thought and labour bestowed on the subject. "The reason lies in the apathy of the people and the tenacity with which they cling to domestic customs, injurious to health. While the inhabitants of the plains of India are on the whole distinguished for personal cleanliness, the sense of public cleanliness has ever been wanting. Great improvements have been effected in many places; but the village house is still often ill-ventilated and over-populated: the village site dirty, crowded with cattle, choked with rank vegetation, and poisoned by stagnant pools; and the village tanks polluted, and used indiscriminately for bathing, cooking and drinking. That the way to improvement lies through the education of the people has always been recognised."

Of recent years the pace has been speeded up as education progressed, education developed, and funds were available. In a resolution issued in May 23rd, 1914, the Government of India summarised the position at that time, and laid down the general lines of advance. This resolution (*Gazette of India*, May 25th, 1914) should be studied by all who wish to understand the attitude of the Government of India towards sanitation prior to the passing of the Reform Act of 1919. It will be found summarised in the Indian Year Book of 1922 (page 475 *et seq.*) and earlier editions. One of the greatest changes effected by the Reform Act of 1919 was the transfer of sanitation to the provinces making it a subject directly responsible to local control through Ministers. It is yet too early to attempt to indicate the effects of this change.

The Public Health Commissioner with the Government of India in a general review of health organisation in British India which he laid in January, 1928, before the Interchange Study Tour organised for Medical Officers of Health from the Far Eastern Countries by the Health Organisation of the League of Nations, concluded "that the State effort in regard to Health Organisation in British India is one of no mean importance, that it has evolved over a couple of centuries during which many mistakes in policy must be admitted, that it has provided the Officers and the stimulus necessary for laying the foundations of medical education, that it has tried to uphold the ethical standards of western medicine and that in whichever way it is regarded it is an effort of which no Government need be ashamed." He quoted, the remark of the Government of India in their Resolution of 1914 that "in the land of the ox cart one must not expect the pace of the motor car."

The Public Health Commissioner in his annual report for the year 1925 noted the introduction of the political element into health matters as a result of the Reforms and said that the improvements being introduced before the Reforms were in some provinces now in a fairway to maturing but that in other provinces "with less appreciation of the actual needs so far from adding to the organisation as they have found it have shown a desire to scrap even some of what they originally possessed." But, he says, "though the picture is neither bright nor the future rosy, it is becoming increasingly evident that a considerable section of the Indian community is thinking seriously on these public health problems: amid much futile and destructive criticisms of State and municipal efforts here and there valuable and suggestive criticism can be met with which goes to prove my contention."

India's birth rate in 1925 was nearly twice that of England and Wales, her death rate was twice that of England and Wales and nearly three times that of New Zealand and her infantile mortality rate was nearly 2½ times that of England and Wales and nearly 4½ times that of New Zealand. "The information furnished for the great group of infectious diseases of world import, *i.e.*, plague, cholera, small-pox, yellow fever, typhus, malaria, and dysentery shows (says the Public Health Report already cited) that if we except typhus and yellow fever, India is one of the world's reservoirs of infection for the others and the main reservoir of infection for plague and cholera." The significance of these facts must, adds the Commissioner, be obvious to all who think: "Briefly their implication is that India's house, from the public health point of view, is sadly out of order and that this disorder requires to be attended to. It is not for India to say that so far as she is concerned prevention is impossible. If we think of the effect of sunlight on tubercle ridden children; of the effect of feeding on rickets, scurvy and beri-beri; of the way in which malaria, cholera, yellow fever, dengue, ankylostomiasis and filariasis can be and have been overcome we need have no fear in regard to India provided the necessary measures are put into operation."

The Public Health Commissioner in an address before the annual congress of the Far Eastern Association of Tropical Medicine, held in Calcutta in December, 1927, urged the importance of instituting a Central Ministry of Health which should be charged with the functions of co-ordinating the policies and activities of the departments concerned in the several provinces and with keeping them abreast of scientific progress. There is at present no public Health Act for the whole of India, nor under existing administrative arrangements is one immediately possible, but the desirability of the Central Ministry of Health and of such an Act is likely to be urged in the course of the revision of the Constitutional Reforms now in progress.

The Commissioner in his annual report to Government for 1927 gave at the outset the following text for thought "Whether the institution of a Ministry of Health, which many of us think is long overdue for the Indian Empire, would accelerate progress is a matter of opinion; but there can be little doubt that such progress must depend not on a haphazard programme or on the fulfilment of an annual routine of measures sanctified by tradition but rather on the acceptance of such cardinal principles as have been laid down by the Chief Medical Officer of the British Ministry of Health in his 1927 report and by a genuine attempt to work to these. Sir George Newman points out that 'Nothing is more certain than the fact that the physical advancement and health of mankind is dependant not upon a doctor's stunt here or a sanitary institution there but upon the whole social evolution of the people. Now, these desired ends are not reached merely by announcing them, still less by leaving things to chance, drift or fate. They can in any case only be partly reached at all without foresight, organisation and expenditure.' He proceeds to inculcate four basic principles which it is necessary for any modern State to work to and which are as follows:—

(a) ascertainment and accurate registration of the data obtainable;

(b) the establishing of a definite standard to work to, which should be based on health and physiology and not on disease or pestilence;

(c) the study of the character and incidence of disease, its causes and predisposing conditions, its mode of spread, its social factors which increase or reduce it and the means of its treatment and prevention;

(d) the establishment of a national organisation by the assent of public opinion, such organisation being an index of the aspirations and enlightenment of the people.

It is for consideration how far we in India are now working to these basic principles or are likely to in the future and whether our existing public health organisation is best suited to enable us to do this."

The following table of vital statistics is taken from the Public Health Commissioner's latest annual report:—

Province.	Birth Rates (per mille).		Death Rates (per mille).	
	1931.	Previous 5 years.	1931.	Previous 5 years.
Delhi	42.2	46.5	23.7	35.3
Bengal	27.8	26.2	22.3	22.7
Bihar and Orissa	33.9	37.0	26.6	26.5
Assam	28.1	31.3	18.7	22.2
United Provinces	35.6	36.2	27.0	24.7
Punjab	42.7	38.1	26.0	25.7
N. W. Frontier Province	30.7	26.9	20.2	19.7
Central Provinces and Berar	44.3	46.0	35.5	34.2
Madras	35.5	37.5	23.7	25.3
Coorg	24.5	21.1	23.8	29.1
Bombay	36.1	37.5	23.8	28.3
Burma	26.5	26.8	17.4	29.9
Ajmer-Merwara	34.0	28.8	30.1	25.0
British India	34.3	35.7	24.9	26.0

Chief Causes of Mortality.—There are three main classes of fatal diseases: specific fevers diseases affecting the abdominal organs, and lung diseases, Intestinal and skin parasites, ulcers and other indications of scurvy widely prevail. The table below shows the number of deaths from each of the principal diseases and from all other causes in British India and death rates per 1,000 during 1931:—

Mortality during 1931.

D—*Deaths.* R—*Ratio per mille.*

Province.		Cholera.	Small-pox.	Plague.	Fevers.	Dysentery and Diarrhœa.	Respiratory Diseases.	All other causes.
Delhi	D.	61	26	1	7,026	513	4,348	3,111

Statistical health reports for all India are always, inevitably submitted are belated owing to the number of provinces from which returns have to be collated.

The Public Health Commissioner in his most recently published annual report, which concerns the year 1931, brings to notice certain leading facts. He shows that the birth-rate for the year was 44.3 per mille of the 1931 census population as compared with 33.4 p.m. of the estimated population for 1930 and 35.7 p.m. for the preceding quinquennium. He shows that the death rate was 24.8 p.m. of the 1931 census population as against 24.5 p.m. on the estimated population for 1930 and 26.0 p.m. for the preceding quinquennium. The infantile mortality rate, *i.e.*, the death rate of infants below one year old per thousand live births, was 178.8 as against 180.8 in 1930 and 177.6 in the preceding quinquennium. The highest birth rate was recorded in the Central Provinces where the figure was 44.1 per mille (43.5 p.m. in 1930 and quinquennial average 46.0), and the lowest in Coorg, where it was 24.5 p.m. (25.7 p.m. in 1930 and quinquennial mean 21.1).

The Public Health Commissioner, dealing specially with the high rate of infantile mortality, mentions that statistics of the causes of these early deaths are not recorded but says that it is generally known that premature birth, convulsions, fever, malnutrition, respiratory diseases and bowel complaints are the main causative features. In a special chapter dealing with municipal vital statistics, he shows that to a considerable extent unskilled maternity service is responsible for high infant mortality rates in municipalities and that steps have been and are being taken in these areas to eliminate the risks.

Dr. Ruth Young, Director of the Maternity and Child Welfare Bureau of the Indian Red Cross Society, in some notes contributed to the Public Health Commissioner's report on this subject, says that "One is forced to a monotonous repetition of the statement that progress (in maternity and child welfare work in India) is very slow, that local bodies and even provincial governments evince little interest in the work and have no convictions about it sufficient to prompt them to spend money on such a subject." On the basis of figures specially collected in the Madras Presidency, she says in regard to that field of international health province that "trained health workers are almost absent and the number of midwives available work out at about one for every 1,300 cases of child-birth per annum..... One medical woman in about 7,000 cases is all that is available as a consultant in labour cases. Work is almost entirely unsupervised and without expert guidance." Dr. Young adds, "The difficulties attending the provision of trained attendants for women during child-birth do not decrease as the years go by. The problem is such a gigantic one that it tends to induce a feeling of despair." One of the difficulties of training midwives is the comparative uselessness of employing medical men for the purpose, because "such practitioners have not the opportunities to give practical instruction on actual deliveries to the midwives and training which consists mainly of lectures is quite unsuited to such pupils," while "the number of medical women can spare time to carry on such work is very small and very few also have the inclination to do it". A satisfactory feature of the position is that women are increasingly taking advantage of hospitals and maternity homes for their confinements.

The Health Commissioner shows in regard to the general statistics that the registration of cases of death in India is still very defective "and is likely to remain so." The Commissioner once more reiterates the demand that he has so often made for strengthening the central health organisation of India. He emphasises afresh the catastrophic nature of disease visitations in India, more especially those of cholera, smallpox and plague, and the paramount necessity for preserving not only the public health organisation which has hitherto existed, but also the principle of its skilled direction by competent and well experienced hygienists. He shows that as a result of the retrenchment campaign "the whole of the central health work of the Government of India has now to be dealt with by the Public Health Commissioner unaided". He adds "One must bow to the penalties of financial stringency more especially if this be on a world-wide scale; but the voice of intelligent Indian opinion must sooner or later be heard on this both inside and outside the legislative chambers. Such opinion will surely demand an organisation which is capable of framing a public health policy for the country and of seeing that it is carried through. It will surely wish to see to it that the personnel for this is adequate and to this end its political representatives must be prepared to vote such grants as is necessary for the expenditure.

No big health policy for this country which is to be worthy of the name can be elaborated and worked to without the necessary expert administrative machinery which has its price like any other commodity."

Referring to the impression which persists in certain quarters that the transfer of executive control of public health to the provinces has removed the need for adequate central health organisation, he points out how absurdly inconsistent this is with the facts of the position, one which he uses for illustration being the obligations of the Government of India in the field of International health.

The Public Health Commissioner concludes: "The great hope of the future must lie in the development of health education and, as a corollary, the gradual appreciation by the educated population of the value of health and so the creation of public health conscience. Until this has happened there will be little hope for the exercise of that intelligent pressure on provincial Governments for judicious expenditure on certain health measures which is not only justifiable but necessary.

THE HEALTH OF THE ARMY.

General Health statistics of the British Army in India during the year 1932.

1929	Average Strength.	Admissions.		Deaths.		Invalids sent Home.		Invalids Discharged in India.		Invalids finally discharged in United Kingdom.		Average Constantly sick.	
		No.	Ratio per 1,000.	No.	Ratio per 1,000.	No.	Ratio per 1,000.	No.	Ratio per 1,000.	No.	Ratio per 1,000.	No.	Ratio per 1,000.
Officers ..	2,295	1,063	463.2	15	6.54	63	27.43	..	..	..	..	38.75	16.88
British Other Ranks.	55,336	32,177	581.2	164	2.96	400	7.39	..	..	..	..	1,458.31	26.35
British Other Ranks' wives	4,317	1,262	292.3	18	4.17	57	13.20	..	..	..	..	41.62	9.64
British Other Ranks' wives —parturition	..	863	..	..	..	..	..	..	..	..	..	33 21	..

Others ..	..	2,345	..	440	..	38	..	..	..	..	..	86·14	..

Among officers of the British Army in India 463.2 per thousand of strength were admitted to hospital during the year compared with 420.4 in 1931. There were 15 deaths, giving a ratio of 6.54 per thousand, compared with 18 and 7.76 in 1931. The average constantly sick in hospital was 38.75 or 16.88 per thousand of strength as compared with 15.11 in the preceding year. The total constantly sick, in hospital or out of hospital, on account of disease and injury was 27.94 per thousand.

Of British soldiers 32,177, or 581.5 per thousand were admitted to hospital compared with 647 per thousand in 1931 and 580.5 per thousand in 1913. There were 1,646 soldier deaths or 2.96 per thousand of the strength compared with 2.76 per thousand in 1931. The most important causes of mortality among soldiers were :—

Local injuries	27
Pneumonia	27
Enteric group of fevers	14
Heat stroke	12
Appendicitis	11
Heat exhaustion	6

The number, sent home as invalids was 409 or 7.39 per thousand of the strength, compared with 544 or 9.74 per thousand in 1931.

Among women and children (British Other Ranks) 1,262 women or 292.3 per thousand of the strength were admitted to hospital compared with 1,395 or 334.4 per thousand in 1931. Of the children, 1,999 or 299.1 per thousand of the strength were admitted to hospital, compared with 1,896 or 286.4 in 1931.

The principal cause of sickness among British troops was malaria of which there were, 4,654 cases, a decrease of 1,628 compared with 1931. The year's report by the medical authorities remarks, "I n 1932, in India, the British troops lost about 32,568 days spent in hospital on account of malaria alone—a matter of serious economic importance to the State. The hard fact is that we know well how to deal with the malaria problem ; but we have not the funds with which to put our knowledge to adequate practical use."

HEALTH OF THE INDIAN ARMY FOR THE YEAR 1932.

	Average strength.	Admissions.		Deaths.		Invalids sent to U. K.		Invalids discharged in India.		Average constantly sick.	
		No.	Ratio per 1,000.	No.	Ratio per 1,000.	No.	Ratio per 1,000.	No.	Ratio per 1,000.	No.	Ratio per 1,000.
Officers	2,175	700	321·8	15	6·90	26	11·95	..	..	24·36	11·20
Indian Ranks ..	121,013	52,017	429·8	305	2·52	..	..	783	6·47	1,902·33	15·72
Followers	28,248	7,525	266·4	109	3·86	..	..	..	..	266·35	9·43
Others *	..	2,094	..	25	..	..	..	73	..	..	..

* Includes Reservists, Indian Territorial Force, Royal Indian Marine, Indian State Forces R. A. F., Civilians and Pensioners.

The admission rate of officers sick in hospital for 1932 was 321.8 per thousand of strength as compared with 367.4 in 1931. Among soldiers 52,017 or 429.8 per thousand of strength were, admitted to hospital, compared with 451.3 per thousand in 1931. There was thus a decrease of 21.5 per thousand on the 1931 figures. The death rate among Indian soldiers during 1932 was 2.52 per thousand as against 2.96 per thousand in 1931.

LEPROSY IN INDIA

It is exceedingly difficult to give anything approaching an accurate estimate of the total number of lepers in the Indian Empire to-day. In 1921, when a Census was made, leprosy was regarded as an *infirmity* like blindness, insanity and deaf-mutism and the supposed number of lepers was tabulated along with these. The number counted was 102,513 as against 109,004 in 1911. But it was recognised doubtful if this figure represented anything more than the more advanced cases and that possibly a majority of this number were the begging and pauper lepers who are seen all over the country. Dr. E. Muir, M.D., F.R.C.S., the Leprosy Research Worker at the Calcutta School of Tropical Medicine, said that "recent figures obtained from a carefully conducted but limited survey, tend to confirm the computation that there are roughly from a half to one million people in India suffering from leprosy."

Early in the year 1924, the British Empire Leprosy Relief Association was constituted in England with H. R. H. The Prince of Wales as Patron, the Viscount Chelmsford as Chairman of the General Committee and H. E. the Viceroy of India as one of the Vice-Presidents. Following its formation and in view of the good results being obtained from the newest treatment of leprosy, H. E. the Viceroy felt that the time was auspicious for the inauguration and carrying on of an earnest campaign with the object of ultimately stamping out leprosy from India.

His Excellency invited certain gentlemen representing various interests to form an Indian Council of the Association, which he formally inaugurated at a public meeting in Delhi on the 27th January 1925.

A general appeal for funds in aid of the Association was issued by His Excellency the Viceroy on the date of the inauguration of the Indian Council which was closed after a year with realizations amounting to over Rs. 20,00,000 which was invested in the end of 1928. The investments amounted to Rs. 20,63,065 yielding an annual revenue of over Rs. 1,22,000.

In the scheme of anti-leprosy campaign which the Association put into operation, the respective parts to be played by the Central and Provincial Committees in carrying forward the aims and objects of the Association are definitely apportioned. The Central Committee is vested with the task of promoting research, of preparing and publishing propaganda material, arranging for the training of doctors in the diagnosis and treatment of leprosy according to the latest methods and of conducting an expert survey of selected areas for the ascertainment of the facts regarding the incidence and endemicity of leprosy. Measures for the accommodation and treatment of leprous patients and other schemes of purely local interest are to be the concern of provincial committees as agents of the Indian Council in the Provinces.

The policy and principles of the British Empire Leprosy Relief Association, Indian Council, with regard to provincial committees are expressed in its "Memorandum on the method of conducting the anti-leprosy campaign in India" which was published in 1926. This document sought to bring out the following main points which according to the latest scientific researches should be the basis upon which all efforts ultimately to eradicate leprosy must rest :—

(1) Pauper lepers form only a small fraction of the leper population, and the disease is common among all classes of the community.

(2) Segregation is not the most appropriate method of dealing with lepers, for

(*a*) financially it would be impossible;

(*b*) any attempt to impose forcible segregation would drive patients, particularly those who are suffering from the earlier stages of the disease, to conceal their misfortune, and, as has been the case where such means have been adopted, only the more advanced and obvious lepers would be segregated.

(3) The majority of the advanced cases are not highly infectious and are less amenable to treatment, while the early cases in which the disease has made but little outward manifestation, can be controlled by treatment.

(4) The strongest hope of stamping out the disease lies in providing facilities for the treatment of early cases.

The Indian Council, therefore, while it did not desire to minimise the usefulness of homes and asylums for the care of lepers, strongly recommended that the efforts of the Provincial Committees should, for the present at least, be concentrated upon the establishment of dispensaries to serve the following objects :—

(*a*) to induce patients to come forward at an early stage in the hope of recovery instead of hiding their malady till it becomes more advanced, more infectious and less remediable; and so

(*b*) to shut off the sources of infection as the number of infectious cases will continually tend to diminish and the opportunities for infecting the next generation will become fewer.

The Governing Body of the Indian Council in their report for the year 1933, show that the Association's main work during the completed nine years of its life has been organisation and planning and the outlining of a programme of work varied by the selection of the most fruitful soils for experimentation in methods of work. One valuable product during theat period is the fact that "the leper is becoming less prone to hide his disease and there is an increase of general interest in the subject."

There are now seventeen provincial branches, including one in Mysore State and each of them has established treatment centres for leprous patients. In Assam, for instance, the number of clinics rose from 81 in 1932 to 145 at the end of 1933. Many clinics in different parts of India report absolute cures of the disease.

His Excellency the Viceroy is the President of the Indian Council, Maj. Gen. C. A. Sprawson, C.I.E., K.H.P., I.M.S., Director General of the I.M.S. the Chairman of the Govering Body, Sardar Bahadur Balwant Singh Puri, the Honorary Secretary and Sir Ernest Burdon, Kt., C.S.I., C.I.E., the Honorary Treasurer.

BLINDNESS IN INDIA.

All over the East, and in fact in most tropical and sub-tropical countries, blindness is very prevalent, and only of recent years have people begun to realise that much of this blindness can be relieved, and still more of it, if not most of it, could, with proper measures taken, be prevented. In Egypt, renowned for its sufferings from blindness, it was a gift of some £43,000 made by Sir Ernest Cassel at the beginning of this century that was the initiation of that fine ophthalmic service, which began under the guidance of Mr. MacCallen, has now spread all over the country and gives medical treatment to three or four hundred thousand patients a year. Northern Africa, Turkey, Persia, India and China are all countries where there is a very high incidence of blindness and suffering from eye disease, and where western medicine has not yet penetrated sufficiently deeply to make much impression on the mainly rural and illiterate populations. There is a great "trachoma belt" extending from China into Eastern Europe, stopped only from spreading all over the West by the higher standard of living, sanitation and cleanliness which the European nations have attained.

India is in this great **Blindness Belt.** According to the last census returns there are 480,000 totally blind persons in this population of more than 300 millions. That is an incidence of 1½ totally blind to every thousand of the population. But the census figures are notoriously defective, and in several districts a special count has been made of the totally blind, and wherever this has been done, the census figures have been found to be much too low. Thus in the Nasik district an incidence of at least 4.38 per thousand was found as against the census figure of 1.74. In Ratnagiri an incidence of 1.5 was found as against the census figure of 0.7; in Bijapur 2.6 as against 0.7; in the United Provinces a Deputy Commissioner had a count made and found no less than 9 per thousand. In Palanpur 7 per thousand was found. If, as is not unlikely, this sort of error of underestimation in the census report is general, then it is not unreasonable to suppose that the real number of totally blind persons in India is more like 1½ millions than the half million shown in the census returns.

These are the figures for total blindness and they by no means give the full picture, for they include only totally blind of both eyes and say nothing of the much greater number who, from neglected eye diseases, are partially or even nearly blind, and whose happiness and efficiency are thus greatly impaired. The term "blindness" has a different interpreta-

tion in every country. In a report on the Prevention of Blindness, published by the League of Red Cross Societies these different interpretations are shown. In the United States blindness is defined as "inability to see well enough to read even with the aid of glasses; or for illiterates, inability to distinguish forms and objects with sufficient distinctness"; and in Egypt a person is accounted blind who cannot see fingers at a distance of one metre. If such persons were counted in our statistics of total blindness in India, there is little doubt that the figure would be very much larger than those indicated above. Recently the **All-India Blind Relief Association** has made an analysis of a very large number of patients attending its camps and dispensaries, and has found that among these patients for every totally blind person there are three with more or less damaged vision, the result of eye disease. It appears not unlikely that the true ophthalmic condition of India would be represented by figures showing one and a half million totally blind persons, and in addition to these four and a half million with more or less impaired eyesight.

"No one," says Col. R. H. Elliot, late of the Madras Ophthalmic Hospital, writing in the British Journal of Ophthalmology of May 1919, "who has not worked in India can form any conception of the enormous amount of preventable and curable blindness which is laying its shadow over the health, happiness and usefulness of this great portion of our Empire", and the same writer in another place has said:—"It is difficult for anyone who has not had first hand experience of medical practice in the East to realise the state of things out there granular ophthalmia claims its victims by the ten thousand, whereas it is really a disease which, when properly treated at an early stage, should not cause the loss of a single eye. The neglect of patients suffering from small-pox and other febrile conditions leads to a vast amount of blindness, while the treatment of mild ocular affections by irritant drugs is probably one of the most evil factors that spread blindness broadcast throughout the land. Large numbers of men and women suffering from glaucoma, from cataract and from other curable diseases, are allowed to hide in their villages like wounded animals, waiting only their release by death. This is not an overdrawn picture. It is a statement of cold, hard, cruel facts, well known to everyone who has practised or is practising medicine in the East."

In an editorial on the Ophthalmic work in Egypt and the possibilities of similar work in India, the *Indian Medical Gazette* (March 1923) remarks:—"It would seem worth while for the Government of India to examine the working of this splendid organisation, for, in spite of the fact that workers in India have always been in the front in advances in ophthalmology, there has been little organised work in ophthalmic research except in Madras; even there the work has been done by men who have already a large amount of routine work to perform. India as a whole owes its position in the ophthalmic world entirely to the energies of individual enthusiasts, whose names are so well known that it is not necessary to mention them. What has been possible in Egypt should also be possible in India and it would appear that the first step should be the establishment of **Schools of Ophthalmology,** in places like Madras and Calcutta where ample facilities exist. At these schools advanced teaching and research in ophthalmology would be carried out, and the next step would be to organise a system of ophthalmic relief at selected centres all over India." (There are now schools of ophthalmology at Madras, Bombay, Calcutta, and Lahore).

Again in an editorial from the same journal (Sept. 1929) the following statements are made—"What is wanted is some large organisation covering the whole of this sub-continent and aiming chiefly at **Prevention rather than treatment**.....In brief what the position now calls for is an all-India movement..... Obviously the main question is one of general public health. Public health is a transferred department, but if the Health Department of the Government of India interests itself in the matter in co-operation with missionary and voluntary movements, we do not despair of seeing an all-India organisation created and built up."

Associations known as **"Blind Relief" Associations** have been working for several years in Western India, in conjunction with Government hospitals, to alleviate this affliction of blindness. The number of eye doctors in India is notoriously small and those there are stay mostly in the large towns. The Associations work by means of travelling hospitals, which bring relief to the villages in the rural areas. They also work by means of trained village workers, whose duty it is to find out the "hidden blind" and get them to the medical centre for relief; to find out cases of small-pox (a constant source of blindness in children); to inspect new born children for the detection of ophthalmia neonatorum; to keep registers of all blind and partly blind persons and persons suffering from eye disease; and to treat in the villages simple cases of conjunctivitis or sore eyes. Since their inception the Associations have been the means of restoring sight to thousands of blind people and of preventing blindness in many thousands more. The work is capable of indefinite extension and the need for some such organisation has been shown. In 1917 Colonel Elliot wrote as follows, "To me it seems that the duty and privilege of undertaking this work lie with the State, and that no sum spent on such a task could be too large. Unfortunately this is not the view that has been taken by those in authority and consequently we see the spectacle of private enterprise endeavouring to undertake this colossal task.....It is at least permissible to voice an admiration for the stand taken by Mr. Henderson. [Founder of the Blind Relief Association movement, who began the work in 1913]. The best that one can hope for his endeavour is that he will succeed in arousing the conscience of educated Indians to the needs of their less fortunate countrymen, and that this little cloud, no bigger than a man's hand, will end in a monsoon of active effort". As the above was written in 1917, it is not altogether applicable to the criticism of Government of to-day, as it has already been shown that there are now several schools of ophthal-

mology in India, and the Government eye hospitals are doing tremendous work; but these hospitals are situated in the large towns and cannot possibly by any stretch of imagination, give relief to the millions living in the rural areas.

The All-India Blind Relief Association.—(The Green Star Society) exists to co-ordinate and centralise the various Associations in the mofussil and to extend their work. It is under the patronage of the Governor of Bombay, and has for its life President, Mr. C. G. Henderson (late I. C. S.) who founded and managed for many years all the branch Associations working in Western India. It is affiliated to the International Association for the Prevention of Blindness, which has its headquarters in Paris and was formed on September 14th, 1929, under the auspices of the League of Red Cross Societies and the American Society for the Prevention of Blindness. The Organising Secretary is R. Crawford Hutchinson, The Town Hall, Bombay.

A beginning has been made, but it is only a beginning, and it is but the fringe of this vast problem that has been touched. The schools of ophthalmology in India, are turning out ophthalmic surgeons who are crowding their profession in the cities and large towns. A scheme for taking these men and placing them in selected centres has been worked out, all that is required is monetary help. The cost is *minimal* and here is an opportunity for the generous and public spirited to emulate Sir Ernest Cassel, and give to India an eye service of which India and the whole world could be proud, and to the peoples of India that which to them is probably their most precious possession—their sight.

THE MATERNITY AND CHILD WELFARE MOVEMENT.

Amongst the most pressing problems of India's health is that presented by the appalling maternal and infant mortality. The figures for maternal mortality are not accurately known, but they are certainly not less than 10 per thousand live births, often more. It has been calculated that every year no fewer than 2 million Indian babies die, while many others survive only to grow weak and feeble from unhygienic surroundings during infancy. A noteworthy feature has been the further progress of the infant welfare movement, which owes much to the All-India Maternity and Child Welfare League initiated by Lady Chelmsford and also to the Indian Red Cross Society, which aims at gradually establishing a network of child welfare centres in most of the larger towns in India. The amalgamation of these two Bodies which has taken place, forming the Maternity and Child Welfare Bureau, will undoubtedly increase and develop the work. In all the great centres of population, word is now being done for the training of midwives, for the instruction of mothers and for the care of babies. Training centres for Indian and Anglo-Indian women have been opened in order to spread the elements of infant hygiene to other parts of India. Most hopeful sign of all, Indian ladies are beginning to interest themselves in this work in large numbers. But such is the magnitude of the field, that a consistent widespread effort on a scale hitherto impossible must be undertaken, if any appreciable reduction is to be made in the appalling mortality of young children.

Centres of Activity are organised on a provincial basis, though the various provinces differ considerably in the nature of the work undertaken and the amount of organisation displayed. It is noteworthy that the work is most co-ordinated and most energetically carried on where there are persons appointed under the Directors of Public Health whose special duty it is to foster Child Welfare activities.

The care needed by the wives and children of sepoys in the Indian Army is being increasingly realised, and nowhere more than in the units themselves. The result has been, in the last few years, the opening of much work in this direction. Much of it is purely medical work, which, in the absence of families hospitals for the Indian soldiers, is a necessity. But genuine child welfare activities are also present in some centres many of them assisted by the M. & C. W. Bureau Indian Red Cross Society which has undertaken the organising work in place of the Lady Birdwood Army Child Welfare Committee. A remarkable feature of this movement is the keenness of the men themselves to aid it, realising as they do the benefit to their own women and children. There are now very few cantonments where some work of this kind is not going on.

So far all the schemes have devoted their attention to educating women in the elements of mothercraft and attempting to preserve infant lives and improve child health. In a land of so many languages and superstitions progress will necessarily be slow and India has yet to decide whether she will work intensively and try to rear a few well developed children as far as adolescence or extensively attempt to bring a large number of infants through the first critical months, only to have them perish at a later stage from the many ills that childhood is heir to in a land of great poverty, undernourishment, epidemics and famine. In Western lands the Child Welfare Movement has no more marked characteristic than its inability to stop expanding. Its ramifications know no bounds. Its inevitable corollaries are endless, and like the banyan tree it will no doubt in India also develop innumerable fresh roots, medical supervision, dental clinics, better housing, open air playgrounds, etc., etc. But these are not yet. Its preliminary task is to educate the mothers of India to the enormity of allowing two million babies to perish every year and to convince them of the equally important fact that a high death rate always spells also a high damage rate of sickly, under-developed, incompetent citizens.

INDIAN RED CROSS SOCIETY.

When the war first broke out, what is generally termed Red Cross work was undertaken in India and Mesopotamia by the St. John Ambulance Association and by a number of provincial organisations working on independent lines. From August 1916, the central work was taken over by the Indian Branch of the Joint War Committee of the Order of St. John of Jerusalem and the British Red Cross Society. The final report of that Committee shows that up to June 1920 its total receipts amounted to Rs. 1,77,85,716 of which some 17 lakhs had been contributed by the British Red Cross Society. It had spent about 67 lakhs in Mesopotamia, nine lakhs on the Afghan War and Waziristan Expedition; in Mesopotamia and India combined it had spent on Red Cross objects in all about 117 lakhs.

It closed its career in June 1920 under the following circumstances. In the summer of 1919, an invitation had been received to join the International League of Red Cross Societies, having for its object the extension of Red Cross work in the sphere of purely civil activity. Though there was then no formally constituted Red Cross Society in India, the invitation was accepted, thus giving India a distinct position in a world-wide League of humanitarian societies. A Bill to constitute an Indian Red Cross Society was introduced by Sir Claude Hill in the Imperial Legislative Council in March 1920, and duly passed into law as Act XV of 1920. This Act handed over the balance of the Joint War Committee to the new Society, and authorised it not only to direct the utilization for war purposes of the capital funds at its disposal but also to devote the interest, as far as possible, for civil purposes. As contemplated in the Act of Constitution of the Society, its activities are completely decentralized, and are being carried on through twenty-two Provincial and State Branches under which there are numerous sub-branches.

The objects on which the funds of the Society may be spent are—

1. The care of the sick and wounded men of His Majesty's Forces, whether still on the active list or demobilised.

2. The care of those suffering from Tuberculosis, having regard in the first place to soldiers and sailors, whether they have contracted the disease on active service or not.

3. Child welfare.

4. Work parties to provide the necessary garments, etc., for hospitals and health institutions in need of them.

5. Assistance required in all branches of nursing, health and welfare work, ancillary to any organisations which have or may come into being in India and which are recognised by the Society.

6. Home Service Ambulance Work.

7. Provision of comforts and assistance to members of His Majesty's Forces, whether on the active list or demobilised.

The Society has five grades of subscribing Members, namely, Honorary Vice-Presidents, Patrons, Vice-Patrons, Members and Associate Members. Their respective subscriptions are Rs. 10,000, Rs. 5,000, Rs. 1,000, Rs. 12 annually or a consolidated payment of Rs. 150, and anything between Re. 1 and Rs. 5 annually or consolidated payment of Rs. 50. At the end of 1933 there were 12,500 adult members of these various grades.

To stimulatel nterest in the aims and objects of the Society amongst the future generations a Junior Red Cross movement has been instituted which embraces the student population. The Punjab Provincial branch has taken the lead in furthering this movement. Other provinces are now following suit and at the end of 1931 the number of members was 252,941.

Constitution.—His Excellency the Viceroy is President of the Society. The Managing Body ordinarily consists of a Chairman to be nominated by the President and 25 members of the Society of whom 12 are the Vice-Presidents nominated by Provincial or State Branches 8 elected by the Society at the Annual General Meeting from among the members of the Society and 5 nominated by the President.

The present Chairman of the Managing Body is Sir David Petrie, Kt., C.I.E., C.V.O. C.B.E., and the Organising Secretary, Miss Norah Hill, A.R.R.C.

Finances.—The operations of the Joint War Committee were brought to a close in June 1920 with a capital investment of the face value of Rs. 56,33,000 and Rs. 8,01,500-8-6 in floating and fixed deposit accounts. The Society has since invested further funds in various securities and its finances at the end of December 1933, stood at a capital investment of the face value of approximately Rs. 67½ lakhs. The income derived from the capital of the Society, (which is 3¾ lakhs at present) after providing for certain liabilities of the Central Society, is distributable under the Act to the Provincial Branches in proportion to their contributions to the Central "Our Day" Fund.

St. JOHN AMBULANCE ASSOCIATION.

(Indian Council.)

The St. John Ambulance Association was founded in 1877, by the Order of the Hospital of St. John of Jerusalem in England, and has for its objects:—

(*a*) The instruction of persons in rendering First Aid in cases of accident or sudden illness and in the transport of the sick and injured;

(*b*) The instruction of persons in the elementary principles and practice of nursing, and also of hygiene and sanitation, especially of a sick room;

(*c*) The manufacture, and distribution by sale or presentation, of ambulance material, and the formation of ambulance depots in mines, factories, and other centres of industry and traffic;

(*d*) The Organisation of Ambulance Corps, Invalid Transport Corps, and Nursing Corps;

(*e*) And generally the promotion of instruction and carrying out of works for the relief of suffering of the sick and injured in peace and war independently of class, nationality, or denomination.

An Indian Council of the Association was constituted on a regular basis in 1910. It has since issued over 200,000 certificates of proficiency in First Aid, Home Nursing, Home Hygiene and Sanitation and over 10,000 tokens such as Vouchers Medallions, Labels and Pendants for special proficiency in those subjects. The object of the Association is not to rival, but to aid, the medical man, and the subject-matter of instruction given at the classes qualifies the pupil to adopt such measures as may be advantageous pending the doctor's arrival, or during the intervals between his visits.

During the year 1933 22,853 persons attended 1,583 courses of instruction in First Aid, Nursing Home, Home Hygiene and Sanitation and of these 13,957 qualified for the Association's certificates: *i.e.*, 12,869 in First Aid, 584 in Home Nursing, 451 in Hygiene and 53 in Sanitation. A new course, Domestic Hygiene and Mothercraft, introduced in 1932 has not made much headway. To popularise Home Nursing, and Domestic Hygiene and Mothercraft courses among young girls and women special propaganda was stated. Steps were taken during 1933 to arrange first aid courses for the personnel of flying clubs, but the response was poor.

The Association has five grades of members, namely, Patrons, Honorary Councillors, Life Members. Annual Members and Annual Associates. Their respective subscriptions are Rs. 1,000, Rs. 500, Rs. 100, Rs. 5, and Rs. 2.

The income of the Indian Council at headquarters consists primarily of interest on securities, a fixed annual grant from Government, fees for certificates and membership subscriptions. The total income for 1933 was Rs. 17,897, a more or less normal figure. Management expenses amounted to Rs. 22,413. After adjusting assets and liabilities outstanding the revenue account for 1933 showed a loss of Rs. 6,305. The Council was able to carry on by taking a loan of Rs. 7,000 from the Indian Red Cross Society and by buying much less stores than it sold, the balance of stores stock thus being reduced by Rs. 11,000. The Council realise that the financial position and its maintenance by temporary expedients is unsatisfactory.

Their Excellencies the Viceroy and the Countess of Willingdon and His Excellency the Commander-in-Chief as President, Lady President and Chairman, respectively, with 17 members form the Indian Council. The general business of the Indian Council is conducted by an Executive Committee of which the Hon'ble Sir David Petrie, Kt., C.I.E., C.V.O., C.B.E., is the Chairman, Miss Norah Hill, A.R.R.C., the General Secretary, and Sir Ernest Burdon, Kt., C.S.I., C.I.E., I.C.S., the Honorary Treasurer.

INSANITY AND MENTAL HOSPITALS IN INDIA.

The accommodation for the treatment in British India of persons who suffer from mental disorders is still very inadequate. In the Indian States, the condition of affairs is even worse, for, with the sole exception of Mysore State which has a small and highly archaic "mental hospital" at Bangalore, there are no mental hospitals in existence so that persons suffering from all forms of mental disease are confined in the Jails where, of course, no provision exists for any kind of treatment. According to the last Census (1921) out of a total population of 318,942,480 (India and Burma) there are 88,305 persons insane, making a proportion of insane to sane of 3 per every 10,000. In the United Kingdom the proportion of insane to sane is roughly 40 per 10,000, while in New Zealand it is as much as 45 per 10,000. In reviewing these figures it must be borne in mind that those of the United Kingdom and New Zealand include the "feeble-minded" an item that is not included in the figures for British India.

INDIA.

Provinces, States and Agencies.	General population.			Insane population.		
	Male.	Female.	Total.	Male.	Female.	Total.
Provinces under British Administration.	139,243,123	131,707,310	270,950,433	44,673	28,234	72,907
States and Agencies ..	24,752,431	23,239,616	47,992,047	9,478	5,920	15,398
Total for all India ..	163,995,554	154,946,926	318,942,480	54,151	34,154	88,305

For the care of the 88,305 insanes of India and Burma there exists accommodation in mental hospitals for 6,750 hence only one person in ten out of the total insane population can obtain accommodation in institutions which exist especially for their care and treatment.

The following table gives the number of mental hospitals in each province during 1927, the total population of each institution and the number discharged cured and died :—

Province.	No. of Mental Hospitals.	Admitted and readmitted during the year	Total Population of Mental Hospitals.			Discharged cured.	Died.	Daily average.		Criminal Lunatics.
			Males.	Females.	Total.			Strength.	Sick.	
Assam	1	66	410	95	505	21	47	438·47	59·35	246
Bihar and Orissa ..	2	364	1,535	398	1,933	206	53	1,604·49	74·68	614

Total ..	18	3,046	..	..	11,040	..	636	8,305·67	656·71	2,601

It will be observed that there is now no mental hospital in Bengal. Insanes from this province are treated in one or other of the two mental hospitals at Ranchi. All Mental hospitals are under the direct control of the Provincial administrative medical officers except the European Mental Hospital at Ranchi which is controlled by a Board of Trustees presided over by the Commissioner of Chota-Nagpur. The socalled "Central" Mental Hospitals, that is to say, the Mental Hospital at Madras, North Yeravda (Bombay), Lahore (Punjab), Agra (United Provinces of Agra and Oudh) and Rangoon (Burma), as well as the two Mental Hospitals at Ranchi (one for Europeans and Americans and one for Asiatics and Africans) are administered by whole-time medical officers who are usually trained alienists. The Administration of the remaining Mental Hospitals in British India and Burma lies with the Civil Surgeon of the locality in which they happen to be situated. It is probably true to state that only one Mental Hospital in the whole of India can claim any pretension to be up-to-date as regards organisation, staffing and equipment and that is the Mental Hospital for Europeans at Ranchi. All the others are for the most part over-crowded and under-staffed, thus rendering anything approaching treatment on modern lines out of the question. The only province in India which has so far displayed some appreciation of the importance of bringing the prevention and treatment of mental disorders into line with conditions in civilised countries is Madras. The local Government of this province has achieved a notable advance in its attitude towards mental disorders by providing, in the construction of the new General Hospital at Madras, accommodation for the treatment of early cases of mental diseases.

As regards the incidence of insanity among the various races of India as well as the incidence of insanity in relation to occupation, no reliable information is available in view of the comparative paucity of cases in proportion to the general population that come under observation. On the other hand the incidence by age is shown fairly well in the Census Report of 1921 which is as follows :—

INDIA

AGE.	Insane.		Distribution of the insane by age per 10,000 of each sex.	
	Male.	Female.	Male.	Female.
YEARS				
0– 5	651	484	121	142
5–10	2,905	1,882	539	558
10–15	4,098	2,733	761	803
15–20	4,366	3,076	810	904

50–55	3,132	2,492	581	733
55–60	1,465	1,036	272	305
60–65	1,683	1,471	....	....
65–70	602	439	....	....
70 and over	1,070	1,006	....	....
Unspecified	270	133	....	....
Total for all India	54,151	34,154	623	857

A further result of the widespread ignorance and apathy both official and non-official, towards psychiatry and its cognate interests, is the lack of any provision for the care and treatment of mentally defective children. In 1925, the Hon'ble Haroon Jaffer moved the Council of State to recommend to the Governor-General in Council that the Provincial Governments be asked to investigate the best means of dealing quickly and adequately with cases of mental defectives. A discussion followed which was remarkable only for the ignorance of the subject displayed by all who took part in it. The motion was eventually withdrawn.

Finally there is still a lamentable failure everywhere to appreciate the intimate association of crime with mental disorder and the extreme paucity of medical men throughout the whole of India with any real knowledge of mental diseases leave the decision of questions involving what the law terms "responsibility" in crime in the hands of medical men who are in no sort of sense "experts". In other words the current ideas both as regards the theory and practice of dealing with insanity and crime in India can only be described as archaic.

(See also "Insanity in India" by Colonel G. F. W. Ewens, I.M.S., and "Lunacy in India" by Colonel A. W. Overbeck-Wright, M.D., D.P.E., I.M.S. and Colonel H. P. Jago Shaw's book.)

National Association for Supplying Medical Aid by Women to the Women of India.

The National Association for Supplying Medical Aid by Women to the women of India was founded by the Countess of Dufferin in 1885, the object being to open women's hospitals and women's wards in existing hospitals; to train women doctors, nurses and midwives in India; and to bring these out when necessary from Europe. An endowment fund of about 6 lakhs was obtained by public subscription. In addition Branches were formed in each Province, each Branch having its own funds and each having a number of Local Committees and Zenana Hospitals affiliated to it.

The Central Fund gives grants-in-aid to several Provincial Branches; it gives scholarships to a number of women students at the Medical schools of Bombay, Calcutta, Madras and Delhi. It has in the past brought from England a certain number of European medical women. It has assisted by grants-in-aid the building of a number of zenana hospitals in different parts of India. It has affiliated to it 13 Provincial Branches and a number of Local Committees.

The Government of India subsidize the Countess of Dufferin's Fund to the extent of Rs. 3,44,306 per annum to maintain a Women's Medical Service for India—this service consists of 44 officers, with a training reserve of 8 doctors and a Junior service of 6 assistant surgeons. Medical women either British or Indian holding registrable British qualifications are eligible for the senior service.

The President is H. E. The Countess of Willingdon, C.I., G.B.E. The Hon. Secretary is the Surgeon to H. E. The Viceroy, and the Secretary Dr. M. V. Webb, C.M.O., W.M.S., Red Cross Building, New Delhi and Viceregal Estates, Simla.

THE WOMEN'S MEDICAL SERVICE FOR INDIA.

This Service is included in the National Association for supplying medical aid by women to the women of India, generally known as the Countess of Dufferin's Fund and is administered by the Executive Committee and Council of that Fund. The Government of India has so far allotted the sum of £25,000 per annum towards its maintenance. The present sanctioned cadre is forty-four first class medical women, with a training reserve of 8 women graduates in medicine of Indian Universities. Recruitment of the service is made (*a*) in India by a medical sub-committee of the Council which includes the Director-General, Indian Medical Service, the Honorary Secretary to the Council and the Chief Medical Officer, Women's Medical Service; (*b*) in England, by a sub-committee, including a medical man and two medical women conversant with conditions in India. These sub-committees perform the duties of a medical board examining candidates for physical fitness, and for return to duty after invaliding.

The Council determines what proportions of the members of the Service is to be recruited in England and in India respectively. In the original constitution of the Service, duly qualified medical women who are in the service of, or who have rendered approved service to, the Countess of Dufferin's Fund, are to have the first claim to appointment, and thereafter special consideration is to be paid to the claims of candidates who have qualified in local institutions and of those who are natives of India.

Qualifications.—The qualifications are that the candidate must be (*a*) a British subject resident in the United Kingdom or in a British Colony or in British India, or a person resident in any territory of any Native Prince or Chief under the suzerainty of His Majesty exercised through the Governor-General of India or through any Governor or other officer subordinate to the Governor-General of India. (*b*) Must be between the ages of twenty-four and thirty at entry. (*c*) She must be a first-class medical woman, *i.e.*, she must possess a medical qualification registrable in the United Kingdom under the Medical Act, or an Indian or Colonial qualification registrable in the United Kingdom under that Act: but this condition does not apply at the original constitution of the Service to medical women in charge of hospitals who, in the opinion of the Council, are of proved experience and ability. (*d*) The candidate must produce a certificate of health and character. But the Council reserves the power to promote to the service ladies not possessing the above qualifications, but who have shown marked capacity. Members of the Service are required to engage for duty anywhere in India. After one year of probation has been satisfactorily passed their appointments are confirmed. The services of officers may be lent to Local or Municipal bodies, or to special institutions, which may be responsible for whole or part of the pay.

Pay.—The rates of pay are as follows:—

1st to 3rd	year	Rs. 450	per month.
4th to 6th	,,	,, 500	,,
7th to 9th	,,	,, 550	,,
10th to 12th	,,	,, 600	,,
13th to 15th	,,	,, 650	,,
16th to 18th	,,	,, 700	,,
19th to 21st	,,	,, 750	,,
22nd to 24th	,,	,, 800	,,
24th and after	,,	,, 850	,,

also an overseas allowance of Rs. 100 per month to those below 12 years' service and Rs. 150 per month to those of 12 years' service and over. Every officer of the Service shall pass an examination in such vernacular as the Executive Committee shall appoint within the first three years of her service, and shall receive no increment after that period until such examination has been passed. In addition

furnished quarters are provided free of rent or a house rent allowance to be determined by the Provincial Committee may be granted in lieu of it.

Officers of the Service are permitted to engage in private practice provided it does not interfere with their official duties, and the Provincial Committee has the power to determine whether such duties are thus interfered with. Except in very special cases retirement is compulsory at the age of fifty-five An officer recruited in England, whose appointment is not confirmed, or who is dismissed, is granted an allowance sufficient to pay her passage to England.

Leave Rules.—(*a*) Casual Leave, which is occasional leave on full pay for a few days, and is not supposed to interrupt duty. (*b*) Leave on average pay is granted up to 2-11 of an officer's period on duty, according to Fundamental Rules. More than eight months' leave on average pay is not granted at one time. (*c*) Study leave may also be granted up to twelve months during the whole service. An allowance of 12 sh. per day is granted in addition to ½ average pay during study leave. (*d*) Extraordinary leave at any time at the discretion of the Executive Committee. (*e*) Leave not due may be granted subject to the following conditions:—(*i*) on medical certificate, without limit of amount; and (*ii*) otherwise than on medical certificate, for not more than three months at any one time and six months in all, reckoned in terms of leave on average pay. (*f*) The maximum period of continuous absence from duty on leave granted otherwise than on medical certificate is 18 months. (*g*) When an officer returns from leave which was not due and which was debited against her leave account, no leave will become due to her until the expiration of a fresh period spent on duty, sufficient to earn a credit of leave equal to the period of leave which she took before it was due. There are no allowances during extraordinary leave. A doctor appointed in England receives a sum of £100 to cover her passage and incidental expenses. There are also allowances to cover the cost of journeys by rail and road.

There is also a Provident Fund, each member contributing monthly thereto ten per cent. of her salary, the Association contributing an equal amount, and each subscriber's account being granted interest on the amount standing to credit at the rate of 4 per cent. per annum, "or at such rate as the Council can invest without risk to the funds of the Association."

An officer loses the contributions made to her account by the Association with the interest thereon if she resigns (except on account of ill-health) before completing five years' service or in the event of dismissal. On retirement after approved service the sum which has accumulated to the credit of the subscriber is handed over to her.

Free Passages.—Officers of the Women's Medical Service are granted free return passages corresponding to those granted under the Lee Concessions to officers of all-India services. The maximum number of return passages granted during an officer's entire term of service must not exceed four, the first falling due after 4 years service.

The Training Reserve of the Women's Medical Service.—This Service has a sanctioned cadre of eight, and is open to women graduates in medicine of the Indian Universities. Salaries range from Rs. 200 to Rs. 300 per month, with furnished quarters or the equivalent in money, to those employed in India.

2. Two of the eight members of the reserve, but not more at any one time, may be deputed to Europe by the Executive Committee for post-graduate training, and shall receive a stipend at the rate of £ 200 a year each paid quarterly and return passage. Any member not so deputed shall be employed in India.

3. Ordinarily four years shall be spent in the reserve before a member is considered for appointment to the Women's Medical Service, but the Executive Committee shall have power to shorten this period in special cases. Service in the reserve shall be considered by the Executive Committee when appointments are being made to the Women's Medical Service, but shall not of itself constitute a claim to appointment.

VICTORIA MEMORIAL SCHOLARSHIPS.

The Victoria Memorial Scholarships Fund was organised by Lady Curzon in 1903, in order to secure a certain amount of improvement in the practising dais of India. A sum of about 6½ lakhs was obtained by public subscription, and centres were organised in each Province to carry out the objects of the Fund. Over 2,000 midwives have been trained in addition to large numbers who have been partially trained. Of late years the Fund has done much to pave the way for the registration and supervision of indigenous dais. It has also done much propaganda work. The fund is now administered by the Maternity and Child Welfare Bureau of the Indian Red Cross Society.

LADY HARDINGE MEDICAL COLLEGE AND HOSPITAL.

The Lady Hardinge Medical College was opened by Lord Hardinge on the 17th February 1916. It is a residential Medical College staffed entirely by women, and was founded to commemorate the visit to Delhi, in 1911, of the Queen Empress. Lady Hardinge took the initiative in raising funds by public subscription to meet the cost of buildings and equipment. Thirty lakhs of rupees, in all, have been given for these purposes, mostly by the Ruling Princes and Chiefs of India. After Lady Hardinge's death in 1914, it was suggested by Her Imperial Majesty Queen Mary that the institution should serve as a memorial to its founder, and be called by her name.

The Governing Body includes the Director-General, Indian Medical Service, the Chief Commissioner of Delhi, the Chief Engineer, Delhi Province, the Educational Commissioner with the Government of India, the Chief Medical Officer, Women's Medical Service, a representative elected by the All-India Association of Medical Women, the Surgeon to H.E. the Viceroy, an Indian member of the Council of State, 2 Indian members of the Legislative Assembly, a private Indian citizen of Delhi, a private lady resident of Delhi, the Civil Surgeon of New Delhi and the Agent, Imperial Bank of India, Delhi. The Honorary Secretary, who is also a member of the Governing Body, is the Deputy Director-General, Indian Medical Service. The Deputy Accountant-General, Central Revenues, acts as Honorary Treasurer.

The College and Hospital, together with separate hostels for 100 Medical students and 70 nurses and residences for the medical and teaching staff, occupy a site of 55 acres in New Delhi within easy reach of old Delhi city. The grounds are enclosed and adequate provision is made for the seclusion of both students and patients from outside observation. Strict observance of purdah cannot, however, be guaranteed in the case of students. As the hospital patients are all women or children, it is for example, necessary that students should, in their final year, attend a brief course of instruction on men patients at the Civil Hospital, Delhi. The College buildings contain a Library, Museum, Lecture Rooms, Laboratories and offices. Hostels are provided for Hindu, Moslem, Sikh and Christian students. The hospital is a fine modern building with accommodation for 200 in-patients and a commodious out-patients' department. The College and Hospital are supported by a grant of Rs. 3,11,000 from the Government of India, supplemented by grants from Provincial Governments and Indian States. Students are prepared for the Intermediate Science Examination, and the M.B., B.S. degree of the Punjab University, with which the College is affiliated.

SENIOR STAFF.

Principal and Professor of Midwifery and Gynæcology—Dr. Miss C. L. Houiton, M.D., &c., Women's Medical Service.
Vice-Principal and Professor of Surgery—Miss Hamilton Browne, M.B. Ch. M. (Syd.), D. T. M. (Calcutta), W.M.S
Professor of Medicine—Miss N. E. Trouton, M.B. B.S. (Lond.), M.R.C.S., L.R.C.P., D.T.M. (Calcutta.)
Professor of Ophthalmology—Miss R. Roulston, M.B., Ch. B. (Glas.), D.O. (Oxon.), B. R. C. S. (Edin.), W.M.S.
Professor of Pathology—Mrs. L. S. Ghosh, M.B., ch. B. (Aberdeen), D.P.H. (Cambridge), W.M.S.
Professor of Anatomy—Miss K. J. McDermott, M.B., B.S. (Punjab), W.M.S.
Professor of Physiology—Miss E. Surie, M. Sc.
Professor of Radiology—Dr. Rekhi, M.B.B.S. (Ph.), D.M.R. & E. (Cantab).
Lecturer in Physics and Mathematics, and Superintendent of the Science Department—Miss J. H. Ross, M.A., B.Sc. (Glas.)
Lecturer in Chemistry—Miss Sosheila Ram, M.A. (Cantab.)
Lecturer in Biology—Miss C. C. Burt, B.Sc. (Edin.)
Lecturer in English—Miss Ebbutt, M.A. (Dublin), Modern Language Tripos (Cantab.).
Bursar and Warden—Miss M. W. Jesson, M.A. (Cantab.)

Attached to the Hospital there are: (1) a Training School for Nurses, and (2) a Training School for Dispensers. All particulars as to admission and training may be obtained in the case of (1) from the Nursing Superintendents, Lady Hardinge Medical College Hospital, Delhi, and in the case of (2) from the Lecturer on Pharmacy, at the same address.

NURSING.

Whilst India cannot show the complete chain of efficiently-nursed hospitals which exists in England, there has been a great development of skilled nursing of recent years. This activity is principally centred in the Bengal, Madras, and Bombay Presidencies, where the chief hospitals in the Presidency towns are well nursed, and where large private staffs are maintained, available to the general public on payment of a prescribed scale of fees. These hospitals also act as training institutions, and turn out a yearly supply of fully trained nurses, both to meet their own demands and those of outside institutions and private agencies. In this way the supply of trained nurses, English, Anglo-Indian and Indian, is being steadily increased. In Bombay the organisation has gone a step farther, through the establishment of the Bombay Presidency Nursing Association, c/o St. George's Hospital, Bombay. This is composed of representatives of the various Nursing Associations in charge of individual hospitals, and works under the Government. The principle on which the relations of this Association with the Local Associations is governed is that there shall be central examination and control combined with complete individual autonomy in administration.

State Registration of Nurses for all India is much required. A meeting was held in Bombay in 1923 when Nurses from the Presidency met to discuss the question. It is desired that India should have its own State Register as in the United Kingdom, South Africa, New Zealand, Australia, Canada and Burma, and that the curricula and examinations should be brought into line with these countries. Government has proposed to establish a Provincial Register preparatory to an All-India Register.

Nursing Bodies.—The Secretary of the Calcutta Hospital Nurses' Institution is Mr. A. R. Nicholson, Allahabad Bank Buildings, Calcutta. The names and addresses of the other Nursing bodies in Calcutta are Lady Minto's Indian Nursing Association (Bengal Branch), 4, Hungerford Street, Lady Rogers' Hostel for Indian Nurses, 144, Russa Road, South; Nurses' Academy, 6, Suburban Hospital Road; and Nurses' Bureau, 37, McLeod Street. In Madras there is the General Hospital, with a staff of 62 nurses, the Government Maternity Hospital, the Caste and Gosha Hospital at Kilpauk, the Royapetta Hospital and the

Ophthalmic Hospital, also the Lady Ampthill Nurses' Institute and the South Indian Nursing Association (now amalgamated) President, Her Excellency Lady Goschen. The Association has under its management—*The Lady Ampthill Nurses' Institute*, Western Castle, Mount Road, Madras. Fully trained and experienced nurses for all cases of illness both among Europeans and Indians, always available. *The Lady Willingdon Nursing Home*, Western Castle, Mount Road, Madras, and *Nilgiri Nursing and Convalescent Home*, Ootacamund, for Medical, Surgical and Maternity cases. The Nilgiri Nursing Home affords admirable facilities for convalescents.

Bombay Presidency.—The Bombay Presidency was amongst the first in India to realise the value of nursing in connection with hospital work. The first steps were taken on the initiative of Mr. L. R. W. Forrest at St. George's Hospital, Bombay, where a regular nursing cadre for the hospital was established together with a small staff of nurses for private cases. This was followed by a similar movement at the J. J. and Allied Hospitals and afterwards spread to other hospitals in the Presidency. Ultimately, the Government laid down a definite principle with regard to the financial aid which they would give to such institutions, agreeing to contribute a sum equal to that raised from private sources. Afterwards, as the work grew, it was decided by Government that each nursing association attached to a hospital should have a definite constitution and consequently these bodies have all been registered as Associations under Act 21 of 1860. By degrees substantial endowments have been built up, although the Associations are still largely dependent upon annual subscriptions towards the maintenance of their works. This Association was incorporated under the Societies' Registration Act of 1860, in the year 1911, with the primary object of establishing a nursing service from which the Nursing staff at Government aided hospitals under management of Nursing Association might be recruited. This function, however, was never carried out by the Bombay Presidency Nursing Association, and under the present circumstances it appeared to the Committee improbable that it could be carried out, but up to now the auxiliary function of the examining and granting certificates to nurses and midwives, and maintaining a register of qualified nurses and midwives and also maintaining a Provident fund for the employees of the affiliated associations have been successfully carried out from 1911 to 1933. Memorandum, Rules and By-laws of the Association were however revised brought into line with the actual working of the Association. Towards the end of 1927; the Committee decided that some steps must be taken to do so and accordingly appointed a sub-committee to consider the revision and amendment of the Memorandum, Rules and By-laws. The Sub-Committee reported that it appeared to be impossible to amend and revise the present rules piecemeal and that the only way to put things in order would be to draft an entirely fresh constitution and rules.

After fully considering the Sub-Committee's report the Committee agreed that the Association be incorporated by an Act on the line of the Registration Act in the United Kingdom. Pending the passing of the Act the new Memorandum of Association having received the approval of Government was brought into operation from 1st April 1929.

The following are affiliated associations as well as Training Institutions:—

St. George's Hospital Nursing Association, Bombay, (for nurses only), Hon. Secretary: R. W. Douglass, Esq.

Jamshetji Jijibhoy Hospital Nursing Association, Bombay, (for nurses and Midwives), Hon. Secretary: Dr. M. V. Mehta, O.B.E., F.R.C.P.

Cama & Albless Hospitals Nursing Association, Bombay (for Nurses and Midwives) Nil. This is now purely Govt. institution.

Sassoon Hospital Nursing Association, Poona, (for Nurses and Midwives) Nil. This is now purely Govt. institution.

Karachi Civil Hospital Nursing Association (for Nurses only), Hon. Secretary: F. T. M. Day.

Civil Hospital Nursing Association, Nasik (for Nurses and Midwives), Hon. Secretary: Civil Surgeon, Nasik.

Civil Hospital Nursing Association, Ahmedabad (for Nurses and Midwives), Hon. Secretary: Civil Surgeon, Ahmedabad.

Victory Nursing Association, Sholapur, (for Nurses and Midwives), Hon. Secretary: Civil Surgeon, Sholapur.

Infant Welfare Society's (Bombay); Wadi Bunder Maternity Home, Warli Maternity Home and DeLisle Road Maternity Home. (For Midwives only.)

Hindu Nirashrit Fund Maternity Home, Surat. (For Midwives only).

Brahman Sabha Mhaskar Maternity Hospital, Bombay. (For Midwives only).

Sheth Vadilal Sarabhai General Hospital and Chinai Maternity Home, Ahmedabad. (For Nurses and Midwives.)

Dhanrajgirji Hospital, Sholapur. (For Nurses and Midwives.)

Nawanagar State Hospitals: Irwin Hospital, Victoria Hospital and Ba Shri Sajuba Female Hospital. (For Midwives and Nurses.)

Bai Jerbai Wadia Hospital, Parel, Bombay. (For Junior Examination only.)

The following are only affiliated Associations but not Training Institutions:—

East Khandesh District Nursing Association, Hony. Secy: Civil Surgeon, Jalgaon.

Goculdas Tejpal Hospital Nursing Association, Hony. Secy. R. W. Bullock.

Bijapur Civil Hospital Nursing Association, Hon. Secretary: Civil Surgeon, Bijapur.

Byramji Jijibhoy Nursing Association, Matheran.

Dharwar Civil Hospital Nursing Association, Hony. Secretary: Civil Surgeon, Dharwar.

Kanara Nursing Association, Karwar, Hon. Secretary: Civil Surgeon, Karwar.

Panch-Mahals Nursing Association, Godhra, Hony. Secretary: Civil Surgeon, Godhra.

Prince of Wales Nursing Association, Aden, Hony. Secretary: I. Taylor, Esq.

The following are recognised Training Institutions:—

V. J. Hospital, Ahmedabad (for Midwives).

State General Hospital, Baroda (for Nurses and Midwives.)

Civil Hospital, Belgaum (for Nurses and Midwives).
King Edward VII Memorial Hospital, Parel, Bombay (for Nurses only).
Bai Yamunabai L. Nair Charitable Hospital, Lamington Road, Bombay (for Nurses only).
Bomanji Dinshaw Petiti Parsi General Hospital, Cumballa Hill, Bombay (for Nurses only).

Lady Dufferin and Louise Lawrence Institute, Karachi (for Nurses and Midwives).
Morarbhai Vrajabhukandas Hospital, Surat (for Midwives).
American Presbyterian Mission Hospital, Miraj (for Nurses only).
St. Luke's Hospital, Vengurla (for Nurses only).
Parsi Lying-in Hospital, Bombay (for Midwives only).
St. Margaret's Hospital, Poona (for Nurses and Midwives only).
King Edward Memorial Hospital, Poona (for Midwives only).
Nowrosji Wadia Maternity Hospital, Parel, Bombay (for Midwives only).
Acharatlal Girdharlal Maternity Home, Ahmedabad (for Midwives only.)
Zenana Mission Hospital, Broach (for Midwives only).
Lady Dufferin Hospital, Sholapur (for Midwives only).
Canada Hospital, Nasik (for Nurses and Midwives).

Mission Hospital, Ahmednagar (for Nurses only
Municipal Maternity Homes, Bombay
Bellasis Road (Byculla).
Imamwada (Mazgaon).
Cadell Road (Worli).
Victoria Cross Road (Byculla).
Khetwadi (Girgaon).

Provision for retiring allowances is made for all members on the basis of a Provident Fund, and a Nursing Reserve has been established for employment in emergencies such as war, pestilence or public danger or calamity.

Address:—The Registrar, Bombay Nursing Council, Old Custom House, Fort, Bombay.

Lady Minto's Indian Nursing Association.—In 1906 this Association was inaugurated, replacing the Punjab and Up-country Nursing Association for Europeans in India, which society, established in 1892, had accomplished much useful work in this country. Owing, however, to lack of funds it was found impossible to continue its administration and to carry out the expansion of the work so urgently called for. The name of the helpers identified with the premier Association to whom the public must ever be indebted are the Hon. Lady Lyttleton, Lady Helen Munro Ferguson and Mrs. Cottrell, while Mrs. Shepherd, by her indefatigable efforts, is truly entitled to be regarded as the pioneer of a trained nursing system throughout the greater part of India. The late Lady Curzon worked energetically to provide an enlarged Nursing organisation, but mainly owing to financial reasons, she was unable before she left India to bring the scheme to fruition. The Home Committee of the existing Association, recognising the need for expansion, consented to take over the present Association and approached Lady Minto before she left England in 1905 for co-operation towards this project, and after much consideration and discussion with the Government of India, Lieut.-Governors and Commissioners of Provinces, the present Association was established. An appeal by Lady Minto addressed to the public both in England and India, was responded to most generously, and sufficient funds were collected to form an endowment fund, which has in spite of fluctuations increased a little with time. The assistance of a Government grant is much valued, as it enables Homes for the Sisters to be kept up in six Provinces in India and in Burma. At the request of the Home Committee the enlarged Association was renamed the "Lady Minto's Indian Nursing Association."

The duties of the Home Committee are, as before, largely concerned in dispatching—as required—suitably trained and carefully selected Nurses for service on the staff of the Association in India. Thus, Europeans who are members of this Association are enabled to obtain skilled nursing at moderate charges on a sliding scale of fees determined by the income of each patient. The boon of obtaining good nursing at moderate terms is much appreciated, the rates of subscriptions being really an insurance against illness.

Her Majesty the Queen is a Patron of the Association. Her Excellency The Countess of Willingdon is President of the Central Committee in India.

Hon. Secretary: Malox F. M. Collins, R.A.M.C.
Hon. Treasurer: W. R. Tinnant, Esq., I.C.S.
Chief Lady Superintendent: Miss G. Beckett. Address—Central Committee, L.M.I. N.A., Viceregal Lodge, Simla; and Red Cross Building, New Delhi.

Hon. Secretary, Home Committee—Vacant.
Secretary, Home Committee: Miss M. E. Ray, R.R.C., 10, Witherly Mansions, Earls Court Sq.

Nurses' Organizations.—The Association of Nursing Superintendents of India is now amalgamated with the Trained Nurses' Association of India, and has the one set of officers. The Trained Nurses' Association of India and the Association of Nursing Superintendents of India are not Associations to employ or to supply nurses, but are organizations with a membership wholly of nurses with the avowed objects of improving and unifying nursing education, promoting *esprit de corps* among nurses, and upholding the dignity and honour of the nursing profession. The Associations have a membership of 472, including nurses trained in ten or more different countries, Europeans, Americans, New Zealanders, Australians and Indians. The Association of Superintendents was started in 1905 as the Association of Nursing Superintendents of the United Provinces and the Punjab, but by the next year its membership had spread over the country to such an extent that the name was changed to include the whole of India. The Trained Nurses' Association was started in 1908, and a monthly Journal of Nursing began to be published by the two Associations in February, 1910. The Associations are affiliated with the International Council of Nurses.

President: Mrs. G. D. Franklin, 33, Rajpur Road, Delhi.

THE WOMAN SUFFRAGE MOVEMENT.

Hon. Secretary and Treasurer : Miss Gadsden, General Hospital, Madras.

Within the abnormally short period of eleven years the Woman Suffrage movement has risen in India, swept through the country sympathetically and achieved the political enfranchisement of women in all the nine British Provinces and in four Indian States.

Three fundamental causes have led to this remarkable success: first, the deep veneration that is given by the Hindu and Muhammadan religions to the feminine aspect of life equally with the masculine as shown by the importance of goddesses, by the necessity for the presence of the wife at all ceremonies performed by a Brahman, by the idea of the sacred mystery of womanhood implied by the purdah, and by the general veneration of motherhood. Secondly, the time was psychological, for a new era was beginning for the Indian people by the introduction of a Scheme of Reforms in Indian government which was planned to give a basis of representative government on a much extended scale. The door was being opened to complete Self-government but only men were being invited to enter through it, although women compose half the people of the country and it had been by the joint efforts of men and women that the agitation for reform in the government had been made. The men and women of India were too awakened and too just to allow this injustice to remain unredressed. Thirdly, the long and strenuous agitation for the vote by women in Britain and America and their recent victories had brought vividly to the consciousness of all educated Indian men and women the whole question of the inclusion of women in public life, and it was also a national and international necessity that Indian women should be given as high a status as women in other parts of the Empire.

Though the **Municipal franchise** had been granted to the women of the Bombay and Madras Presidencies over fifteen years ago it was so limited in numbers that it did not make a large impact on women's consciousness and indeed no protest was made when it was suddenly withdrawn from Madras women some years later. Over 1,700 women are qualified to vote for the Bombay Corporation and a fair percentage of these have polled at each election, and similarly in other Municipalities in that Presidency women have exercised their vote responsibly and intelligently. Since 1922 over 100 women have become Municipal Councillors and members of Local Government Boards. Their appointment has chiefly been by nomination but there have been notable seats won by election in open contest with men, such as the election of all the four women who first entered the contest for seat in Bombay Corporation, also the instance in which the single woman contestant in the Municipal elections in Lucknow secured the largest poll of any of the candidates. Many important local reforms have been secured by this large band of women Councillors, and every year sees a greater number of women serving on these local Councils and Boards.

It was owing to the rise of the political agitation for Home Rule between 1914 and 1917 that women began to wake up to their position of exclusion by British law from any share in representative government. The internment of one of their own sex, Dr. Besant, stimulated political activity and political self-consciousness amongst women to a very great extent. The moment for the ripe public expression of their feelings came when the Secretary of State for India came to India to investigate and study Indian affairs at first hand in 1917.

During the Hon. E. S. Montagu's visit only one Women's Deputation waited on him but it was representative of womanhood in all parts of India, and it brought to his notice the various reforms which women were specially desirous of recommending the Government to carry out.

The first claim for women suffrage for Indian women was made in the address presented to Mr. Montagu at this historic **All-India Women's Deputation** which waited upon him in Madras on the 18th December 1917. The section referring to enfranchisement merits full quotation:

"Our interests, as one half of the people, are directly affected by the demand in the united (Hindu-Muslim Reform) scheme (I. 3) that 'the Members of the Council should be elected directly by the people on as broad a franchise as possible,' and in the Memorandum (3) that 'the franchise should be broadened and extended directly to the people.' We pray that, when such a franchise is being drawn up, women may be recognized as 'people,' and that it may be worded in such terms as will not disqualify our sex, but allow our women the same opportunities of representation as our men. In agreeing with the demand of the abovementioned Memorandum that 'a full measure of Local Self-Government should be immediately granted, we request that it shall include the representation of our women, a policy that has been admittedly successful for the past twenty years in Local Self-Government elsewhere in the British Empire. The precedent for including women in modern Indian political life has been a marked feature of the Indian National Congress, in which since its inception women have voted and been delegates and speakers, and which this year finds its climax in the election of a woman as its President. Thus the voice of India approves of its women being considered responsible and acknowledged citizens; and we urgently claim that, in the drawing up of all provisions regarding representation, our sex shall not be made a disqualification for the exercise of the franchise or for service in public life."

The year 1918 was devoted to converting the Government forces to the justice and expediency of Indian Woman Suffrage, but this proved a more difficult matter. It was a disappointment first that though the Secretary of State had given a sympathetic reply to the All-India Women's Deputation, yet when the Scheme of Reforms, drawn up by him and Lord Chelmsford as the outcome of his visit to India was published no mention of women was made

though the widening of the electorate was one of the reforms suggested. When the Southborough Franchise Committee was formed to investigate the suggestions regarding the franchise in this Scheme, the women suffragists took every means to bring to the notice of the Committee all the evidence which showed the need for, and the country's support of the inclusion of women in the new franchise.

After the introduction of the **Government of India Bill** into Parliament in July 1919, a number of Indian deputations proceeded to London to give evidence before the Joint Select Committee of Members of both Houses of Parliament which had been appointed to place the Reforms on a workable basis. Mrs. Annie Besant, Mrs. Sarojini Naidu and Mrs. and Miss Herabai Tata were the women who were heard by the Committee in support of the extension of the franchise to women in India.

The House of Commons decided that the question was one for Indians to answer for themselves and while retaining the sex disqualification in the Reform Bill they framed the Electoral Rules in such terms that if any Provincial Legislative Council should approve by a resolution in favour of women's franchise, women should be put on the electoral register of that Province. This was the only provision regarding franchise matters which might be changed before a 10 years' time limit. Until after that period women were ineligible for election as Legislative Councillors.

Travancore, a very progressive Indian State, was the first to grant the Legislative vote to women at the close of 1920, and it was promptly followed by the Indian State of Jhalawar. In the first session of the Legislative Councils in 1921 it is gratifying to record that a motion was tabled by Dewan Bahadur Krishnan Nair of Malabar that he would bring forward a Resolution in the **Madras** Legislative Council to remove the disqualification of sex existing in regard to the Legislative Council franchise. During the month that must legally intervene between the tabling of a Woman Suffrage motion and its introduction for Debate the Madras women under the leadership of the Women's Indian Association carried on all forms of public propaganda and canvassed the important members of the Council. The Debate took place on April 1st and after a short discussion, in which it was evident that opposition came only from the Muhammadan members, the debate itself became only an accumulation of appreciation of womanhood and an expression of faith in its future. When the division was taken, it resulted in the resolution being carried by a majority of 54. Madras has thus the honour of being the first Province in British India to enfranchise its women, and it has done this ungrudgingly and unhesitatingly in the broad spirit of the equality of the sexes, as it grants the vote to women on the same terms as it has been granted to men. Dr. (Mrs.) Muthulakshmi Reddi, the first woman member of the British Indian Legislature, has been able to introduce legislation to do away with the Devadasi service in the Hindu temples and the immoral traffic in women and children. She has also devoted her attention to the development of the education of girls and to the promotion of the health of mothers and children.

Mr. Trivedi brought forward a Woman Suffrage Resolution in the **Bombay** Legislative Council during the same session, but some irregularity in its wording caused it to be pronounced out of order. In June that subject was tabled again and championed by Rao Saheb Harilal Desaibhai Desai of Ahmedabad, Deputy President of the Council. As in Madras, the intervening month was filled with suffrage activity by the women of the Presidency and was remarkable for a large joint meeting of Bombay city women at which 19 Women's Societies took part, and for a suffrage meeting of Marathi and Gujerati women in Poona when over 800 women showed the greatest enthusiasm for the movement.

The **Bombay** Council Debate on Woman Suffrage took three days and the subject was very fully discussed by over 40 members. The result was satisfactory to the suffragists, the voting being 52 in favour, 25 against and 12 neutral. Thus Madras and Bombay Presidencies gave the lead to the other Provinces. In September, 1922, Mr. S. M. Bose, in the **Bengal** Council, moved a Woman Suffrage Resolution, which was debated for three days but finally defeated by 56 to 37 votes, a *bloc* of 40 Muhammadan members voting solidly against it. In September 1925 the Bengal Council passed the Suffrage Resolution by a vote of 54 to 38.

Mr. Devaki Prasad Sinha's similar Resolution in the **Behar and Orissa** Legislative Council was defeated by only a 10 votes' majority.

These Debates proved so educational to their respective Provinces that the **Bengal** and **Behar** Provinces have since granted qualified women the **Municipal Vote.**

In February, 1923, a world suffrage record was made by the *unanimous* vote of the **United Provinces** Legislative Council in favour of Woman Suffrage.

In 1926 the **Punjab** granted woman suffrage without a division, and in 1926 the **Central Provinces.**

The new Reform Bill for **Burma** has included the grant of woman suffrage to the qualified Burmese women, and further made provision for their election as Councillors if the Council passes a Resolution desiring their admission and if that Resolution is approved of by the Governor.

In April, 1922, the **Mysore** Legislative Council unanimously passed the Woman Suffrage Resolution. The vote for the Representative Assembly of Mysore was granted to women in October, 1922. The vote for Mysore Legislative Franchise was granted to the Mysore women by H. H. The Maharaja and His Privy Council in June 1923. In October, 1924, **Assam** Provincial Council granted Woman Suffrage for its Province by 26 to 8. It also has been the first Province to pass a Resolution in favour of allowing women to enter the Council as members.

In 1929 soon after the All-India Women's Educational Reform was held in Patna, the Legislative Council of **Behar** and **Orissa** gave women the right of voting, election and nomination to the Council on the same terms as men. Thus the whole of British India has now

given to women equal political rights with men. The result has already demonstrated itself in the remarkable advancement of all the interests of women along the lines of education, health, housing, morality and social customs.

The Indian Native States of **Travancore, Cochin and Rajkot** are the only places in India where the sex disqualification has been completely removed from the statute book. These have allowed women the right to stand for election for the Legislative Council as well as the right to vote for it, and two women have been elected to the newly formed Representative Council of Rajkot. The year 1925 has been noteworthy for the appointment of the first woman Minister to Government. Mrs. Poonem Lukhose became a member of the Travancore Legislative Council on taking the position of State Darbar Physician. She acted as Minister for Health to the State for three years. Cochin State nominated Mrs. Madhavi Amma as a member of its first Legislative Council.

In British India by the terms of the Reform Bill the Councils had no power to alter the disqualification of sex which remains against the right to stand as candidates for election to the Councils. This could only be changed by the vote of the British Parliament; and the gaining of this right remained as a further objective of the women suffragists. Many large, influential meetings were held claiming the right of women to entry of the Legislatures. A deputation of women about this subject waited on the Madras Governor and their claims were supported by him and by his Government. The Imperial Legislative Assembly and the Council of State had been accorded the power to grant women the franchise for their assemblies also by resolution, but only for those provinces which had already granted women the Legislative franchise. The Legislative Assembly has passed by a large majority a Resolution granting the Assembly franchise tothewomen of such Provinces. Accordingly in November 1923, women in India voted for the first time for the elections of both Provincial Legislative Councillors and members of the Legislative Assembly. The number of women who voted in the large cities was surprisingly large in Bombay and Madras Presidencies and comprised women of all castes and communities.

In April, 1926, as a result of a favourable recommendation of the Muddiman Committee on Franchise Reforms, the Rule was changed in the Reform Bill which disqualified women from entering the Legislatures. Power was granted to the Councils and the Assembly to pass Resolutions allowing qualified women to be elected or nominated as members of these bodies. Again Madras Council, on the 17th July, was the first to pass a Resolution admitting women to its membership. Bombay and the Punjab followed its lead in August and October respectively. This enabled women to become members of the Councils which have been functioning since then. But the permission came too late for women to stand for election with any great chance of success, so the Women's Indian Association asked that women be nominated by Government for the new Councils in those Provinces which had voted to admit them, and that women also be nominated to the Assembly and the Council of State. Thus the year 1926 marked another milestone passed on the road to the complete political emancipation of Indian womanhood.

In 1926 the Central Provinces, the Punjab and Bengal, all granted the Franchise to women. The year 1927 was notable for the nomination of the first woman member to a Legislative Council in British India, the recipient of the honour being DR. MUTHULAKSHMI AMMAL, and she was further honoured by being elected unanimously by her colleagues in the Madras Legislative Council, to the Office OF DEPUTY-PRESIDENT OF THE COUNCIL. Since then Mrs. Kale has been nominated to the Legislative Council of the Central Provinces, and Mrs. Ahmed Shaw to that of the United Provinces. A Deputation from the All-India Women's Conference in Delhi in 1928 waited on the Viceroy requesting him to nominate two women to the Legislative Assembly. That has still remained ungranted.

The number of women enfranchised by the grant of the vote throughout India will not be more than a million under the present qualifications. Property and not literacy is the basis of the franchise, though the grant of the vote to every graduate of seven years' standing ensures that the best educated women of the country as well as those who have to shoulder the largest property responsibilities will be those who rightly will be the legislating influence on behalf of womanhood. As regards the custom of purdah prevailing in parts of India special provisions have been made in Municipal voting for purdah recording stations for purdah women in which a woman is returning officer and this has been found quite satisfactory and has been adopted also where desired in connection with Legislative Council elections.

Though the Women's Indian Association was the only Indian women's society which had woman suffrage as one of its specific objects, almost all other women's organisations have combined in special efforts for the gaining of municipal and legislative rights and the following ladies have identified themselves specially with the movement: Lady D. Tata, Lady A. Bose, Lady T. Sadasivaier, the Begum of Cambay, Mrs Ramabai Ranade, Mrs. Sarojini Naidu, Mrs. Jaiji Jehangir Petit, Mrs. Tata, Mrs. Wadia, Mrs. Jinarajadasa, Dr. A. Besant, Mrs. M. E. Cousins, Mrs. Srirangamma, Mrs. Chandrasekhara Iyer, Miss S. Sorabji, Mrs. Khedkar, Dr. Mistry, Dr. Muthulakshmi Ammal, Mrs. Palmer, Mrs. Saraladevi Choudhuri, Mrs. Kumudini Basu, Mrs. K. N. Roy, Lady Shafi, Mrs. Hassan Imam, Miss S. E. Das, Mrs. P. K. Sen, Mrs. Rustomji Faridoonji, Mrs. B. Rama Rao, Mrs. Deep Narain Singh, Mrs. Raschid, Mrs. van Gildemeester, etc.

Warrant of Precedence.

The following new Warrant of Precedence for India was approved by His Majesty the King-Emperor of India, and received His Royal Sign Manual, on 9th April 1930:—

1. Governor-General and Viceroy of India.

2. Governors of Presidencies and Provinces within their respective charges.

3. Governors of Madras, Bombay and Bengal.

4. Commander-in-Chief in India.

5. Governors of the United Provinces, Punjab, Bihar and Orissa and Burma.

6. Governors of the Central Provinces and Assam; Governor of the North-West Frontier Province.

7. Chief Justice of Bengal.

8. Members of the Governor-General's Executive Council.

9. Commander-in-Chief of His Majesty's Naval Forces in the East Indies.

10. President of the Council of State.

11. President of the Legislative Assembly.

12. Chief Justice of a High Court other than that of Bengal.

13. Agents to the Governor-General, Rajputana, Central India, Baluchistan, Punjab States and States of Western India; Chief Commissioner of the North-West Frontier Province; Commissioner in Sind; Members of Executive Councils and Ministers of Governors and Lieutenant-Governors*; Political Resident in the Persian Gulf; Resident and Commander-in-Chief at Aden, and Residents at Hyderabad and in Mysore within their respective charges.

14. Chief Commissioner of Railways; General Officers Commanding, Northern, Southern, Eastern and Western Commands; and Officers of the rank of General.

15. Members of the Executive Councils and Ministers in Madras, Bombay and Bengal.*

16. Members of the Executive Councils and Ministers, United Provinces, Punjab, Burma and Bihar and Orissa.*

17. Agents to the Governor-General, Rajputana, Central India, Baluchistan, Punjab States and States of Western India; Chief Commissioner of the North-West Frontier Province; Political Resident in the Persian Gulf; and Residents at Hyderabad and in Mysore.

18. Members of the Executive Councils and Ministers, Central Provinces and Assam;* Members of the Executive Council and Ministers, North-West Frontier Province.

19. Presidents of Legislative Councils, within their respective Provinces.

20. Chief Judges of Chief Courts; and Puisne Judges of High Courts.

21. Lieutenant-Generals.

22. Auditor-General; Chairman of the Public Service Commission; and Chief Commissioner of Delhi, when within his charge.

23. Air Officer Commanding, Royal Air Force in India; Flag Officer Commanding and Director, Royal Indian Marine; Members of the Railway Board; Railway Financial Commissioner; Secretaries to the Government of India; and Vice-Chairman, Imperial Council of Agricultural Research.

24. Additional Secretaries and Joint Secretaries to the Government of India; Commissioner in Sind; Controller of Civil Accounts; Financial Adviser, Military Finance; Judges of Chief Courts; Members of the Central Board of Revenue; and Resident and Commander-in-Chief at Aden.

25. Chief Commissioner of the Andaman and Nicobar Islands, when within his charge; and Chief Secretaries to the Governments of Madras, Bombay and Bengal.

26. Commissioners of Revenue and Commissioner of Excise, Bombay; Consulting Engineer to the Government of India; Development Commissioner, Burma; Director of Development, Bombay; Director-General, Indian Medical Service; Director-General of Posts and Telegraphs; Financial Commissioners; Judicial Commissioners of the Central Provinces, Sind and North-West Frontier Provinces; Major-Generals; Members of a Board of Revenue; Members of the Public Service Commission; and Surgeons-General.

27. Chairman of the Madras Services Commission; Vice-Chancellors of the Indian Universities.

28. Agents of State Railways; Controller of the Currency; Additional Judicial Commissioners; Judicial Commissioner, Western India States Agency; Commissioners of Division; Residents of the 2nd Class; Deputy Auditor-General in India; Revenue and Divisional Commissioners, North-West Frontier Province, within their respective charges.

29. Members of the Indian Civil Service of 30 years' standing, whose position but for this Article would not be lower than Article 34.

30. Advocate-General, Calcutta.

31. Advocates-General, Madras and Bombay.

32. Chief Secretaries to Governments other than those of Madras, Bombay, Bengal and Assam.

33. Accountants-General, Class I; Air Force Officer Commanding, Aden; Brigadiers; Census Commissioner for India; Chief Controller of Stores, Indian Stores Department; Commissioner, Northern India Salt Revenue; Director-General of Archæology in India; Director of the Geological Survey; Director, Intelligence Bureau; Director of Ordnance Factories and Manufacture; Director of Railway Audit; Educational Commissioner with the Government of India; His Majesty's Senior Trade Commissioner, Calcutta; Inspector-General of Forests; Military Accountant-General; Public Health Commissioner with the Government of India; and Surveyor-General of India.

* The Vice-President of the Council appointed under section 48 of the Government of India Act ranks in the same article of the Warrant but senior to his colleagues on the Council.

34. Additional Judicial Commissioners; Chief Commissioner of the Andaman and Nicobar Islands; Chief Commissioner of Delhi; Chief Secretary to the Government of Assam; Chief Secretary to the Government of the North-West Frontier Province; Commissioners of Division; Judicial Commissioner, Western India States Agency; and Residents of the 2nd Class; Revenue and Divisional Commissioners of the North-West Frontier Province.

35. Non-Official Presidents of Municipal Corporations in Presidency Towns and Rangoon, within their respective municipal jurisdictions; Private Secretary to the Viceroy; and Secretaries, Additional Secretaries and Joint Secretaries to Local Governments.

36. 1. The entries in the above table apply exclusively to the persons entered therein, and while regulating their relative precedence with each other, do not give them any precedence over members of the non-official community resident in India, who shall take their place according to usage.

2. Officers in the above table will take precedence in order of the numbers of the entries. Those included in one number will take precedence *inter se*, according to the date of entry into that number.

3. When an officer holds more than one position in the table, he will be entitled to the highest position accorded to him.

4. Officers who are temporarily officiating in any number in the table will rank in that number below permanent incumbents.

5. All officers not mentioned in the above table, whose rank is regulated by comparison with rank in the army, to have the same rank with reference to civil servants as is enjoyed by military officers of equal grades.

6. All other persons who may not be mentioned in this table to take rank according to general usage, which is to be explained and

* In virtue of the provisions of section 9 (*ii*) of the Indian Church Act, 1927, a Bishop or Archdeacon who held a bishopric or archdeaconry on the 1st March 1930 takes rank as follows:—

Bishop of Calcutta, Metropolitan of India, immediately after Chief Justice of Bengal, Article 7.

Bishops of Madras and Bombay, immediately after Chief Justice of a High Court other than that of Bengal, Article 12.

Bishops of Lahore, Rangoon, Lucknow and Nagpur, immediately after Chief Commissioner of Delhi, when within his charge, Article 22.

Bishops (not territorial) under license from the Crown, immediately after Chief Secretaries to Governments, other than those of Madras, Bombay, Bengal and Assam, Article 32.

Archdeacons of Calcutta, Madras and Bombay, in Article 33.

Archdeacons of Lahore Lucknow, Rangoon and Nagpur, in Article 39.

determined by the Governor-General in Council in case any question shall arise.* When the position of any such person is so determined and notified, it shall be entered in the table in italics, provided he holds an appointment in India.

7. Nothing in the foregoing rules to disturb the existing practice relating to precedence at the Courts of Indian States or on occasions of intercourse with Indians, and the Governor-General in Council to be empowered to make rules for such occasions in case any dispute shall arise.

8. The following will take courtesy rank as shown:—

Consuls-General,—Immediately after Article 33, which includes Brigadiers; Consuls—Immediately after Article 36 which includes Colonels; Vice-Consuls—Immediately after Article 59, which includes Majors.

Consular officers *de carriere* will in their respective grades take precedence of consular officers who are not *de carriere*.

9. The following may be given, by courtesy, precedence as shown below, provided that they do not hold appointments in India:—

Peers according to their precedence in England; Knights of the Garter, the Thistle, and St. Patrick; Privy Councillors; Members of the Council of the Secretary of State for India—Immediately after Members of the Governor-General's Executive Council, Article 8.

Baronets of England, Scotland, Ireland, and the United Kingdom according to date of Patents; Knight Grand Cross of the Bath; Knights Grand Commander of the Star of India; Knights Grand Cross of St. Michael and St. George; Knights Grand Commander of the Indian Empire; Knights Grand Cross of the Royal Victoria Order; Knights Grand Cross of the Order of the British Empire—Immediately after Puisne Judges of High Courts, Article 20.

Knight Commander of the Bath; Knights Commander of the Star of India; Knights Commander of St. Michael and St. George; Knights Commander of the Indian Empire; Knight Commander of the Royal Victorian Order; Knight Commander of the Order of the British Empire; Knights Bachelor—Immediately after the Residents of the 2nd Class, Article 28.

10. All ladies, unless by virtue of holding an appointment themselves they are entitled to a higher position in the table, to take place according to the rank herein assigned to their respective husbands, with the exception of wives of Peers and of ladies having precedence in England independently of their husbands, and who are not in rank below the daughters of Barons; such ladies to take place according to their several ranks, with reference to such precedence in England immediately after the wives of Members of the Governor-General's Executive Council.

Indian Orders.

The Star of India.

The Order of the Star of India was instituted by Queen Victoria in 1861, and enlarged in 1866, 1875, 1876, 1897, 1902, 1911, 1915 and 1920 and the dignity of Knight Grand Commander may be conferred on Princes or Chiefs of India, or upon British subjects for important and loyal service rendered to the Indian Empire; the second and third classes for services in the Indian Empire thirty years in the department of the Secretary of State for India. It consists of the Sovereign, a Grand Master (the Viceroy of India), the first class of forty-four Knights Grand Commanders (22 British and 22 Indian), the second class of one hundred Knights Commanders, and the third class of two hundred and twenty-five Companions, exclusive of Extra and Honorary Members, as well as certain additional Knights and Companions.

The Insignia are (i) the Collar of gold, composed of the lotus of India, of palm branches tied together in satire, of the united red and white rose, and in the centre an Imperial Crown; all enamelled in their proper colours and linked together by gold chains. (ii) The Star of a Knight Grand Commander is composed of rays of gold issuing from a centre, having thereon a star of five points in diamonds resting upon a light blue enamelled circular riband, tied at the ends and inscribed with the motto of the Order, *Heaven's Light our Guide*, also in diamonds. That of a Knight Commander is somewhat different, and is described below. (iii) The Badge, an onyx cameo having Her Majesty Queen Victoria's Royal Effigy thereon, set in a perforated and ornamental oval, containing the motto of the Order surmounted by a star of five points, all in diamonds. (iv) The Mantle of light blue satin lined with white, and fastened with a cordon of white silk with blue and silver tassels. On the left side a representation of the Star of the Order.

The ribbon of the Order (four inches wide for Knights Grand Commanders) is sky-blue, having a narrow white stripe towards either edge, and is worn from the right shoulder to the left side. A Knight Commander wears (a) around his neck a ribbon two inches in width of the same colours and pattern as a Knight Grand Commander, and pendent therefrom a badge of a smaller size, (b) on his left breast a Star composed of rays of silver issuing from a gold centre, having thereon a silver star of five points resting upon a light blue enamelled circular ribbon, tied at the ends, inscribed with the motto of the Order in diamonds. A Companion wears around his neck a badge of the same form as appointed for a Knight Commander, but of a smaller size pendent to a like ribbon of the breadth of one and a half inches. All Insignia are returnable at death to the Central Chancery, or if the recipient was resident in India, to the Secretary of the Order at Calcutta.

Sovereign of the Order:—His Most Gracious Majesty The King-Emperor of India.

Grand Master of the Order:—His Excellency the Viceroy and Governor-General of India, the Right Honourable Viscount Willingdon, P.C., G.M.S.I., G.M.I.E., G.B.E.

Officers of the Order:—*Registrar*: Col. the Hon. Sir George Arthur Charles Crichton, K.C.V.O., Secretary of the Central Chancery of the Orders of Knighthood, St. James' Palace London, W. 1.

Secretary: The Hon'ble Mr. B. J. Glancy, C.S.I., C.I.E., Secretary to the Government of India in the Foreign and Political Department

The Most Eminent Order of the Indian Empire.

This Order, instituted by H. M. Queen Victoria, Empress of India, December 1877, and extended and enlarged in 1886, 1887, 1892, 1897, 1902, 1911, 1915 and 1920 is conferred for services rendered to the Indian Empire, and consists of the Sovereign, a Grand Master, forty Knights Grand Commanders (of whom the Grand Master is first and principal), one hundred and forty Knights Commanders, and an indefinite number of Companions (not exceeding, without special statute, 20 nominations in any one year); also Extra and Honorary Members over and above the vacancies caused by promotion to a higher class of the Order, as well as certain Additional Knights and Companions appointed by special statute Jan. 1st, 1909, commemorative of the 50th Anniversary of the assumption of Crown Govt. in India.

The Insignia are: (*i*) The COLLAR of gold formed of elephants, lotus flowers, peacocks in their pride, and Indian roses, in the centre the Imperial Crown, the whole linked together with chains; (*ii*) The STAR of the Knight Grand Commander, comprised of five rays of silver, having a small ray of gold between each of them, the whole alternately plain and scaled, issuing from a gold centre, having thereon Her Majesty Queen Victoria's Royal Effigy, within a purple circle, edged and lettered gold, inscribed *Imperatricis Auspiciis*, and surmounted by an Imperial Crown gold; (*iii*) The BADGE consisting of a rose, enamelled gules, barbed vert, and having in the centre Her Majesty Queen Victoria's Royal Effigy, within a purple circle, edged and lettered gold, inscribed *Imperatricis Auspiciis*, surmounted by an Imperial Crown, also gold; (*iv*) The MANTLE is of Imperial purple satin, lined with and fastened by a cordon of white silk, with purple silk and gold tassels attached. On the left side a representation of the Star of the Order.

A Knight Commander wears: (*a*) around his neck a ribbon two inches in width, of the same colour (purple) and pattern as a Knight Grand Commander, pendent therefrom a badge of smaller size: (*b*) on his left breast a star, similar to that of the first class, but the rays of which are all of silver.

The above mentioned Insignia are returned at death to the Central Chancery, or if the Knight was resident in India to the Secretary of the Order.

A Companion wears around his neck a badge (not returnable at death) of the same form as appointed for a Knight Commander, but of smaller size, pendent to a like ribbon of the breadth of one and a half inches.

Sovereign of the Order:—His Most Gracious Majesty The King-Emperor of India.

Grand Master of the Order:—H. E. the Viceroy (Viscount Willingdon).

Officers of the Order:—The same as for the Order of the Star of India.

The Imperial Order of the Crown of India.

This Order was instituted Jan. 1, 1878, and for a like purpose with the simultaneously created Order of the Indian Empire. It consists of the Queen and Queen Mother with some Royal Princesses, and the female relatives of Indian Princes or of persons who have held conspicuous offices in connection with India. Badge, the Royal Cypher in jewels within an oval surmounted by an Heraldic Crown and attached to a bow of light blue watered ribbon, edged white. Designation, the letters C. I.

Sovereign of the Order.

THE KING-EMPEROR OF INDIA.

Ladies of the Order (C. I.)

Her Majesty The Queen
H. M. the Queen of Norway
H. R. H. the Princess Victoria
H. M. The Queen of Roumania
H. R. H. the Princess Beatrice
H. R. H. the Princess Louise (Duchess of Argyll)
H. I. and R. H. Grand Duchess the Cyril
Lady Patricia Ramsay
H. H. the Princess Marie-Louise
Baroness Kinloss
Lady Jane Emma Crichton
Dowager Countess of Lytton
Dowager Marchioness of Dufferin and Ava
Marchioness of Lansdowne
Constance Mary Baroness Wenlock
H. H. Maharani Sahib Chimna Bai Gaekwar
H. H. Rani Sahib of Gondal
H. H. the Dowager Maharani of Mysore
Lady George Hamilton

H. H. the Maharani Sahiba of Udaipur
Alice, Baroness Northcote
Amelia Maria, Lady White
Baroness Ampthill
Countess of Minto
Marchioness of Crewa
France Charlotte, Lady Chelmsford
The Lady Willingdon
The Lady Irwin
Countess of Lytton
Viscountess Goschen
Lady Birdwood
Lady Ali Shah.

Distinctive Badges.—An announcement was made at the Coronation Durbar in 1911, that a distinctive badge should be granted to present holders and future recipients of the titles of 'Diwan Bahadur', 'Sardar Bahadur', 'Khan Bahadur', 'Rai Bahadur', 'Rao Bahadur', 'Khan Sahib', 'Rai Sahib' and 'Rao Sahib'. Subsequently the following regulations in respect of these decorations were issued:—(1) The decoration to be worn by the holders of the titles above mentioned shall be a badge or medallion bearing the King's effigy crowned and the name of the title, both to be executed on a plaque or shield surrounded by a five-pointed star surmounted by the Imperial Crown, the plaque or shield being of silver gilt for the titles of Diwan, Sardar, Khan, Rai and Rao Bahadur, and of silver for the titles of Khan, Rai, and Rao Sahib. (2) The badge shall be worn suspended round the neck by a ribbon of one inch and a half in width, which for the titles of Diwan and Sardar Bahadur shall be light blue with a dark blue border, for the titles of Khan, Rai and Rao Bahadur light red with a dark red border, and for the titles of Khan, Rai and Rao Sahib dark blue with light blue border.

A Press Note issued in November, 1914, states:—The Government of India have recently had under consideration the question of the position in which **miniatures** of Indian titles should be worn, and have decided that they should be worn on the left breast fastened by a brooch, and not suspended round the neck by a ribbon as prescribed in the case of the badge itself. When the miniatures are worn in conjunction with other decorations, they should be placed immediately after the Kaiser-i-Hind Medal.

Indian Distinguished Service Medal.—This medal was instituted on June 28th, 1907, by an Army Order published in Simla as a reward for both commissioned and non-commissioned officers of the regular and other forces in India. It bears on the obverse the bust of King Edward VII, and on the reverse a laurel wreath encircling the words For Distinguished Service. The medal, 1⅝ inches in diameter, is ordered to be worn immediately to the right of all war medals suspended by a red ribbon 1¼ in. wide, with blue edges ¼ in. wide. This medal may be conferred by the Viceroy of India.

Indian Order of Merit.—This reward of valour was instituted by the H. E. I. Co. in 1837, to reward personal bravery without any reference to length of service or good conduct. It is divided into three classes and is awarded to native officers and men for distinguished conduct in the field. On the advancement from one class to another the star is surrendered to the Government, and the superior class substituted, but in the event of the death of the recipient his relatives retain the decoration. The order carries with it an increase of one-third in the pay of the recipient, and in the event of his death the allowance is continued to his widow for three years. The First Class consists of a star of eight points, 1⅝ in. in diameter, having in the centre a ground of dark-blue enamel bearing crossed swords in gold, within a gold circle, and the inscription Reward of Valour, the whole being surmounted by two wreaths of laurel in gold. The Second Class star is of silver, with the wreaths of laurel in gold; and the Third Class entirely of silver. The decoration is suspended from a simple loop and bar from a dark-blue ribbon 1¼ in. in width with red edges, bearing a gold or silver buckle according to class.

Order of British India.—This order was instituted at the same time as the Order of Merit, to reward native commissioned officers for long and faithful service in the Indian Army. Since 1878, however, any person European or native, holding a commission in a native regiment, became eligible for admission to the Order without reference to creed or colour. The First Class consists of a gold eight-pointed radiated star 1½ in. in diameter. The centre is occupied by a lion statant gardant upon a ground of light-blue enamel, within a dark-blue band inscribed Order of British India, and encircled by two laurel wreaths of gold. A gold loop and ring are attached to the crown for suspension from a broad ornamental band ⅞ in. in diameter, through which the ribbon, once blue, now red, is passed for suspension from the neck. The Second Class is 1⅞ in. in diameter with dark-blue enamelled centre: there is no crown on this class, and the suspender is formed of an ornamental gold loop. The reverse is plain in both classes. The First Class carries with it the title Sirdar Bahadur, and an additional allowance of two rupees a day and the Second the title of Bahadur, and an extra allowance of one rupee per day.

Indian Meritorious Service Medal—This was instituted on July 27th, 1888, and on receipt of the medal the order states "a non-commissioned officer must surrender his Long Service and Good Conduct medal": but on being promoted to a commission he may retain the M. S. medal, but the annuity attached to it will cease. On the obverse is the diademed bust of Queen Victoria facing left, with a veil falling over the crown behind, encircled by the legend Victoria Kaisar-i-Hind. On the reverse is a wreath of lotus leaves enclosing a wreath of palm tied at the base, having a star beneath, between the two wreaths is the inscription for meritorious service. Within the palm wreath is the word India. The medal, 1⅝ in. in diameter, is suspended from a scroll by means of a red ribbon 1¼ in. wide. The medals issued during the reigns of Queen Victoria's successors bear on the obverse their bust in profile with the legend altered to EDWARDVS or GEORGIVS.

THE KAISAR-I-HIND MEDAL.

This decoration was instituted in 1900, the preamble to the Royal Warrant—which was amended in 1901 and 1912—being as follows:—"Whereas We, taking into Our Royal consideration that there do not exist adequate means whereby We can reward important and useful services rendered to Us in Our Indian Empire in the advancement of the public interests of Our said Empire, and taking also into consideration the expediency of distinguishing such services by some mark of Our Royal favour: Now for the purpose of attaining an end so desirable as that of thus distinguishing such services aforesaid, We have instituted and created, and by these presents for Us, Our Heirs, and Successors, do institute and create a new Decoration." The decoration is styled "The Kaisar-i-Hind Medal for Public Service in India" and consists of two classes. The Medal is an oval-shaped Badge or Decoration—in gold for the First Class and in silver for the Second Class—with the Royal Cypher on one side and on the reverse the words "Kaisar-i-Hind for Public Service in India"; it is suspended on the left breast by a dark blue ribbon.

THE VICTORIA CROSS.

The announcement, made at the Delhi Durbar in 1911, that in future Indians would be eligible for the Victoria Cross, gave satisfaction which was increased during the War and afterwards by the award of that decoration to the following:—

Subadar (then Sepoy) Khudadad Khan, 129th Baluchis.—On 31st October 1914, at Hollebeke, Belgium, the British Officer in charge of the detachment having been wounded, and the other gun put out of action by a shell, Sepoy Khudadad, though himself wounded, remained working his gun until all the other five men of the gun detachment had been killed.

Naick Darwan Sing Negi, 1-39th Garhwal Rifles.—For great gallantry on the night of the 23rd-24th November 1914 near Festubert, France, when the Regiment was engaged in retaking and clearing the enemy out of our trenches and, although wounded in two places in the head, and also in the arm, being one of the first to push round each successive traverse, in the face of severe fire from bombs and rifles at the closest range.

Subadar (then Jamadar) Mir Dast, 55th Coke's Rifles.—For most conspicuous bravery and great ability at Ypres on 26th April 1915, when he led his platoon with great gallantry during the attack, and afterwards collected various parties of the Regiment (when no British Officers were left) and kept them under his command until the retirement was ordered. Jamadar Mir Dast subsequently on this day displayed remarkable courage in helping to carry eight British and Indian Officers into safety, whilst exposed to very heavy fire.

Rifleman Kulbir Thapa, 2nd Gurkha Rifles.—For most conspicuous bravery during operations against the German trenches south of Mauquissart. When himself wounded, on the 25th September 1915, he found a badly wounded soldier of the 2nd Leicestershire Regiment behind the first line German trench, and though urged by the British soldier to save himself, he remained with him all day and night. In the early morning of the 26th September, in misty weather, he brought him out through the German wire, and, leaving him in a place of comparative safety returned and brought in two wounded Gurkhas one after the other. He then went back in broad daylight for the British soldier and brought him in also, carrying him most of the way and being at most points under the enemy's fire.

Havildar (then Lance-Naick) Lala, 41st Dogras.—Finding a British Officer of another regiment lying close to the enemy he dragged him into a temporary shelter which he himself had made, and in which he had already bandaged four wounded men. After bandaging his wounds he heard calls from the Adjutant of his own Regiment who was lying in the open severely wounded. The enemy were not more than one hundred yards distant, and it seemed certain death to go out in that direction, but Lance-Naik Lala insisted on going out to his Adjutant, and offered to crawl back with him on his back at once. When this was not permitted, he stripped off his own clothing to keep the wounded officer warmer and stayed with him till just before dark when he returned to the shelter. After dark he carried the first wounded officer back to the main trenches, and then, returning with a stretcher carried back his Adjutant. He set a magnificent example of courage and devotion to his officers.

Sepoy Chatta Singh, 9th Bhopal Infantry.—For most conspicuous bravery and devotion to duty in leaving cover to assist his Commanding Officer who was lying wounded and helpless in the open. Sepoy Chatta Singh bound up the officer's wound and then dug cover for him with his entrenching tool, being exposed all the time to very heavy rifle fire. For five hours until nightfall he remained beside the wounded officer shielding him with his own body on the exposed side. He then under cover of darkness, went back for assistance and brought the officer into safety.

Naick Shahamad Khan, 89th Punjabis.—For most conspicuous bravery. He was in charge of a machine-gun section in an exposed position in front of and covering a gap in our new line within 150 yards of the enemy's entrenched position. He beat off three counter-attacks, and worked his gun single-handed after all his men, except two belt-fillers, had become casualties. For three hours he held the gap under very heavy fire while it was being made secure. When his gun was knocked out by hostile fire he and his two belt-fillers held their ground with rifles till ordered to withdraw. With three men sent to assist him he then brought back his gun, ammunition, and one severely wounded man unable to walk. Finally, he himself returned and removed all remaining arms and equipment except two shovels. But for his great gallantry and determination our line must have been penetrated by the enemy.

Lance-Dafedar Govind Singh, 28th Cavalry.—For most conspicuous bravery and devotion to duty in thrice volunteering to carry messages between the regiment and brigade headquarters, a distance of 1½ miles over open ground which was under the observation and heavy fire of the enemy. He succeeded each time in delivering his message although on each occasion his horse was shot, and he was compelled to finish the journey on foot.

Rifleman Karan Bahadur Rana, 2nd Gurkha Rifles.—For conspicuous bravery and resource in action under adverse conditions, and utter contempt of danger during an attack. He with a few other men succeeded, under intense fire, in creeping forward with a Lewis gun in order to engage an enemy machine gun which had caused severe casualties to officers and other ranks who had attempted to put it out of action. No. 1 of the Lewis gun party opened fire and was shot immediately. Without a moment's hesitation Karan Bahadur pushed the dead man off the gun, and in spite of bombs thrown at him and heavy fire from both flanks, he opened fire and knocked out the enemy machine gun crew. Then switching his fire on the enemy bomber

and riflemen in front of him, he silenced their fire. He kept his gun in action, and showed the greatest coolness in removing defects which had twice prevented the gun from firing. He did magnificent work during the remainder of the day and when a withdrawal was ordered assisted with covering fire until the enemy was close to him. He displayed throughout a very high standard of valour and devotion to duty.

Ressaldar Badlu Singh, 14th Lancers attached 29th Lancers.—For most conspicuous bravery and self-sacrifice on the morning of the 23rd September 1918, when his squadron charged a strong enemy position on the west bank of the River Jordan, between the river and Kh. es Samariveh Village. On nearing the position Ressaldar Badlu Singh realised that the squadron was suffering casualties from a small hill on the left front occupied by machine guns and 200 infantry. Without the slightest hesitation he collected six other ranks and with the greatest dash and an entire disregard of danger charged and captured the position, thereby saving very heavy casualties to the squadron. He was mortally wounded on the very top of the hill when capturing one of the machine guns single-handed, but all the machine guns and infantry had surrendered to him before he died. His valour and initiativ were of the highest order.

Rifleman Gobar Sing Negi, 2nd Battalion 39th Garhwal Rifles.—For most conspicuous bravery on 10th March 1915 at Neuve Chapelle. During an attack on the German position he was one of a bayonet party with bombs who entered their main trench, and was the first man to go round each traverse, driving back the enemy until they were eventually forced to surrender. He was killed during this engagement.

Sepoy Ishaw Singh, 28th Punjabis.—For devotion and bravery "quite beyond all praise" in Waziristan on 10th April, 1921. He received a severe gunshot wound in the chest while serving a Lewis gun, and when all the havildars had been killed or disabled he struggled to his feet, called to his assistance two men, and charged and recovered the gun, restoring it to action. He refused medical attention, insisting first on pointing out where the other wounded were and on carrying water to them. While the medical man was attending to these wounded he shielded him with his body and he submitted to medical attention himself only after he was exhausted through three hours' continual effort and by loss of blood.

PASSPORT REGULATIONS.

[*Note.*—These instructions are intended for the information of residents in the Bombay Presidency proper only. Residents in Sind should apply for passports to the Commissioner in Sind. Persons residing outside the Bombay Presidency should apply for passports to their respective Governments or Administrations.]

A.—British Subjects.

1. British Indian passports are issued only to:—(1) British subjects by birth, (2) wives and widows of such persons, (3) British subjects by naturalization and (4) British-protected persons. Before a subject of an Indian State is granted a passport he should show that he has severed all connections with his state of origin and is permanently residing in British India or produce a certificate to show that the state has no objection to the grant of a passport.

2. The Indian Passport Regulations do not require persons to be in possession of passports for leaving India, but as practically every other country requires travellers to be in possession of passports before they are allowed to land at the port of such country, travellers are advised to obtain passports before embarkation. Members of His Majesty's Naval, Military or Air Forces or of the Indian Marine Service travelling on duty and members of the families of such persons when travelling to the United Kingdom on military entitled passages need not have passports.

3. Passports are not required for journeys by sea from Bombay to ports in India or to Burma; nor are passports required for permanent residents of Ceylon or India, being British subjects to travel between India and Ceylon. Natives of India travelling to the Federated Malay States or the Straits Settlements do not require passports unless they propose to continue their journey onward. (The term "permanent resident" actually means persons born and domiciled in India).

4. In order to obtain a passport, an application form (showing, among other things, the reasons for the proposed journey) should be filled in by the applicant and the applicant's declaration certified by a Political Officer, Magistrate, Justice of the Peace, Police Officer not below the rank of Superintendent, or Notary Public resident in India. Copies of the form can be obtained from any District Magistrate, from the Commissioner of Police, Bombay, by post from the Passport Officer to the Government of Bombay, by personal application at the Passport Office, or from any of the leading Banking and Shipping Agents in Bombay. Small duplicate unmounted copies of the photograph of the applicant and a fee of Rs. 6 in cash should be forwarded with the application form. Fees are not accepted in stamps or by cheque.

5. The application form when filled in should either be posted with the photographs and fee to the Passport Officer to the Government of Bombay, or should be presented at the Passport Office, Bombay. An applicant who forwards his application for a passport through the post may call at the Passport Office at Bombay to take personal delivery of it, but if it is desired that the passport should be sent to him through the post it will be sent to the local officer of the town in which the applicant resides who will hand over the passport to the applicant personally and take a receipt for it.

6. The Passport Office in Bombay is situated in the Civil Secretariat. The office is open from 10-30 a.m. to 6 p.m. daily, except on Saturdays when it closes at 2 p.m. and on Sundays and public holidays.

7. As a passport is valid for five years, there is no objection to anyone applying for a passport weeks or even months in advance of the date of sailing and much inconvenience will be avoided by early application. A notice of at least

8. In certain circumstances, such as for instance, cases of extreme urgency, the Passport Officer is authorised to issue a travel document called an "Emergency Certificate" on being satisfied as to the nationality and the *bona fides* of the applicant. An application for an Emergency Certificate will on no account be considered, unless it is accompanied by duplicate unmounted copies of the photograph of the applicant.

Iraq.

9. Members of His Majesty's Naval, Military or Air Forces or of the Indian Marine Service in uniform and *bona fide* Muhammadan pilgrims (Haj or Zair) holding individual pilgrim passes do not require passports for their journey to Iraq. All intending pilgrims holding pilgrin passes and proceeding to the Holy shrines in Iraq or Persia are warned that if they do not set out on their journey on or about the date specified on their passes they may be refused permission to land in Iraq or Persia. All other travellers must be in possession of national passports and visas for Iraq. In the absence of Iraq Consular Officers in India, visas for Iraq are granted by Passport Issuing Authorities in India on behalf of the Iraq Government subject to the conditions stated below. The Iraq visas are of two kinds—Ordinary, valid for all entries into Iraq during a period of twelve months; and Transit, valid for a single journey only, allowing for stay of not more than fifteen days in Iraq. The fee for these visas is the same as for British visas—*vide* paragraph 18 below. Iraq national passports are valid for return to that country without any further visa or endorsement.

Except in the case of *bona fide* tourists of ample and independent means, business representatives and employees of well established firms and persons with definite guarantee of employment in Iraq, visas for Iraq will not be granted without the previous permission of the Iraq Government. The Passport Officer will, on request, ask for this permission by post or, if the applicant is prepared to defray the cost by cable. Applicants must state clearly the nature of their business and give one or more references in Iraq to enable the local authorities to make inquiries regarding the purpose of their journey.

With the exception of tourists who may remain for three months in Iraq without registration, all persons are required to obtain a "permis de sejour" from the police within fifteen days of their arrival in Iraq. Travellers are also warned that before departure from Iraq even on a transit visa they must obtain a passport endorsement of departure.

Passengers, both British and Foreign, proceeding by Eastbound aeroplane on the regular service to India do not require any endorsements or visas on their passports for any of the Arab Principalities. Similarly, passengers by Westbound do not require endorsements or visas, if they are booked to proceed the Arab Principalities places beyond. When, however, they propose to discontinue their journey at Koweit, Bahrein, Sharjah or Gwadur or to break their journey at any of those places, they must comply with the ordinary passport requirements regarding endorsements and visas.

Egypt.

10. In the absence of Egyptian Consular Officers in India visas for Egypt are granted by Passport Issuing Authorities in India on behalf of the Egyptian Government. The fee for these visas is the same as for British visas—*vide* paragraph 18 below. All visas for Egypt placed on British passports are free of charge.

The Egyptian Government have prescribed rules which regulate the admission of foreigners into Egypt. Generally except in the case of British Government officials, *bona fide* tourists of ample and independent means and representatives of commercial houses of good standing, visas for Egypt cannot be granted whether for permanent residence or for a limited period without a reference to the Egyptian Government. In applying for visas for Egypt, a form of questionnaire laid down by the Egyptian Government which can be obtained from the Passport Office at Bombay, should be filled in. In addition, an applicant for a visa should supply in writing, full particulars as regard the nature of his business in Egypt, the reasons for the journey, the proposed duration of stay in Egypt and what means he possesses.

No transit visa for Egypt can be given unless Egypt is necessarily on the route which the traveller must follow to reach his country of destination, and provided there exists no direct route by which he can reach that country without the necessity of passing through Egyptian territory.

Holders of the new-form Egyptian passport do not require visas to return to Egypt.

Other Countries.

11. Restrictions exist on travel to various parts of the British Empire and to certain foreign countries. Among these may be mentioned Afghanistan, Australia, Canada, Fiji, Madagaskar, Mexico, Mohammerah and Abadan, New Zealand, Palestine, Southern Rhodesia, Union of South Africa, South-West Africa and the United States of America. The restrictions apply particularly to Indians. Detailed particulars with respect to each country will be supplied on application.

Foreign Countries.

12. Passports for journeys to or through foreign countries require, after issue, the visa of the Consul concerned. The addresses of the foreign consulates in Bombay will be found in the appendix below. Visas are, however, not necessary for Austria, Belgium, Czechoslovakia, Denmark, France, Germany, Holland, Iceland, Italy, Liechtenstein, Luxemberg, Norway, Portugal, Sarro, Spain, Sweden and Switzerland provided the names of these countries are entered on the passport by a British Passport issuing authority. Pilgrims holding pilgrim passes for Iraq are warned that should they desire to proceed to Persia they should obtain a visa on their pass from a Persian Consular Officer in India.

Renewal.

13. A passport is valid for five years from the date of issue and is renewable for a further period of from one to five years from the date of expiry of its validity, at the option of the holder; but in no case can a passport be extended beyond ten years from the original date of issue. On expiration of this period, or, if at any time the space provided for visas is covered and the holder wishes to travel to countries for which fresh visas are required a

new passport must be obtained. Application for renewal must be made in the prescribed form, copies of which may be had from any of the officers mentioned in paragraph 4 above. The fee for renewals is Re. 1 for each year, or portion of a year, for which the passport is renewed.

Endorsements.

14. A passport is valid only for the country or countries endorsed on it and fresh endorsements from a British Passport authority are not needed during the validity of the passport for subsequent journeys to these countries. Fresh endorsements may, however, be obtained on the passport for additional countries. Passports endorsed as valid for the British Empire are also available for travelling to territories under British protection or mandate, not however including Palestine, for which country the passport must be specifically endorsed. The fee for endorsing the names of foreign countries on British passports is Re. 1, but no fee is charged for this purpose on British Indian passports. A fee of Rs. 1-8-0 is payable for an endorsement for Palestine on both British and British Indian passports.

Marriage.

15. A lady on marriage or re-marriage requires a fresh passport.

16. In the case of a joint passport issued in favour of a husband and wife, the latter cannot travel alone on it, but should take out a fresh passport, surrendering the joint passport for cancellation of her name from it. The particulars of a wife cannot be added to her husband's existing passport. The holder of the passport should either apply for a new joint passport or his wife should apply for a separate passport in her own name.

B.—Foreigners.

17. Foreigners proceeding direct to their own country, or to, or through, any other foreign country or countries do not require a British visa on their passports. The nationals of the following countries do not require a British visa for travelling to the United Kingdom. The concession also applies to certain nationals proceeding to certain British Dominions and Colonies and information on this point can be obtained from the Passport Office. The concession does not apply to India :—

Austria, Belgium, Czechoslovakia, Denmark, France, Germany, Holland, Iceland, Italy, Liechtenstein, Luxemburg, Norway, Portugal, Sarro, Spain, Sweden and Switzerland.

18. Foreigners who are subjects of the countries shown in the appendix below and who are travelling to British territories for which a British visa is necessary should first obtain passports endorsed for the British territory concerned from their consular representatives and should then present them to the Passport Officer for visa, together with a written statement of the reasons for the journey. British visas are of two kinds, *viz.*, the Non-transit and Transit. The fees for these are Rs. 7-0-0 and Re. 1-0-0, respectively, except in the case of nationals of States which levy higher fees, when the retaliatory scale of fees will be applied.

19. Other foreigners should apply for Emergency certificates through the Commissioner of Police, Bombay, or, where such foreigners reside in the mofussil, through the District Magistrate of the district in which they are residing. Small duplicate copies of the applicant's photograph must accompany the application. The fee for an Emergency Certificate is Rs. 1-8-0.

20. The holder of a foreign passport who has obtained a visa granted by a British Passport Authority outside India for a destination which involves landing in, or passing through, India does not need a further visa from the authorities in India.

ADDRESSES OF FOREIGN CONSULATES IN BOMBAY.

Afghanistan.—Amir's Bungalow, Walkeshwar Road, Malabar Hill.
Austria.—Closed down.
Belgium.—17, Cuffe Parade, Colaba.
Brazil.—Asian Building, Nicol Road, Ballard Estate.

Hungary.—Royal Insurance Buildings, 26, Dalhousie Square.

Panama.—9, Esplanade Mansions.

Peru.—3, Victoria Terrace.

Turkey.—C/o Monsell & Co., Mercantile Buildings, Lall Bazar.

Venezuela:—C/o Messrs. Henry William, India, 1931, Ltd., 7, Church Lane.

N. B.—There are at present no Consuls for Costa Rica, Liberia, Salvador and Mexico at Calcutta. The Consulates for Guatemala and Chib Lane been abolished.

The School of Oriental Studies.

This School was established by Royal Charter in June 1916. The purposes of the School (as set out in the Charter) are to be a School of Oriental Studies in the University of London to give instruction in the Languages of Eastern and African peoples, Ancient and Modern, and in the Literature, History, Religion, Law, Customs and Art of those peoples, especially with a view to the needs of persons about to proceed to the East or to Africa for the pursuit of study and research, commerce or a profession, and to do all or any of such other things as the Governing Body of the School consider conducive or incidental thereto, having regard to the provision for those purposes which already exists elsewhere and in particular to the co-ordination of the work of the School with that of similar institutions both in Great Britain and in its Eastern and African Dominions and with the work of the University of London and its other Schools.

The School possesses noble and interesting buildings, in Finsbury Circus, provided by the British Government under the London Institution (Transfer) Act of 1912. The sum of £25,000 required for the alteration and extension of the buildings of the London Institution for the purposes of the School was voted by Parliament. The School buildings are quiet, although they are in the heart of the City. The School provides teaching in more than seventy subjects In a considerable proportion of the spoken languages instruction is given by teachers belonging to the countries where the languages are spoken, as it is the aim of the School to provide as far as possible both European and Oriental Lecturers in the principal languages included in the curriculum.

Courses on the History, Religions, and Customs of Oriental and African countries form a special feature in the teaching of the School. There is a whole time Professor in Phonetics, the classes for which are numerically larger than in any other subject. It is intended to record fully in phonetic symbols all the languages taught at the School.

Owing to the generosity of the Rockefeller Foundation a new sub-department under Professor Lloyd James has been opened for the teaching of and research into African Linguistics.

Courses are also provided in Indian Law and the History of India, and arrangements are made from time to time for special courses of lectures to be given by distinguished orientalists not on the staff.

Patron, H. M. the King. *Chairman of the Governing Body*, Sir Harcourt Butler, G.C.S.I. *Director*, Professor Sir E. Denison Ross, C.I.E., D. Lit, Ph.D. *Secretary*, G. W. Rossetti, M.A.

7. University Professor of Persian and Appointed Teacher (Director).
8. University Professor of Sanskrit and Appointed Teacher.
9. University Professor of Phonetics and Appointed Teacher.

The Fisheries of India.

The fisheries of India, potentially rich, as yet yield a mere fraction of what they could were they exploited in a fashion comparable with those of Europe, North America or Japan. The fishing industry, particularly the marine section, has certainly expanded considerably within the last 50 years concurrently with improvement in the methods of transport and increase in demand for fish, cured as well as fresh, from the growing population of the great cities within reach of the seaboard. The caste system, however, exerts a blighting influence on progress. Fishing and fish trade are universally relegated to low caste men who alike from their want of education, the isolation caused by their work and caste and their extreme conservatism, are among the most ignorant, suspicious and prejudiced of the population, extremely averse to amending the methods of their forefathers and almost universally without the financial resources requisite to the adoption of new methods, even when convinced of their value. Higher caste capitalists have hitherto fought shy of associating with the low caste fishermen, and except in large operations on new lines, these capitalists cannot be counted upon to assist in the development of Indian fisheries. As in Japan, it appears that the general conditions of the industry are such that the initiative must necessarily be taken by Government in the uplift and education of the fishing community and in the introduction and testing of new and improved apparatus and methods.

The first local Government to lead the way was that of Madras, which in 1905 initiated an investigation of the industry, both marine and fresh-water, appointing Sir F. A. Nicholson to supervise operations. Bengal followed suit in 1906, and from these beginnings have sprung the local Fisheries Departments of Madras, Bengal, and Bihar and Orissa. Bombay, the remaining seaboard province, has comparatively small fresh-water interests compared with Madras and Bengal and as it happens that her marine fisheries are favoured with good harbours and the most enterprising race of fishermen in India, there was less urgent need for State help in the industry. Fisheries there were a subject of Government solicitude for five years after the war but they finally ceased to receive any attention after the abolition in 1924 of the short lived Department of Industries to which this subject was allotted.

Madras.

The Madras coast line of 1,750 miles is margined by a shallow-water area within the 100 fathom line of 40,000 square miles outside of the mere fringe inshore, this vast expanse of fishable water lies idle and unproductive. The surf-swept East coast is singularly deficient in harbours whereon fishing fleets can be based, and so from Ganjam to Negapatam, the unsinkable catamaran, composed of logs tied side by side is the only possible easy-going fishing craft. Its limitations circumscribe the fishing power of its owners and consequently these men are poor and the produce of their best efforts meagre compared with what it would be if better and larger boats were available and possible. The West coast is more favoured. From September till April weather conditions are good enough to permit even dugout canoes to fish daily. No difficulty is found in beaching canoes and boats throughout this season. The fishing population is a large one. In the census taken by the Department of Fisheries in 1927-28, the fisher-population on the West coast totalled 114,502. The esteemed table fish of the coast consist of the Seer (*Cybium* or *Scomberomorous*), Pomfret (*Apolectus* and *Stromateus*) several large species of Horse Mackerel (*Caranx*). Jew fish (*Sciaenidae*), Whiting (*Sillago.*) Thread-fins (*Polynemus*), Sardines (*Clupea*) and Mackerel (*Scomber*). In economic importance, however, shoaling fish and fish of inferior quality such as Sardine (*Clupea*). Mackerel (*Scomber*), Cat fish (*Arius*), Ribbon fish (*Trichiurus*), Goggles (*Caranx crumenophthalmus*) and Silver bellies (*Equula* and *Cazza*) take precedence of the former. Sardine and Mackerel over-shadow all others. So greatly in excess of food requirements are the catches of sardines, that every year large quantities are turned into oil and manure. Fishing outside the 5 fathom line is little in evidence save by Bombay boats (Ratnagiri) which are engaged in drift netting for bonito, seer and other medium-sized fishes. These strangers are enterprising fishers and bring large catches into Malpe and Mangalore and other convenient centres: the material is largely cured for export.

The Madras Department of Fisheries.—As Government attention has been given in Madras over a longer period to the improvement of fisheries, and a larger staff concentrated upon the problems involved than elsewhere this Presidency has now the proud position of knowing that her fisheries and collateral industries are better organised and more progressive than those in other provinces. The credit for the wonderful success which has been achieved and the still greater promise of the future, is due in large measure to the wise and cautious plans of Sir F. A. Nicholson, who from 1905 to 1918 had the guidance of affairs entrusted to him. In 1905 he was appointed on special duty to investigate existing conditions and future potentialities; in 1907, a permanent status was given by the creation of a fisheries bureau and this in turn has developed into a separate Department of Government which till August 1923 was being administered by Mr. James Hornell, F.L.S., as Director and, is now controlled by his successor Dr. B. Sundara Raj, M.A., Ph.D. The activities of the Department have greatly expanded since its inception. A Committee constituted by Government to

enquire into the working of the Department and make recommendations for its future development have just published their report in two volumes. The Evidence collected by the Committee is an octavo volume of 431 pages and the Report of the Committee is another similar volume of 264 pages. The Report is a remarkable production which summarises the aims and achievements of the Department during the last quarter of a century and contains detailed proposals for the expansion of the Department activities in different directions. The whole work of the Department has received a great impetus as a result of the report of this Committee. The Committee have emphasised the true purpose and aim of a technical Department of Fisheries to be essentially the material amelioration of the lot of the sea-going fishermen. The activities of the past 25 years were largely concerned with curing and canning, manufacture of oil and guano and safe-guarding of Government revenue. Remarkably successful as they were under the able guidance of Sir Frederick Nicholson, they seemed somewhat to obscure what should be the primary object and policy of the Department. Technological improvements in curing and canning and allied industries should follow ultimately in the wake of improved catches. Socio-economic and humanitarian endeavours however necessary and important, in view of the caste system of India, could not directly add one fish to the actual catch of the fisherman. The Committee have therefore urged that efforts to improve the professional knowledge of the sea-going fishermen and the catching powers of his craft and tackle which were inaugurated with the inquisition of the trawler in 1926 must necessarily occupy the first place of the departmental programme. The higher staff now consists of five Assistant Directors and an Assistant Biologist. These are respectively in charge of (1) the chank and beche-de-mer fisheries; (b) the Co-operative and educational work and the West coast fish curing yards; (c) inland pisciculture; (d) deep sea fishing; (e) propaganda for rural pisciculture; and (f) biological investigations and fishery research. Certain other officers have charge respectively of sections dealing with technological research; trout fisheries and the fisheries of the Northern Circars. A special staff of officers trained in co-operation have been appointed for intensive work among fishermen. The miscellaneous institutions controlled by the Department consist of a small demonstration cannery a research station for curing, canning and allied industries, a Fisheries Training Institute at Calicut for imparting special training to teachers selected to teach in schools for fishers' children of which there were 43 with a total of 3,637 pupils in 1930. All the public fish curing yards which were under the control of the Salt and Abkari Department till 1924 have passed into the charge of the Fisheries Department. It is now possible to introduce the better methods of cure and improved hygiene which the Department has been straining to popularise, in all the yards. Due to the transfer of the yards, the Fisheries Department has a large ramified staff of yard officers (Salt Sub-Inspectors, Petty Yard Officers and Peons) in almost every large fishing village on the coast. Besides the direct work of issuing salt for curing, the Department sets itself to train these officers into expert advisers in curing methods and marketing fish, social workers for the inculcation of thrift, co-operative and progressive ideas and new industries and lastly as trained observers for recording and reporting on various biological questions connected with fish and fisheries and collecting statistics regarding the value and quantity of sea fish caught and landed. Statistics have been published since 1925-26 regularly every year in the bulletins.

The activities of the Department are so varied and far-reaching that it is difficult even to enumerate them in the space available, much less to give details. So far its most notable industrial successes have been the reform of manufacturing processes in the fish-oil trade, the creation of a fish guano industry and the opening of an oyster farm conducted under hygienic conditions. Twenty-four volumes have been issued to date and the twenty-fifth volume in Press. All this work has been carried on under serious handicap for want of adequate staff and equipment.

The educational work of the Department is becoming one of its most important branches whether it be specially training teachers for schools in fishing villages or training men in the technology of curing, canning and oil manufacture, in co-operative propaganda and in the supply of zoological specimens for the use of college classes and museums. The last named has filled a long-felt want and is contributing materially to the advancement of the study of Zoology throughout India. There is now no need to obtain specimens from Europe as they can be had from the Research Assistant, Fisheries Station, Ennur, Madras, at moderate prices.

Fish Curing.—Fish curing is practised extensively everywhere on the Madras coasts: its present success is due primarily to Dr. Francis Day who after an investigation during 1869-71 of the fisheries of the whole of India, pressed for the grant to fishermen of duty-free salt for curing purposes within fenced enclosures. He advocated much else, but the time was not ripe and the salt concession was the sole tangible result of his long and honourable efforts. His salt suggestions were accepted by the Madras Government, and from 1882 a gradually increasing number of yards or bonded enclosures were opened at which salt is issued free of duty and often at rates below the local cost of the salt to Government. At present about 115 of such yards are scattered along the coast and over 55,000 tons of wet fish are annually cured therein. The total receipts on the administration of these yards for the year 1930-31 was Rs. 1,97,777-0-4 and expenditure Rs. 2,85,913-12-4.

Pearl and Chank Fisheries.—In the absence of the pearl fishery during the year, the chank fisheries prospered. An unprecedented number of 467,628 chanks were fished yielding a gross revenue of Rs. 17,860-8-8.

The Inland Fisheries.—The Inland Fisheries of Madras compare unfavourably with those of Bengal. Many of the rivers dry up in the hot season and few of the many thousands of irrigation tanks throughout the provinces

hold water for more than 6 to 9 months. As a consequence, inland fisheries are badly organised and few men devote themselves to fishing as their sole or even main occupation. The custom is to neglect or ignore the fishery value of these streams and tanks so long as they are full of water: only when the streams shrink to pools and the tanks to puddles do the owners or lessees of the fishing rights turn out to catch fish. The result is a dearth of fish throughout the greater part of the year, a glut for a few days, and often much waste in consequence. The chief fresh water fishes of economic importance are the Murrel, notable for its virtue of living for a considerable period out of water, and various carps including Labeo, Catla and the well-known favourite of sportsman in India the "Mahseer," Cat-fishes and Hilsa. In the Nilgiris, the Rainbow Trout has been acclimatised and thrives well. The Government working in conjunction with the Nilgiri Game Association maintain a hatchery at Avalanche, where quantities of fry are hatched and reared for the replenishment of the streams of the plateau. Fishing rights in the large irrigation tanks were transferred from Government to local authorities many years ago; these tanks are now being reacquired by Government in order that they may be stocked periodically by the Department; the results so far have shown a profit on the operations. To breed the necessary fry, 7 fish farms are in operation. In these the chief fish bred are the Gourami, obtained from Java, and Etroplu suratensis which has the excellent attribute of thriving and breeding as well in brackish as in fresh water; both protect their eggs while developing, a useful habit. Both the Gourami and Etroplus are largely vegetarian in diet. A further activity is represented by the breeding of small fishes especially addicted to feed upon the aquatic larvæ of mosquitoes. These are supplied in thousands to municipalities and other local authorities at a nominal price, for introduction into mosquito-haunted sheets of water; these anti-malarial operations have proved successful in the places where the local authorities have given proper attention to the direction given.

Marine Aquarium.—Perhaps a word is necessary about this institution at Madras. The building was constructed under the auspices of the Superintendent, Government Museum, Madras, and was thrown open to the public on 21st October 1909. The Superintendent, Government Museum, had charge of the Aquarium for ten years till 1919 when it was transferred to the Department of Fisheries. Ever since its opening, being the first institution of its kind in Asia, it has been immensely popular with the public.

A turtle tank of rough semi-circular shape with 21 feet as diameter was added during the course of the year.

Deep Sea Fishing and Research.—The fisherman has a fairly exhaustive knowledge of the fisheries along the coast up to 7 fathoms. If the catches of fish are to be improved it is necessary to ascertain—

(1) what kinds and quantities of fish are available beyond 7 fathoms; and,
(2) how to exploit these deep sea fisheries economically.

The department's trawler "Lady Goschen" has been exploring the off shore belt of the sea up to 100 fathoms from Point Calimere to Madras on the East Coast and Calicut to Pigeon Islands on the West Coast, with a view to ascertain the kinds and quantities of fish available there. The Assistant Biologist and staff worked on board the trawler. One remarkable discovery made by this systematic survey is that fish of better quality and in larger quantity are available in deeper waters on the East coast from Point Calimere to Madras than on the West coast from Calicut to Pigeon Islands, during the months of the survey. Whether it is the case throughout the year is yet to be ascertained. However it has helped to revise the general belief that fish are much more abundant on the West coast than on the East coast, and opens up possibilities for large fishery developments on the East Coast which will ultimately increase the supply of fish food and fish manure.

Rural Pisciculture.—As a result of the recommendation of the Royal Commission on Agriculture that all practical measures should be adopted to add fish to the diet of the cultivator thereby improving his nutrition, a scheme of rural propaganda was inaugurated in 1930. An Assistant Director with necessary staff was appointed to advise ryots in the stocking of village ponds which number over 106,050 in the Presidency. The work though begun in July 1930, has already completed a survey of ponds in 98 villages, 2,172 wells and 264 ponds in these villages were examined and out of this number 175 wells and 85 ponds were selected as suitable for piscicultural operations and 45 wells and 1 pond were stocked.

Welfare Work.—A remarkable feature in the work of the Madras Fisheries Department is the energy which it devotes to the improvement of the condition of the fisherfolk. On Sir Frederick Nicholson's initiative, the Department has always recognised the duty of spreading among them education and the habits of thrift, temperance and co-operation. The work has been specially successful on the West Coast. The number of fishermen's co-operative societies in 1930-31 was 73.

The need for special efforts to promote co-operation among fisherfolk and to renew and stimulate co-operative societies to more efficient work has been recognised by Government for some years. The Committee on Fisheries recommended that all co-operative work among fishermen both on the West and East Coasts in the Presidency should be done by the Fisheries Department and that, on the analogy of the system in vogue in the Labour Department, the staff of Inspectors of Co-operative societies should work under the Fisheries Department, the Co-operative supplying trained Inspectors and auditing the books of the societies. The Government partially accepted the recommendations and sanctioned the deputation of 3 Inspectors of Co-operative Societies for exclusive work among fishermen under the department.

Two industrial societies were started one at Blangad and the other at Palapatty on the West Coast in 1927 with the object of wearing the fishermen gradually from the influence of

middlemen capitalists. The Government sanctioned a loan of Rs. 1,500 each to the two societies for purchasing boats, nets and other accessories for fishing purposes. They are working since 1927 with varying degrees of success.

To promote the education of fishermen a training institution was opened in the middle of 1918 at Calicut to train teachers to work in elementary schools for the fisherfolk. The pupil teachers under training are familiarised with the work carried on in the fishery stations at Tanur and Chaliyam. They are given practical instructions in fishing, a boat having been purchased for the purpose. In some places the villagers themselves started the schools and then handed over to the Department. In other places schools were opened by the Department at the request of the fishermen. Local men are appointed as honorary managers of schools.

Bengal & Bihar & Orissa.

The fishing value of this extensive deltaic region lies primarily in the enormous area occupied by inland waters—rivers, creeks, jheels, and swamps,—to say nothing of paddy fields and tanks. These swarm with fish and, as the Hindu population are free to a large extent from the aversion to a fish-diet which is widely prevalent among the better castes in the south, the demand for fish is enormous. Rice and fish are indeed the principal mainstays of the population and not less than 80 per cent. of the people consume fish as a regular item of diet. It is calculated that 1·6 per cent. of the population is engaged in fishing and its connected trades, a percentage that rises to 2·6 in the Presidency, Rajshahi, and Dacca Divisions. 644,000 persons in Bengal subsist by fishing with 324,000 maintained by the sale of fish, and this in spite of the fact that fishing is not considered an honourable profession. As a fresh-water fisherman the Bengali is most ingenious, his traps and other devices exceedingly clever and effective—in many cases too effective —so eager is he for immediate profit, however meagre this may be. The greatest inland fishery is that of the hilsa (*Clupea ilisha*) which annually migrates from the sea in innumerable multitudes to seek spawning grounds far up the branches of the Ganges and the other great rivers. Other valued and abundant fishes are the rohu (*Labeo rohita*) and the katla (*Catla catla*), mrigela (*Cirrit uan mrigela*); prawns and shrimps abound everywhere. Of important fishes taken in the lower reaches of the rivers and in the great network of creeks spread throughout the Sunderbans, the bekti (*Lates calcrifer*) and the mullets are the most esteemed; apart from these estuarine fish the most valuable sea-fishes are the mango-fishes (*Polynemus,*) pomfrets. The sea-fisheries are as yet little exploited, the fishermen of Orissa, where alone coastal fishing is of any local importance, having no sea craft save catamarans of inferior design and construction.

Following the inquiry begun in 1906 by Sir K. G. Gupta, an investigation of the steam trawl potentialities of the head of the Bay of Bengal was undertaken, the trawler *Golden Crown* being employed for the purpose. The results showed that there are extensive areas suitable for trawling and capable of yielding large quantities of high class fish. Much attention was devoted during these trawl cruises to the acquisition of increased knowledge of the marine fauna, the results being published in the Records and Memoirs of the Indian Museum. For various reasons, the chief perhaps being the hostility of vested interests, the lack of cold storage facilities and the loss of time involved by the trawler having to bring her catches to Calcutta instead of sending them by a swift tender, the experiment was financially a failure and was dropped. With ever-increasing demand for fish in Calcutta and the concurrent rise in prices, the prospects of remunerative steam-trawling are now much more, steam-trawling companies being floated in the immediate future. The trade is a difficult one to organize and without a rare combination of technical fishery knowledge and far-sighted and comprehensive organization the danger run by the investing public will be considerable. Originally one Fisheries Department served the needs of the two provinces of Bengal and Bihar and Orissa. Separation was effected in after which fisheries in Bengal were administered by the Director of Agriculture. The Bengal Fishery Department was abolished under retrenchment in 1923. There is no immediate prospect of reconstitution of the Department. In Bihar and Orissa, Fisheries form a section of the Department of Industries.

Bengal Fisheries Department has of necessity a more limited scope for its activities than in the case of Madras. Practically no coastal minor industries exist, neither do the natural conditions lead us to suppose that any can be created without extreme difficulty, and in the absence of a great trawl industry which alone might be able to call into existence factories devoted to the uplift of the general utilization of fish bye-products. Apart from this, much can be done by its officers for the uplift of the general fishing population with a view to free them from the tyranny of the mahajans (fish contractors and middle men) and enable them to put more capital into their business and to conduct it co-operatively. This is necessarily extremely slow work, but a beginning has been made and a number of fishermen's co-operative societies have been formed. Their example is calculated to effectively serve the purpose of propaganda. The fishery wealth of Bengal is enormous and nothing but good can come out of intensive investigation and propaganda.

Fresh-water mussels are used extensively at Dacca in the manufacture of cheap pearl buttons and in many cases pearls also are found in the mussels which the pearl dealers gather and sell in the various parts of India. The Dacca bangle factories carry on an important local industry of very ancient standing; their material is almost entirely obtained from the South Indian and Ceylon chank fisheries already alluded to.

Bombay.

Whereas Bengal's fisheries are at present confined principally to inland waters, those of Bombay are concerned, save in Sind, almost entirely with the exploitation of the wealth of the sea. Bombay is favoured with a coast line abounding with excellent harbours for fishing craft, a fair-weather season lasting for some seven months, and a fishing population more alive to their opportunities and more daring than those of the sister Presidencies. Bombay sea-fisheries are of very great importance financially as well as economically and, though there is less necessity for a special department to develop marine industries, there is ample scope for most useful work in improving curing methods, in introducing canning and in the development of minor marine industries particularly those connected with the utilization of bye-products. With this end in view the Director of Industries administered the subject of "Fisheries" from 1918 and had for a time two officers in the Department engaged upon fishery investigation and development. A steam trawler was bought for work in Bombay waters in 1920 and began work in May 1921 off Bombay. The experiment continued until February 1922, and the trawler was subsequently sold to the Government of Burma. At the outset the results seemed promising, but the experiment as a whole showed that the cost of maintaining a trawler of the type used could not be met by sales of fish at current market rates. Cold storage has since been installed at the principal fish market in Bombay, but for a trawler special facilities are needed also for rapid coaling, supplying ice and stores, and for unloading catches. More than this a change is needed in the mediæval conditions under which the local fish market is conducted and there is much to be done in popularising little known species of edible fish, such as karei, palu, tambusa, and particularly the ray or skate which formed on the average 25 per cent. of the total catch but which is so little esteemed locally that it sold on the average at the rate of 100 lbs. for a rupee.

Owing to retrenchment the appointments of Fisheries officers have been abolished.

The more important sea-fish are pomfrets, sole and sea-perches among which are included the valuable Jew-fishes (*Sciæna* spp.) often attaining a very large size and notable as the chief source of "fish-maws" or "sounds," largely exported from Bombay for eventual manufacture into isinglass. The finest of Bombay fishing boats hail from the coast between Bassein and Surat. These boats are beautifully constructed, attain a considerable size, and are capable of keeping the sea for weeks together. In the season they fish principally off the Kutch and Kathiawar coasts and in the mouth of the Gulf of Cambay. Their main method of fishing is by means of huge anchored stow nets, which are left down for several hours and hauled at the turn of the tide. The chief catches are bombil (Bombay ducks), pomfrets and jew-fishes. The first named are dried in the sun after being strung through the mouth upon lines stretched between upright posts. South of Bombay the fishermen of Ratnagiri and Rajapur make use of another and lighter class of fishing boat, specially designed for use in drift-net fishing. Fine hauls of bonito seer (a large form of mackerel) and allied fishes are often made during the season from September to January and later of shark and ray fish. For the latter specially large and powerful nets are employed. For part of the fair season, when fishing is not usually remunerative, many of the larger Bombay fishing boats are employed as small coasters, a fact which shows how large they run in size.

In **Sind** considerable sea-fishing is carried on in the neighbourhood of Karachi chiefly for large and coarse fish, such as soormai, shark, rays and jew-fishes. In order to prevent destructive exploitation of oyster beds the plucking of oyster is confined to licensed fishermen and is limited to a few months of the cold weather. The demand for oysters for edible purposes is considerable, but although many seed pearls are procurable it does not pay to work the beds for these purposes and the export of such seed pearls to China for use in medicine ceased many years ago. Considerable fisheries exist in the River Indus, chiefly for the fish known as palla, which are annually leased out by Government for about Rs. 20,000.

In the Gulf of Kutch two pearl fisheries exist, one for the true pearl oyster, the other for the window-pane oyster. The former is carried on by His Highness the Maharaja of Jamnagar, the other partly by this Prince and partly by the administration of His Highness the Maharaja Gaekwar of Baroda. The latter industry owes its local existence to the enterprise of the Baroda Government which in 1905 obtained the services on deputation of Mr. J. Hornell, formerly Director of Fisheries in Madras, for the purpose of examining the Marine potentialities of the Baroda territory in Kathiawar. One of the consequences was the discovery of large deposits of pearl-bearing window-pane oysters until then unknown; of late years these beds have produced annually from Rs. 15,000 to Rs. 25,000 in revenue perhaps the best example we have in India of the profitable nature of well-directed scientific enquiry into fishery problems. The Baroda Government, continuing their enlightened interest in the fishery developments have had two officers trained in the Madras Fisheries Department and now employ them in development work on the Baroda coast.

Experiments in canning are now in progress at one of the chief fishing centres on the Southern Kathiawar coast and already promise considerable success particularly with regard to pomfrets.

In 1910 Mr. W. H. Lucas, Collector of Salt Revenue, drew up a report on the improvement of the sea fisheries in the Bombay Presidency. The main conclusions at which he arrived were that the Indian consumer is so conservative that new methods of curing, canning, etc., have no chance of succeeding without the help of patient demonstration by Government as an initial step towards the investment of Indian capital in a new enterprise, and that therefore the establishment of a Government demonstration fishing station at some large fishing centre on the Ratnagiri or Kanara coast may be found advisable after the results of the Madras Government fishing station have been studied.

Recently Mr. H. T. Sorley, I.C.S., carried out a survey of the fishing resources of the Bombay Presidency and Sind coast The results of this investigation published by the Bombay Government contain valuable suggestions for the development of the Presidency's fishing industry.

The year 1933 is a memorable one so far as the fishing industry of the City of Bombay is concerned. The year saw the establishment of a Section of Fisheries under the aegis of the Department of Industries, Bombay. This Section is still in its infancy and there is hardly any data whence it may be possible to draw any deductions about the future of the industry. An important feature of the work of the new Section was the launching of a fast motor boat by Sir Frederick Sykes, the then Governor of Bombay, for the rapid transport of fish from the fishing grounds to the landing sites in Bombay. The venture is merely of an experimental nature. The primary object of this experiment is to demonstrate to local fishermen how the adoption of rapid and modern means of transport will directly benefit their trade.

Burma.

Fresh, dried and salted fish and fish paste are consumed by Burmese people. The value of fish imported from foreign countries (chiefly from Straits Settlements) was 8.85 lakhs in 1931-32. The exclusive right of fishing throughout the province of Burma belongs by custom of the country to Government, and the Burma Fisheries Act provides for the protection of this right and for conceding the enjoyment of it to the people subject to certain restrictions for the conservation of the fish.

Revenue.—The economic value of any industry or tract of country can, to some extent, be gauged by the revenue it yields. The fisheries yielded a substantial revenue (about 43.85 lakhs *per annum* during the last decennium) and therefore they are one of the most important sources of national wealth. The receipts declined to 2/3rds of this amount in the year 1932-33 owing to trade and economic depression. Some open lakes, pools of water and small rivers are classed as leasable fisheries and are leased by Government to the highest and best bidders at public auction for periods varying from one to five years. The total number of leaseable fisheries in the province is 3,606 of which 1,697 lie in the Irrawaddy Division, and 699 in Maubin—one of the five districts in that division.

The Delta consists of a series of saucer-shaped islands, many of which have embankments round the greater part of them along the north-east and west; in the hollows of these islands most of the fish come into spawn, and with the floods which overflow the embankment during October the young fry come down-country from Upper Burma.

Licenses for fishing in all open fisheries are issued annually to persons who pay the prescribed fees for the specified classes of fishing implements. The greatest revenue from licenses comes from Mergui District where not only is the Pearling industry carried on, but leases for collecting green snails and sea slugs are issued.

The principal kinds of fish caught in nets on the sea-coast are (1) Kakkuyan, (2) Kathabaung, (3) Kathahmyin and (4) Kabalu. These are generally made into salt fish which fetch Rs. 2 to Rs. 3 per *viss*. The creek and fresh water fish from fisheries are generally *ngakhu*, *ngayan* and *ngagyi*. Most of them are sold fresh, but some are converted into salt fish. The fish caught in the rivers are generally *ngathalauk*, *Ngagyin* and *Ngamyinyin*. *Kakalaung* and *Ngaponna* which are found in small quantities elsewhere in India are sold in abundance in the Rangoon market.

The Punjab.

The year 1932-33 was marked by an important change in the administration of the Fisheries Department. On the retirement of Mr. C. H. Donald the post of Warden of Fisheries was abolished, and the department placed under the control of the Director of Agriculture, Punjab. The Fisheries Research Laboratory was transferred to the Agricultural College, Lyallpur, and now forms part of the Entomological Section at that Institute.

On account of financial stringency no important advance could be made either in conservation or in research. The number of fishing licenses rose from 6,892 in the previous year to 6,917 during 1932-33.

The catches of professional fisherman on the whole were satisfactory, except during the Spring of 1933, when weather conditions were unfavourable for both netting and angling. Hail storms did considerable damage to the fish in the Sohan Stream in the Rawalpindi District. The trout fishing on the Beas and its tributaries in Kulu was good, except in the Tirthan Stream where the floods were very severe and played havoc with the fish. The number of trout Angling Licenses rose from 113 in the last year to 141. The Anglers got good sport and found the fish in excellent condition. Fishing in the two Trout Streams in Kangra proper was not good. Mahasir fishing in the waters in the sub-montane Districts was satisfactory.

Trout-cultural experiments were successful in the hills, but the breeding of carp at Chhenawan did not yield any important results. Owing to paucity of funds other fish-breeding stations remained closed. 900 Larvicidal fish were sent from the Chhenawan Fish Tanks to three different places for the control of Malaria. These fish have been found by experiments to devour about 100 Mosquito larvae each in one hour.

Travancore.

This State has affiliated fisheries to the Department of Agriculture and with the help of two officers trained in Madras and another officer trained in Japan, the Department has already accomplished a notable amount of development work. Special attention has been given to the regulation of fisheries in backwaters, to the establishment of co-operative societies among the fishing community and to the introduction of improved methods of sardine oil and guano production. Useful work has been done by one of the officers in elucidating the life-histories of the more valuable food fishes and prawns. Improved methods of curing fish are being introduced. Special Schools have been opened for the education of fisher lads.

The Forests.

Even in the earliest days of the British occupation the destruction of the forests in many parts of India indicated the necessity for a strong forest policy, but whether or not our earlier administrators realized the importance of the forests to the physical and economic welfare of the country, the fact remains that little or nothing was done. The year 1855 marked the commencement of a new era in the history of forestry in India, for it was then that Lord Dalhousie laid down a definite and far-sighted forest policy. Further progress was delayed for a time by the Mutiny, but from 1860 onwards forest organization was rapidly extended to the other provinces. The earlier years of forest administration were beset with difficulties, which is not surprising considering that the Department was charged with the unpopular duty of protecting the heritage of Nature from the rapacity of mankind—a duty which naturally roused the antagonism of the agricultural population of India. Exploration, demarcation and settlement, followed by efforts to introduce protection and some form of regular management, were the first duties of the Forest Department. Work on these lines, which is not yet completed in the more backward parts of the country, has been pursued steadily from the commencement, and in consequence large tracts of forest have been saved from ruin and are gradually being brought under efficient management. Whatever may have been the opinions held in some quarters half a century ago as to the need for a policy such as that expressed in Lord Dalhousie's memorable enunciation of 1855, there is no longer any doubt that results have amply justified the steps taken, and that in her forests India now possesses a property of constantly increasing value, the future importance of which it is hardly possible to overestimate.

Types of Forest.—More than one-fifth of the total area of British India (including the Shan States) is under the control of the Forest Department. These areas are classified as reserved, protected or unclassed State forests. In the reserved forests rights of user in favour of individuals and the public are carefully recorded and limited at settlement while the boundaries are defined and demarcated; in the protected forests the record of rights is not so complete, the accrual of rights after settlement not being prohibited, and the boundaries are not always demarcated; while in the unclassed forests no systematic management is attempted, and as a rule the control amounts to nothing more than the collection of revenue until the areas are taken up for cultivation or are converted into reserved or protected forests. The total forest area of British India (including the Shan States) on 31st March 1930 was 249,710 square miles or 22·6 of the total area. This was classed as follows: Reserved 107,753; Protected 6,263; Unclassed State 135,694.

Throughout this vast forest area, scattered over the length and breadth of India from the Himalayan snows to Cape Comorin and from the arid juniper tracts of Baluchistan to the eastern limits of the Shan States, there is, as may be imagined, an infinite variety in the types of forest vegetation, depending on variations of climate and soil and on other local factors. Broadly speaking, the following main types of forest may be distinguished:—

(1) Arid-country forests, extending over Sind, a considerable portion of Rajputana, part of Baluchistan and the south of the Punjab, in dry tracts where the rainfall is less than 20 inches. The number of species is few, the most important tree being the babul or kikar (*Acacia arabica*), which however in the driest regions exists only by the aid of river inundations.

(2) Deciduous forests, in which most of the trees are leafless for a portion of the year. These forests, which extend over large areas in the sub-Himalayan tract, the Peninsula of India and Burma, are among the most important, comprising as they do the greater part of the teak and sal forests.

(3) Evergreen forests.—These occur in regions of very heavy rainfall, such as the west coast of the Peninsula, the eastern sub-Himalayan tract, and the moisture parts of Burma and are characterized by the great variety and luxuriance of their vegetation.

(4) Hill forests.—In these the vegetation varies considerably according to elevation and rainfall. In the Eastern Himalaya, Assam and Burma, the hill forests are characterized by various oaks, magnolias and laurels, while in Assam and Burma the Khasia pine (*Pinus khasya*) grows gregariously at elevations of 3,000 to 7,000 feet. In the North-Western Himalaya the chief timber tree is the deodar (*Cedrus deodara*), which occurs most commonly at elevations of 6,000 to 8,000 feet, and in association with oaks or blue pine (*Pinus excelsa*); towards its upper limit the deodar merges into very large areas of spruce and silver fir, while below it are found extensive forests of the long-needled pine (*Pinus longifolia*) which is tapped for resin.

(5) Littoral forests.—These occur on the sea coast and along tidal creeks. The most characteristic trees belong to the mangrove family (*Rhizophoreae*). Behind the mangrove belt is an important type of forest occasionally inundated by high tides, in which the most valuable species is the "sundri" (*Heritiera fomes*).

Forest Policy.—The general policy of the Government of India in relation to forests was definitely laid down in 1894 by the classification of the areas under the control of the Department into four broad classes, namely:—

(*a*) Forests the preservation of which is essential on climatic or physical grounds. These are usually situated in hilly country where the retention of forest growth is of vital importance on account of its influence on the storage of the rainfall and on the prevention of erosion and sudden floods.

(*b*) Forests which afford a supply of valuable timbers for commercial purposes, such, for example, as the teak forests of Burma, the sail forests of Northern, Central, and North-Eastern India, and the deodar and pine forests of the North-Western Himalaya.

(*c*) Minor forests, containing somewhat inferior kinds of timber, and managed for the production of wood, fodder, grazing and other produce for local consumption; these forests are of great importance in agricultural districts.

(*d*) Pasture lands.—These are not "forests" in the generally understood sense of the term but grazing grounds managed by the Forest Department merely as a matter of convenience.

These four classes of forest are not always sharply divided from each other, and one and the same tract may to a certain extent be managed with more than one object.

Administration.—The forest business of the Government of India is carried out in the Department of Education, Health and Lands. The Inspector-General of Forests is also President of the Forest Research Institute at Dehra Dun and is the technical adviser to the Government of India in forest matters. Under the Constitution of 1919 Forests were made a transferred subject in Bombay and Burma, where they had long been administered by the Provincial Governments, and in 1924 the Reforms Inquiry Committee presided over by the late Sir Alexander Muddiman, Home Member of the Government of India, recommended that they be transferred in other provinces now unless any local Government on examination of the position can make out a convincing case against the transfer in its own province.

Territorial charges.—The various provinces are divided into one or more Forest Circles; each in charge of a Conservator of Forests; provinces containing three or more circles also have a Chief Conservator who is the head of the Department for his province. Circles are divided into a number of Forest Divisions, in charge of members of the Imperial or Provincial Forest Service; these Divisions in most cases correspond to civil districts. Each Division contains a number of Ranges in charge of junior members of the Provincial Service or of Forest Rangers or Deputy Rangers; heavy Divisions are also sometimes divided into Subdivisions. The Ranges are further subdivided into a number of beats or protective charges held by Forest Guards or in some cases by Foresters.

Non-territorial changes.—Apart from territorial changes there are various important posts of a non-territorial nature connected with Forest Research and Education, the preparation of Forest Working Plans, and other special duties.

The Forest Service.—The Forest Service comprises three branches:—

(1) The Indian (Imperial) Forest Service with a sanctioned total personnel of 379 officers consisting of the Inspector-General of Forests, Chief Conservators, Conservators, Deputy and Assistant Conservators. Of these 281 have been recruited direct to the service. The officers of this service are recruited as probationers subject to the following methods prescribed in the Indian Forest Service (Recruitment) Rules, 1928:—

(*a*) by nomination in England in accordance with such supplementary regulations as may be prescribed by the Secretary of State in Council.

(*b*) by competitive examination in India in accordance with such supplementary regulations as may be prescribed by the Governor-General in Council

(*c*) by direct appointment of persons selected in India otherwise than by competitive examination;

(*d*) by the promotion on the recommendation of local Governments of members of the Provincial Forest Services;

(*e*) by the transfer of promotion of an officer belonging to a branch of Government Service in India other than a Provincial Forest Service.

Further recruitment to the Indian Forest Service, whether by promotion or direct appointment, has been suspended until a decision is reached on the recommendation of the Services Sub-Committee of the Indian Round Table Conference in regard to the provincialisation of the Indian Forest Service.

In Bombay and Burma, where. Forest is a transferred subject new services called the Bombay and Burma Forest Services Class I, have been created to take the place of the Indian Forest Service.

(2) **The Indian Forest Engineering Service.**—This service was created in 1919 but since 1922 no further recruitment has been made. Some of the Forest Engineers have been transferred to the Indian Forest Service or the Indian Service of Engineers and some have resigned or have retired. The future strength is not expected to remain at more than three *i.e.* (one each in Bombay, Madras and Punjab).

(3) **The Provincial Service.**—Formerly it consisted of Extra Deputy and Extra Assistant Conservators of Forests. All Extra Deputy Conservators who were considered to be fully qualified to hold a major charge were transferred to the Indian Forest Service in 1920. The class of Extra Deputy Conservators has been abolished and the service now consists of Extra Assistant Conservators only. The fixation of the strength of the personnel of the service rests with the local Governments.

Officers of this service are eligible for promotion upto 25 per cent. of the posts in the Indian Forest Service in provinces other than Bombay and Burma, such promotion being made by the Secretary of State for India. These officers are recruited and trained in India, their

recruitment being a matter for the local Governments. A certain number of posts in the service are filled by the promotion of specially promising Rangers. Owing to the establishment of a course for the training of probationers for the Indian Forests Service at Dehra Dun since 1926, the Provincial Service course ceased to exist from 1928. The I. F. S. College has also closed down at the end of Oct. 1932 as a result of the stoppage of recruitment to the Indian Forest Service and as a measure of economy.

(4) The Subordinate Service consists of Forest Rangers (about 840), Deputy Rangers (about 900), Foresters (about 2,000) and Forest Guards (about 11,500). The Rangers are at present trained at three different centres—the Forest College at Dehra Dun (for provinces other than Burma, the Central Provinces, Bihar and Orissa, Bombay and Madras), the Burma Forest School at Pyinmana (for Burma), and the Madras Forest College at Coimbatore (for Madras, Bihar and Orissa, Bombay and the Central Provinces). These three institutions were established in 1878, 1898 and 1912, respectively. The training of subordinates below the rank of Ranger is carried out in various local forest schools and training classes.

Research.—For the first fifty years of the existence of the Forest Department in India no attempt was made to organize the conduct of forest research, and thus to co-ordinate and elaborate the scientific knowledge so necessary to successful economic working. A commencement in organized forest research was at last made in 1906 by the establishment, at the instance of Sir Sainthill Eardley-Wilmot, then Inspector-General of Forests, of a Forest Research Institute at Dehra Dun. The Forest Research Institute, is under the administrative control of the Inspector-General of Forests who is also the President. There are five main branches of research, namely Sylviculture, Forest Botany, Forest Economic Products, Entomology and Chemistry, each branch being in charge of a research officer. The Timber Testing expert is engaged temporarily on short term contract. Indian Assistants have been appointed to receive the necessary technical training and experience with the object of eventually taking the place of experts if and when properly qualified. The Wood Technology, Paper Pulp Wood Preservation and Seasoning Sections are in charge of Indian experts who have received special training in their various subjects in Europe and America.

As a result of Mr. R. S. Pearson's long and able administration of the Forest Economic Branch, the Government of India now have at Dehra Dun a series of forest workshops and experimental laboratories without parallel anywhere else in the world and official reports show that the value of the experimental work done in them is daily exemplified by the unending stream of inquiries received from persons doing business in timber and other forest products, not only in India but elsewhere in the world. The officers in charge of this branch received their training mostly in Europe and America and their efficiency is of a very high order.

Since 1906 research work has been prosecuted energetically so much so that in 1920 a new scheme was sanctioned for the expansion of the staff and site of the Institute. Since then new land has been acquired, on which new buildings have been built for accommodating the various expanded branches and the new machinery obtained from the United Kingdom. As a result of this, steady progress has been made in the investigations which should ultimately lead to the fuller and better utilization of the raw products produced by Indian forests. Unfortunately the need for retrenchment in all Government activities has stopped or curtailed many promising lines of investigation.

Forest Products.—Forest produce is divided into two main heads—(1) Major produce, that is timber and firewood, and (2) Minor produce, comprising all other products such as bamboos, leaves, fruits, fibres, grass, gums, resins, barks, animal and mineral products, etc. The average annual outturn of timber and fuel from all sources during the quinquennium ended 31st March 1931, the latest date for which statistics are available, was 353,863,000 cubic feet against an average of 361,172,000 cubic feet per annum attained in the preceding quinquennium. The annual outturn of timber and fuel from all sources during the quinquennium 1928-29 averaged 362,217,000 cubic feet against an average of 340,000,000 c. ft. during the preceding quinquennium. The trade in bamboos was almost stationary, with expectations of great development under commercial exploitation for paper pulp manufacture in the near future. The five years witnessed the initiation and development of certain large exploitation schemes, especially in Madras, which had indifferent success. It was hoped in Madras by utilising modern American methods to extract and utilise very large quantities of valuable timbers, but the final result proved that this extensive exploitation was justified neither by the stand of timber in the forests nor by the possibilities of satisfying markets. The Provincial Government after this experience adopted a more cautious policy.

An important measure for the development of forests in the Andamans was sanctioned by the Government of India. Hitherto, elephants had been employed for extraction of timber, with the result that only the fringe of the forests could be touched. The new plan is for the employment of American methods. American logging machinery was purchased and an American expert engaged to take charge of the work. Owing, however, to the wide-spread depression in the timber trade the employment of mechanical methods for the extraction of timber have been suspended for the present. Elsewhere in India a great part of the trade in timber lies in the hands of contractors who are regarded as on the whole trustworthy if sufficient control over their operations is maintained.

Forest Industries.—The important rôle which the forests of a country play in its general commercial welfare and in providing employment for its population is not always fully recognized. Fifteen years ago it was estimated that in Germany work in the forests provided employment for 1,000,000 persons while 3,000,000 persons, earning £30,000,000 a year, were employed in working up the raw

material yielded by the forests. If accurate estimates were available for India, they would no doubt show that apart from the jungle population which is directly dependent on the forests and the large numbers of wood-cutters, sawyers, carters, carriers, raftsmen and others working in and near them, employment on an enormous scale is provided to persons engaged in working up the raw products. Among these latter may be mentioned carpenters, wheelwrights, coopers, boat-builders, tanners, rope-makers, lac-manufacturers, basket-makers, and many other classes of skilled labourers. The Indian census shows over a million people and their dependents so employed in British India and nearly a further half million in Indian States, but these are probably below the actuals, as much forest labour is not whole-time labour, devoting seven or eight months in the year to forest work and the rest to agriculture. With the opening up of the forests, the extension of systematic working, the wider use of known products, and the possible discovery of new products, a steady and extensive development of industries dependent on the forests of India may be confidently anticipated in the future.

Financial Results.—The steady growth of forest revenue, expenditure and surplus during the past 65 years is shown in the following statement, which gives annual averages for quinquennial periods:—

Financial Results of Forest Administration in British India from 1864-65 *to* 1928-29 *(in lakhs of rupees).*

Quinquennial period.	(Gross revenue average per annum).	(Expenditure average per annum).	Surplus (average per annum).	Percentage of surplus to gross revenue.
	Lakhs.	Lakhs.	Lakhs.	Lakhs.
1864–65 to 1868–69	27·4	23·8	13·6	36·4
1869–70 to 1873–74	56·3	39·3	17·0	30·2
1874–75 to 1878–79	66·6	45·8	20·8	31·2
1879–80 to 1883–84	88·2	56·1	32·1	36·4
1884–85 to 1888–89	116·7	74·3	42·4	36·2
1889–90 to 1893–94	159·5	86·0	73·5	46·1
1894–95 to 1898–99	177·2	93·0	79·2	44·7
1899–1900 to 1903–04	196·6	112·7	83·9	42 7
1904–05 to 1908–09	257·0	141·0	116·0	45·1
1909–10 to 1913–14	296·0	163·7	132·3	44·7
1914–15 to 1918–19	371·3	211·1	160·2	43·1
1919–20 to 1923–24	551·7	367·1	184·6	33·5
1924–25 to 1928–29	595·4	351·1	244·2	40·9

Most of the provinces show a steady increase of surplus. The slump in trade of the last few years was evident in the surplus for the year 1930-31 which fell to 121 lakhs from a previous "peak" figure of 273 lakhs in 1926-27. The figure, however, is still a most favourable one and indicates that the forests of India are being properly worked for the benefit of the country, with the passing of the current world-wide depression the temporary set back in financial results may be expected to disappear.

Agencies.—An agency has been established in India by the Government of India for the sale of Government timber and it is at present held by Messrs. Martin & Co., Calcutta. The agency held in England by Messrs. W. W. Howard Brothers terminated in December 1926 and the work of marketing Indian timbers in England (especially Andaman timbers) is now done under the direction of a Timber Adviser who is attached to the Office of the High Commissioner for India. This trade has not yet been raised to a satisfactory level, because, according to the official explanation, "the intense conservatism in English timber trade and the difficulty of obtaining a footing for little known timbers have combined to make satisfactory sales very difficult.

Bibliography.—A large number of bulletins and other publications has been issued by the Forest Research Institute, and of these a list can be obtained from the President, Forest Research Institute and College, New Forest, Dehra Dun, U. P.

* Excludes Delhi Province and the British Pargana of Manpur (Central India).

† Unclassed state forests or public forest lands as they are often called, include in many provinces all unoccupied waste, often entirely devoid of trees. So the statistics do not necessarily represent the wooded area.

(a) Includes 60,615 square miles for Federated Shan States.

(b) Excluding figures for Shan States and Karrenni.

(c) Includes Rs. 29,092 on account of receipts under the head Forest Research Institute and College.

(d) Includes expenditure under heads Imperial (Rs. 59,082), Forest Research Institute and College (Rs. 7,33,174).

(e) After taking into account deficits under Imperial (Rs. 59,082), Forest Research Institute and College (Rs. 7,04,082).

WIRELESS TELEGRAPHY AND TELEPHONY.

Beam Stations.—The year 1927 saw the commencement of Beam wireless services on the Marconi system between India and the United Kingdom. Powerful transmitting and receiving stations erected at Poona and Dhond respectively by the Indian Radio Telegraph Company are connected by land lines with the Central Telegraph Office in Bombay, whilst stations at Skegness and Grimsby are similarly connected with the General Post Office in London, and the circuits are so arranged that messages are exchanged between Bombay and London without intermediate handling at the Beam stations at either end. The huge aerial systems at Poona and Dhond, each supported on five steel towers 287 feet in height, are landmarks over a distance of many miles. The service was inaugurated by His Excellency the Viceroy on 23rd July 1927 at the Central Telegraph Office, Bombay, when His Excellency transmitted a message to the King and His Majesty's reply was received a few minutes later.

It is noteworthy that the opening of the Beam wireless service coincided with a reduction in rates by the cable companies. The Eastern Telegraph Co., which operates the cable from Europe to India, has become merged in the New Imperial and International Communications Ltd.

For reasons of economy, most of the inland wireless stations in India were practically closed down and placed in charge of "Care and Maintenance" parties which carry out tests twice a month, the exceptions being Peshawar Radio, which always maintained official communication with Kabul in Afghanistan and Kashgar in China, and Jotogh Radio, which receives British Official Wireless sent out from Oxford and Rugby and passes the messages to Reuter's Agency for distribution to subscribing newspapers. The stations at Delhi and Allahabad have now been equipped with apparatus to enable them to function as aeronautical wireless stations and they are used as such. New wireless stations for aeronautical purposes have been erected at Jodhpur in Bikaner, and Gaya. The wireless installations at Karachi and Calcutta have been modified so as to meet all the Wireless requirements of aircraft passing over India. New stations equipped for aeronautical communication purposes are under construction at Chittagong, Akyab, Sandoway and Bassein.

The coast stations, however, have been maintained in a state of high efficiency and many improvements effected. The application of the Baudot system to the high-speed continuous-wave wireless stations at Madras Fort and Mingaladon (Rangoon) has proved extremely satisfactory, and a large portion of the traffic between Southern India and Burma is regularly worked by this direct route instead of the circuitous route *via* Calcutta. The traffic is interrupted occasionally by atmospheric interference, particularly during the hot weather but the difficulties have been largely overcome by handspeed working during the worst periods.

For many years the Bombay stations known as Bombay Radio was located on Butcher Island in the Harbour, but during 1927 a fine new station equipped with modern apparatus was erected and taken into service at Santa Cruz, just outside the limits of Bombay Municipality.

Radio telegrams exchanged with ships at sea by coast stations in India and Burma continue to increase in number, and now total about 30,000 per annum. Official telegrams are exchanged with the British Naval station at Matara (Ceylon) *via* Bombay Radio. Regular services are also maintained between Burma and the Malay Peninsula *via* Rangoon and Penang and between Burma and Sumatra, whilst radio traffic is passed between Madras and Colombo when the normal route is interrupted.

Wireless telephonic communication between pilot vessels, lighthouses and shore stations are maintained by the Port Trusts at Bombay and Rangoon. In March 1931, telephonic communication between Bombay and London was established for the first time. The conversations were initiated from the s.s. *Belgenland* a tourist ship lying in Bombay Harbour and were made possible through the courtesy of Standard Telephones and Cables Limited in conjunction with the International Marine Radio Company.

Safety at Sea.—A noticeable feature of wireless development during the past two years has been the provision of direction-finding apparatus at Bombay and Karachi and facilities at other coast stations whereby ships at sea equipped with direction-finding apparatus can obtain bearings on coast stations and thus determine their position with a remarkable degree of accuracy. The latest style of Marcony beacon was erected on Kennedy Island during 1931 to guide shipping approaching Bombay harbour. All Ships equipped with wireless direction finders will now be able to obtain exact knowledge of their whereabouts at a distance of 150 miles from the coast. The beacon is an experiment and is likely to be the first of many others along the coast of India. Improved arrangements for broadcasting time signals, weather reports and navigational warnings from coast stations have also proved of value to ships at sea.

Broadcasting.—For several years, limited broadcasting services were maintained by Radio Clubs in Calcutta, Bombay, Madras, Karachi and Rangoon, and although the transmitting sets employed by them were of very low power, the broadcasts were tuned-in over practically the whole of India. The clubs were assisted financially by a Government contribution based upon the revenue from license fees, but this did not nearly suffice to cover the cost of the transmissions, and the greatest credit is due to the members of those clubs for the sporting manner in which they provided additional funds and undertook the entire responsibility for the programmes. Credit is also due to the Indian States and Eastern Agency for the loan of transmitting apparatus, without which the broadcasts would have been impossible.

After negotiations extending over several years, an Indian Broadcasting Company was granted a license to establish broadcasting services upon lines similar to those of the British Broadcasting Corporation, and transmitting stations were erected in Bombay and Calcutta.

the services at the former being inaugurated by His Excellency the Viceroy in July 1927 and the latter by the Governor of Bengal a month later. These stations had each an aerial input of three kilowatts, the same as that of the 2LO stations in London, of which they are practically duplicates. The programmes were so arranged that both Indian and European music are broadcast daily and the news bulletins and market and weather reports are read in two languages.

Bombay broadcasts normally on a wavelength of 3502 metres, and Calcutta on 370·4 and 49·10 metres. Reception in either of these cities, and for a distance of twenty or thirty miles around, is possible on crystal sets, of which a very large number have been sold. Valve sets are necessary for those living further afield, but although there has been a considerable demand for these, the sales have not reached expectation. One of the greatest difficulties in India is the maintenance of batteries, which is no inconsiderable item when sets containing five or six valves are employed.

The Indian Broadcasting Company was wound up in 1930 and its operations have since been conducted by the Government of India, in the Industries and Labour Department. Government for this purpose formed an Indian State Broadcasting Service and instituted a Central Broadcasting Advisory Committee, representative of the non-official public in association with the Departmental officials, to keep them in touch with public opinion. The Committee has as its chairman the Member of the Viceroy's Executive Council in charge of the Subject (now the Hon. Sir Joseph Bhore) and upon it sit at the present time Messrs. N. B. Macbeth and N. M. Dumasia, M.L.A., Bombay; H. H. Reylands and K. C. Neogy, M.L.A., Calcutta; M. R. Coburn, Financial Adviser to Government in the Posts and Telegraphs Department and B. Rama Rao, Joint Secretary to Government in the Industries and Labour Dept. It is now proposed to establish a series of additional broadcasting stations in different parts of India so as to spread broadcasting receivable on low-powered sets throughout the land. Important proposals with this purpose in view were discussed by the Advisory Committee in Calcutta in December, 1930. An event of considerable importance was Bombay's broadcast to the world on December 13, 1933. This broadcast, played from the Empire Station, gave listeners in Europe their first opportunity of hearing a typical Indian programme.

Licenses.—Broadcast receiving licenses are issued at Head Post Offices at a fee of ten rupees per year, and cover the use of receiving sets throughout British India except Baluchistan and the North-West Frontier Province. Licenses for fixed stations for transmitting and experimental purposes are much sought after, and despite a careful scrutiny of the applicants, more than 300 have been issued. The number of traders in wireless apparatus who are required to take out special Import licenses has increased considerably during the past year. This improvement must be ascribed primarily to the commencement of broadcasting.

Prospects.—The Government of India have always encouraged the development of wireless in India by private enterprise and to this source that India may look in the future for considerably increased internal radio communication. There are two most promising lines of development, *viz.*—

(*a*) Erection of small sets either for speech or morse in districts where no land lines exist, and to link such districts with the existing landlines. In this connection it may be remarked that modern small radio sets are capable of using either morse or speech at will and if used for speech can be operated by the ordinary desk telephone instrument in daily use all over India.

(*b*) The use of radio as a substitute for landline to form the trunk telephone route between two cities which already have telephone facilities.

These would, it is thought, open up a new industry which if properly forstered would very soon extend its sales outside the limits of India. It is believed that the majority of parts for small radio sets could be more cheaply manufactured in this country than they can be imported and such an industry would find the right kind of skilled labour already in India.

Radio Telephone Service.—An event of considerable importance was the inauguration of the radio telephone service between India and England on May 1, 1933, when His Excellency Sir Frederick Sykes, Governor of Bombay, and Sir Samuel Hoare, Secretary of State for India, exchanged messages as a preliminary to the opening of the service to the public.

The service is based upon the beam wireless system which has been operated successfully for the past six years by the Indian Radio and Cable Communications Company between India and the United Kingdom and, since the beginning of this year, between India and Japan. Initially, the radio telephone service was limited to Bombay and Poona at the Indian end and to the United Kingdom at the other, but facilities for conversation with other places were speedily arranged, and within a month it was possible for people in Bombay to speak to the United States, Canada, Australia, South Africa and many other parts of the world. Similarly, there is a gradual extension of the area covered in India, and when the improvement of the land lines has been completed, nearly every important city will be in direct telephonic communication with England and the rest of the world.

Many technical problems are involved in the perfection of the India-England wireless telephone, not the least of which is the ensuring of secrecy. When the service was first opened, reports from ordinary broadcast listeners in all parts of the country and as far afield as Ceylon indicated that conversations could be "tapped" with the greatest ease, but later "secrecy gear" was installed.

Any private telephone owner will be able to use the service for an overseas call. Before doing so, however, he will have to place a deposit of Rs. 100 with the Divisonal Engineer, Telegraphs, Bombay.

The charge for a 3 minutes' conversation to (*a*) places in England, Scotland and Wales is Rs. 80; (*b*) Northern Ireland (Dublin) and the Isle of Man, Rs. 84. Each additional minute's conversation to places under (*a*) will cos Rs. 26-11 and to (*b*) Rs. 28.

The Press.

The newspaper Press in India is an essentially English institution and was introduced soon after the task of organising the administration was seriously taken in hand by the English in Bengal. In 1773 was passed the Regulating Act creating the Governor-Generalship and the Supreme Court in Bengal and within seven years at the end of the same decade, the first newspaper was started in Calcutta by an Englishman in January 1780. Exactly a century and a third has elapsed since, not a very long period certainly, a period almost measured by the life of a single newspaper, *The Times*, which came into existence only five years later in 1785; but then the period of British supremacy is not much longer, having commenced at Plassey, only twenty-three years earlier. Bombay followed Calcutta closely, and Madras did not lag much behind. In 1789 the first Bombay newspaper appeared, *The Bombay Herald*, followed next year by *The Bombay Courier*, a paper now represented by *The Times of India* with which it was amalgamated in 1861. In Bombay the advent of the press may be said to have followed the British occupation of the island much later than was the case in Calcutta. In Calcutta the English were on sufferance before Plassey, but in Bombay they were absolute masters after 1665, and it is somewhat strange that no Englishman should have thought of starting a newspaper during all those hundred and twenty-five years before the actual advent of *The Herald*.

The first newspaper was called *The Bengal Gazette* which is better known from the name of its founder as *Hicky's Gazette* or *Journal*. Hicky like most pioneers had to suffer for his enterprising spirit, though the fault was entirely his own, as he made his paper a medium of publishing gross scandal, and he and his journal disappeared from public view in 1782. Several journals rapidly followed Hicky's, though they did not fortunately copy its bad example. *The Indian Gazette* had a career of over half a century, when in 1833 it was merged into the *Bengal Harkaru*, which came into existence only a little later, and both are now represented by *The Indian Daily News* with which they were amalgamated in 1866. No fewer than five papers followed in as many years, the *Bengal Gazette* of 1780, and one of these, *The Calcutta Gazette*, started in February 1784, under the avowed patronage of Government, flourishes still as the official gazette of the Bengal Government.

In 1821 a syndicate of European merchants and officials commenced the publication of *John Bull in the East*, a daily paper which was intended to reflect Tory opinion in India and set an example to the Press generally in the matter of moderation and restraint. The name of this journal was altered to *The Englishman* by the famous Stocqueler in 1836.

From its commencement the press was jealously watched by the authorities, who put serious restraints upon its independence and pursued a policy of discouragement and rigorous control. Government objected news of apparently the most trivial charac affecting its servants. From 1791 to 17 several editors were deported to Europe wi out trial and on short notice, whilst seve more were censured and had to apologi At the commencement of the rule of Welles Government promulgated stringent rules the public press and instituted an official cens to whom everything was to be submitted befo publication, the penalty for offending again these rules to be immediate deportation. The regulations continued in force till the time the Marquis of Hastings who in 1818 abolishe the censorship and substituted milder rule

This change proved beneficial to the statu of the press, for henceforward self-respectin and able men began slowly but steadily t join the ranks of journalism, which had til then been considered a low profession. Sill Buckingham, one of the ablest and best know of Anglo-Indian journalists of those days availed himself of this comparative freedom to criticise the authorities, and under the short administration of Adam, a civilian who tem porarily occupied Hastings' place, he was de ported under rules specially passed. But Lord Amherst and still more Lord William Bentinck were persons of broad and liberal views, and under them the press was left prac tically free, though there existed certain regu lations which were not enforced, though Lord Clare, who was Governor of Bombay from 1831 to 1835, once strongly but in vain urged the latter to enforce them. Metcalfe who suc ceeded for a brief period Bentinck, removed even these regulations, and brought about what is called the emancipation of the press in India in 1835, which was the beginning of a new era in the history of the Indian press. Among papers that came into being, was the *Bombay Times* which was started towards the close of 1838 by the leading merchants of Bombay, and which in 1861 changed its name to the *Times of India*. *The Bombay Gazette*, founded in 1791, ceased publication in 1914.

The liberal spirit in which Lord Hastings had begun to deal with the press led not only to the improvement in the tone and status of the Anglo-Indian press, but also to the rise of the Native or Indian Press. The first newspaper in any Indian language was the *Samachar Durpan* started by the famous Serampore Missionaries Ward, Carey and Marshman in 1818 in Bengali, and it received encouragement from Hastings who allowed it to circulate through the post office at one-fourth the usual rates. This was followed in 1822 by a purely native paper in Bombay called the *Bombay Samachar* which still exists, and thus was laid the foundation of the Native Indian Press which at the present day is by far the largest part of the press in India, numbering over 650 papers.

From 1835 to the Mutiny the press spread to other cities like Delhi, Agra, Gwalior, and even Lahore, whereas formerly it was chiefly confined to the Presidency towns. During

the Mutiny its freedom had to be temporarily controlled by the Gagging Act which Canning passed in June 1857 on account of the license of a very few papers, and owing still more to the fears of its circulating intelligence which might be prejudicial to public interests. The Act was passed only for a year at the end of which the press was once more free.

On India passing to the Crown in 1858, an era of prosperity and progress opened for the whole country in which the press participated. There were 19 Anglo-Indian papers at the beginning of this period in 1858 and 25 Native papers and the circulation of all was very small. The number of the former did not show a great rise in the next generation, but the rise in influence and also circulation was satisfactory. Famous journalists like Robert Knight, James Maclean and Hurris Mookerji flourished in this generation. The *Civil and Military Gazette* was originally published in Simla as a weekly paper, the first issue being dated June 22nd. 1872. Prior to and in the days of the Mutiny the most famous paper in Northern India was the *Mofussilite*, originally published at Meerut, but afterwards at Agra and then at Ambala. After a lively existence for a few years in Simla the *Civil and Military Gazette* acquired and incorporated the *Mofussilite*, and in 1876 the office of the paper was transferred from Simla to Lahore, and the *Gazette* began to be published daily.

INDIAN PRESS LAW.

Before 1835 all printing of books and paper was subject to licence by the Governor-General in Council, and the licences were issued or refused at the discretion of Government. Act XI of 1835 repealed the old Regulations and merely required registration of the printer and made a few minor requirements. That Act was replaced in 1867 by the present Press and Registration of Books Act, and, except for an Act which was in force for one year during the Mutiny, there was no further legislation directly affecting the Press until 1878 when the Vernacular Press Act was passed. That Act was repealed during the Viceroyalty of Lord Ripon in 1882. From that date until 1907 Government made no attempt to interfere directly with the liberty of the Press, the growth of sedition being dealt with in other ways by the passing in 1898 of section 124A of the Penal Code in its present form, which had been originally enacted in 1870, and by the introduction into the Penal Code of section 153A and into the Criminal Procedure Code of section 108. There were a certain number of prosecutions under those sections up to 1907, but the dissemination of sedition through the Press continued. In 1908 the Newspaper (Incitement to Offences) Act was passed which dealt with papers inciting to murder or to acts of violence. This Act failed to have the desired effect.

The Indian Press Act, 1910, was a measure of wider scope, the main object of which was to ensure that the Indian press generally should be kept within the limits of legitimate discussion.

The Act deals, not only with incitements to murder and acts of violence, but also with other specified classes of published matter, including any words or signs tending to seduce soldiers or sailors from their allegiance or duty, to bring into hatred or contempt the British Government, any Native Prince, or any section of His Majesty's subjects in India, or to intimidate public servants or private individuals.

The different sections of the Act have in view (i) Control over presses and means of publication; (ii) control over publishers of newspapers; (iii) control over the importation into British India and the transmission by the post of objectionable matter; (iv) the suppression of seditious or objectionable newspapers; books, or other documents wherever found.

Repeal of Press Legislation.—By the autumn of 1917 the Government of India had begun to consider the desirability of modifying at least one section of the Press Act to which great exception had been taken on account of the wide powers that it gave. Finally, after more than once consulting Local Government, a Committee was appointed in February 1921 after a debate in the Legislative Assembly, to examine the Press and Registration of Books Act, 1867, and the Indian Press Act, 1910, and report what modifications were required in the existing law. That Committee made an unanimous report in July 1921, recommending:—

(1) The Press Act should be repealed.

(2) The Newspapers Incitements to Offences Act should be repealed.

(3) The Press and Registration of Books Act and the Post Office Act should be amended where necessary to meet the conclusion noted below: (*a*) The name of the editor should be inscribed on every issue of a newspaper and the editor should be subject to the same liabilities as the printer and publisher, as regards criminal and civil responsibilities; (*b*) any person registering under the Press and Registration of Books Act should be a major as defined by the Indian Majority Act; (*c*) local Governments should retain the power of confiscating openly seditious leaflets, subject to the owner of the press or any other person aggrieved being able to protest before a court and challenge the seizure of such document, in which case the local Government ordering the confiscation should be called upon to prove the seditious character of the documents. The powers conferred by Sections 13 to 15 of the Press Act should be retained. Customs and Postal officers being empowered to seize seditious literature within the meaning of Section 124A of the I. P. C. subject to review on the part of the local Government and challenge by any persons interested in the courts; (*e*) any person challenging the orders of Government should do so in the local High Court; (*f*) the term of imprisonment prescribed in Sections 12, 13, 14 and 15 of the Press and Registration of Books Act should be reduced to six months, (*g*) the provisions of Section 16 of the Press Act should be reproduced in the Press and Registration of Books Act.

Effect was given to these recommendations during the year 1922:

Press Association of India.—At the end of 1915 this Association was formed in Bombay. According to the articles of constitution "Its objects shall be to protect the press of the country by all lawful means from arbitrary laws and their administration, from all attempts of the Legislature to encroach on its liberty or of the executive authorities to interfere with the free exercise of their calling by journalists and press proprietors, and for all other purposes of mutual help and protection which may be deemed advisable from time to time." Members pay a minimum subscription of Rs. 10 annually. The affairs of the Association are managed by a Council.

Banking.

An event of great importance in the history of Indian banking was the formation on the 27th January 1921 of the Imperial Bank of India by amalgamation of the three Presidency Banks of Bengal, Bombay and Madras.

The idea of a Central Banking establishment for British India was mooted as early as 1836, and was the subject of a minute by Mr. James Wilson, when Finance Member, in 1859. Again, in 1867 Mr. Dickson, the well-known Secretary of the Bank of Bengal, submitted detailed proposals for an amalgamation of the three Presidency Banks. On various later occasions the matter was brought forward without result and it was discussed by the Chamberlain Commission on Indian Finance and Currency in 1913. The present scheme which has come to fruition was however the result of a *rapprochement* on the part of the Banks themselves as a result of the experience gained during the war and the realisation of the desirability of strengthening and extending the Banking system in India.

The Presidency Banks:—The history of the Presidency Banks in their relationship with Government falls into three well-defined stages. Prior to 1862 the Presidency Banks had the right of note issue, but were directly controlled by Government and the scope of their business was restricted by their charters. The second period was from 1862 to 1876. In 1862 the Banks were deprived of the right of note issue, though by their agreements of that year they were authorised to transact the paper currency business as agents of Government. As compensation for the loss of their right of issue, they were given the use of the Government balances and the management of the treasury work at the Presidency towns and at their branches. The old statutory limitations on their business were at the same time greatly relaxed, though the Government's power of control remained unchanged. In 1866 the agreements were revised and the paper currency business was removed from their control and placed under the direct management of Government. The third period dates from the Presidency Banks Act of 1876 by which nearly all the most important limitations of the earlier period were reimposed. But, very briefly, the principal restrictions imposed by this Act prohibited the Banks from conducting foreign exchange business, from borrowing or receiving deposits payable out of India, and from lending for a longer period than six months, or upon mortgage or on the security of immovable property or upon promissory notes bearing less than two independent names or upon goods, unless the goods of the title to them were deposited with the Bank as security. At the same time Government abandoned direct interference in the management, ceasing to appoint official directors and disposing of their shares in the Banks. The Banks no longer enjoyed the full use of the Government balances. Reserve Treasuries were constituted at the Presidency towns into which the surplus revenues were drawn and the balances left at the disposal of the Banks were strictly limited.

This system continued with only minor modifications until 1920. During the war, however, the policy was deliberately adopted of reducing the amount of the balances held in the Reserve Treasuries and leaving much larger balances with the Headquarters of the Presidency Banks in order to assist the money market.

The Imperial Bank:—Under the Imperial Bank of India Act (XLVII of 1920), the control of the Bank is entrusted to a Central Boards of Governors with Local Boards at Calcutta, Bombay and Madras and such other places as the Central Board, with the previous sanction of the Governor-General in Council may determine. The Central Board of Governors consists of—

(*a*) Managing Governors not exceeding two in number, appointed by the Governor-General in Council on recommendation by the Central Board;
(*b*) the Presidents, Vice-Presidents and Secretaries of the Local Boards;
(*c*) the Controller of the Currency, or other officer nominated by the Governor-General in Council; and
(*d*) not more than four non-officials, nominated by the Governor-General in Council.

Representatives of any new Local Boards, which may be constituted, may be added at the discretion of the Central Board.

The Controller of the Currency and the Secretaries of the Local Boards are entitled to attend the meetings of the Central Board but not to vote under the agreement with Government. The Governor-General in Council is entitled to issue instructions to the Bank in respect of any matter which in his opinion vitally affects his financial policy or the safety of the Government balances, and if the Controller of the Currency or such other officer of Government as may be nominated by the Governor-General in Council to be a Governor of the Central Board shall give notice in writing to the Managing Governors that he considers that any action proposed to be taken by the Bank will be detrimental to the Government as affecting the matters aforesaid, such action shall not be taken without the approval in writing of the Governor-General in Council. Under the Imperial Bank of India Act provision was made for the increase of the capital of the Bank. The capital of the three Presidency Banks consisted of 3¾ crores of rupees in shares of Rs. 500 each, fully subscribed. The additional capital authorised was 7½ crores in shares of Rs. 500 each, of which Rs. 125 has been called up, making the present capital of the Bank Rs. 11¼ crores, of which Rs. 5,62,50,000 has been paid up. The Reserve Fund of the Bank is Rs. 5,22,50,000 and the Balance Sheet of 31st December 1933 showed the Government balance at Rs. 6,44,10,571, other deposits at Rs. 74,12,77,440 and Cash Rs. 18,59,75,840, with a percentage of Cash to liabilities of 22.83.

Class of Business:—The Imperial Bank of India Act follows the Presidency Banks Act of 1876 in defining absolutely the class of business

in which the Bank may engage, though the older limitations are modified in some minor points. It permits for the first time the constitution of a London Office and the borrowing of money in England for the purpose of the Bank's business upon the security of assets of the Bank, but not the opening of cash credits, keeping cash accounts or receiving deposits in London except from former customers of the Presidency Banks. The Act provides for an agreement between the Bank and the Secretary of State, and this agreement, which was signed on the 27th January 1921 and is for a period of ten years determinable thereafter by either party with one year's notice, provides, *inter alia*, for the following important matters:—

(1) All the general banking business of the Government of India is to be carried out by the Imperial Bank.

(2) The Bank will hold all the Treasury Balances at Headquarters and at its branches. This involves the abolition of the Reserve Treasury system.

(3) Within five years the Bank undertakes to open 100 new branches of which the Government of India may determine the location of one in four. The branches and agencies of the three Presidency Banks prior to the date of amalgamation numbered 69, including the Colombo branch of the Bank of Madras. The Bank of Bengal had no branches prior to the proposal to transfer Government business to the Bank in 1861-62 but no less than 18 branches were established before 1868.

(4) The management of the Public Debt will continue to be conducted by the Bank for specified remuneration.

In Schedule 1, Part 1, of the Act, the various descriptions of business which the Bank may transact are laid down, and in Part 2 it is expressly provided that the Bank shall not transact any kind of banking business other than that sanctioned in Part 1.

Briefly stated, the main classes of business sanctioned are:—

(1) Advancing money upon the security of:—

(*a*) Stocks, &c., in which a trustee is authorised by Act to invest trust moneys.

(*b*) Securities issued by State aided Railways, notified by the Governor-General-in-Council.

(*c*) Debentures, or other securities issued under Act, by, or on behalf of, a District Board.

(*d*) Goods, or documents of title thereto, deposited with, or assigned to the Bank.

(*e*) Accepted Bills of Exchange or Pro. Notes.

(*f*) Fully paid shares and debentures of Companies with limited liability or immovable property or documents of title relating thereto, as collateral security where the original security is one of those specified in *a*, *b*, *c*, *d* and, if authorised by the Central Board, in *e*.

(2) With the sanction of the Local Government, advancing money to Courts of Wards upon security of estates in their charge.

(3) Drawing, accepting, discounting, buying and selling bills of exchange and other negotiable securities payable in India and Ceylon, and, subject to the directions of the Governor-General-in-Council, the discounting, buying and selling of bills of exchange payable outside India for and from or to such Banks as may be approved.

(4) Investing the Banks' funds in the securities referred to in (1) *a*, *b*, *c*.

(5) Making Bank Post Bills and Letters of credit payable in India and Ceylon.

(6) Buying and selling gold and silver.

(7) Receiving deposits.

(8) Receiving securities for safe custody.

(9) Selling such properties as may come into the Bank's possession in satisfaction of claims.

(10) Transacting agency business on commission.

(11) Acting as Administrator, for winding up estates.

(12) Drawing bills of exchange and granting letters of credit payable out of India for the use of principles in connection with (11) and also for private constituents for *bona fide* personal needs.

(13) Buying, for the purpose of meeting such bills, &c., bills of exchange payable out of India at any usance not exceeding six months.

(14) Borrowing money in India.

(15) Borrowing money in England upon security of assets of the Bank, but not otherwise.

The principal restrictions placed on the business of the Bank in Part 2 are as follows:—

(1) It shall not make any loan or advance:—

(*a*) For a longer period than six months;

(*b*) upon the security of stock or shares of the Bank;

(*c*) save in the case of estates specified in Part 1 (Courts of Ward) upon mortgage or security of immovable property or documents of title thereof.

(2) The amount which may be advanced to any individual or partnership is limited.

(3) Discounts cannot be made or advances on personal security given, unless such discounts or advances carry with them the several responsibilities of at least two persons or firms unconnected with each other in general partnership.

The Balance Sheet of the Bank as at 31st December 1933 was as follows :—

Liabilities.	Rs. a. p.	Assets.	Rs. a. p.

to Establish the Reserve Bank

A Bill to establish a Reserve Bank s an essential preliminary to the r of the scheme of Reforms to give dern Government has been passed gislative Assembly and Council of ceived the assent of the Governor- larch 6th, 1834. The proposals embo- Bill are given below :—

shall be constituted for the pur- ting over the management of the n the Governor-General in Council ing on the business of banking in with the provisions of the Act,

The original share capital of the Bank shall be five crores of rupees divided into shares of Rs. 100 each, which shall be fully paid-up ; the maximum number of votes any one shareholder shall have is 10, every five shares carrying the right of one vote. The number of share registers shall be fixed at five to be maintained at Bombay, Calcutta, Delhi, Madras and Rangoon and the nominal value of the shares assigned to each centre has been fixed at Rs. 140 lacs for Bombay, Rs. 145 lacs for Calcutta, Rs. 115 lacs for Delhi, Rs. 70 lacs for Madras and Rs. 30 lacs for Rangoon.

Management.—The general superintendence and direction of the affairs and business of the Bank will be entrusted to a Central Board of Directors which shall exercised all powers and do all acts and things which may be exercised and done by the Bank. The Board shall be composed of :—

(*a*) A Governor and two Deputy Governors to be appointed by the Governor-General in Council after consideration of the recommendations made by the Board.

(*b*) Four Directors to be nominated by the Governor-General in Council.

(*c*) Eight Directors to be elected on behalf of the shareholders on the various registers.

(*d*) One Government official to be nominated by the Governor-General in Council.

The Governor and Deputy Governors shall be the executive heads, and shall hold office for such term not exceeding five years as the Governor-General in Council may fix when appointing them, and shall be eligible for re-appointment. A Local Board shall be constituted for each of the five areas.

Business which the Bank may transact.—The Bank shall be authorised to carry on and transact the following commercial business, *viz* :—The accepting of money on deposit without interest ; the purchase, sale and rediscount of bills of exchange and promissory notes with certain restrictions ; the maing of loans and advances, repayable on demand but not exceeding 90 days, against the security of stocks, funds and securities (other than immovable property) against gold coin or bullion or documents of title to the same and such bills of exchange and promissory notes as are eligible for purchase or rediscount by the Bank ; the purchase from and sale to scheduled Banks of sterling in amounts of not less than the equivalent of Rs. 1 lacs ; the making of advances to the Governor-General in Council and to Local Governments repayable in each case not later than three months from the date of making the advance ; the purchase and sale of Government securities of the United Kingdom maturing within ten years from the date of purchase ; the purchase and sale of securities of the Government of India or of a Local Government of any maturity or of a local authority in British India or of certain States in India which may be specified.

The Bank shall act as Agent for the Secretary of State in Council, the Governor-General in Council or any Local Government or State in India for the purchase and sale of gold and silver ; for the purchase, sale, transfer and custody of bills of exchange, securities or shares ; for the collection of the proceeds, whether principal, interest or dividends, of any securities or shares ; for the remittance of such proceeds by bill of exchange payable either in India or elsewhere, and for the management of public debt.

Right to issue Bank Notes.—The Bank shall have the sole right to issue bank notes in British India and at the commencement shall issue currency notes of the Government of India supplied to it by the Governor-General in Council and on and from the date of such transfer the Governor-General in Council shall not issue any currency notes. The issue of bank notes shall be conducted by the Bank in an Issue Department which shall be separated and kept wholly distinct from the Banking Department.

In addition to the note issue obligation the Bank shall undertake to accept monies for account of the Secretary of State in Council, the Governor-General in Council and of Local Governments and shall carry out their exchange, remittance and other banking operations including the management of the public debt on such conditions as may be agreed upon.

Obligation to Sell or Buy Sterling.—The Bank shall sell to or buy from any person who makes a demand in that behalf at its office in Bombay, Calcutta, Delhi, Madras or Rangoon, sterling for immediate delivery in London at a rate not lower than 1sh. 5 49-64d. and not higher than 1sh. 6 3-16d. respectively ; provided that no person shall be entitled to demand to buy or sell an amount of sterling less than ten thousand pounds. Every Scheduled bank shall maintain with the Reserve Bank a balance of not less than 5 per cent. of their demand and 2 per cent. of their time liabilities.

Agreement with the Imperial Bank.—The Bank shall enter into an agreement with the Imperial Bank of India which shall be subject to the approval of the Governor-General in Council and will remain in force for 15 years and thereafter until five years' notice on either side. Provisions to be contained in the agreement between the Reserve Bank of India and the Imperial Bank of India are :—

The Imperial Bank of India shall be the sole agent of the Reserve Bank of India at all places in British India where there is a branch of the Imperial Bank of India which was in existence at the commencement of the Reserve Bank of India Act and where there is no branch of the Banking Department of the Reserve Bank of India.

In consideration of the performance of the Agency duties, the Reserve Bank of India shall pay the Imperial Bank of India as remuneration a sum which shall be for the first ten years during which this agreement is in force a commission calculated at 1/16 per cent. on the first 250 crores and 1·32 per cent. on the remainder of the total of the receipts and disbursements dealt with annually on account of Government. As for the remaining five years the remuneration to be paid to the Imperial Bank shall be determined on the basis of the actual cost to the Imperial Bank of India as ascertained by expert accounting investigation.

In consideration of the maintenance by the Imperial Bank of India of branches not less in number than those existing at the commencement of the Reserve Bank of India Act, the Reserve Bank of India shall until the expiry of 15 years, make to the Imperial Bank the following payments :—

(*a*) during the first five years of this agreement Rs. 9,00,000 per annum ; (*b*) during the next five years of the agreement Rs. 6,00,000 per annum ; and (*c*) during the next five years of the agreement Rs. 4,00,000 per annum.

Allocation of Surplus.—The Governor-General in Council shall transfer to the Bank rupee securities of the value of Rs. five crores to be allocated by the Bank to Reserve Fund.

After making the necessary and usual provisions out of profits, a cumulative dividend at such rate not exceeding five per cent. per annum on the share capital as the Governor-General in Council may fix at the time of the issue of the shares shall be paid and the surplus shall be allocated to the payment of an additional dividend to the shareholders calculated on the scales prescribed in the Act and the balance of the surplus shall be paid to the Governor-General in Council.

Provided that so long as the Reserve Fund is less than the share capital, not less than fifty lacs of rupees of the surplus or the whole of the surplus if less than that amount shall be allocated to the Reserve Fund.

Publication of the Bank Rate.—The Bank shall make public from time to time the standard rate at which it is prepared to buy or re-discount bills of exchange or other commercial paper eligible for purchase under the Act.

The Bank will publish the accounts of both the Issue and Banking Departments weekly in the *Gazette of India*.

The Bank shall create an Agricultural Credit Department.

The full text of the Reserve Bank Act is reproduced elsewhere in the year Book.

THE EXCHANGE BANKS.

The Banks carrying on Exchange business in India are merely branch agencies of Banks having their head offices in London, on the continent, or in the Far East and the United States. Originally their business was confined almost exclusively to the financing of the external trade of India; but in recent years most of them, while continuing to finance this part of India's trade, have also taken an active part in the financing of the internal portion also at the places where their branches are situated.

At one time the Banks carried on their operations in India almost entirely with money borrowed elsewhere, principally in London—the home offices of the Banks attracting deposits for use in India by offering rates of interest much higher than the English Banks were able to quote. Within recent years however it has been discovered that it is possible to attract deposits in India on quite as favourable terms as can be done in London and a very large proportion of the financing done by the Exchange Banks is now carried through by means of money actually borrowed in India. No information is available as to how far *each* Bank has secured deposits in India, but the following statement published by the Director-General of Statistics in India shows how rapidly such deposits have grown in the aggregate within recent years.

Exchange Banks' Investments.

Turning now to the question of the investment of the Banks' resources, so far as it concerns India, this to a great extent consists of the purchase of bills drawn against imports and exports to and from India.

The financing of the import trade originated and is carried through however for the most part by Branches outside India, the Indian Branches' share in the business consisting principally in collecting the amount of the bills at maturity and in furnishing their other branches with information as to the means and standing of the drawees of the bills, and it is as regards the export business that the Indian Branches are more immediately concerned. The Exchange Banks have practically a monopoly of the export finance in India and in view of the dimensions of the trade which has to be dealt with the Banks would under ordinary circumstances require to utilise a very large proportion of their resources in carrying through the business. They are able however by a system of rediscount in London to limit the employment of their own resources to a comparatively small figure in relation to the business they actually put through. No definite information can be secured as to the extent to which rediscounting in London is carried on but the following figures appearing in the balance sheets dated 31st December 1932 of the undernoted Banks will give some idea of this.

LIABILITY ON BILLS OF EXCHANGE RE-DISCOUNTED AND STILL CURRENT.

	£.
Chartered Bank of India, Australia and China	2,110,000
Eastern Bank, Ltd.	325,000
Hongkong and Shanghai Banking Corporation	2,165,000
Mercantile Bank of India, Ltd. ..	1,081,000
National Bank of India, Ltd. ..	3,213,000
P. & O. Banking Corporation, Ltd.	1,301,000
	10,195,000

The above figures do not of course relate to re-discounts of Indian bills alone, as the Banks operate in other parts of the world also, but it may safely be inferred that bills drawn in India form a very large proportion of the whole

The bills against exports are largely drawn at three months' sight and may either be "clean" or be accompanied by the documents relating to the goods in respect of which they are drawn. Most of them are drawn on well-known firms at home or against credits opened by Banks or financial houses in England and bearing as they do an Exchange Bank endorsement they are readily taken up by the discount houses and Banks in London. Any bills purchased in India are sent home by the first possible Mail so that presuming they are rediscounted as soon as they reach London the Exchange Banks are able to secure the return of their money in about 16 or 17 days instead of having to wait for three months which would be the case if they were unable to rediscount. It must not be assumed however that all bills are rediscounted as soon as they reach London as at times it suits the Banks to hold up the bills in anticipation of a fall in the London discount rate while on occasions also the Banks prefer to hold the bills on their own account as an investment until maturity.

The Banks place themselves in funds in India for the purpose of purchasing export bills in a variety of ways of which the following are the principal:—

(1) Proceeds of import bills as they mature

(2) Sale of drafts and telegraphic transfers payable in London and elsewhere out of India.

(3) Purchase of Council Bills and Telegraphic Transfers payable in India from the Secretary of State.

(4) Imports of bar gold and silver bullion.

(5) Imports of sovereigns from London, Egypt or Australia.

The remaining business transacted by the Banks in India is of the usual nature and need not be given in detail.

An interesting event in Indian Banking history is the recent entry in the Banking field here of one of the English "Big Five." This has been brought about by the acquisition of the business of Cox & Co., by Lloyds Bank.

The following is a statement of the position of the various Exchange Banks carrying on business in India as at 31st December 1931:—

In Thousands of £.

JOINT STOCK BANKS.

Previous to 1906 there were few Banks of this description operating in India, and such as were then in existence were of comparatively small importance and had their business confined to a very restricted area. The rapid development of this class of Bank, which has been so marked a feature in Banking within recent years, really had its origin in Bombay and set in with the establishment of the Bank of India and the Indian Specie Bank in 1906. After that time there was a perfect stream of new flotations, and although many of the new Companies confined themselves to legitimate banking business, on the other hand a very large number engaged in other businesses in addition and can hardly be properly classed as Banks.

These Banks made very great strides during the first few years of their existence, but it was generally suspected in well informed circles that the business of many of the Banks was of a very speculative and unsafe character and it was a matter of no great surprise to many people when it became known that some of the Banks were in difficulties.

The first important failure to take place was that of the People's Bank of India and the loss of confidence caused by the failure of that Bank resulted in a very large number of other failures, the principal being that of the Indian Specie Bank.

Since those events of ten years ago confidence has been largely restored. But in April 1923 the Alliance Bank of Simla suspended payment and is now in voluntary liquidation. The effect of the failure of this old established Bank might have been disastrous but for the prompt action of the Imperial Bank which dealt with the situation in close association with the Government of India. The Imperial Bank undertook to pay the depositors of the Alliance Bank 50 per cent. of the amounts due to them. A panic was averted and a critical period was passed through with little difficulty.

During 1923 the Tata Industrial Bank, which was established in 1918, was merged in the Central Bank of India.

The following shows the position of the better known existing Banks as it appears in the latest available Balance Sheets :—

In Lakhs of Rupees.

INDIAN PRIVATE BANKERS AND SHROFFS.

Indian private Bankers and Shroffs flourished in India long before Joint Stock Banks were ever thought of, and it seems likely that they will continue to thrive for some very considerable time to come. The use of the word "Shroff" is usually associated with a person who charges usurious rates of interest to impecunious people, but this is hardly fair to the people known as "shroffs" in banking circles, as there is no doubt that the latter are of very real service to the business community and of very great assistance to Banks in India. Under present conditions the Banks in India can never hope to be able to get into sufficiently close touch with the affairs of the vast trading community in India to enable them to grant accommodation to more than a few of these traders direct and it is in his capacity as middleman that the shroff proves of such great service. In this capacity also he brings a very considerable volume of business within the scope of the Presidency Banks Act, and enables the Presidency Banks to give accommodation which, without his assistance, the Banks would not be permitted to give. The shroff's position as an intermediary between the trading community and the Banks usually arises in something after the following manner. A shopkeeper in the bazaar, with limited means of his own, finds that, after using all his own money, he still requires say Rs. 25,000 to stock his shop suitably. He thereupon approaches the shroff, and the latter after very careful inquiries as to the shopkeeper's position grants the accommodation, if he is satisfied that the business is safe. The business, as a rule, is arranged through a hoondee broker, and in the case referred to the latter may probably approach about ten shroffs and secure accommodation from them to the extent of Rs. 2,500 each. A hoondee usually drawn at a currency of about 2 months is almost invariably taken by the shroffs in respect of such advances.

A stage is reached however when the demands on the shroffs are greater than they are able to meet out of their own money, and it is at this point that the assistance of the Banks is called into requisition. The shroffs do this by taking a number of the bills they already hold to the Banks for discount under their endorsement, and the Banks accept such bills freely to an extent determined in each case by the standing of the shroff and the strength of the drawers. The extent to which any one shroff may grant accommodation in the bazaar is therefore dependent on two factors, *viz.*, (1) the limit which he himself may think it advisable to place on his transactions, and (2) the extent to which the Banks are prepared to discount bills bearing his endorsement. The shroffs keep in very close touch with all the traders to whom they grant accommodation, and past experience has shewn that the class of business above referred to is one of the safest the Banks can engage in.

The rates charged by the shroffs are usually based on the rates at which they in turn can discount the bills with the Banks and necessarily vary according to the standing of the borrower and with the season of the year. Generally speaking, however, a charge of two annas per cent. per mensem above the Bank's rate of discount, or 1½% is a fair average rate charged in Bombay to a first class borrower. Rates in Calcutta and Madras are on a slightly higher scale due in a great measure to the fact that the competition among the shroffs for business is not so keen in these places as it is in Bombay.

The shroffs who engage in the class of business above described are principally Marwaries and Multanis having their Head Offices for the most part in Bikaner and Shikarpur, respectively, the business elsewhere than at the Head Offices being carried on by "Moonims" who have very wide powers.

It is not known to what extent native bankers and shroffs receive deposits and engage in exchange business throughout India, but there is no doubt that this is done to a very considerable extent.

THE BANK RATE.

Formerly each Presidency Bank fixed its own Bank Rate, and the rates were not uniform. Now the Imperial Bank fixes the rate for the whole of India. The rate fixed represents the rate charged by the Banks on demand loans against Government securities only and advances on other securities or discounts are granted as a rule at a slightly higher rate. Ordinarily such advances or discounts are granted at from one-half to one per cent. over the official rate; but this does not always apply and in the monsoon months, when the Bank rate is sometimes nominal, it often happens that such accommodation is granted at the official rate or even less.

The following statement shows the average Bank Rate since the Imperial Bank was constituted:—

Year.	1st Half-year.	2nd Half-year.	Yearly average.
1922	7·132	4·510	5·821
1923	7·419	4·5	5·959
1924	8·05	5·315	6·682
1925	6·585	4·701	5·643
1926	5·651	4·	4·825
1927	6·508	4·956	5·732
1928	6·945	5·456	6·2
1929	6·878	5·788	6·333
1930	6·508	5·277	5·892
1931	6·735	7·353	7·044
1932	6·022	4·033	5·027
1933	3·627	3·5	3·563

BANKERS' CLEARING HOUSES.

The principal Clearing Houses in India are those of Calcutta; Bombay, Madras, Rangoon, Colombo and Karachi, and of these the first two are by far the most important. The members at these places consist of the Imperial Bank, most of the Exchange Banks and English Banking Agency firms, and a few of the better known of the local Joint Stock Banks. No Bank is entitled to claim to be a member as of right and any application for admission to a Clearing must be proposed and seconded by two members and be subject thereafter to ballot by the existing members.

The duties of settling Bank are undertaken by the Imperial Bank at each of the places mentioned and a representative of each member attends at the office of that Bank on each business day at the time fixed to deliver all cheques he may have negotiated on other members and to receive in exchange all cheques drawn on him negotiated by the latter. After all the cheques have been received and delivered the representative of each Bank advises the settling Bank of the difference between his total receipts and deliveries and the settling Bank thereafter strikes a final balance to satisfy itself that the totals of the debtor balances agrees with the total of the creditor balances. The debtor Banks thereafter arrange to pay the amounts due by them to the settling Bank during the course of the day and the latter in turn arranges to pay on receipt of those amounts the balances due to the creditor Banks. In practice however all the members keep Bank accounts with the settling Bank so that the final balances are settled by cheques and book entries thus doing away with the necessity for cash in any form.

The figures for the Clearing Houses in India above referred to are given below:—

Total amount of Cheques Cleared Annually.

The Railways.

The history of Indian Railways very closely reflects the financial vicissitudes of the country. Not for some time after the establishment of Railways in England was their construction in India contemplated, and then to test their applicability to Eastern conditions three experimental lines were sanctioned in 1845. These were from Calcutta to Raniganj (120 miles), the East Indian Railway; Bombay to Kalyan (33 miles), Great Indian Peninsula Railway; and Madras to Arkonam (39 miles), Madras Railway. Indian Railway building on a serious scale dates from Lord Dalhousie's great minute of 1853, wherein, after dwelling upon the great social, political and commercial advantages of connecting the chief cities by rail, he suggested a great scheme of trunk lines linking the Presidencies with each other and the inland regions with the principal ports. This reasoning commended itself to the Directors of the East India Company, and it was powerfully reinforced when, during the Mutiny, the barriers imposed on free communication were severely felt. As there was no private capital in India available for railway construction, English Companies, the interest on whose capital was guaranteed by the State, were formed for the purpose. By the end of 1859 contracts had been entered into with eight companies for the construction of 5,000 miles of line, involving a guaranteed capital of £52 millions. These companies were (1) the East Indian; (2) the Great Indian Peninsula; (3) the Madras; (4) the Bombay, Baroda and Central India; (5) the Eastern Bengal; (6) the Indian Branch, later the Oudh and Rohilkund State Railway and now part of the East Indian Railway; (7) the Sind, Punjab and Delhi, now merged in the North Western State Railway; (8) the Great Southern of India, now the South Indian Railway. The scheme laid the foundations of the Indian Railway system as it exists to-day.

Early Disappointments.

The main principle in the formation of these companies was a Government guarantee on their capital, for this was the only condition on which investors would come forward. This guarantee was five per cent. coupled with the free grant of all the land required; in return the companies were required to share the surplus profits with the Government, after the guaranteed interest had been met; the interest charges were calculated at 22*d.* to the rupee; the Railways were to be sold to Government on fixed terms at the close of twenty-five years and the Government were to exercise close control over expenditure and working. The early results were disappointing. Whilst the Railways greatly increased the efficiency of the administration, the mobility of the troops, the trade of the country, and the movement of the population, they failed to make profits sufficient to meet the guaranteed interest. Some critics attributed this to the unnecessarily high standard of construction adopted, and to the engineers' ignorance of local conditions; the result was that by 1869 the deficit on the Railway budget was Rs. 166½ lakhs. Seeking for some more economical method of construction; the Government secured sanction to the building of lines by direct State Agency, and funds were allotted for the purpose, the metre-gauge being adopted for cheapness. Funds soon lapsed and the money available had to be diverted to converting the Sind and Punjab lines from metre to broad-gauge for strategic reasons. Government had therefore again to resort to the system of guarantee, and the Indian Midland (1882-85), since absorbed by the Great Indian Peninsula; the Bengal-Nagpur (1883-87); the Southern Mahratta (1882); and the Assam Bengal (1891) were constructed under guarantees, but on easier terms than the first companies. Their total length was over 4,000 miles.

Famine and Frontiers.

In 1879, embarrassed by famine and by the fall of the exchange value of the rupee, Government again endeavoured to enlist unaided private enterprise. Four companies were promoted:—the Nilgiri, the Delhi-Umballa-Kalka, the Bengal Central, and the Bengal North-Western. The first became bankrupt, the second and third received guarantees, and the Tirhut Railway had to be leased to the fourth. A step of even greater importance was taken when Native States were invited to undertake construction in their own territories, and the Nizam's Government guaranteed the interest on 330 miles of line in the State of Hyderabad. This was the first of the large system of Native State Railways. In the first period up to 1870, 4,255 miles were opened, of which all save 45 were on the broad-gauge; during the next ten years there were opened 4,239, making the total 8,494 (on the broad-gauge 6,562, the metre 1,865, and narrow 67). Then ensued a period of financial ease. It was broken by the fall in exchange and the costly lines built on the frontier. The Penjdeh incident, which brought Great Britain and Russia to the verge of war, necessitated the connection of our outposts at Quetta and Chaman with the main trunk lines. The sections through the desolate Harnai and Bolan Passes were enormously costly; it is said that they might have been ballasted with rupees; the long tunnel under the Khojak Pass added largely to this necessary, but unprofitable, outlay.

Rebate Terms Established.

This induced the fourth period—the system of rebates. Instead of a gold subsidy, companies were offered a rebate on the gross earnings of the traffic interchanged with the main line, so that the dividend might rise to four per cent. but the rebate was limited to 20 per cent. of the gross earnings. Under these conditions, there were promoted the Ahmedabad-Prantej, the South Behar, and the Southern Punjab, although only in the case of the first were the terms strictly adhered to. The Barsi Light Railway, on the two feet six inches gauge, entered the field without any guarantee, and with rolling stock designed to illustrate the carrying power of this gauge. The rebates terms being found unattractive in view of the competition of 4 per cent. trustee stocks; they were revised in 1896 to provide for an

absolute guarantee of 3 per cent. with a share of surplus profits, or rebate up to the full extent of the main line's net earnings in supplement of their own net earnings, the total being limited to 3½ per cent. on the capital outlay. Under these terms, a considerable number of feeder line companies was promoted, though in none were the conditions arbitrarily exacted. As these terms did not at first attain their purpose, they were further revised, and in lieu was substituted an increase in the rate of guarantee from 3 to 3½ per cent. and of rebate from 3½ to 5 per cent. with equal division of surplus profits over 5 per cent. in both cases. At last, the requirements of the market were met, and there was for a time a mild boom in feeder railway construction and the stock of all the sound companies promoted stood at a substantial premium. Conditions changed after the war and the Acworth Committee so far from approving of this system, considered that the aim of the Government should be to reduce by amalgamation the number of existing companies and that it should only be in cases where the State cannot or will not provide adequate funds that private enterprise in this direction should be encouraged.

The existing Branch Line Companies have ceased for some time to raise additional capital for capital requirements. They have either obtained overdrafts from various Banks for this purpose at heavy rates of interest or issued debentures at special rates of interest (usually about 7 per cent.) or in several cases asked for money to be advanced to them by the Railway Board. So far, therefore, from reducing the amount that the Government of India have to raise in the open market, they were increasing the amount. For the above reasons, the Government of India have abolished this system and are now prepared themselves to find the capital required for the construction of extensions or branches to existing main line systems. They have also announced their readiness to consider the question of constructing branch or feeder lines which were not expected to be remunerative from the point of view of railway earnings upon a guarantee against loss from a Local Government or local authority which might desire to have such lines constructed for purely local reasons or on account of administrative advantages likely to accrue in particular areas. This proposal was put forward as affording a suitable method of reconciling the interests of the Central and the Local Governments and of providing for local bodies and for Local Governments a method of securing the construction of railways which may be required for purely local reasons and which, while not likely to prove remunerative on purely railway earnings, are likely to give such benefits to Local Governments and local bodies as will more than repay the amounts paid under the guarantee. Some such arrangements have already been made with Local Governments in Madras, Punjab Burma and Bombay.

Railway Profits begin.

Meantime a much more important change was in progress. The gradual economic development of the country vastly increased the traffic, both passenger and goods. The falling in of the original contracts allowed Government to renew them on more favourable terms. The development of irrigation in the Punjab and Sind transformed the North-Western State Railway. Owing to the burden of maintaining the unprofitable Frontier lines, this was the Cinderella Railway in India—the scapegoat of the critics who protested against the unwisdom of constructing railways from borrowed capital. But with the completion of the Chenab and Jhelum Canals, the North-Western became one of the great grain lines of the world, choked with traffic at certain seasons of the year and making a large profit for the State. In 1900 the railways for the first time showed a small gain to the State. In succeeding years the net receipts grew rapidly. In the four years ended 1907-08 they averaged close upon £2 millions a year. In the following year there was a relapse. Bad harvests in India, accompanied by the monetary panic caused by the American financial crisis, led to a great falling off in receipts just when working expenses were rising, owing to the general increase in prices. Instead of a profit, there was a deficit of £1,240,000 in the railway accounts for 1908-09. But in the following year there was a reversion to a profit, and the net Railway gain has steadily increased. For the year ended March 1919 this gain amounted to £10,573,000. Although in a country like India, where the finances are mainly dependent upon the character of the monsoon, the railway revenue must fluctuate, there was no reason to anticipate a further deficit, but the net railway gain decreased to £3,767,000 in 1920-21 and there was an actual loss of £6,182,000 in 1921-22. As a result of the steps taken by the Railway Board, however, on the report of the Acworth Committee in 1921, this loss was changed into a gain of £813,000 in 1922-23.

The results in succeeding years will be seen from the following statements :—

—	Contribution to General Revenues.	Railway Reserve Fund.	Total Gain.
	£	£	£
1923–24 ..	..	..	4,437,712
1924–25 ..	4,941,387	4,635,985	9,577,372
1925–26 ..	4,135,644	2,854,936	6,990,580
1926–27 ..	4,486,045	1,108,433	5,594,478
1927–28 ..	4,707,239	3,460,000	8,167,239
1928–29 ..	3,933,834	1,937,895	5,871,729
1929–30 ..	4,588,950	1,561,650	3,027,300
1930–31 ..	4,301,775	8,192,625	3,890,850
1931–32 ..	4,020,150	—	6,900,000
1932–33 ..	*		

* The contribution to General Revenues due for the year 1932-33 amounts to Rs. 523 lakhs or 13 lakhs less than in 1931-32. The payment of the contribution has been held in abeyance until the return of prosperous years.

Rupees have been converted into £ at the average rate of exchange for the year.

In 1932-33 the gross receipts amounted to 84½ crores or 2 crores less than in the previous year. Working expenses, including the usual appropriation for depreciation amounted to 61½ crores—about 1½ crore less than in the

previous year. The net receipt of 23 crores, or 1 crore less than in 1931-32 were insufficient to meet the interest charges. The deficit of 10 crores was, as in the previous year, borrowed from accumulated balances of the Depreciation Fund.

Contracts Revised.

One factor which helped to improve the financial position was the revision of the original contracts under which the guaranteed lines were constructed. The five per cent. dividend guaranteed at 22*d.* per rupee, and the half-yearly settlements made these companies a drain on the State at a time when their stock was at a high premium. The first contract to fall in was the East Indian, the great line connecting Calcutta with Delhi and the Northern provinces. When the contract lapsed, the Government exercised their right of purchasing the line, paying the purchase-money in the form of terminable annuities, derived from revenue, carrying with them a sinking fund for the redemption of capital. The railway thus became a State line: but it was released to the Company which actually works it. Under these new conditions the East Indian Company brought to the State in the ten years ended 1909 after meeting all charges, including the payments on account of the terminable annuity by means of which the purchase of the line was made, and interest of all capital outlay subsequent to the date on purchase, a clear profit of nearly ten millions. At the end of seventy-four years from 1880, when the annuity expires, the Government will come into receipt of a clear yearly income of upwards of £2,700,000, equivalent to the creation of a capital of sixty to seventy millions sterling. No other railway shows results quite equal to the East Indian, because, in addition to serving a rich country by an easy line, it possesses its own collieries and enjoys cheap coal. But with allowance for these factors, all the other guaranteed companies which have been acquired under similar conditions as their contracts expired, have proportionately swelled the revenue and assets of the State. It is difficult to estimate the amount which must be added to the capital debt of the Indian railways in order to counterbalance the loss during the period when the revenue did not meet the interest charges. According to one estimate it should be £50 millions. But even if that figure be taken, Government have a magnificent asset in their railway property.

Improving Open Lines.

These changes induced a corresponding change in Indian Railway policy. Up to 1900 the great work had been the provision of trunk lines. But with the completion of the Nagda-Muttra line, providing an alternative broad-gauge route from Bombay to Delhi through Eastern Rajputana, the trunk system was virtually complete. A direct broad-gauge route from Bombay to Sind is needed, but the poor commercial prospects of the line and the opposition of the Rao of Cutch to any through line in his territories, has for some time kept this scheme in the background. The possibilities however of this construction being undertaken have improved considerably recently and a detailed survey is being carried out. There does not exist any through rail connection between India and Burma, although several routes have been surveyed: the mountainous character of the region to be traversed, and the easy means of communication with Burma by sea, rob this scheme of any living importance. Further survey work was undertaken between 1914 and 1920, the three routes to be surveyed being the coast route, the Manipur route, and the Hukong valley route. The metre-gauge systems of Northern and Southern India will also probably one day be connected and Karachi given direct broad-gauge connection with Delhi, a project that has been investigated more than once but cannot at present be financially justified. These works are, however, subordinate to the necessity for bringing the open lines up to their traffic requirements and providing them with feeders. The sudden increase in the trade of India found the main lines totally unprepared. Costly works were necessary to double lines, improve the equipment, provide new and better yards and terminal facilities and to increase the rolling stock. Consequently the demands on the open lines altogether overshadowed the provision of new lines. Even then the railway budget was found totally inadequate for the purpose, and a small Committee sat in London, under the chairmanship of Lord Inchcape, to consider ways and means. This Committee found that the amount which could be remuneratively spent on railway construction in India was limited only by the capacity of the money market. They fixed the annual allotment at £12,000,000 a year. Even this reduced sum could not always be provided.

During 1932-33 the principal open line improvements consisted in:—

Doubling of the Ruparani Bridge on the B. N. Railway.

Erection of new spans on the Kotri Bridge over the Indus, N. W. Railway.

Replacement of girders on the Jumna Bridge, Delhi.

Rebuilding of the Mahanadi Bridge on the Katni Branch, B. N. Railway.

Building the new double track Bridge over the Nerbadda near Broach, B. B. & C. I. Railway.

Shoranur-Cochin Railway conversion, S. I. Railway.

Government Control and Re-organisation of Railway Board.

As the original contracts carried a definite Government guarantee of interest, it was necessary for Government to exercise strong supervision and control over the expenditure during construction, and over management and expenditure after the lines were open for traffic. For these purposes a staff of Consulting Engineers was formed, and a whole system of checks and counterchecks established, leading up to the Railway Branch of the Public Works Department of the Government of India. As traffic developed, the Indian Railways outgrew this dry nursing, and when the original contracts expired, and the interests of Government and the Companies synchronised, it became not only vexatious but unnecessary. Accordingly in 1901-02 Mr. Thomas Robertson was deputed by the Secretary of State to examine the whole

question of the organization and working of the Indian Railways, and he recommended that the existing system should be replaced by a Railway Board, consisting of a Chairman and two members with a Secretary. The Board was formally constituted in March 1905. The Board was made subordinate to the Government of India in which it was represented by the Department of Commerce and Industry. It prepared the railway programme of expenditure and considered the greater questions of policy and economy affecting all the lines. Its administrative duties included the construction of new lines by State agency, the carrying out of new works on open lines, the improvement of railway management with regard both to economy and public convenience, the arrangements for through traffic, the settlement of disputes between lines, the control and promotion of the staff on State lines, and the general supervision over the working and expenditure of the Company's lines. Certain minor changes have taken place from time to time since the constitution of the Railway Board. In 1908, to meet the complaint that the Board was subjected to excessive control by the Department of Commerce and Industry, the powers of the Chairman were increased and he was given the status of a Secretary to Government with the right of independent access to the Viceroy; he usually sat in the Imperial Legislative Council as the representative of the Railway interest. In 1912 in consequence of complaints of the excessive interference of the Board with the Companies, an informal mission was undertaken by Lord Inchcape to reconcile differences. Various changes were introduced during the years 1912-1920 such as the modification of the rule that the President and members of the Railway Board should all be men of large experience in the working of railways due to the importance of financial and commercial considerations in connection with the control of Indian Railway policy. This decision was, however, revised in 1920 and an additional appointment of Financial Adviser to the Railway Board created instead. The question of the most suitable organization was further fully examined by the Acworth Committee in 1921 and a revised organization which is described later was introduced from 1st April 1924.

Some of the difficulties involved in the constitution of a controlling authority for the railways of India may be realized from a study of the "Notes on the Relation of the Government to Railways in India" printed as an appendix to Volume I of the Annual Report by the Railway Board on Indian Railways. These notes bring out the great diversity of conditions prevailing which involve the Railway Department in the exercise of the functions of—

(*a*) the directly controlling authority of the State-worked systems aggregating 18,499 miles in on the 31st March 1929,

(*b*) the representative of the predominant owning partner in systems aggregating 29,451 miles,

(*c*) the guarantor of many of the smaller companies, and

(*d*) the statutory authority over all railways in India.

Moreover in all questions relating to railways or extra municipal tramways in which Provincial Governments are concerned, the Railway Department is called upon to watch the interests of the Central Government and is frequently asked to advise the Local Governments. Its duties do not end there. The future development of railways depends largely on the Government of India and the Railway Department is therefore called upon to plan out schemes of development, to investigate and survey new lines and to arrange for financing their construction. The evolution of a satisfactory authority for the administration of these varied functions has proved extremely difficult and the question was one of those referred to the Railway Committee (1920-21) presided over by Sir William Acworth who recommended the early appointment of a Chief Commissioner of Railways whose first duty should be to prepare a definite scheme for the reorganization of the Railway Department and Mr. C. D. M. Hindley, formerly Agent of the East Indian Railway and Chairman of the Calcutta Port Trust, was appointed Chief Commissioner on November 1st, 1922.

The principal constitutional change involved in this appointment is that the Chief Commissioner who takes the place of the President of the Railway Board is solely responsible—under the Government of India—for arriving at decisions on technical matters and for advising the Government of India on matters of railway policy and is not, as was the President, subject to be out-voted and over-ruled by his colleagues on the Board. The detailed re-organization of the Railway Board in accordance with the Chief Commissioner's proposals required careful consideration but one of the most important of his recommendations namely the appointment of a Financial Commissioner was considered of particular urgency and the Secretary of State's sanction was therefore obtained to the appointment with effect from 1st April 1923. While in the person of the Chief Engineer the Railway Board has always had available the technical advice of a senior Civil Engineer in Mechanical Engineering questions it has had to depend on outside assistance. The disadvantages of this arrangement have become increasingly evident and it was therefore decided with effect from November 1st, 1922, to create the new appointment of Chief Mechanical Engineer with the Railway Board.

The reorganization carried out in 1924 had for one of its principal objects the relief of the Chief Commissioner and the Members from all but important work so as to enable them to devote their attention to larger questions of railway policy and to enable them to keep in touch with Local Governments, railway administrations and public bodies by touring to a greater extent than they had been able to do in the past.

This object was effected by the following new ports which in some cases supplemented the existing ones and in other cases replaced them. Directors of Civil Engineering, Mechanical Engineering, Traffic, Establishment and Finance and seven Deputy Directors working under them.

The necessity of some central organisation to co-ordinate the publicity work carried out on railways and to undertake on its own the many forms of railways publicity which can be best

organised by one central body led to the inauguration of the Central Publicity Bureau under a Chief Publicity Officer in 1927. The success which has attended the work of this Bureau led to its being made permanent from January 1st, 1929. The work undertaken is described later.

The growing importance of Labour questions necessitated the organisation of a new branch in the Railway Board's office and to the appointment in 1929 of a third member whose main duties are connected with the satisfactory solution of labour problems and the improvements of the conditions of service of the staff generally and of the lower paid employees in particular.

Under the Railway Board's policy of progressive standardisation, a Central Standardisation Office was established under a Chief Controller of Standardisation to provide the means whereby such standardisation would be progressively effected in accordance with changing conditions and as the result of practical experience. The Technical Officer under the Railway Board was transferred to this office as a Deputy Controller.

The present superior staff under the Railway Board, therefore consisted of 5 Directors, 5 Deputy Directors, a Secretary and an Assistant Secretary in addition to the Controller of Railway Accounts and his officers, to the Central Publicity Officer and the Officers in the Central Publicity Bureau and to the Chief Controller and the officers in the Central Standardisation Office.

The question of transferring the supervision of railway accounts of State Railways from the Finance Department to the Railway Board was under consideration for some time and in accordance with a resolution adopted, by the Legislative Assembly in September 1925, a start was made with the transfer of the supervision of railway accounts on the East Indian Railway. At the same time a separate Audit Staff was appointed reporting directly to the Auditor-General. As it was found that the separation of Audit from Accounts led to greater efficiency, a similar organisation was introduced on other State-managed railways during 1929. The supervision of Accounts Officers was placed under a Controller of Railway Accounts reporting to the Financial Commissioner of Railways and that of Audit Officers under a Director of Railway Audit reporting to the Auditor-General. These two duties were previously combined under the Accountant-General, Railways, reporting to the Auditor-General. The Chief Accounts Officers on railways are now under the Agent but have certain powers of direct reference to the Financial Commissioner of Railways.

Management.

The Railways managed by Companies have Boards of Directors in London and are represented in India by an Agent. Some of the Company-managed railways are still on a departmental basis with a Traffic Manager, Chief Engineer, Locomotive and Carriage and Wagon Superintendent, Controller of Stores and Chief Auditor, while others have separated the Transportation and Commercial duties of the Traffic Manager and combined the supervision of Locomotive running with Transportation. State-managed lines have generally adopted the divisional organisation.

Clearing Accounts Office.

A Clearing Accounts Office, with a Statutory Audit Office attached thereto, was opened in December 1926 to take over work relating to the check and apportionment of traffic interchanged between State-managed Railways. The work of the different railways was gradually transferred to this office, the North Western Railway being taken over first on the 1st January 1927, the East Indian Railway following on the 1st April, the Eastern Bengal Railway on the 1st January 1928, and the Great Indian Peninsula Railway later.

At the request of the Bombay, Baroda and Central India Railway an exhaustive experiment was conducted to check the accuracy of the results obtained by the revised procedure, and as the experiment was completely successful, the Board of Directors of the Bombay, Baroda & Central India Railway have also agreed to the transfer of the check and apportionment of their foreign traffic to the Clearing Accounts Office.

During 1927-28 demonstrations explaining the Clearing Accounts Office procedure were given to the representatives of the Press as well as to the representatives of the various railways who visited the office to study the new procedure. An important demonstration was given to the representatives of the Southern Railways at Madras who were so impressed with the superiority of the new procedure that they unanimously recommended to their Home Boards the transfer of the work of check and apportionment of earnings from interchanged traffic to the Clearing Account Office, and it was hoped to open a branch Clearing Accounts Office at Madras at an early date to deal with such traffic but owing to certain later developments in connection with experiments now in operation of through rate registers and of decentralisation of Traffic Accounts Work, no definite decision has yet been arrived at.

The Railway Conference.

In order to facilitate the adjustment of domestic questions, the Railway Conference was instituted in 1876. This Conference was consolidated into a permanent body in 1903 under the title of the Indian Railway Conference Association. It is under the direct control of the railways, it elects a President from amongst the members, and has done much useful work.

The Indian Gauges.

The standard gauge for India is five feet six inches. When construction was started the broad-gauge school was strong, and it was thought advisable to have a broad-gauge in order to resist the influence of cyclones. But in 1870, when the State system was adopted it was decided to find a more economical gauge, for the open lines had cost £17,000 a mile. After much deliberation, the metre-gauge of 3 feet 3⅜ inches was adopted, because at that time the idea of adopting the metric system for India was in the air. The original intention was to make the metre-gauge lines provisional; they were to be converted into broad-gauge as soon as the traffic justified it; consequently

they were built very light. But the traffic expanded with surprising rapidity, and it was found cheaper to improve the carrying power of the metre-gauge lines than to convert them to the broad-gauge. So, except in the Indus Valley, where the strategic situation demanded an unbroken gauge, the metre-gauge lines were improved and they became a permanent feature in the railway system. Now there is a great metre-gauge system north of the Ganges connected with the Rajputana lines and Kathiawar and another system in Southern India embracing the Southern Maratha and the South India Systems. These are not yet connected, but the necessary link from Khandwa by way of the Nizam's Hyderabad-Godaveri Railway, cannot be long delayed. All the Burma lines are on the metre-guage. Certain feeder and hill railways have been constructed on the 2'-6" and 2'-0" gauges and since the opening of the Barsi Light Railway which showed the possible capacity of the 2'-6" gauge, there has been a tendency to construct feeder lines on this rather than on the metre-gauge.

State versus Company Management.—The relative advantages and disadvantages of State and Company management of the railways owned by Government which comprise the great bulk of the railway mileage in India have been the subject of discussion in official circles and the public press for many years. In India the question is complicated by the fact that the more important companies have not in recent years been the owners of the railways which they manage and the headquarters of their Boards are in London. The subject was one, perhaps the most important, of the terms of reference of the Acworth Railway Committee. That Committee was unfortunately, unable to make a unanimous recommendation on this point, their members being equally divided in favour of State management and Company management. They were however, unanimous in recommending that the present system of management by Boards of Directors in London should not be extended beyond the terms of the existing contracts and this recommendation has met with general public acceptance. During the year 1922-23, the question was again referred to certain Local Governments and public bodies and opinions collected and discussed. The approaching termination of the East Indian Railway contract on 31st December 1924 and of that of the Great Indian Peninsula Railway on 30th June 1925 rendered an early decision on this question imperative. When the question was debated in the Legislative Assembly in February 1923, the non-official Indian Members were almost unanimously in favour of State management and indeed were able to carry a resolution recommending the placing of the East Indian Railway and the Great Indian Peninsula Railway under State management at the close of their present contracts. The Government of India, however, expressed themselves as being so convinced by the almost universal failure of this method in other countries that they proposed, while accepting the necessity for taking over the managment of the East Indian Railway and the Great Indian Peninsula Railway to continue their efforts to devise a satisfactory form of Company domiciled in India to take these railways over eventually on a basis of real Company management. There have been certain definite advantages during a transition period in having a central authority with necessary powers to co-ordinate the work on railways and that the results have been satisfactory are borne out by the fact that Indian railways have contributed 4¾ million pounds to General Revenues during 1927-28 and nearly 4 million pounds during 1928-29 in addition to paying in 3¼ million and 1¾ million pounds respectively during these two years to the Railway Reserve Fund. The future organisation will, however, need careful organisation. Experience in other countries has shown that difficulties arise in a Government fully responsible to the Legislature or under any constitution which imposed on the Railway Department the necessary restrictions which must apply as between ordinary departments of the State. The solution found in other countries such as Germany, Canada, Belgium, Austria and elswhere, where State ownership has thrown on the State the obligation to manage its own railways, has been to create by a statute an authority charged with the management of the State Railway property with statutory prescription of the objects to be aimed at in such management and statutory division of railway profits between the State and the Railway Authority. This authority may take the form of a company as in Canada and in Germany or follow the simpler lines of a statutory commission. On 1st January 1925 the East Indian Railway was amalgamated with the Oudh and Rohilkhand Railway and brought under direct State Management while on 1st July 1925 the Great Indian Peninsular Railway followed suit. The Naini-Jubbulpore Section of the East Indian Railway was transferred to the Great Indian Peninsula Railway on 1st October 1925.

On January 1st 1929 the contract with the Burma Railways Company was terminated and the management taken over by the State. The purchase of this railway has entailed the payment to the Burma Railways Company of the sum of three millions sterling being the share capital originally contributed by the Company. The financial effort of taking over the line is estimated to be an increase of about half a crore of rupees in the net annual revenue to Government.

The purchase of the Southern Punjab Railway of an aggregate length of about 927 miles worked by the North Western Railway was effected on the 1st January 1930. It is estimated that the financial result of the purchase which cost approximately Rs. 703 lakhs will be a gain to Government of about Rs. 47 lakhs a year.

At the end of 1929-30 the Nizam's Guaranteed State Railways system which was the property of the company, was acquired and its management taken over by His Exalted Highness the Nizam's Government and is now known as His Exalted Highness the Nizam's State Railway.

Separation of the Railway from the General Finances.—The question of the separation of the railway from the general finances was under consideration for some time and as a result of the recommendations of the Acworth Committee in 1921, the question was further examined by the Railway Finance Committee and the Legislative Assembly but it was decided to postpone a definite decision for the present.

The question was examined afresh in connection with the recommendation of the Retrenchment Committee in 1923, that the railways in India should be so worked as to yield an average return of at least 5½ per cent. on the capital at charge and it was decided that a suitable time had arrived when this separation could be carried out. A resolution was accordingly introduced in the Assembly on the 3rd March 1924, recommending to the Governor-General in Council:—"that in order to relieve the general budget from the violent fluctuations caused by the incorporation therein of the railway estimates and to enable the railway to carry out a continuous railway policy based on the necessity of making a definite return over a period of years to the State on the Capital expended on railways:—

(1) The railway finances shall be separated from the general finances of the country and the general revenues shall receive a definite annual contribution from railways which shall be the first charge on railway earnings.

(2) The contribution shall be a sum equal to five-sixths of 1 per cent. on the capital at charge of the railways (excluding capital contributed by Companies and Indian States and Capital expenditure on strategic Railways) at the end of the penultimate financial year *plus* one-fifth of any surplus profits remaining after payment of this fixed return, subject to the condition that if any year railway revenues are insufficient to provide the percentage of five-sixths of 1 per cent. on the capital at charges surplus profits in the next or subsequent years, will not be deemed to have accrued for purposes of division until such deficiency has been made good. From the contribution so fixed will be deducted the loss in working, and the interest on capital expenditure on strategic lines.

(3) Any surplus profits that exist after payment of these charges shall be available for the Railway administration to be utilised in—

(*a*) forming reserves for,

(*i*) equalising dividends, that is to say, of securing the payment of the percentage contribution to the general revenues in lean years,

(*ii*) depreciation,

(*iii*) writing down and writing off capital,

(*b*) the improvement of services rendered to the public,

(*c*) the reduction of rates.

(4) The railway administration shall be entitled, subject to such conditions as may be described by the Government of India, to borrow temporarily from capital or from the reserves for the purpose of meeting expenditure for which there is no provision or insufficient provision in the revenue budget subject to the obligation to make repayment of borrowings out of the revenue budgets of subsequent years.

(5) In accordance with present practice the figures of gross receipts and expenditure of railways will be included in the Budget Statement. The proposed expenditure will, as at present, be placed before the Legislative Assembly in the form of a demand for grants and on a separate day or days among the days allotted for the discussion of the demands for grants the Member in charge of the Railways will make a general statement on railway accounts and working. Any reductions in the demand for grants for railways resulting from the votes of the Legislative Assembly will not ensure to general revenues, *i.e.*, will not have the effect of increasing the fixed contribution for the year.

(6) The Railway Department will place the estimate of railway expenditure before the Central Advisory Council on some date prior to the date for the discussion of the demand for grants for railways."

This resolution was examined by the Standing Finance Committee in September and was introduced with certain modifications. The final resolution agreed to by the Assembly on September 20th, 1924, and accepted by Government differed from the original resolution in that the yearly contribution had been placed at 1 per cent. instead of 5/6th per cent. on the capital at charge and if the surplus remaining after this payment to General Revenues should exceed 3 crores, only ⅔rd of the excess over 3 crores were to be transferred to the Railway Reserve and the remaining ⅓rd was to accrue to General Revenues. At the same time a Standing Finance Committee for Railways was to be constituted to examine the estimate of railways expenditure and the demand for grants, the programme revenue expenditure being shown under a depreciation fund. This committee was to consist of one nominated official member of the Legislative Assembly as Chairman and 11 members elected by the Legislative Assembly from that body. This would be in addition to the Central Advisory Council which will include the Members of the Standing Finance Committee and certain other official and non-official members from the Legislative Assembly and Council of State. These arrangements were to be subject to periodic revision but to be provisionally tried for at least 3 years. They would, however, only hold good as long as the E. I. Railway and the G. I. P. Railway and existing State Managed Railways remain under State-management and if any contract for the transfer of any of the above to Company management was concluded against the advice of the Assembly, the Assembly would be at liberty to terminate the arrangements in this resolution.

The Assembly in an addendum recommended that the railway services and the Railway Board should be rapidly Indianised and that the stores for the State Managed Railways should be purchased through the organisation of the Indian Stores Department.

The period has now arrived for this separation to be reconsidered and revised but due to the economic depression the matter has been held in abeyance.

Re-organisation problems.—The growing complexity of railway administration in India and the evolution of new methods of controlling traffic have given a stimulus to the efforts of various railways to revise their organisations. The general direction in which this re-organisation is being considered is that of consolidation into one department of the operating or transportation work of the railway, including the provision of power. This system which is commonly known as the divisional system, was first adopted on the Great Indian Peninsula Railway during 1922-23.

The Pope Committee.

During 1932-33 a Committee under the Chairmanship of Mr. Pope, General Executive Assistant to the President of the L. M. S. Railway was formed to investigate and inaugurate a detailed analysis of every important activity of railway operation. In addition to the specific recommendation that "job analysis" should be initiated on all railways, the following recommendations were made:—

(*i*) The better use of Locomotives.
(*ii*) The better use of Railway land.
(*iii*) Additional research and experiments.
(*iv*) Improved Workshop practice.
(*v*) More careful listing of surplus track, equipment and accommodation.
(*vi*) Possibility of reducing hot axles.

Rates Advisory Committee.

The Rates Advisory Committee was constituted in 1926 to investigate and make recommendations to Government on the following subjects:—

(1) Complaints of undue preference;
(2) Complaints that rates are unreasonable in themselves;
(3) Complaints or disputes in respect of terminals;
(4) The reasonableness or otherwise of any conditions as to the packing of articles specially liable to damage in transit or liable to cause damage to other merchandise;
(5) Complaints in respect of conditions as to packing attached to a rate;
(6) Complaints that Railways do not fulfil their obligations to provide reasonable facilities under Section 42 (3) of the Indian Railways Act.

1932-33 five cases were referred for investigation and report.

Inauguration of the Main Line Electric Service, G. I. P. Railway.

The inauguration of the electrified main line section of the G. I. P. Railway from Kalyan to Poona took place on the 5th November 1929, and constituted the first entirely main line of track to be electrified in India. This scheme involved the elimination of the Bhore Ghat Reversing Station. The problem of eliminating the Reversing Station had been seriously considered on several occasions in the past but it was not until 1923, when electrification had been definitely decided upon, that final survey operations became imperative.

Apart from the location of the realignment which called for the adoption of methods unusual in ordinary survey practice, the works involved in the construction of this double line broad-gauge section of railway were of considerable magnitude, chiefly in the form of heavy tunnel construction.

There are three tunnels in all aggregating 4,598 feet or ·87 of a mile. The longest of these is 3,100 feet built throughout on a curve of the sharpest radius which occurs in these ghats. Allowing for curvature and the considerably increased spacing of tracks necessitated by the adoption of the latest standard dimensions, a tunnel section of 34 feet 6 inches wide and 24 feet 6 inches high was decided upon. This is considered to be the largest tunnel section in the world.

The steam trains to Poona took approximately 6 hours for the journey and it is anticipated that with electric traction this timing will be now reduced to approximately 3 hours.

With the opening of the electrified section between Kalyan and Igatpuri in October 1930, it is believed that the G. I. P. Railway has the greatest length of electrified main line in the British Empire and the entire scheme will be one of the most important main line electrifications in the world.

Publicity.

The year 1929-30 marked a very considerable advance in the Publicity activities of the Indian railways. The Central Publicity Bureau of the Railway Board was inaugurated on 1st April 1927, a Chief Publicity Officer was appointed and provided with an Assistant and a small clerical staff. The office was located in Victoria Terminus, Bombay, it being felt that, to commence with, Bombay's position as the main port of arrival in India, closer touch could be kept with travellers and furthermore, Bombay presented certain distinct advantages from the point of view of printing facilities, etc.

For 1928 however the office was moved to Delhi as being more central and in closer touch with the Railway Board. Among some of the principal lines upon which it was decided to concentrate attention were:—

Cinema film production and display;
Poster production and display;
Pamphlet production and display;
Publication of an *Indian State Railways Magazine*;
Demonstration Trains;
Upper and Lower class special excursion trains;
Press propaganda in India;
Press propaganda in Europe, America and other parts of the world;
Reciprocal publicity with the leading railways of the world.

Shortly after the inauguration of the Central Publicity Bureau, the need was felt for a representative in England to give information and advice to potential travellers and to handle enquiries arising out of the advertising campaign which it was decided to carry out. A Publicity Officer was appointed and temporary offices secured in London in which an Indian State Railways Bureau was opened. It was soon found that separate permanent offices were required and these have now been obtained in 57, Haymarket, London, where sufficient accommodation is available to deal adequately with the many visitors who come there. With the opening of 'India House' a Branch Office has also been provided there, and this will deal more particularly with enquiries concerning Goods rates, but general enquiries can also be answered there. In order to obtain an adequate share of the American tourist traffic, an Office has also been opened in New York and a Resident Manager appointed there. This office was at first temporarily in accommodation kindly provided by the Canadian Pacific Railway in their General Offices at 342, Madison Avenue, New York, but now has its own commodious office in an excellent site at Delhi House, 38, East 57th Street, New York.

Owing to the financial stringency it was decided in 1931 to cut down the Bureau and

to bring it directly under the Railway Bureau. The work carried out remains, however, unchanged except in scope and the film department was definitely closed down.

The Branch office in India House was also closed and the total staff in the London Bureau reduced from 3 officers to 2 officers.

The year 1932-33 necessitated a greater concentrated and co-ordinated efforts in order to maintain tourist traffic from abroad than any previous year on record. Experiments were also carried out in India with a view to postering 3rd class traffic, especial pilgrim traffic. These experiments proved successful and it is hoped will be enlarged upon in the future.

Capital Expenditure.—The outlay during the year 1928-29 was Rs. 27·53 crores, of which Rs. 25·41 crores represented expenditure incurred on State-owned lines.

Considerable progress has been made with the programme of new construction. Close on 1,300 miles of new railway were opened for traffic during 1928-29, and at the close of the year there were some 2,100 miles under construction.

Trade review.—The earnings of railways are dependent on the general prosperity of the country which in the case of India is most easily measured by the agricultural position and the returns of foreign trade.

The Universal Trade Depression continued to be felt with greater intensity in India during the year 1932-33, resulting in a decline in exports of Rs. 25 crores or 15 per cent. as compared with 1931-32. The imports however showed an improvement of Rs. 7 crores or 5 per cent. The total value of exports from British India during the year 1932-33, amounted to Rs. 136 crores and that of imports to Rs. 133 crores. The decline in export traffic was one of the main factors contributing to the decline in railway earnings as compared with 1931-32. The outstanding feature on the export side was a further slumps in the raw, cotton due to the comparatively high prices of the Indian Staples. Despatches fell from Rs. 23 crores to Rs. 20 crores. Twist and yarn from Rs. 128 lakhs to Rs. 79 lakhs. Shipments of Indian Cotton Piecegoods from Rs. 3.24 crores to Rs. 2.09 crores. Raw jute from Rs. 11.19 crores to Rs. 9.73 crores. Rice from Rs. 18.14 crores to Rs. 14.46 crores. Food grains from Rs. 20.37 crores to Rs. 16.08 crores. The improvements in imports came principally from a demand for foreign textiles and represented an additional revenue of Rs. 12 crores. Passenger earnings fell from Rs. 31.35 crores in 1931-32 to Rs. 31.34 crores in 1932-33, showing a slight drop only of 0.03 per cent. 3.6 million less passengers were carried by class I railways in 1932-33. Goods earnings decreased by Rs. 1.89 crores, chiefly under oil seeds, grain, pulses and other grains, wheat, rice, kerosene and sugar.

The tonnage of and earnings from the main commodities on Class I Railways during the last two years are shown in the table below :—

Commodities.	1931-32.		1932-33.	
	Handled on Home Line.	Earnings.	Handled on Home Line.	Earnings.
	Tons.	Rs.	Tons.	Rs.
1. Fuel	24,866,300	8,83,20,800	23,823,100	8,90,32,800
2. Materials and stores on Revenue Account	14,387,800	2,30,83,000	13,512,600	2,36,28,000
3. Wheat	2,262,800	2,16,06,800	1,836,500	1,83,94,300
4. Rice	5,312,300	3,70,50,900	4,726,800	3,47,32,800
5. Gram and pulse and other grains	3,989,400	3,58,09,200	3,655,700	3,08,96,700
6. Marble and stone	2,642,400	70,39,700	2,616,300	71,27,700
7. Metallic ores	2,218,000	58,07,400	1,841,400	44,68,100
8. Salt	2,326,300	1,92,85,300	2,185,800	1,85,87,800
9. Sugar	1,080,000	1,50,61,800	1,057,700	1,29,47,200
10. Wood, unwrought	1,501,600	70,17,100	1,676,300	78,79,400
11. Oil seeds	3,503,100	3,52,12,800	3,021,300	2,87,90,400
12. Cotton, raw, unmanufactured	1,933,900	4,75,55,700	2,189,000	5,19,27,500
13. Jute, raw	1,101,100	98,92,700	1,287,400	1,12,06,200
14. Fodder	1,036,800	50,42,200	1,100,800	54,44,800
15. Fruits and vegetables	1,809,900	1,11,05,000	2,250,000	1,15,07,900
16. Iron and steel wrought	1,704,300	1,81,38,600	1,836,000	1,99,62,900
17. Kerosene and Petrol	1,671,400	2,55,14,400	1,346,200	2,17,32,000
18. Gur, Jagree, Molasses, &c.	1,421,000	1,26,66,700	1,504,900	1,38,97,900
19. Tobacco	442,100	67,83,400	461,100	72,69,500
20. Provisions	1,865,100	2,82,77,300	1,828,500	2,76,36,800
21. Military Traffic	400,300	27,23,800	484,900	30,56,400
22. Railway materials	6,081,100	72,46,900	4,996,700	51,58,300
23. Live stock	200,300	51,82,300	202,500	52,23,200
24. Other commodities	10,305,400	9,23,92,300	9,914,300	9,03,43,400
25. Manures	185,200	9,16,300	227,200	10,69,400

Open Mileage.—The total route mileage on March 31st, 1933, was made up of—

Broad-gauge..	.. ..	21,131·06 miles.
Metre-gauge..	.. ..	17,652·97 ,,
Narrow-gauge	.. ..	4,176·85 ,,

Under the classification adopted for statistical purposes, this mileage is divided between the three classes of railways as follows:—

Class I	.. .. ..	34,893·56 miles.
Class II	.. .. ..	3,248·82 ,,
Class III	.. .. ..	1,145·60 ,,

During the year 1932-33, 305·92 miles of new lines were opened for public traffic. Of this mileage, 264·11 miles belong to Class I.

Class I Railways.	Number of seats in passenger carriages.			
	1st.	2nd.	Inter.	Third.
5′-6″ ..	25,214	45,200	67,556	676,433
3′-3⅜″ ..	10,993	14,762	12,653	379,338

Financial Results of Working.—The total gross earnings of all railways in India during the year 1932-33 amounted to Rs. 86·65 crores as compared with 87·83 crores in 1931-32. These figures, however, include railways owned by Indian States and companies for which the Government of India has no direct financial responsibility. The figures of receipts and expenditure for railways with which the Government are directly concerned are as follows :—

(Based on actuals of penultimate year 1930-31.)

(Figures in thousands.)

		Rs.	Rs.
1.	1 per cent. on capital of Rs. 7,35,94,90 at charge—commercial lines—to end of 1930-31		7,35,95
2. (i)	Receipts (1930-31)—		
	Gross traffic receipts—commercial lines	93,62,17	
	Subsidized companies—share of surplus profits	20,36	
	Interest on depreciation and reserve fund balances and dividends on investments in branch lines and miscellaneous receipts ..	1,47,78	
	Total Receipts ..		95,30,31

			5,22,58

After meeting all interest and annuity charges Government therefore received a net profit of 4·04 crores on the capital at charge of the State *minus* the net receipts, that is the gross receipts *minus* the working expenses, have in recent years given the following returns:—

	Per cent.
1913–14	5·01
1923–24	5·24
1924–25	5·85
1925–26	5·31
1926–27	4·95
1927–28	5.30
1928–29	5·22
1929–30	4·65
1930–31	*Nil*
1931–32	*Nil*

Up-to-date figures of the results of working of other countries are not available, but the following table compares the latest available figures of average receipts per ton mile of those countries which have published statistics of working later than 1919:—

	Receipts * per ton mile. Pies.
United States of America 1929 ..	5·70
United Kingdom 1929	15·15
Japan 1927-28	7·26
Switzerland 1928	20·25
South Australia 1928-29	17·25
Canadian Railways 1929	5·75
India 1929-30	6·14

In the case of receipts per passenger mile the figures for United States of America and India are as follows:—

United States of America 1929. 14·78 pies
India 1929-30 .. .. .. 3·28 „

while in England the present standard fare charged per mile third class is 18 pies.

From the above it will be seen that railway transportation of freight in India is one of the cheapest in the world and still more so for passenger traffic.

An examination of the latest available figures of operating ratios of foreign countries brings out results not unfavourable to Indian Railways.

	Year.	Operating Ratio
United States of America	1930	74 per cent.
France	1925	84·15 „ „
English Railways	1928	79·40 „ „
South African Railways	1928–29	77·80 „ „
Argentine Railways	1927	71·05 „ „
Canadian Railways	1929	81·21 „ „
India	1913–14	51·79 „ „
	1925–26	62·69 „ „
	1926–27	62·04 „ „
	1927–28	61·39 „ „
	1928–29	62·77 „ „
	1929–30	65·02 „ „
	1931 32	71.08 „ „
	1932–33	71.61 „ „

Output of Railway owned Collieries.—The output of railway owned collieries during 1929-30 was 3,184,206 tons out of a total of 6,773,559 tons consumed on class I Railways.

For 1930-31 the output was 2,926,812 tons for a total of 6,629,014 tons.

For 1931-32 the figures are 2,484,891 tons for a total of 5,759,398 tons.

Number of Staff.—The total number of employees on Indian Railways at the end of the year 1932-33 was 710,271 was compared with 731,979 at the end of 1931-32. The increase in route mileage during the same period was 812 miles. The following table shows the number of employees by communities on 31st March 1930, 1931 and 1932:—

	Europeans.	Statutory Indians.					
		Hindus.	Muhammadans.	Anglo-Indians.	Sikhs.	Indian Christians.	Other Classes.*
31st March 1930	4,981	579,040	182,349	14,647	....	....	36,716
31st March 1931	4,799	553,851	172,321	14,350	....	....	35,809
31st March 1932	4,532	520,575	157,876	13,570	8,767	14,398	12,261
31st March 1933	4,297	504,082	152,875	13,048	8,591	15,574	11,804

* These include Sikhs and Indian Christians not shown separately

Indianisation.—The various Railway Companies managing State and other Railway lines have followed the lead given by Government and accepted the recommendation of the Lee Commission that the extension of existing training facilities should be pressed forward as expeditiously as possible in order that recruitment in India may be advanced as soon as practicable up to 75 per cent. of the total num of vacancies in the Superior Services of Railway concerned.

Fatalities and Injuries.—During the y 1931-32 the number of persons killed decrea by 292 as compared with the previous ye the number of passengers killed decreased 82 and of passengers injured by 125.

The following table shows the numbers killed and injured separately under passenge railway servants and others for 1932-33 as compared with 1931-32 :—

	Killed.		Injured.	
	1931-32.	1932-33.	1931-32.	1932-33.
A.—Passengers.				
In accidents to trains, rolling-stock, permanent-way, etc.	8	6	93	61
In accidents caused by movements of trains and railway vehicles exclusive of train accidents ..	245	215	808	761
In accidents on Railway premises in which the movement of trains, vehicles, etc., was not concerned	2	10	11	21
B.—Railway Servants.				
In accidents to trains, rolling-stock, permanent way, etc.	16	8	157	79
In accidents caused by movements of trains and railway vehicles exclusive of train accidents ..	201	184	1,819	1,789
In accidents on Railway premises in which the movement of trains, vehicles, etc., was not concerned	43	24	5,467	5,922
C.—Other than passengers and railway servants.				
In accidents to trains, rolling-stock, permanent-way, etc.	32	41	62	103
In accidents caused by movements of trains and railway vehicles exclusive of train accidents ..	2,322	2,225	736	698
In accidents on Railway premises in which the movements of trains, vehicles, etc., was not concerned	19	44	47	75
Total ..	2,888	2,757	9,200	9,509

Of the total number of 2,888 persons killed 1,863 were trespassers on the line and 394 committed suicide.

Local Advisory Committees.—In the Annual Reports by the Railway Board on the working of Indian Railways, references are made each year to the work that is being done by Local Advisory Committees on railways in bringing to the notice of their respective railways administrations matters affecting the general public in their capacity as users of the railway. These committees have been established and are functioning on all Class I Railways, except His Exalted Highness the Nizam's State Railways and the Jodhpur Railway. During 1929-30, the Barsi Light Railway constituted an Advisory Committee for that line.

These committees constitute a valuable link between railways and their clientele.

The following is a list of some of the more important matters discussed :—

Improvements in coaching stock; Provision of cold storage compartments; Provision of Indian dining cars; Reduction of rates and fares; Arrangements for dealing with traffic at festivals; Reservation of seats in intermediate class carriages; Supply of drinkng water to passengers; Sleeping accommodation for passengers; Provision of bathing cabins at stations; Despatch ordinary of goods; Portage charge over railway bridges; Overcrowding in lower class carriages; Provision of waiting rooms for ladies; Combustion of culverts of permanent openings for flood waters; Electrification of railway stations; Provision of over bridges; Remodelling of stations; Mileage of coupons.

THE CHIEF RAILWAYS IN INDIA.

The Assam-Bengal Railway, which is constructed on the metre-gauge, starts from Chittagong and runs through Surma Valley across the North Cachar Hills into Assam. It is worked under a limited guarantee by a company.

Mileage open	.. ..	11,31·43
Capital at charge	..	Rs. 23,58,50,000
Net earnings	..	Rs. 42,01,000
Earnings per cent.	.. ..	1·80

Bengal and North-Western.

The Bengal and North-Western Railway was constructed on the metre-gauge system by a company without any Government assistance other than free land and was opened to traffic in 1885. The system was begun in 1874 as the Tirhut State Railway. In 1890 this line was leased by Government to the Bengal and North-Western Railway. Since then extensive additions have been made in both sections. It is connected with the Rajputana metre-gauge system at Cawnpore and with the Eastern Bengal State Railway at Khatihar and the East Indian Railway at Benares and Mokameh Ghat.

Mileage open	.. ..	1269·67

Bengal-Nagpur.

The Bengal-Nagpur Railway was commenced as a metre-gauge from Nagpur to Chhatisgarh in the Central Provinces in 1887. A company was formed under a guarantee which took over the line, converted it to the broad-gauge and extended it to Howrah, Cuttack and Katni. In 1901 a part of the East Coast State Railway from Cuttack to Vizagapatam was transferred to it and in the same year sanction was given for an extension to the coal-fields and for a connection with the Branch of the East Indian Railway at Hariharpur.

Bombay Baroda.

The Bombay, Baroda and Central India Railway is one of the original guaranteed railways. It was commenced from Surat *via* Baroda to Ahmedabad, but was subsequently extended to Bombay. The original contract was terminable in 1880, but the period was extended to 1905; and then renewed under revised conditions. In 1885 the Rajputana-Malwa metre-gauge system of State railways was leased to the Company and has since been incorporated in it. On the opening of the Nagda-Muttra, giving broad-gauge connection through Eastern Rajputana with Delhi the working was entrusted to this Company. On the acquisition of the Company in April 1907 the purchase price was fixed at £11,685,581.

Burma Railways.

The Burma Railway is an isolated line, and although various routes have been surveyed there is little prospect of its being connected with the Railway system of India in the near future. In reply to a question in the Imperial Legislative Council in 1919, Sir Arthur Anderson said:—"During 1914-15 extensive survey operations were carried out to ascertain the best alignment for a railway connection along the coast route between Chittagong and certain stations on the Burma Railways south of Mandalay. A rival route *via* the Hukong Valley between the northern section of the Assam-Bengal Railway and the section of the Burma Railways north of Mandalay was to have been surveyed during the following year but was postponed because of the war. It is now proposed to commence this survey during the coming cold weather, and on its completion, Government will have sufficient information to enable them to decide which route shall be adopted. Thus no arrangements for the construction of a line have yet been made nor has any concession been granted, but it is probable that the line selected will be built at the cost of Government and worked by one or other of the main lines which it will connect. It was commenced as a State Railway and transferred in 1896 to a Company under a guarantee. From January 1st, 1929, its working has been taken over by the State.

Eastern Bengal.

The Eastern Bengal State Railway was promoted under the original form of guarantee and was constructed on the broad-gauge. The first portion of the line running to Calcutta over the Ganges was opened in 1862. In 1874 sanction was granted for the construction on the metre-gauge of the Northern Bengal State Railway, which ran from the north bank of the Ganges to the foot of the Himalayas on the way to Darjeeling. These two portions of the line were amalgamated in 1884 into one State Railway.

Earnings per cent.	.. ..	1·48

East Indian.

The East Indian Railway is one of the three railways sanctioned for construction as experimental lines under the old form of guarantee. The first section from Howrah to Pandua was opened in 1854 and at the time of the Mutiny ran as far as Raniganj. It gives the only direct access to the port of Calcutta from Northern India and is consequently fed by all the large railway systems connected with it. In 1880 the Government purchased the line, paying the share-holder by annuities, but leased it again to the company to work under a contract which was terminable in 1919.

The contract was not terminated until January 1st, 1925, when the State took over the management. From July 1st, 1925, the Oudh & Rohilkhund railway was amalgamated with it.

Great Indian Peninsula.

The Great Indian Peninsula Railway is the earliest line undertaken in India. It was promoted by a Company under a guarantee of 5 per cent. and the first section from Bombay to Thana was open for traffic in 1853. Sanction was given for the extension of this line *via* Poona to Raichur, where it connects with the Madras Railway, and to Jubbulpore where it meets the East Indian Railway. The feature of the line is the passage of the Western Ghats, these sections being 15¾ miles on the Bhore Ghat and 9¼ miles on the Thul Ghat which rise 1,131 and 972 feet. In 1900, the contract with the Government terminated and under an arrangement with the Indian Midland Railway that line was amalgamated and leased to a Company to work.

The contract was terminated on June 30th, 1925, when the State took over the management.

Capital at charge	.. Rs.	1,17,17,50,000
Net earnings	.. Rs.	2,89,65,000
Earnings per cent.	.. ..	2·47

Madras and Southern Mahratta Railway.

The Madras Railway was the third of the original railways constructed as experimental lines under the old form of guarantee. It was projected to run in a north-westerly direction in connection with the Great Indian Peninsula Railway and in a south-westerly direction to Calicut. On the expiry of the contract in 1907 the line was amalgamated with the Southern Mahratta Railway Company, a system on the metre-gauge built to meet the famine conditions in the Southern Mahratta Country and released to a large Company called the Madras and Southern Mahratta Railway Company.

Mileage open	.. ..	1118·80
Capital at charge	.. Rs.	53,14,31,000
Net earnings	.. Rs.	2,95,40,000
Earnings per cent.	.. ..	5·56

The North-Western.

The North-Western State Railway began its existence at the Sind-Punjab-Delhi Railway, which was promoted by a Company under the original form of guarantee and extended to Delhi, Multan and Lahore and from Karachi to Kotri. The interval between Kotri and Multan was unbridged and the railway traffic was exchanged by a ferry service. In 1871-72 sanction was given for the connection of this by the Indus Valley State Railways and at the same time the Punjab Northern State Railway from Lahore towards Peshawar was begun. In 1886 the Sind-Punjab-Delhi Railway was acquired by the State and amalgamated with these two railways under the name of the North-Western State Railway. It is the longest railway in India under one administration.

Mileage open	.. ..	5552·68
Capital at charge	.. Rs.	1,13,33,56,000
Net earnings	.. Rs.	3,02,06,000
Earnings per cent.	.. ..	2,66

Oudh and Rohilkhand.

Oudh and Rohilkhand Railway was another of the lines constructed under the original form of guarantee. It began from the north bank of the Ganges running through Rohilkhand as far as Saharanpur where it joins the North-Western State Railway. It was not until 1887 that the bridge over the Ganges was completed and connected with the East Indian Railway. To effect a connection between the metre-gauge systems to the North and those to the South of the Ganges, a third rail was laid between Bhuriwal and Cawnpore. The Company's contract expired in 1889 when the Railway was purchased by the State and has since been worked as a State Railway.

The working of this railway was amalgamated with that of the East Indian Railway from 1st July 1925.

The South Indian.

The South Indian Railway was one of the original guaranteed railways. It was begun by the Great Southern India Railway Company as a broad-gauge line; but was converted after the seventies to the metre-gauge. This line has been extended and now serves the whole of the Southern India, south of the south-west line of the Madras Railway. Between Tuticorin and Ceylon a ferry service was formerly maintained, but a new and more direct route to Ceylon *via* Rameshwaram was opened at the beginning of 1914. As the original contract ended in 1907, a new contract was entered upon with the Company on the 1st of January 1908.

Mileage open	.. ..	599·03
Capital at charge	.. Rs.	44,95,13,000

Earnings per cent.	.. ..	5·34

The Indian States.

The principal Indian State Railways are the Nizam's, constructed by a company under a guarantee from the Hyderabad State; the Kathiawar system of railways, constructed by subscriptions, among the several Chiefs in Kathiawar; the Jodhpur and Bikaner Railways, constructed by the Jodhpur and Bikaner Chiefs; the system of railways in the Punjab, constructed by the Patiala, Jind, Maler Kotla, and Kashmir Chiefs; and the railways in Mysore, constructed by the Mysore State.

At the end of the financial year 1929-30 a total of 1257.57 miles of new lines was under construction, distributed as follows:—

	Miles.
5′-6″ gauge	730.77
3′-3¾″ gauge	457.51
2′-6″ gauge	69.29

During 1929-30 sanction was accorded to the construction of new lines totalling 227.77 miles.

	Miles.
5′-6″ gauge	93.00
3′-3¾″ gauge	115.17
2′-6″ gauge	19.00

INDIA AND CEYLON.

The possibility of connecting India and Ceylon by a railway across the bank of sand extending the whole way from Rameswaram to Mannar has been reported on from time to time, and since 1895 various schemes having been suggested.

The South Indian Railway having been extended to Dhanushkodi, the southernmost point of Rameswaram Island, and the Ceylon Government Railway to Talaimannar, on Mannar Island, two points distant from each other about 21 miles across a narrow and shallow strait, the possibility of connecting these two terminal stations by a railway constructed on a solid embankment raised on the sand bank known as "Adam's Bridge," to supersede the ferry steamer service which has been established between these two points, is one of the schemes that has been investigated.

In 1913, a detailed survey was made by the South Indian Railway Company, and the project contemplates the construction of a causeway from Dhanushkodi Point on the Indian side to Talaimannar Point on the Ceylon side, a length of 20·05 miles of which 7·19 will be upon the dry land of the various lands, and 12·86 will be in water. The sections on dry land will consist of low banks of sand pitched with coral and present no difficulty. The section through the sea will be carried on a causeway which it is proposed to construct in the following way. A double row of reinforced concrete piles, pitched at 10 feet centres and having their inner faces 14 feet apart, will first be driven into the sand. These piles will then be braced together longitudinally with light concrete arches and chains and transversely with concrete ties, struts and chains. Behind the piles slabs of reinforced concrete will be slipped into position, the bottom slabs being sunk well into the sand of the sea bottom. Lastly, the space enclosed by the slabs will be filled in with sand.

The top of the concrete work will be carried to six feet above high water level, and the rails will be laid at that level. The sinking of the piles and slabs will be done by means of water jets. This causeway, it is expected, will cause the suspended sand brought up by the currents, to settle on either side bringing about rapid accretion and eventually making one big island of Rameswaram island and Mannar island.

Indo-Burma Connection.

The raids of the Emden in the Bay of Bengal in 1914, and the temporary interruption of communications between India and Burma, stimulated the demand for a direct railway connection between India and Burma. Government accepted the position and appointed Mr. Richards, M. Inst. C.E., to be the engineer-in-charge of the surveys to determine the best route for a railway from India to Burma. The coast route appears to be the best one but at present would not be remunerative. This would start from Chittagong, which is the terminus and headquarters of the Assam-Bengal Railway and a seaport for the produce of Assam. The route runs southwards through the Chittagong district, a land of fertile rice fields intersected by big rivers and tidal creeks and it crosses the Indo-Burma frontier, 94 miles from the town of Chittagong. For about 160 miles further it chiefly runs through the fertile rice lands of Arrakan and crosses all the big tidal rivers of the Akyab delta. These include the Kalidan river which drains 4,700 miles of country and even at a distance of about 30 miles from its mouth is more than half a mile wide. About 260 miles from Chittagong the railway would run into the region of mangrove swamps which fringe the seacoast north and south of the harbour of Kaukkphu stretching out into the mangrove swamps like ribs from the backbone. Innumerable spurs of the Arrakan Yoma have to be crossed. Yoma is a mountain ridge which extends from Cape Negrais northwards until it loses itself in a mass of tangled hills east of Akyab and Chittagong. At its southern end the height of the ridge is insignificant but it has peaks as high as 4,000 feet before it reaches the altitude of Sandway and further north it rises much higher. It is a formidable obstacle to railway communication between India and Burma. This route is estimated to cost about £7,000,000 and would have to be supplemented by branch lines to Akyab where there is at present a considerable rice traffic and the cost of this would have to be added to the £7,000,000 already referred to.

The other routes examined have been the Hukong Valley route and the Manipur route which were surveyed by the late Mr. R. A. Way many years ago. The Manipur route was estimated to cost about £5,000,000 as it has to cross three main ranges of hills with summit levels of 2,650, 3,600 and 8,900 feet long. Altogether there would be about four miles of tunnelling through the three main ridges and through other hills and more than 100 miles of expensive undulating railway with grades as steep as 1 in 50 and 11,000 feet of aggregate rise and fall. The Hukong valley route is only about 284 miles long and it presents fewer engineering difficulties than either the Coast or the Manipur route. One hundred and fifty miles of this route lie in open country capable of cultivation though at present it is only very thinly populated. Only one range of hills has to be crossed and this can be negotiated with a summit tunnel 5,000 feet long at a height of 2,500 feet. There are less than fifty miles of very heavy work and only about 4,500ft. aggregate of rise and fall. The Hukong Valley route although cheaper than the Manipur route is not a practical financial proposition and both may be ruled out of consideration.

Main results of working of all Indian Railways treated as one system.

(*d*) Estimated.

The feature which stands out most prominently in a survey of the mineral industries of India is the fact that until recent years little has been done to develop those minerals which are essential to modern metallurgical and chemical industries, while most striking progress has been made in opening out deposits from which products are obtained suitable for export, or for consumption in the country by what may conveniently be called direct processes. In this respect India of to-day stands in contrast to the India of a century ago. The European chemist armed with cheap supplies of sulphuric acid and alkali, and aided by low sea freights and increased facilities for internal distribution by the spreading network of railways has been enabled to stamp out, in all but remote localities, the once flourishing native manufactures of alum, the various alkaline compounds, blue vitriol, copperas, copper, lead, steel and iron, and seriously to curtail the export trade in nitre and borax. The reaction against that invasion is of recent date. The high quality of the native-made iron; the early anticipation of the processes now employed in Europe for the manufacture of high-class steels, and the artistic products in copper and brass gave the country a prominent position in the ancient metallurgical world, while as a chief source of nitre India held a position of peculiar political importance until, less than forty years ago, the chemical manufacturer of Europe found among his by-products, cheaper and more effective compounds for the manufacture of explosives.

With the spread of railways, the development of manufactures connected with jute, cotton and paper, and the gradually extended use of electricity the demand for metallurgical and chemical products in India has steadily grown. Before long the stage must be reached at which the variety and quantity of products required, but now imported, will satisfy the conditions necessary for the local production of those which can be economically manufactured only for the supply of groups of industries.

COAL.

Most of the coal raised in India comes from the Bengal and Bihar and Orissa—Gondwana coal-fields. Outside Bengal and Bihar and Orissa the most important mines are those at Singareni in Hyderabad, and in Central Provinces but there are a number of smaller mines which have been worked at one time or another.

(*a*) Estimated.

In reversal of 1930 and 1931, the *export statistics for coal* during 1932 show an increase, amounting to about 78,500 tons. Exports to Hongkong increased greatly from 89,127 tons in 1931 to 218,638 tons in 1932. As the exports to Ceylon fell from 281,684 tons in 1931 to 190,237 tons in 1932, Hongkong, for the first time, became the leading importer of Indian coal. Exports to the Straits Settlements (including Labuan) decreased by some 16,000 tons, whilst those to the Philippine Islands and Guam showed an increase of about 7,000 tons. The United Kingdom took 32,699 tons against 10,785 tons in the previous year and other countries absorbed about 28,000 tons more. The export of coke decreased by 332 tons. *Imports of coal and coke.* showed during 1932 another substantial fall, namely from 88,035 tons in 1931 to 47,544 tons in 1932; 13,912 tons of the latter consisted of coke. This fall is due mainly to a decrease of some 30,000 tons from South Africa, and of 9,000 tons from the United Kingdom. The average surplus of exports over imports during the years 1926 to 1932 was, in fact, greater than the surplus during the pre-war quinquennium.

The average number of persons employed in the coal fields during the year showed a smaller decrease (4.4 per cent.) than the decrease in production (7.2 per cent.). The average output per person employed, therefore, showed a decrease to 121.7 tons in contrast with the advances up to 1930, which have been 110.5 tons for 1925, rising to 113.1 tons for 1926, 122.3 tons for 1927, 125.5 tons for 1928, 130.4 tons for 1929, and 129.1 tons for 1930, with a decrease to 125.4 tons in 1931. Except for the last five years, however the figure for the year under review is still higher than those previously recorded; these higher figures are due, partly to an increased use of mechanical coal-cutters, and partly to concentration of work. During the past few years a large number of collieries have been shut down and the labour absorbed in the remainder; this concentration permits of a proportional reduction of the supervising staff, resulting in a larger tonnage per head. There was a decrease in the number of deaths by accident from 196 in 1931 to 164; the latter figure is much better than the annual average for the quinquennium 1919-1923, which was 274, and also below the annual average for the quinquennium 1924-1928, which was 218. The death rate was 1.0 per thousand persons employed in 1932, a little less than the figure for the previous year (1.1); the average figure for the period 1919-1923 was 1.36, and for the period 1924-1928 was 1.16.

IRON ORE.

Bengal and Bihar and Orissa are the only provinces in India in which iron ore is mined for smelting by European methods. Iron smelting, however, was at one time a widespread industry in India and there is hardly a district away from the great alluvial tracts of the Indus, Ganges and Brahmaputra in which slag heaps are not found. The primitive iron smelter finds on difficulty in obtaining sufficient supplies of ore from deposit that no European Ironmaster would regard as worth his serious consideration.

Early attempts to introduce European processes for the manufacture of pig-iron and steel were recorded in 1830 in the South Arcot District. Since that date various other attempts have been made but none proved a success before that now in operation near Barakar in Bengal. The site of the **Barakar Iron-Works** was originally chosen on account of the proximity of both coal and ore supplies. The outcrop of iron stone shales between the coal-bearing Barakar and Raniganj stages stretches east and west

from the works, and for many years the clay ironstone nodules obtainable from this formation formed the only supply of ore used in the blast furnaces. Recently magnetite and hematite have been obtained from the Manbhum and Singhbhum districts, and the production from the last named district has largely replaced the supplies of ore hitherto obtained near the iron-works. The Bengal Iron and Steel Company, Limited, have now given up the use of ores obtained from the neighbourhood of Barakar and Raniganj and are now obtaining most of their ores from the Kolhan Estate, Singhbhum. Some years ago the Bengal Iron Steel Co., Ltd., secured two deposits of iron-ore in Saranda (Singhbhum) forming parts of two large hill masses known as Notu Buru and Buda Buru respectively. Recent prospecting in this part of Singhbhum has led to the discovery of numerous additional deposits of iron-ore, the extension of which has been traced into Keonjhar and Bonal States in Orissa, a total distance of some 40 miles in a S. S. W. direction. At Pansira Buru, a portion of Notu Buru, the deposit has been opened up, and now feeds the Barakar ironwork. Pansira Buru rises to over 2,500 feet above sea level, the low ground on the west side being at about 1,100 feet above sea-level. The uppermost 400 to 450 feet of this hill has now been opened up, and the workings indicate the existence of a deposit about a quarter of a mile long, perhaps 400 feet thick and proved on the dip for about 500 feet. The ore body appears to be interbedded with the Dharwar slates, from which it is separated by banded hæmatite-jaspers. The ore itself is high-grade micaceous hæmatite often lateritised at the outcrop. Cross-cuts into the interior of the deposit show that the hæmatite becomes very friable not far below the outcrop. In fact the characteristics of this ore, including the surface lateritisation, are almost exactly reproduced in the iron-ore deposits of Goa and Ratnagiri. **The Tata Iron and Steel Company** at Sakchi possesses slightly richer and purer ore-bodies in the Raipur district, supplies of ore are at present drawn from the deposits in Mayurbhanj. The ore-deposits have all been found to take the form of roughly lenticular leads or bodies of hæmatite, with small proportions of magnetite, in close association with granite on the one hand and granitic rocks on the other.

The production of iron ore in India is still steadily on the increase; India is now, in fact, the second largest producer in the British Empire, and yields place only to the United Kingdom. Her output is of course still completely dwarfed by the production in the United States (over 59 million tons in 1930 and 31 million tons in 1931) and France 48 and 38 million tons in 1930 and 1931 respectively); but her reserves of ore are not much less than three-quarters of the estimated total in the United States, and there is every hope that India will eventually take a much more important place among the world's producers of iron-ore. In 1930, however, the prevailing depression was reflected in a decrease in the Indian output over the previous year of 23.8 per cent amounting to 578,930 tons, followed by a further fall of 224,742 tons (12.1 per cent.) in 1931. In 1932, however, in spite of the continuance of the depression there was a partial recovery in the production of iron-ore in India of 135,618 tons (8.3 per cent.) The figures shown against the Keonjhar and Mayurbhanj States in the following table represent the production by the United Steel Corporation of Asia, Ltd., and the Tata Iron and Steel Co., Ltd., respectively. Of the total production of 666,874 tons shown against Singhbhum, 528,370 tons were produced by the Tata Iron and Steel Co., Ltd., from their Noamundi mine, and 138,504 tons by the Indian Iron and Steel Co., Ltd., from their mines at Gua. The output of iron-ore in Burma is by the Burma Corporation, Limited, and is used as a flux in lead smelting.

In contrast with the preceding year there was a fall in the total output of iron and steel by the Tata Iron and Steel Co. at Jamshedpur. The production of pig-iron fell from 799,545 tons in 1931 to 699,931 tons in 1932, with decreases in the production of steel (including steel rails) from 439,134 tons in 1931 to 430,333 tons in 1932, and of ferro-manganese from 14,366 tons in 1931 to 366 tons in 1932. As in 1931, there was no production of pig-iron by the Bengal Iron Co.; their output of products made from pig-iron in 1932 amounted to 3,371 tons of sleepers and chairs, and 17,266 tons of pipes and other castings, against 28,211 tons and 32,760 tons, respectively in 1931. The Indian Iron and Steel Co. decreased their production of pig-iron from 243,214 tons in 1931 to 198,700 tons in 1932. The output of pig-iron by the Mysore Iron Works fell from 15,577 tons in 1931 to 14,683 tons in 1932. The total production of pig-iron in India fell from 1,058,336 tons in 1931 to 913,314 tons in 1932.

Exports of Pig-iron.—The decrease in the production of pig-iron in India recorded above was accompanied by a fall in the quantity exported from 318,994 tons in 1931 to 250,137 tons in 1932. Japan is still the principal consumer of Indian pig-iron, but the proportion fell from 49 per cent. in 1931 to 41.5 per cent. in 1932, whilst the actual amount fell by 34 per cent. Exports to all other countries fell substantially except to United Kingdom to which a rise of about 65 per cent. (33,732 tons) took place. The export value per ton of pig-iron varied slightly from Rs. 35.1 (£2.6) in 1931 to Rs. 34.8 (£2.62) in 1932.

MANGANESE ORE.

This industry was started some thirty years ago by quarrying the deposits of the Vizagapatam district, and from an output of 674 tons in 1892, the production rose rapidly to 92,008 tons in 1900 when the richer deposits in the Central Provinces were also attacked, and are now yielding a larger quantity of ore than the Vizagapatam mines. The most important deposits occur in the Central Provinces, Madras, Central India, and Mysore—the largest supply coming from the Central Provinces. The uses to which the ore is put are somewhat varied. The peroxide is used by glass manufacturers to destroy the green colour in glass making, and it is also used in porcelain painting and glazing for the brown colour which it yields. The ore is now used in the manufacture of ferro-manganese for use in steel manufacture. Since 1904, when the total output was 150,190 tons, the progress of the industry has been remarkable owing to the high prices prevailing.

Record Output in 1927.—Before the year 1926, the record production of Manganese-ore in India took place in 1907 when 902,291 tons were raised. In 1926, the output rose to 1,014,928 tons, valued at £2,463,491 f.o.b. Indian ports; the rise in output was however, accompanied by a decrease in value. In 1927 the production rose to the highest figure yet recorded, 1,129,353 tons, accompanied by a rise in value to the peak figure of £2,703,068 f.o.b. Indian ports. During the year 1928, the upward tendency was not maintained, the output falling to 978,449 tons valued at £2,198,895 f.o.b. Indian ports. In 1929, the output rose again slightly to 994,279 tons but the value fell heavily to £1,571,030. In 1930 the output fell substantially to 829,946 tons with a heavy fall in value to £1,200,236. In 1931 a still more serious fall took place to 537,844 tons with a value of £726,954. This has been followed by a disastrous fall in 1932 to 212,604 with a value of £140,022. This is the smallest quantity and value reported since 1904, when the output was 150,190 tons valued at £137,933. In 1905 the output was 247,427 tons valued at £223,432 since when the smallest production was 450,416 tons in 1915 valued at £929,546; whilst the smallest value was in 1909 when a production of 644,660 tons was valued at £603,908. The full magnitude of this catastrophe to the Indian maganese industry is perhaps best realised from the fact that whilst the quantity of the production in 1932 was a little over one-fifth of that of the peak year of 1927, the value was less than one nineteenth of the value of the 1927 production. In fact in none of the major Indian mineral industries have the effects of slump been so seriously felt as in the maganese industry.

The decrease of 1932, totalling 325,575 tons, was distributed over all producing districts except Keonjhar State which showed an increase of some 5,000 tons, Vizagapatam district with an increase of some 2,700 tons, and North Kanara with a trivial output against none in the previous year. Production ceased from the Panch Mahals, Belgaum, and Bellary. In the Central Provinces the production fell from 302,344 tons in 1931 to 77,186 tons in 1932, which is the smallest output since 1901, in the infancy of the industry in the Central Provinces, when the output was 44,428 tons. During the year the majority of mines in the Central Provinces were closed including several in mines that had never been closed since the commencement of work in 1900 and 1901.

The present chief *sources of production* of manganese-ore are now India, Russia, the Gold Coast, South Africa, and Brazil, whilst substantial supplies of ore are forthcoming from Egypt and Czechoslovakia.

There is a steady *consumption of maganese-ore* at the works of the three principal Indian iron and steel companies, not only for use in the steel furnaces of the Tata Iron and Steel Company, and for the manufacture of ferro-manganese, but also for addition to the blast-furnace charge in the manufacture of pig-iron. The consumption of maganese-ore by the Indian iron and steel industry in the year under review amounted to 19,647 tons, against 53,037 tons in 1931.

GOLD.

The greater part of the total output of gold in India is derived from the Kolar gold field in Mysore. During the last decade the production of this mine reached its highest point in 1905 when 616,758 ounces were raised. In 1906 the quantity won was 565,208 ounces and this figure fell to 535,085 ounces in 1907. The figures for the latter years reveal a small improvement. The Nizam's mine at Hutti in Hyderabad comes next, but at a respectable distance, to the Kolar gold field. This mine was opened in 1903. The only other mines from which gold was raised were those in the Dharwar district of Bombay and the Anantapur district of Madras. The Dharwar mines gave an output of 2,993 ounces in 1911 but work there ceased in 1912. The Anantapur mines gave their first output of gold during the year 1910; the amount being 2,532 ounces, valued at Rs. 1,51,800. Gold mining was carried on in the North Arcot district of Madras from 1893 till 1900, the highest yield (2,854 ounces) being obtained in the year 1898. The Kyaukpazat mine in Upper Burma was worked until 1903, when the pay chute was lost and the mine closed down. In 1902 dredging operations were started on the Irrawaddy river near Myitkyina, and 216 ounces of gold were obtained in 1904; the amount steadily increased from year to year and reached 8,445 ounces in 1909, but fell in subsequent years until in 1922 it was no more than 24 oz. The small quantity of gold produced in the Punjab, the Central Provinces, and the United Provinces is obtained by washing. Gold washing is carried on in a great many districts in India, but there is no complete record of the amount obtained in this way. There was a trivial fall in the total Indian gold production from 330,488.8 ozs. valued at Rs. 2,08,01,943 (£1,540,885) in 1931 to 329,681.7 ozs. valued at Rs. 2,53,51,438 (£1,906,123) in 1932. There was again a small production from Singhbhum, and as in the previous year small outputs from Burma, the Punjab and the United Provinces. But these figures are, of course, quite insignificant compared with the output of Kolar which makes up 99.97 per cent. of the Indian total. The considerable increase in the value of production is due to 1932 being the first full year since Britain and India abandoned the gold standard in September, 1931, with consequent appreciation in the price of gold, against sterling or Rupees. As a result of this appreciation in the price of gold 9,666,122 ozs. of gold reckoned in terms of fine gold were exported during 1932. The value was Rs. 75,87,52,203 (£57,049,038).

The average number of persons employed on the Kolar Gold Field during 1932 was 18,816.

* Fine ounces in the case of Mysore.

PETROLEUM.

Petroleum is found in India in two distinct areas—one on the east, which includes Assam, Burma, and the islands off the Arakan coast. This belt extends to the productive oil fields of Sumatra, Java and Borneo. The other area is on the west, and includes the Punjab and Baluchistan, the same belt of oil-bearing rocks being continued beyond the borders of British India to Persia. Of these two the eastern area is by far the most important, and the most successful oil-fields are found in the Irrawaddy Valley. Yenangyaung is the oldest and most developed of these fields. Native wells have been at work here for over 100 years, and to 1886, prior to annexation of Upper Burma, the output is estimated to have averaged over 2 million gallons a year. Drilling was begun in 1887. The Yenangyat field yielded a very small supply of petroleum before 1891, in which year drilling was started by the Burma Oil Company. Singu now holds the second place among the oil-fields of India. Petroleum was struck at the end of 1901, and in 1903, 5 million gallons were obtained. In 1907 and 1908 the production of this field was 43 million gallons, and after a fall to 31¼ million gallons in 1910 it rose to 56½ million gallons in 1912. Several of the islands off the Arakan coasts are known to contain oil deposits but their value is uncertain. About 20,000 gallons were obtained from the eastern Barongo Island near Akyab, and about 37,000 gallons from Ramri Island in the Kyaukpyu district during 1911. Oil was struck at Minbu in 1910, the production for that year being 18,320 gallons which increased to nearly 4 million gallons in 1912. The existence of oil in Assam has been known for many years and an oil spring was struck near Makum in 1867. Nothing more, however, was done until 1883, and from that year up till 1902 progress was slow. Since that year the annual production has been between 2½ and 4 million gallons.

On the west, oil springs have been known for many years to exist in the Rawalpindi and other districts in the Punjab. In Baluchistan geological conditions are adverse, and though some small oil springs have been discovered, attempts to develop them have not hitherto been successful.

The world's production of petroleum in 1926 amounted to nearly 150 million tons, of which India contributed 0.72 per cent. In 1927, this figure jumped to some 172 million tons, of which the Indian proportion on a practically stationary production, fell to 0.64 per cent. In 1928, there was another substantial rise in the world's production, which reached the figure of over 181 million tons. In 1929 there was another jump to over 202 million tons, but in 1930 the world's production fell to about 193½ million tons in 1931 to about 188 million tons, and in 1932 to about 180 million tons. The United States alone showed a fall greater than the total fall. Increases were shown by Roumania, Persia, Netherlands, East Indies, Argentina, Trinidad, India, Germany, Czecho-Slovakia, Italy and Bolivia; Roumania showed the largest increase

All other producers showed a decrease in production. The United States contributed 59.9 per cent. of the world's supply in 1932 Russia 11.9 per cent. and Venezuela 8.9 per cent. In 1928, India contributed 0.64 per cent which fell 0.60 per cent in 1929 and rose to 0.62 in 1930, 0.63 per cent. in 1931 and 0.64 per cent. in 1932; her position on the list of petroleum producing countries fell from 11th in 1929 to 12th in 1930, 1931 and 1932, her place being taken by Trinidad.

The production of petroleum in India (including Burma) rose from 305,018,751 gallons in 1931 to 308,606,031 gallons in 1932, the highest production yet recorded, with the exception of the output of 311,030,108 gallons in 1930. The increase in 1932 represents the balance of a considerable increase in the output of Burma a slight increase of that of the Punjab, and of a trivial proportionate decrease in the production of Assam. This increase in output in 1932 was accompanied, however, by a decrease in value amounting to Rs. 83,44,212 (£561,514) 12.8 per cent., the fall in price being a reflection of the world depression.

Production from Yenangyaung, the most highly developed field in the Indian Empire, showed a decrease of 4,073,700 gallons, or a little over 3 per cent. of the 1931 total.

An interesting feature of the year was the discovery of oil at the horizon of the 3,000 and and 3,100-feet sands in East Twingon. For many years these horizons have been recognised as gas sands, but it now appears that the gas in them is a crestal accumulation on the higher portions of the structure. This discovery proved a narrow strip of oil within the Twingon Reserve and led to competitive deepening towards the close of the year. Development of this part of the field, both by extension tests and by a deep test well, was proceeding at the end of the year. At Minlindaung one of the two deep test wells was abandoned, while the other remained shut down.

Amber, Graphite and Mica.—Amber is found in very small quantities in Burma, Graphite is found in small quantities in various places but little progress has been made in mining except in Travancore. The total output in 1929 was 39 tons. India has for many years been the leading producer of mica, turning out more than half of the world's supply. In 1914, owing to the war, the output was only 38, 189 cwts. compared with 43,650 cwts. in 1913. Owing to necessary restrictions with regard to the export of mica, the output fell off considerably in the year 1915, but subsequent demand in the United Kingdom for the best grade of ruby mica led to a considerable increase in production during the following years.

There was a small fall in the declared Production of mica from 38,963 cwts. valued at Rs. 20,37,634 (£150,935) in 1931, to 32,713 cwts. valued at Rs. 14,35,401 (£107, 925) in 1932. In the years 1926 and 1927 the export figure was approximately double the reported production figure, whilst in the years 1928 and 1929 the quantity exported was more than double the reported production. In 1930 the recorded exports were, however, only some 57 per cent. in excess of the reported production, in 1931 only 36 per cent., and in 1932 only 43 per cent. in excess.

The United States of America and the United Kingdom, which are the principal importers of Indian mica, absorbed respectively 23.4 per cent. and 43.2 per cent. during 1931, and 24.0 per cent. and 47.6 per cent. during 1932. Germany took 7.2 per cent. and 10.6 per cent. respectively, of the total quantities exported during the years 1931 and 1932. The average value of the exported mica decreased from Rs. 78.3 (£5.8) per cwt. in 1931 to Rs. 71.2 (£5.4) per cwt. in 1932. The exports fell from 52,966 cwts. value at Rs. 41,48,768 (£307,316) in 1931, to 47,021 cwts. valued at Rs. 33,48,943 (£251,800) in 1932. This is the lowest total value recorded since 1915-16, when the value of the mica exports was £208,496.

The difference between exports and production is generally attributed to theft from the mines. If this be the only explanation we must assume that during the three years prior to 1930 there has been as much mica stolen as won by honest means. Early in 1928 a bill was introduced into the Legislative Council of Bihar and Orissa, the purpose of which was an attempt to reduce the losses on this account by licensing miners and dealers; the bill was, however, rejected. In March, 1930, however, a similar bill to regulate the possession and transport of, and trading in, mica was passed, and from the figures presented since 1930, as analysed above, it appears that this bill may already have produced a good effect.

Tin, Copper, Silver and Lead.——Following a series of years of practically continuous increase, a slight decrease in the production of tin-ore in Burma was reported for the year 1931, during which the output amounted to 4,255.2 tons valued at Rs. 35,07,380. In 1932, however, there was again an increase in production to 4,525 tons valued at Rs. 45,09,995. This is the highest quantity (but not the highest total value, for which the smaller outputs of 1926, 1927, 1929, 1930 and 1931 showed higher figures) yet recorded in any one year. The considerable increase in the total value is, of course, mainly due to the rise in the price of the metal during the year resulting from the tin restriction scheme in operation in the five leading tin producing countries, Malaya, Netherlands East Indies, Bolivia, Nigeria and Siam, a scheme to which India is not an adherent. This increase in output of some 270 tons is the balance of and increase from Tavoy and Mergui and a decrease from Mawchi in the Southern Shan States. Milling operations were suspended at Mawchi in August 1927 pending the installation of additional plant and further development. Milling was resumed in February 1930 and this explains the large increases of 1930 and 1931. The figure for 1932 includes 1,557.3 tons from Mawchi, calculated to be the proportion of tin-ore in 2,732 tons of concentrates derived from mixed wolfram-scheelite-cassiterite-ore; these concentrates are assumed to contain 43 per cent. of wolfram and 57 per cent. of cassiterite. There was no reported output of block tin.

Imports of unwrought tin increased from 41,969 cwts. valued at Rs. 36,28,556 in 1931 to 49,279 cwts. valued at Rs. 47,50,341 in 1932; over 98 per cent. of these imports came from the Straits Settlements.

In contrast with the increase in the **production of silver** from the Bawdwin mines of Upper Burma, amounting to 1,400,291 ozs. recorded during the four years, 1925 to 1928, the following years 1929, 1930 and 1931 were marked by decreases amounting to 124,211 ozs., 226,311 ozs., and 1,153,806 ozs. respectively. In 1932, however, there was a small increase again, amounting to 98,556 ozs. These variations in quantity were accompanied by a small fall of value in 1929, marked falls in 1930 and 1931, and a marked rise in 1932. The output of silver obtained as a bye-product from the Kolar gold mines of Mysore showed an increase of some 5,000 ozs. The amount of silver bullion and coin exported during the year was 34,664,148 ozs. valued at Rs. 4,15,61,144.

The production of lead-ore at the Burma Corporation's Bawdwin mines in Burma decreased further from 397,679 tons in 1931 to 372,586 tons in 1932, and the total amount of metal extracted decreased from 74,785 tons of lead (including 1,505 tons antimonial lead) valued at Rs. 1,28,88,270 in 1931, to 71,202 tons of lead (including 642 tons of antimonial lead) valued at Rs. 1,09,95,587) in 1932. The quantity of silver extracted from the Bawdwin ores rose slightly from 5,900,400 ozs. valued at Rs. 51,97,367 in 1931 to 5,998,956 ozs. valued at Rs. 62,32,915 in 1932. The value of the lead per ton fell from Rs. 172.3 to Rs. 154.5, whilst the value of the silver rose from Re. 0-14-1 to Re. 1-0-7 in the year 1932. The ore reserves in the Bawdwin mine, as calculated at the end of June, 1932, totalled 4,126,179 tons, against 4,233,120 tons at the end of June, 1931, with an average composition of 25.4 per cent. of lead, 15.6 per cent. of zinc, 0.68 per cent. of copper and 19.7 ozs. of silver per ton of lead. Included in this reserve are 37,000 tons of copper-ore. During the year development work in the Meingtha section, discovered in 1930, continued in yield satisfactory results.

Zinc.—A monograph on zinc ores issued by the Imperial Institute in 1917 says that during the past fifty years zinc ores have received but little attention in India, and no production was recorded until 1913. The

production of zinc concentrates by the Burma Corporation, Limited, in the Northern Shan States, fell from 51,455 tons valued at Rs. 17,28,528 in 1931 to 44,484 tons valued at Rs. 15,09,298 in 1932. The slight rise in the value per ton is parallel with a similar rise in the price of spelte. The exports during 1932 amounted to 49,950 tons valued at Rs. 24,97,500 against 54,818 tons valued at Rs. 28,41,250 in the preceding year.

Copper.—In 1931 the mine output was 153,636 long tons of copper-ore valued at Rs. 22,71,940. 161,563 short tons of ore were treated for a production of 4,069 long tons of refined copper. 1,668 tons of this were sold in the Indian market at an average price of Rs. 673 per ton. In addition there was a production of 3,637 tons of yellow metal, the average selling price in India being Rs. 719 per ton.

Operations continued uninterruptedly during the year 1932 at the Mosaboni Mine and at the works site at Maubhandar. The mine output increased to 175,010 long tons of copper-ore valued at Rs. 25,09,080. 185,894 short tons of ore were treated in the mill and the production of refined copper amounted to 4,443 long tons. 3,441 tons were consumed in the rolling mill and 1,312 tons were sold in the Indian market at an average price of Rs. 689 per ton. Operations in the rolling mill resulted in the production of 5,440 long tons of yellow metal, of which 4,830 were sold in India at an average price of Rs. 657 per ton. The total ore reserves at the close of the year 1932 amounted to 700,466 short tons with an average assay value of 3.053 per cent. of copper.

There was a considerable decrease in the production of coppermatte at the Namtu smelting plant of the Burma Corporation Limited, from 13,437 tons valued at Rs. 32,25,003 In 1931, to 9,729 tons valued at Rs. 19,81,499 and averaging 44.32 per cent. of copper, 26.36 per cent. of lead, and 83.72 ozs. of silver to the ton. In addition 365 tons of copper-ore valued at Rs. 6,900 were produced in the Nellore district, Madras.

Gem Stones.—The only precious and semi-precious stones at present mined in India are the diamond, ruby, sapphire, spinel, tourmaline garnet, rock-crystal, agate, cornelian, jadeite and amber. The production of diamonds in Central India rose from 639 carats valued at Rs. 34,083 in 1931 to 1,254.1 carats valued at Rs. 72,189 in 1932. Of this latter production 1,152.1 carats were produced in Panna State and the remainder in Charkhari, Ajaigarh and Bijawar.

A severe decline in the output from the Mogok **ruby mines** of Upper Burma in 1924, followed in 1925 by a marked drop in value, bore witness to a serious decline in the industry. The Burma Ruby Mines, Limited, ultimately decided to go into liquidation, and the mines were offered for sale in September, 1926. The skeleton organisation left in charge of the mines, however, made good use of its opportunities with the result that the value of the output in 1926 exceeded that of the previous year by over a lakh of rupees. This encouraging result was effected by a rigorous economy and an extension of a systen of co-operation with local miners, and was assisted by some good finds of sapphires in the Kyaungdwin mine—the only one still worked by European methods.

During 1927, however, production fell in value by over 1¾ lakhs of rupees, due mainly to a decrease in the value of the **sapphires and spinels** produced, there having been a slight increase in the value of the rubies. During 1928, there was another very large decline in value, amounting to over a lakh of rupees, due to a severe drop in the value of the sapphires produced as before. There was a slight increase in the value of the rubies. The value of the 1929 production was slightly above that of 1928, due to a considerable increase in the value of the rubies found, largely balanced by another large fall in the value of sapphires produced. In 1930 there was a further substantial fall in production and in total value, though the value per carat of the sapphires produced is the highest recorded for many years. Judging from reports in the *Rangoon Times* this is due to the opening up by the Burma Ruby Mines, Ltd., of the new Pagoda mine at Kathe leading to the find of a fine sapphire of 630 carats and a star sapphire of 293 carats. The find of a ruby of 100 carats was also reported. The great drop in production recorded in 1931 was due to the cessation of operations of the Burma Ruby Mines, Limited. Though the industry is in a very depressed state, work is still continued by local miners, but of this no reliable statistics are available. For 1932 no returns are available, except that a fine ruby of 17 carats was found at Chaunggyi near Mogok, and a fine sapphire of about 90 carats and a good star sapphire of 453 carats were mined at Kathe.

SALT.

There was a large decrease in the total output of salt amounting to some 228,000 tons, shared by Madras (108,893 tons), Bombay and Sind (83,638 tons), and Northern India (43,317 tons), partially balanced by small increases in Aden (5,204 tons) and Burma (2,110 tons). Imports of salt into India increased slightly by 24,147 tons, all the countries of origin showing increases excepting Italian East Africa, Spain, and 'other countries.'

(Records of the Geological Survey of India, Vol. LXIV).

Stock Exchanges.

There are about 475 Share and Stock Brokers in **Bombay**. They carry on business on the Brokers' Hall, bought in 1887 from the funds of the **Share and Stock Brokers' Association** formed to facilitate the negotiations and the sale and purchase of Joint Stock securities promoted throughout the Presidency of Bombay. Their powers are defined by rules and regulations framed by the Board of Directors and approved by the general body of Brokers. The Board has the power to stop business in times of emergencies. The official address of the Secretary is Dalal Stree, Fort, Bombay.

At first the admittance fee for a broker was Rs. 5 which was gradually raised to Rs. 7,000. The fee for the Broker's card has increased. In 1921 a number of cards were sold at Rs. 40,000 each and the proceeds were employed to purchase an adjoining building for the extension of the business. The present value of the card is about Rs. 11,000.

In November 1917 a second Stock Exchange was opened in Bombay, with its headquarters in Apollo Street known as the **Bombay Stock**

Exchange, Ltd. This separate Exchange no longer functions it was revived in 1922. It has ceased to function again.

Committee of Enquiry.—In 1923 the Government of Bombay appointed a Committee to enquire into the constitution, customs, practices, rules, regulations and methods of business of the Native Share and Stock Brokers' Association of Bombay and to investigate any such complaints of the public and to make any such enquiries with reference to any of the aforesaid matters or any other matter appertaining to the aforesaid Association as the Committee may deem proper and thereafter with a view to protect the investing public against the interested or irregular control of business to formulate such definite proposals for the future constitution, control, direction and regulation of the aforesaid Association as the Committee may deem proper.

The Committee issued a report early in 1924 signed by all the members save one who appended a minority report. The majority report made several important recommendations for reform notably one aimed at the prevention of corners and another for facilitating the handling of legitimate complaints against the brokers on the part of the public. The Association, however, adopted the minority report which leaves the constitution and practice of the Exchange very little modified.

In the middle of the year 1925 there was heavy speculation in certain mill scrips. The market was tremendously oversold, the usual crisis ensured, leading to the temporary closing of the Exchange and the suspension of all dealings and a public agitation for thorough reform arose. The brokers were at first unwilling to yield to this demand. But a threat of Government intervention and control altered their attitude. In the end, they submitted new draft rules under which wild speculation will be discouraged and the recurrence of such crisis as that indicated above will be unlikely.

For many years the **Calcutta** Share Market met in the open air in business quarters and was under no control except that of market custom. In 1908 the **Calcutta Stock Exchange Association** was formed, a Representative Committee came into existence, and the existing customs were focussed into rules drawn up for the conduct of business. Public confidence grew rapidly and the rules regarding membership and business underwent drastic changes to suit advancing conditions. The Great War, having given an impetus to Indian industries, was responsible for an astoundingly large volume of business in the market which culminated in a boom.

In June, 1923, the Association was incorporated into a Limited Company under the Indian Companies' Acts 1913-1920 with an authorised capital of Rs. 3 lakhs divided into 300 fully paid up shares of 1,000 each. Accounts are made up annually up to 30th September. At the present moment, the number of shares subscribed is 223, each firm owning, and being entitled to own, only one share.

The total number of members, including partners and assistants of member firms, is a little above 560. The Committee has restricted the further sale of new shares until it deems it necessary to revise its decision, exception being made in the case of a partner dissociating from an existing firm. Anyone intending to become a member is required to purchase a share from a member and the admission fee charged by the Association is Rs. 5,000. The conduct of members and of business is controlled by bye-laws, customs and usages being fully honoured. The market customs differ from those of most other Stock Exchanges, since there are no settlement days, delivery is due the second day after the contract is passed, and sales of securities are effected for most part under blank transfers. It has not got jobbers like the London Stock Exchange, but the brokers mostly combine the function of dealers. The principle business transacted is connected with the shares in Jute Mills, Coal Companies, Tea Companies registered in India, miscellaneous industrial concerns (such as paper, flour, etc.) Railway Companies and Debentures, the latter representing those of industrial concerns and Trustees Investment Securities, namely, Municipal, Port Trust and Improvement Trust Debentures.

A general meeting of the shareholders annually elects a Committee which elects several Sub-Committees and Hony. Office Bearers—the President, two Joint Hony. Treasurers and the Hony. Secretary. The Committee is empowered to do all work on behalf of the Association, which in its turn delegates powers to the Sub-Committees and the Hon. Office Bearers. The Committee also adjudicates in disputes between members thus enabling the members to avoid Law Courts in most cases.

Committee for 1934.—Kedarnath Khandelwal, B. A., LL. B., President: J. S. Haywood. G. C. Montgomery: O. A. Cohey; J. S. Ker. Gobind Lall Bangur: Mahaliram Sonthalia Rai Rameswar Nathany Bahadur: Jagannath Jhunjhunwala; Sarbotosh Sen; Shambhu Nath Dutt; Jitendra Mohan Dutt, M.Sc.; Goralall Seal and Basant Lall Chaturvedi.

Joint Honorary Treasurers:—Rai Rameswar Nathany Bahadur and Goralall Seal.

Hon. Secretary:—Satya Ranjan Mitra, B.A., B.L.

The Stock Exchange has its own building at 7, Lyons Range. This building—one of the finest specimen of its kind—was opened on 6th July, 1928, by Sir Stanley Jackson, the Governor of Bengal. The ground floor is utilised for the Association Hall where members meet between 12 noon and 5 p.m. This floor also contains the offices of the Association, a well equipped Library and several retiring places for the benefit of the members. The upper three floors are tenanted by members' offices.

The **Madras** Stock Exchange situated at No. 9 Broadway consists of about 100 Members of which 25 are working Members. It was opened on 6th April 1920 and deals principally in Mill shares. Business is regulated by rules drawn up by the Directors. There is a Board of arbitration. There is an admittance membership card of Rs. 1,000 and an annual subscription of Rs. 100. The original 100 members were elected by the first Directors and each of the working members have deposited a security of Rs. 3,000.

Chambers of Commerce.

Modern commerce in India was built up by merchants from the west and was for a long time entirely in their hands. Chambers of Commerce and numerous kindred Associations were formed by them for its protection and assistance. But Indians have in recent years, taken a large and growing part in this commercial life. The extent of their participation varies greatly in different parts of India, according to the natural proclivities and genius of different races. Bombay, for instance, has led the way in the industrial and commercial regeneration of the new India, while Bengal, very active in other fields of activity, lags behind in this one. Arising from these circumstances we find Chambers of Commerce in Bombay, Karachi, Calcutta, Madras and other important centres, with a membership both European and Indian; but alongside these have sprung up in recent years certain Associations, such as the Bombay Indian Merchants' Chamber and Bureau, of which the membership is exclusively Indian. These different classes of bodies are in no sense hostile to one another and constantly work in association.

The London Chamber of Commerce in 1921 realizing the increasing attention demanded by the economic development of India, took steps to form an "East India Section" of their organization. The Indian Chambers work harmoniously with this body, but are in no sense affiliated to it, nor is there at present any inclination on their part to enter into such close relationship, because it is generally felt that the Indian Chambers can themselves achieve their objects better and more effectively than a London body could do for them, and on various occasions the London Chamber, or the East India Section of it have shown themselves out of touch with what seemed locally to be immediate requirements in particular matters.

A new movement was started in 1913 by the Hon. Sir Fazulbhoy Currimbhoy Ibrahim, a leading millowner and public citizen of Bombay, which aims at effecting great improvement in strengthening Indian commercial organization. Sir Fazulbhoy's original plan was for the formation of an Indian Commercial Congress. The proposal met with approval in all parts of India. The scheme was delayed by the outbreak of war but afterwards received an impetus from the same cause and the first Congress was held in the 1915 Christmas holiday season, in the Town Hall, Bombay. The list of members of the Reception Committee showed that all the important commercial associations of Bombay were prepared to cooperate actively.

The Congress was attended by several hundred delegates from all parts of India. Mr. (now the Hon. Sir) D. E. Wacha, President of the Bombay Indian Merchants' Chamber, presided as Chairman of the Reception Committee, at the opening of the proceedings and the first business was the election of Sir Fazulbhoy Currimbhoy as the first President. The Congress resolved upon the establishment of an Associated Indian Chamber of Commerce, and elected a Provincial Committee empowered to take the necessary steps to get the Association registered and to enrol members and carry on work. The Congress also approved of the draft constitution.

The following are the principal paragraphs of a Memorandum of Association and Statement of Objects of the new Associated Chamber as approved by the Congress:—

I. The name of the Chamber will be "THE ASSOCIATED INDIAN CHAMBER OF COMMERCE."

II. The Registered Office of the Chamber will be in Bombay.

III. The objects for which the Chamber is established are:—

(1) To discuss and consider questions concerning and affecting trade, commerce, manufactures and the shipping interests, at meeting of delegates from Indian Chambers of Commerce and Commercial Associations or Bodies and to collect and disseminate information from time to time on matters affecting the common interests of such Chambers or Associations or Bodies and the commercial, manufacturing and shipping interests of the country.

(2) To attain those advantages by united action which each Chamber or Association or body may not be able to accomplish in its separate capacity.

(3) To organize Chambers of Commerce, Commercial Associations or Bodies in different trade centres of the Country.

(4) To convene when necessary the Indian Commercial Congress at such places and at such times as may be determined by a Resolution of the Chamber.

The Articles of Association provided "There shall be an annual meeting of the Associated Indian Chamber held at Bombay on a date to be fixed by the Executive Council in the month of February," or at some other time, and "semi-annual or special meetings . . . may be convened by the Executive Council or on the requisition of one-third of the total number of members addressed to the Secretary . . . "

The organization languished for lack of support for some years until a number of merchants specially interested in Currency and Exchange questions revived it in 1926 at Delhi and 1927 at Calcutta, the initiative in the new activities hailing, like the first movement, from Bombay. The Commercial Congress held in Calcutta on 31st December 1926 and 1st and 2nd January 1927, decided upon the formation of a "Federation of Indian Chambers of Commerce" and agreed to the registered office of this body being "at the place where the President for the year has his headquarters or where he directs it to be located." Among the objects for which the Federation is established are the following:—

(*a*) To promote Indian businesses in matters of inland and foreign trade, transport, industry and manufactures, finance and all other economic subjects.

(*b*) To encourage friendly feeling and unanimity among business community and associations on all subjects connected with the common good of Indian business.

(*c*) To enter into any arrangement with any Government or authority supreme, municipal, local or otherwise that may seem conducive to the Federation's objects or any of them, and to obtain from any such Government or authority all rights, concessions, and privileges which the Federation may think it desirable to obtain and to carry out, exercise and comply with any such arrangements, rights, privileges and concessions.

(*d*) To sell or dispose of the undertaking of the Federation or any part thereof for such consideration as the Federation may think fit and in particular for shares, debentures or securities of any other company having objects altogether or in part similar to those of this Federation.

(*e*) To take or otherwise acquire and hold shares in any other company having objects altogether or in part similar to those of this Federation.

(*f*) To undertake and execute any trusts the undertaking of which may seem to the Federation desirable either gratuitously or otherwise.

(*g*) To draw, make, accept, discount, execute and issue bills of exchange, promissory notes, bills of lading warrants, debentures and other negotiable or transferable instruments or securities.

The Rules provide for two classes of members, *viz.*, numbers consisting of Chambers of Commerce (Subscription Rs. 300) and others consisting of Commercial Associations (Subscription Rs. 150).

The following are the Committee of the Federation for 1934 :—

President.—Mr. Kasturbhai Lalbhai.

Vice-President.—Lala Padampat Singhania.

Members of the Committee.—Mr. Nalini Ranjan Sarker (Bengal National Chamber of Commerce, Calcutta), Lala Shri Ram (Delhi Factory-owners' Federation, Delhi), Mr. G. D. Birla (Indian Chamber of Commerce, Calcutta), Sir Purshotamdas Thakurdas, Kt., C.I.E., M.B.E., (Indian Merchants' Chamber, Bombay), Mr. Walchand Hirachand (Maharashtra Chamber of Commerce, Bombay), Raj Ratna Seth Chimanlal Girdharlal (Baroda Millowners' Association, Baroda), Seth Mathurdas Vissanji (Indian Merchants' Chamber, Bombay), Rao Bahadur Shivrattan G. Mohatta (Karachi Indian Merchants' Association, Karachi), Mr. A. D. Shroff (Indian Merchants' Chamber, Bombay), Mr. P. S. Sodhbans (Indian Chamber of Commerce, Lahore), Mr. Vidya Sagar Pandya, M.L.A. (Southern Indian Chamber of Commerce, Madras.)

Honorary Treasurers.—Mr D. P. Khaitan (Indian Chamber of Commerce, Calcutta), Sir Hari Sanker Paul, Kt., M.L.C. (Bengal National Chamber of Commerce, Calcutta).

Co-opted Members.—Seth Haji Abdoola Haroon, M.L.A., Karachi, Mr. B. Das, M.L.A., Cuttack, Rai Upendra Lal Roy Bahadur, Chittagong, Mr. Chunilal B. Mehta, Bombay, Mr. Amrit Lal Ojha, Calcutta, Mr. M. Muhammad Ismail, Madras.

Secretary.—Mr. D. G. Mulherkar.

Office address.—Pankore's Naka, Ahmedabad.

Telegraphic address.—Unicomind, Ahmedabad.

BENGAL.

The Bengal Chamber of Commerce was founded in 1834. Its headquarters are in Calcutta. Other societies connected with the trade and commerce of the city are the Royal Exchange, the Bengal Bonded Warehouse Association, the Calcutta Trades Association, the Bengal National Chamber of Commerce and the Marwari Chamber of Commerce. The Bengal Chamber is registered with a declaration of membership of 300. Its objects are the usual purposes connected with the protection of trade "in particular in Calcutta." There are two classes of members. Permanent (Chamber and Associated) and Honorary.

Merchants, bankers, shipowners, representatives of commercial, railway and insurance companies, brokers, persons and firms engaged in commerce, agriculture, mining or manufacture, and joint stock companies or other corporations, formed for any purpose or object connected with commerce, agriculture, mining or manufacture, and persons engaged in or connected with art, science or literature, may be elected as permanent members of the Chamber.

The following are the office bearers of the Chamber for the year 1933-34 :—

President.—Mr. J. S. Henderson, (Messrs. Mackinnnon, Mackenzie & Co.)

Vice-President.—Mr. J. Reid Kay, (Messrs. James Finlay & Co., Ltd.)

Members.—Mr. Alec. Aikman, (Messrs. Andrew Yule & Co.); Mr. H. F. Bateman, (Messrs. Shaw, Wallace & Co.); The Hon'ble Sir E. C. Benthall, (Messrs. Bird & Co.); Mr. R. D. Cromartie, (The Mercantile Bank of India, Ltd.); Mr. H. A. M. Hannay, (Agent, Eastern Bengal Railway.); Mr. L. V. Heathcote, (The Burma-Shell Oil Storage & Distributing Co. of India, Ltd.); Mr. R. A. Towler, (Messrs. McLeod & Co.).

The Secretary of the Chamber is Mr. A. C. Daniel. Assistant Secretary, Mr. D. C. Fairbairn.

The following are the public bodies (among others) to which the Chamber has the right of

returning representatives, and the representatives returned, for the current year.

The Council of State.—The Hon'ble Mr. J. S. Henderson.

The Bengal Legislative Council.—Mr. G. R. Dain, C.I.E., (Calcutta Tramways Co. Ltd.); Mr. H. H. Burn, (McLeod & Co.); Mr. C. R. Sunover, (Kilburn & Co.); Mr. C. C. Miller, (Hoare Miller & Co. Ltd.); Mr. W. H. Thompson, (Bengal Telephone); Mr. Henry Birkmyre, (Birkmyre Brothers).

The Calcutta Port Trust.—Mr. M. A. Hughes, (Turner Morrison & Co. Ltd.); Mr. S. D. Gladstone, (Gillanders Arbuthnot & Co.); Mr. G. R. Campbell, Mackinnon, (Mackenzie & Co., Ltd.); Mr. A. L. B. Tucker, (Kilburn & Co.); Mr. K. J. Nicolson, (Gladstone, Wyllie & Co.); Mr. J. Reid Kay, (James Finlay & Co., Ltd.).

The Calcutta Municipal Corporation.—Mr. F. Rooney, (Bengal Telephone Co., Ltd.); Mr. G. U. Pottinger, (Burmah-Shell); Mr. N. G. Herbert, (Imperial Chemical Industries Co. Ltd.); Mr. A. M. Playfair, (Macneill & Co.); Mr. C. H. Holmes, (Holmes Wilson & Co. Ltd.); Mr. K. G. Sillar, (Calcutta Electric Supply Corporation Ltd.).

The Board of Trustees for the Improvement of Calcutta.—Mr. W. H. Thompson, M.L.C. (Bengal Telephone Co., Ltd.)

The Bengal Boiler Commission.—Mr. W. Gow, (Burn & Co. Ltd.); Mr. H. H. Reynolds, M.I.E. (Ind.), M.I.E.E.; Mr. J. Williamson, M.I.E. (Ind.), M.I.E.E.

The Bengal Smoke Nuisances Commission :—Mr. E. J. R. Gardiner; Mr. G. Y. Robertson.

The Chamber elects representatives to various other bodies of less importance, such as the committee of the Calcutta Sailors' Home, and to numerous subsidiary associations. The following are the recognised associations of the Bengal Chamber of Commerce :—

Calcutta Grain Oilseed and Rice Association, Indian Jute Mills Association, Indian Tea Association, Calcutta Tea Traders' Association, Calcutta Fire Insurance Association, Calcutta Import Trade Association, Calcutta Marine Insurance Association, The Wine, Spirit and Beer Association of India, Indian Mining Association, Calcutta Baled Jute Association, Indian Paper Makers' Association, Indian Engineering Association, Calcutta Jute Fabrics Shippers' Association, Calcutta Hydraulic Press Association, Jute Fabric Brokers' Association, Calcutta Baled Jute Shippers' Association, Calcutta Jute Dealers, Association, Calcutta Hides and Skins Shippers, Association, Calcutta Sugar Importers' Association, Calcutta Accident Insurance Association, Calcutta Flour Mills' Association, Calcutta River Transport Association, and the Masters' Stevedores' Association.

The Chamber maintains a Tribunal of Arbitration for the determination, settlement and adjustment of disputes and differences relating to trade, business, manufactures, and to customs of trade, between parties, all or any of whom reside or carry on business personally or by agent or otherwise in Calcutta, or elsewhere in India or Burmah, by whomsoever of such parties the said disputes and differences be submitted. The Secretary of the Chamber acts as the Registrar of the Tribunal, which consists of such members or assistants to members as may, from time to time, annually or otherwise be selected by the Registrar and willing to serve on the Tribunal. The Registrar from time to time makes a list of such members and assistants.

The Chamber also maintains a Licensed Measurers Department controlled by a special committee. It includes a Superintendent (Mr. R. Ellis), Head Office Manager (Mr. C. G. Smith) and Assistant Superintendents (Messrs. J. G. Smyth G. C. G. Smyth, J. B. F. Henfrey and B. Perry), and the staff at the time of the last official returns consisted of 100 officers. The usual system of work for the benefit of the trade of the port is followed. The Department has its own provident fund and compassionate funds and Measurers' Club. The Chamber does not assist in the preparation of official statistical returns. It publishes weekly the *Calcutta Prices Current*, and also publishes a large number of statistical circulars of various descriptions in addition to a monthly abstract of proceedings and many other circulars on matters under discussion.

INDIAN CHAMBER OF COMMERCE, CALCUTTA.

The Indian Chamber of Commerce was established in November 1925 to promote and protect the trade, commerce and industries of India and in particular the trade, commerce and industries in or with which Indians are engaged or concerned; to aid and stimulate the development of trade, commerce and industries in India with capital principally provided by or under the management of Indians; to watch over and protect the general commercial interests of India or any part thereof, and the interests of persons, in particular the Indians, engaged in trade, commerce or industries in India; to adjust controversies between members of this Chamber; to arbitrate in the settlement of disputes arising out of commercial transactions between parties willing or agreeing to abide by the judgment and decision of the Tribunal of the Chamber; to promote and advance commercial and technical education and such study of different branches of Art and Science as may tend to develop trade, commerce and industries in India; to provide, regulate and maintain a suitable building or room or suitable buildings or rooms for a Commercial Exchange in Calcutta; and to do all such other things as may be conducive to the development of trade, commerce and industries, or incidental to attainment of the above objects or any of them.

There are two classes of Members, local and mofussil. The local Members pay an annual subscription of Rs. 100 and the Mofussil

members Rs. 50. Merchants, Bankers, Shipowners, representatives of commercial, transport or insurance companies, brokers and persons engaged in commerce, agriculture, mining or manufacture, and persons engaged in or connected with art, science or literature who are Indians shall be eligible for election as members of the Chamber.

The following constitute the Managing Committee of the Chamber for the year 1933 :—

President.—Mr. A. L. Ojha.

Senior Vice-President.—Mr. K. L. Jatia.

Vice-President.—J. P. Dutia.

Members.—G. D. Birla ; Mr. D. P. Khaitan Mr. S. K. Bhatter; Mr. Faizulla Gangjee ; Mr G. L. Mehta ; Mr. Mohanlal Lallubhai ; Mr. M. K. Powvala ; Mr. N. L. Pun ; Mr. K. J. Purohit ; Mr. C. K. Parekh ; Mr. Anandji Haridas ; Mr. H. P. Bagaria ; Mr. Kassim A. Mohamed ; Mr. Habib Mohamed ; Mr. Kedarnath Khandelwal ; Mr. Gourishanker Dalmiya ; Mr. S. B. Sen and Dr. M. Sanyal.

Secretary.—Mr. M. P. Gandhi, M.A., F.R.E.S., F.S.S.

The following Associations are affiliated with the Chamber :—Indian Sugar Mills' Association, Jute Balers' Association, Indian Produce Association, East India Jute Association, Indian Merchants' Association, Calcutta Rice Merchants' Association, Calcutta Kirana Association, Bengal Jute Dealers' Association, Gunny Trades Association and Shareholders' Association.

The Indian Chamber of Commerce also appointed in 1927 a Tribunal of Arbitration to arbitrate in all disputes relating to various trades. With a view to cover the varying nature of disputes arising in different trades, separate panels of Arbitration are appointed on the Tribunal of Arbitration for each of the following trades :—(1) Jute, (2) Gunny, (3) Piecegoods and Yarn, (4) Iron and Steel, (5) Coal and Minerals, (6) General.

Chamber's representatives on—

Calcutta Port Commissioners : Mr. G. L. Mehta.

Bengal Nagpur Railway Local Advisory Committee : Mr. K. J. Purohit.

East Indian Railway Local Advisory Committee : Mr. D. P. Khaitan.

Eastern Bengal Local Advisory Committee : Mr. R. Chakravarty.

Board of Apprenticeship Training : Mr. A. L. Ojha.

Railway Rates Advisory Committee : Messrs. Anandji Haridas, H. P. Bagaria, G. D. Birla, Faizulla Gangjee and D. P. Khaitan.

Calcutta Society for the Prevention of Cruelty to Animals : Mr. Kassim A. Mohamed.

Bengal Conciliation Panel : Messrs. D. P. Khaitan, Anandji Haridas, and N. Rajabally.

Bengal Pilotage Dues Committee : Mr. K. J. Purohit.

Chamber's Auditors : Messrs. S. R. Batliboi & Co.

INTERNATIONAL CHAMBER OF COMMERCE, INDIAN NATIONAL COMMITTEE, BOMBAY.

The Indian National Committee of the International Chamber of Commerce was established for the following purposes in the year 1928 :—

(*a*) To participate in the promotion of the objects for which the International Chamber of Commerce, hereinafter called the "International Chamber", is established, namely :

(*i*) To facilitate the commercial intercourse of countries.

(*ii*) To secure harmony of action on all international questions affecting finance, industry and commerce.

(*iii*) To encourage progress and to promote peace and cordial relations among countries and their citizens by the co-operation of business men and organizations devoted to the development of commerce and industry.

The Indian National Committee has on its roll 40 commercial bodies as Organisation Members and 60 commercial firms as Associate Members.

OFFICE-BEARERS FOR THE YEAR 1933.

Ex-Officio.—Mr. D. S. Erulkar and Mr. K. P. Mehta (Representatives on the Council of the International Chamber of Commerce).

Honorary Treasurer.—Mr. R. L. Nopany.

Secretary.—Mr. J. K. Mehta.

Assistant Secretary.—A. C. Ramalingham.

BOMBAY.

The object and duties of the Bombay Chamber, as set forth in their Memorandum and Articles of Association, are to encourage a friendly feeling and unanimity among commercial men on all subjects involving their common good; to promote and protect the general mercantile interests of this Presidency; to collect and classify information on all matters of general commercial interest; to obtain the removal, as far as such a Society can, of all acknowledged grievances affecting merchants as a body, or mercantile interests in general; to receive and decide references on matters of usage and custom in dispute, recording such decisions for future guidance, and by this and such other means, as the Committee for the time being may think fit, assisting to form a code of practice for simplifying and facilitating business; to communicate with the public authorities, with similar Associations in other places and with individuals, on all subjects of general mercantile interests; and to arbitrate between parties willing to refer to, and abide by, the judgment of the Chamber.

The Bombay Chamber was established in 1836, under the auspices of Sir Robert Grant, who was then Governor of the Presidency, and the programme described above was embodied in their first set of rules. According to the latest returns, the number of Chamber members is 186. Of these numbers 20 represent banking institutions, 11 shipping agencies and commanies, 3 firms of solicitors, 3 railway companies, 12 insurance companies, 17 engineers and contractors, 130 firms engaged in general mercantile business.

All persons engaged or interested in mercantile pursuits desirous of joining the Chamber and disposed to aid in carrying its objects into effect are eligible for election to membership by ballot. The Chamber member's subscription is Rs. 360. Gentlemen distinguished for public services, or "eminent in commerce and manufactures," may be elected honorary members and as such are exempt from paying subscriptions. Any stranger engaged or interested in mercantile pursuits and visiting the Presidency may be introduced as a visitor by any Member of the Chamber inserting his name in a book to be kept for the purpose, but a residence of two months shall subject him to the rule for the admission of members.

Officers of the Year.

The affairs and funds of the Chamber are managed by a committee of nine ordinary members, consisting of the President and Vice-President and seven members. The committee must, as a rule, meet at least once a week and the minutes of its proceedings are open to inspection by all members of the Chamber, subject to such regulations as the committee may make in regard to the matter. A general meeting of the Chamber must be held once a year and ten or more members may requisition, through the officers of the Chamber, a special meeting at any time, for specific purpose.

The Chamber elects representatives as follows to various public bodies:—

The Council of State, one representative.
Legislative Council of the Governor of Bombay, two representatives.
Bombay Municipal Corporation, one member, elected for three years.
Bombay Improvements Committee, one member, elected for two years.
Board of Trustees of the Port of Bombay, five members, elected for two years.

The following are the officers of the Chamber for the year 1934-35 and their representatives on the various public bodies:—

President.—G. L. Winterbotham, Esq.
Vice-President.—A. McIntosh, Esq.
Committee.—E. J. Bunbury, Esq.; G. H. Cooke, Esq.; N. S. Golder, Esq.; L. A. Halsall, Esq.; A. K. G. Hogg, Esq.; W. M. Petrie, Esq.; G. C. Phillips, Esq.
Secretary.—R. J. F. Sulivan, Esq.
Asst. Secretary.—H. Royal, Esq.
Representatives on—
Council of State: The Hon'ble Mr. E. Miller.
Bombay Legislative Council.—J. B. Greaves, Esq., M.L.C.; G. L. Winterbotham, Esq., M.L.C.

Railway Rates Advisory Committee: G. C. R. Coleridge, Esq.; L. A. Halsall, Esq.; J. F. Macdonell, Esq.; The Hon. Mr. E. Miller; C. J. Damala, Esq.
Government of Bombay Road Board: The Hon'ble Mr. E. Miller.
Bombay University: G. L. Winterbotham, Esq., M.L.C.

Special Work.

One of the most important functions performed by the Chamber is that of arbitration in commercial disputes. Rules for this have been in existence for many years and have worked most satisfactorily. The decisions are in all cases given by competent arbitrators appointed by the General Committee of the Chamber and the system avoids the great expense of resort to the Law Courts.

A special department of the Bombay Chamber is its Statistical Department, which prepares a large amount of statistical returns connected with the trade of the port and of great importance to the conduct of commerce. The department consists of fourteen Indian clerks who, by the authority of Government, work in the Customs House and have every facility placed at their disposal by the Customs authorities. They compile all the statistical information in connection with the trade of the port, in both export and import divisions, which it is desirable to record. No other Chamber in India does similar work to the same extent.

The Bombay Chamber publishes a Daily Arrival Return which shows the receipts into Bombay of cotton, wheat and seeds, and a Daily Trade Return, which deals with trade by sea and shows in great detail imports of various kinds of merchandise and of treasure, while the same return contains particulars of the movements of merchant vessels.

The Chamber publishes twice a week detailed reports known as Import and Export manifests, which give particulars of the cargo carried by each steamer to and from Bombay.

Three statements are issued once a month. One shows the quantity of exports of cotton seeds and wheat from the principal ports of the whole of India. The second gives in detail imports from Europe, more particularly in regard to grey cloths, bleached cloths, Turkey red and scarlet cloths, printed and dyed goods, fancy cloth of various descriptions, woollens, yarns, metals, kerosene oil, coal, aniline dyes, sugar, matches, wines and other sundry goods. The third shows, classified, the number of packages of piece-goods and yarns imported by individual merchants.

The "Weekly Return" issued by the Chamber shows clearances of a large number of important designations of merchandise. A return of "Current Quotations" is issued once a week, on the day of the departure of the English mail, and shows the rates of exchange for Bank and Mercantile Bills on England and Paris, and a large quantity of general banking and trade information.

The annual reports of the Chamber are substantial tones in which the whole of the affairs of the Chamber and the trade of the port during the past year are reviewed.

The Chamber has also a Measurement Department with a staff of 10, whose business is that of actual measurement of exports in the docks before loading in steamers. Certificates are issued by these officers with the authority of the Chamber to shippers and ship agents as to the measurement of cotton and other goods in bales or packages. The measurers are in attendance on the quays whenever there are goods to be measured and during the busy season are on duty early and late. The certificates granted show the following details:—

(*a*) The date, hour and place of measurement.
(*b*) the name of the shipper;
(*c*) the name of the vessel;
(*d*) the port of destination;
(*e*) the number and description of packages:
(*f*) the marks;
(*g*) the measurement, and in the case of goods shipped by boats;
(*h*) the registered number of the boat;
(*i*) the name of the tindal.

Certificates of weight and of origin are also issued by the Chamber.

Associated Chamber of Commerce of India.

HEAD OFFICE LOCATED IN CALCUTTA FOR 1933.

President: The Hon. Sir E. C. Benthall.

Millowners' Association, Bombay.

The Millowners' Association, Bombay, was established in 1875 and its objects are as follows:—

(*a*) To encourage friendly feeling and unanimity amongst Millowners and users of steam water and/or electric power on all subjects connected with their common good.
(*b*) To secure good relations between members of the Association.
(*c*) To promote and protect the trade, commerce and manufactures of India in general and of the cotton trade in particular.
(*d*) To consider questions connected with the trade, commerce and manufactures of its members.
(*e*) To collect and circulate statistics and to collect, classify and circulate information relating to the trade, commerce and manufactures of its members.

Any individual partnership or company owning one or more mill or mills or one or more press or presses or one or more ginning or other factory or factories actuated by steam, water, electric and/or other power is eligible for membership, members being elected by ballot. Every member is entitled to one vote for every complete sum of Rs. 50 paid by him as annual subscription.

The membership of the Association in 1933 numbers 100.

The following is the Committee for 1934:—
H. P. Mody, Esq., M.L.A., (*Chairman*), H. H. Sawyer, Esq., (*Dy. Chairman*), Sir Ness Wadia, K.B.E., C.I.E., Sir Dinshaw E. Wacha, Kt., Sir Munmohands Ramji, Kt., Sir Chunilal Mehta, K.C.S.I., C.I.E., Sir N. B. Saklatvala, Kt., C.I.E., T. V. Baddeley, Esq., F. E. Dinshaw, Esq., A. Geddis, Esq., H. H. Lakin, Esq., Lalji Naranji, Esq., H. F. Milne, Esq., Dharamsi Mulraj Khatau, Esq., Ratansi D. Morarji, Esq., Albert Raymond, Esq., S. D. Saklatvala, Esq., V. N. Chandavarkar, Esq., F. Stones, Esq., O.B.E., Madhavji D. Thackersey, Esq., and T. Maloney, Esq., (*Secretary*).

The following are the Association's Representatives on public bodies:—
Legislative Assembly: Mr. H. P. Mody, M.L.A.

Bombay Legislative Council: Mr. J. B. Petit.

Bombay Port Trust: Mr. A. Geddis.

Victoria Jubilee Technical Institute: Mr. V. N. Chandavarkar.

Bombay Smoke Nuisances Commission: Messrs. W. F. Webb and W. A. Sutherland.

Advisory Board of Sydenham College of Commerce and Economics: Mr. Dharamsi Mulraj Khatau.

Central Cotton Committee: Mr. S. D. Saklatvala.

Development of Bombay Advisory Committee: Mr. Jehangir B. Petit.

G. I. P. Railway Advisory Committee: Mr. A. Geddis.

B. B. & C. I. Railway Advisory Committee: Mr. H. P. Mody.

Bombay Municipal Corporation: Mr. H. P. Mody.

University of Bombay: Mr. Jehangir B. Petit.

Royal Institute of Science: Mr. H. P. Mody.

The Office of the Association is located at 2nd Floor, Patel House, Churchgate Street, Fort, Bombay, and the telephone number is 25350.

Millowners' Mutual Insurance Association, Ltd.

The Millowners' Mutual Insurance Association, Ltd., was registered on 30th June 1924, as a Company limited by guarantee. The registered office of the Association is located in Patel House, Churchgate Street, Fort, Bombay.

The objects of the Association are:—

(*a*) The mutual insurance of members of the Company against liability to pay compensation or damages to workmen employed by them or their dependants for injuries or accidents, fatal or otherwise, arising out of and in the course of their employment; (*b*) the insurance of members of the Company against loss or damage by or incidental to fire, lightning, etc.; and (*c*) to reinsure or in any way provide for or against the liability of the Company upon any assurances granted or entered into by the Company and generally to effect and obtain re-insurances, counterinsurances and counter-guarantees, etc., etc., etc.

The Association consisted of 56 members on 1st October, 1933.

All members of the Millowners' Association are eligible for admission to the Mutual Company. Non-members are also eligible for membership of the Mutual, provided their application is approved of by the Committee of the Millowners' Association.

The affairs of the Mutual Insurance Association are under the control of a Board of Directors.

The present Directors are:—

Mr. A. Geddis (*Chairman*).

The Hon'ble Sir Munmohandas Ramji, Kt., Sir Ness Wadia, K.B.E., C.I.E., Sir Joseph Kay, Kt., Sir Chunilal V. Mehta, K.C.S.I., Ratansi D. Morarji, Esq., S. D. Saklatvala, Esq., F. Stones, Esq., O.B.E., and A. C. M. Cursetjee, Esq., M.A., LL.B., Secretary of the Association.

Indian Merchants' Chamber.

The Indian Merchants' Chamber was established in the year 1907. Its objects are:—

(*a*) To encourage friendly feeling and unanimity among business community on all subjects connected with the common good of Indian merchants.

(*b*) To secure organised action on all subjects relating to the interests of the Indian business community directly and indirectly.

(*c*) To promote the objects of the Indian business community in matters of inland and foreign trade, shipping and transport, industry and manufacture, banking and insurance.

(*d*) To collect and disseminate statistical and other information securing the promotion of the objects of the Chamber, and to make efforts for the spread of commercial and economic knowledge.

(*e*) To take all steps which may be necessary for promoting, supporting or opposing legislation or other action affecting the aforesaid interests by the Government or any Department thereof or by any local body or bodies and in general to take the initiative to secure the welfare of the business community in all respects.

(*f*) To make representations to Local, Central or Imperial authorities, Executive or Legislative, on any matter affecting trade, commerce, manufacture or shipping, banking or insurance.

(*g*) To undertake by arbitration the settlement of commercial disputes between merchants and businessmen and also to provide for arbitration in respect of disputes arising in the course of trade, industry or transport, and to secure the services of expert technical and other men to that end if necessary or desirable.

(*h*) To advance and promote commercial and technical education and to found and support establishments and institutions for such purposes.

(*i*) To undertake special enquiries and action for securing redress for legitimate grievances of any branch of trade or industry as also all such other action as may be conducive to the extension of trade, commerce or manufacture or incidental to the attainment of the above objects.

(*j*) To secure the interests and well-being of the Indian business communities abroad.

(*k*) (*i*) To secure, wherever possible, organised and/or concerted action on all subjects involving the interests of members including 'regulating conditions of employment of industrial labour' in various industries represented by the members of the Organisation.

(*iii*) To nominate delegates and advisers, etc., to represent the employers of India at the Annual International Labour Conference of the League of Nations.

(*iii*) To take up, consider and formulate ideas on the subjects which are on the Agenda of each International Labour Conference.

(*iv*) To take all steps which may be necessary for promoting, supporting or opposing recommendations or conventions of the International Labour Conference.

(*l*) And generally to do all that may be necessary in the interests of the realisation of the above objects of the Chamber directly or indirectly.

There are three classes of members:—

(1) Ordinary, (2) Patrons and (3) Honorary.

(1) There are three classes of ordinary members:—

(*a*)—Residents of Bombay and its suburbs who will have to pay Rs. 75 as annual subscription; but joint stock Companies will have to pay Rs. 100 per year.

(*b*)—Mofussil members who will have to pay Rs. 25 as annual subscription.

(*c*)—Associations which will have to pay Rs. 125 as annual subscription.

Admission Fee:—All the ordinary members and patrons pay Rs. 100 as admission fee which is credited to a capital fund of the Chamber and not expended on revenue account except with the consent of the general body.

(2) Patrons:—Indian firms or individual Indian merchants can join as Patrons Firms will have to pay Rs. 5,000 and individuals Rs. 2,500 as donation, the proceeds of which will be credited to a capital fund which shall not be expended on revenue account but the interest whereof shall be taken to revenue account.

(3) Honorary members:—Gentlemen distinguished for public services or eminent in commerce and manufactures or otherwise interested in the aims and objects of the Chamber may be elected as Honorary members by a General Meeting of the Chamber on the recommendation of the Committee and as such shall be exempted from paying subscriptions. They shall not be entitled to vote at any meeting of the Chamber nor shall they be eligible to serve on the Committee.

Any Indian gentleman, firm or association engaged in mercantile pursuits or interested in trade and commerce desirous of joining the Chamber shall be eligible for membership.

The following bodies are connected directly and indirectly with the Chamber:—

Vice-Chairman.—Mr. Ratansi Hirji.

Hony. Secretary.—Mr. Lakhamsi Ghelabhai.

Secretary.—Mr. Uttaram Ambaram, B.A., LL.B.

Hon. Secretary.—Mr. Jadavji Visanji.

Acting Secretary.—Mr. Ganpatram Narottam Raval.

The address of the Association is 262, Masjid Bunder Road, Mandvi Post, Bombay.

MAHARASHTRA CHAMBER OF COMMERCE.

The Maharashtra Chamber of Commerce was started in September 1927 with the object of establishing friendly relations among merchants and factory-owners of Maharashtra, safeguarding their interests against measures likely to affect them adversely, collecting financial, industrial and trade statistics, and disseminating information thereabout amongst members of the Chamber.

Membership of the Chamber is confined to merchants and factory-owners belonging to the City of Bombay, Bombay Suburban District, Poona, Sholapur, Satara, Ratnagiri, Kolaba, Nasik, Ahmednagar, Thana and East and West Khandesh and Belgaum and Indian States adjoining these districts.

President: Mr. Walchand Hirachand.

Vice-Presidents: R. B. Hanamantram Ramnath, R. B. Laxman Vishwanath Pophale, Mr. M. L. Dahanukar.

Secretary:—Mr. D. V. Kelkar, M.A.

The offices of the Chamber are in the Phoenix Building, Graham Road, Ballard Estate, Bombay

KARACHI.

The objects and duties of the Karachi Chamber of Commerce are set forth in terms similar to those of Bombay. Qualifications for membership are also similar. Honorary Membership may be conferred by the Committee upon "any gentlemen interested in the affairs and objects of the Chamber." All new members joining the Chamber pay Rs. 750 entrance fee and the monthly subscription is Rs. 18. The subscription to the Chamber's periodical returns is at present fixed at Rs. 10 per month for the Daily Trade Return & Rs. 10 per annum for the Weekly Price Current and Market Report. The affairs of the Chamber are managed by a committee of ten members, consisting of a Chairman, Vice-Chairman and eight members, elected at the annual general meeting of the Chamber as early in the year as possible. The Chamber elects a representative on the Bombay Legislative Council, four representatives on the Karachi Port Trust, two on the Karachi Municipality and two on the North Western Railway Advisory Committee, Karachi. There were 63 members of the Chamber in January 1934. The following were the officers in 1933 :—

Chairman :—Mr. R. H. Martin, (Forbes, Forbes, Campbell & Co., Ltd.)

Vice-Chairman.—Mr. J. W. Anderson, (Grahams Trading Co. (India), Ltd.)

Members of Committee :—Mr. L. C. Buss, (Burmah-Shell Oil Storage and Distributing Co. of India, Ltd.); Mr. A. D. Finney, (Mackinnon, Mackenzie & Co.); Mr. T. C. Hales, (North-Western Railway); Mr. F. H. Johnston (National Bank of India, Ltd.); Mr. G. N. R. Morgan, (Bombay Co., Ltd.); Mr. W. Reid, (David Sassoon & Co., Ltd.); Mr. T. M. Zoures, (Ralli Brothers, Ltd.); Mr. C. Voegeli, (Volkart Brothers).

Representative on the Bombay Legislative Council : Mr. J. Humphrey, O.B.E.

Representatives on the Karachi Port Trust: Messrs. H. S. Bigg-Wither, O.B.E., G. H. Raschen; J. W. Anderson and W. D. Young.

Representatives on the Karachi Municipality: Mr. A. A. L. Hynn & Mr. G. A. Johnstone.

Representatives on the North Western Railway Local Advisory Committee, Karachi : Messrs. R. H. Martin and L. Reid.

Ag. Secretary :—Mr. H. M. Gomes.

Ag. Public Measurer :—Mr. J. G. Smith.

The following are the principal ways in which the Chamber gives special assistance to members :—The Committee take into consideration and give an opinion upon questions submitted by members regarding the custom of the trade or of the Port of Karachi. The Committee undertake to nominate arbitrators and surveyors for the settlements of disputes. When two members of the Chamber or when one member and a party who is not a member have agreed to refer disputes to the arbitration of the Chamber or of an arbitrator or arbitrators nominated by the Chamber, the Committee will undertake to nominate an arbitrator or arbitrators, under certain regulations. Similarly, the Chamber, under certain regulations, will undertake to appoint an arbitrator or arbitrators for the settlement of disputes in which neither of the parties are members of the Chamber. A public measurer is appointed under the authority of the Chamber to measure pressed bales of cotton, wool, hides and other merchandise arriving at or leaving the port.

MADRAS.

The Madras Chamber of Commerce was founded in 1836. All merchants and other persons engaged or interested in the general trade, commerce and manufactures of Madras are eligible for membership. Any assistant signing a firm or signing *per-pro* for a firm is eligible. Members who are absent from Madras but pay their subscriptions may be represented in the Chamber by their powers-of-attorney, as honorary members, subject to ballot. Honorary members thus elected are entitled to the full privilege of ordinary members. Election for membership is by ballot at a general meeting, a majority of two-thirds of the recorded votes being necessary to secure election. Every member pays an entrance fee of Rs. 100, provided that banks, corporate bodies and mercantile firms may be represented on the Chamber by one or more members and are liable for an entrance fee of Rs. 100 once in ten years each. The subscriptions shall not exceed Rs. 300 per annum, payable quarterly in advance, subject to reduction from time to time in accordance with the state of the Chambers' finances. Absentees in Europe pay no subscription and members temporarily absent from Madras pay one rupee per month. Honorary members are admissible to the Chamber on the usual conditions. Members becoming insolvent cease to be members but are eligible for re-election without repayment of the entrance donation.

The Chamber undertakes arbitrations and surveys, the granting of certificates of origin and the registration of trade marks. One of the rules for the last named is "that no trade mark or ticket shall be registered on behalf of an Indian firm trading under a European name."

The following publications are issued by the Chamber :—Madras Price Current and Market Report, Tonnage Schedule and Madras Landing Charges and Harbour Dues Schedule.

There are 58 members and 6 Honorary Members of the Chamber in the current year and the Officers and Committee for the year are as follows :—

Chairman : Mr. W. M. Browning.

Vice-Chairman : Mr. F. Birley, M.L.C.

Committee :—Messrs. G. A. Bambridge, H. N. Colam, R. A. Gray, G. H. Hodgson and A. S. Todd.

The following are bodies to which the Chamber is entitled to elect representatives and the representatives elected for the year :—

Madras Legislative Council: Mr. F. Birley, M.L.C.

Madras Port Trust: Messrs. W. M. Browning, R. D. Denniston, and A. S. Todd, *Vacant*.

Corporation of Madras: Messrs. F. E. James, A. J. Powell and A. G. Vere.

Federation of Chamber of Commerce of the British Empire: Sir Gordon Fraser.

Secretary: G. Gompertz.

SOUTHERN INDIA.

The Southern India Chamber of Commerce established in 1909 has its Registered Office in Madras. The objects of the Chamber are those usual for such bodies, concerning the promotion of trade, especially in the Madras Presidency, and the interests of members. Special objects are stated to be:—

"To maintain a Library of books and publications of commercial interest, so as to diffuse commercial information and knowledge amongst its members.

"To establish Museums of commercial products or organise exhibitions, either on behalf of the Chamber or in co-operation with others."

There are two classes of members, permanent and honorary. The usual conditions as to eligibility for election prevail.

The Chamber is a member of the Federation of Indian Chambers of Commerce, the Indian Chamber of Commerce in Great Britain, and the Indian National Committee of the International Chamber of Commerce, Paris.

The Chamber registers trade marks, holds survey and arbitrations, and issues certificates of origin.

The right of electing two representatives to the Madras Port Trust was accorded to the Chamber by the Madras Port Trust Amendment Act, 1915. Members of the Chamber hold seats in the Madras Legislative Council and the Chamber has also been accorded the right of electing a representative to that body. Under the Madras City Municipal Act, 1919, the Chamber has the right of electing two Councillors to the Madras Corporation. Under the State Aid to Industries Act, 1923, the Chamber has the right to elect one member to the Board of Industries.

The Chamber also sends its representatives to the Road Board, the Town Planning Trust, the Provincial Cotton Committee, Vizagapatam Harbour Works Committee, the Advisory Committees of the South Indian and Madras and Southern Mahratta Railways, the Madras University, the Government Institute of Commerce Advisory Council, Madras, the Social Hygiene Council (Madras Branch), the Annamalai University, State Technical Scholarship Board, Advisory Committees of the Government, Rayapuram and Ophthalmic Hospital and Madras Electric Supply and Tramways Advisory Committee, Income-tax Board of Referees, and Indian Institute of Accountants.

The Chamber has 435 members on the roll and has its own building. Several Associations in the City of Madras and Chambers of Commerce Upcountry have been affiliated to this Chamber.

President.—Mr. Jamal Mahomed Saib.

Vice-Presidents.—Dewan Bahadur Govindas Chathoorbhujadas and Mr. C. Gopal Menon.

Honorary Secretaries.— Khan Bahadur Adam Hajee Md. Sait and Mr. K. K. Streenivasam.

Assistant Secretary.—P. R. Nair, B.A., B.Com.

NORTHERN INDIA.

Northern India Chamber of Commerce, *C. & M. Gazette* Building, The Mall, Lahore.

Chairman: Hon'ble Rai Bahadur L. Ram Saran Das, C.I.E., M.C.S.

Vice Chairman: L. T. R. Rickford.

Committee: Mr. Binda Saran; Mr. C. C. T. Brereton, M.B.E.,; Rai Bahadur Bawa Dinga Singh; Mr. W. H. Grice; Mr. P. H. Guest; Dewan Bahadur Dewan Krishna Kishore Dahriwala; C. G. C. Redman; Mr. H. J. Rustomji; Mr. J. C. F. Davidson; Mr. L. R. Sahni; Mr. Sapuran Singh; Professor W. Roberts, B.Sc.

UPPER INDIA.

The Upper India Chamber of Commerce is concerned with trade, commerce and manufactures in the United Provinces and has its registered office at Cawnpore. Members are elected by the Committee, subject to confirmation by the next general meeting of the Chamber Gentlemen distinguished for public service, or eminent in commerce or manufactures, may be elected honorary members of the Chamber by the members in a General Meeting and such shall be exempted from paying any subscription to the Chamber. There is no entrance fee for membership, but subscriptions are payable as follows:—A firm, company or association having its place of business in Cawnpore, Rs. 300 a year; an individual member resident or carrying on business in Cawnpore, Rs. 300; firms or individuals having their places of business or residence outside Cawnpore pay half the above rates, but the maintenance of a branch office in Cawnpore necessitates payment of full rates.

The affairs and funds of the Chamber are managed by a Committee of ten members, which has power to constitute Local Committees of from four to seven members each at trade centres where membership is sufficiently numerous to justify the step. Such Local Committees have power to communicate only with the Central Committee.

The Chamber appoints arbitration Tribunals for the settlement and adjustment of disputes when invited, to do so, members of the Tribunals being selected from a regular printed list of arbitrators.

The Chamber has in the present year 61 members, two honorary members and seven affiliated members.

The following are the officers:—

Upper India Chamber of Commerce Committee:—*President*—Mr. J. M. Lownie, (Messrs. Begg, Sutherland & Co., Ltd.). *Vice-President*—Mr. R. Menzies, O.B.E., (The British India Corporation, Ltd.). *Members*—Mr. K. J. D. Price, (The Muir Mills Co., Ltd.); Mr. T. Gavin Jones, (The Cawnpore Chemical Works, Ltd.); Mr. Ram Narain, Cawnpore; Mr. G. V. Lewis, (The British India Corporation, Ltd.); Mr. E. J. W. Plummer, (The Swadeshi Cotton Mills Co., Ltd.); Mr. A. P. Curtis, (Messrs. Begg, Sutherland & Co., Ltd.); Mr. Jang Bahadur Mirhoutra, (Messrs. Moonna Lall & Sons); and Mr. A. Barr Pollock, (The Chartered Bank of India, Australia & China). *Representatives on the United Provinces Legislative Council.*—Mr. E. M. Souter, M.L.C., (Messrs. Ford & Macdonald, Ltd.); The Hon'ble Mr. J. P. Srivastava, M.L.C., M.SC., Cawnpore.

Secretary.—Mr. J. G. Ryan, M.B.E., V.D.
Head Clerk.—Babu B. N. Ghosal.

PUNJAB.

The Punjab Chamber of Commerce has its headquarters at Delhi and exists for the care of mercantile interests on the usual lines in the Punjab, the North West Frontier Province and Kashmir. The Chamber has Branches at Amritsar and Lahore. Membership is by ballot and is restricted to Banks, Merchants (wholesale), Railways and proprietors of large industrial interests. The entrance fee is Rs. 100 and the rate of subscription Rs. 180 per year. The Chamber returns one member to a seat on the Reformed Punjab Legislative Council jointly with the Punjab Trades Association, and shares representation in the Indian Legislative Assembly with other Chambers which are members of the Associated Chambers of Commerce of India, in the seat allotted to the Associated Chambers. The Chamber is a member of the Federation of Chambers of Commerce, London. The Chamber is represented on the Municipal Corporation of Delhi as well as on the N. W. Railway Advisory Committee, Lahore.

The Managing Committee meets at Delhi and Lahore and the following are office-bearers:—

Mr. W. G. L. Gilbert, *Chairman*, (Shahdara Saharanpore Light Railway Co., Ltd., Delhi); Khan Bahadur S. M. Abdulla, *Deputy-Chairman*, (Messrs. S. M. Abdulla & Sons, Delhi); Rai Bahadur P. Mukerjee, M.L.C., (Messrs. P. Mukerjee & Co., Ltd., Delhi); Mr. V. F. Gray, (Messrs. R. J. Wood & Co., Ltd., Delhi); Lala Shri Ram, (The Delhi Cloth & General Mills Co., Ltd., Delhi); Mr. R. T. H. Mackenzie, M.L.A., (Burmah-Shell Oil Storage & Distributing Co. of India Ltd., New Delhi); Mr. U. N. Sen, C.B.E. (The Eastern News Agency Ltd., New Delhi); Mr. C. M. Grant Govan, (Messrs. Govan Brothers, Ltd., Delhi); The Hon'ble Rai Bahadur Lala Ram Saram Das, C.I.E., (The Mela Ram Cotton Mills, Lahore); Mr. Aftab Rai, (The Ganga Ice Factory, Lahore Cantt.); Mr. R. S. Fairley, (The New Egerton Woollen Mills, Dhariwal); Mr. A. M. Freeman, (North Western Railway, Delhi); Mr. Lachhmi Narain, (Messrs. B. M. Lachhmi Narain, Amritsar); Mr. Moti Ram Mehra, (Messrs. Moti Ram Mehra & Co., Amritsar); Mr. W. Robertson Taylor, (The East India Carpet Co., Ltd., Amritsar); Mr. A. C. Mullen (The Amritsar Distillery Co., Ltd., Amritsar).

Secretaries.—Messrs. A. F. Ferguson & Co., Chartered Accountants, Delhi.

UNITED PROVINCES.

Secretary.—L. Rameshwar Prasad Bagla, M.L.A., Proprietor, Messrs. Gangadhar Baijnath, Cawnpore.

Joint-Secretary.—Mr. Krishna Lal Gupta, B.A., LL.B., Proprietor, Messrs. Saligram Kallomal, Cawnpore.

Members of Committee.—Mr. Dwarka Prasad Singh, Mr. Hiralal Khanna, Mr. L. Chunilal Maheshri, Mr. R. B. B. Bhugwan Dass, Mr. B. P. Srivastava, Mr. Ranjit Singh, Mr. L. Hari Shanker Bagla, Mr. L. Makundilal Garg, Mr. L. Girdharilal Bajaj, Mr. C. L. Mehta, Esq., Mr. I. D. Varshanie, Mr. L. Ramchander, Mr. B. Nand Ram Mehrotra, Mr. Ch. Pearey Lal, Mr. Brindaban Das, Mr. L. Ram Kishen Das Bajoria.

Assistant Secretary.—B. N. Chopra, Esq., A.I.S.A.

Head Assistant.—Mr. S. B. Tondon, B. Com. (Alld.).

BURMA.

The Burma Chamber of Commerce, with headquarters at Rangoon, exists to encourage friendly feeling and unanimity among commercial men on all subjects involving their common good, to promote and protect trade, commerce and manufactures and, in particular, the general mercantile interests of the province, to communicate with public authorities, associations and individuals on all matters, directly or indirectly affecting these interests, and to provide for arbitration between parties willing to refer to, and abide by, the judgment of arbitrators appointed by the Chamber. The following are affiliated bodies :—

Burma Fire Insurance Association.
Burma Marine Insurance Agents' Association.
Rangoon Import Association.
Burma Motor Insurance Agents' Association.
Burma Planter's Association.

The Chamber elects representatives to the following Public Bodies :—

Council of State.
Burma Legislative Council.
Rangoon Port Trust Board.
Rangoon Corporation.
Victoria Memorial Park Trustees.
Pasteur Institute Committee.
Burma University Council.
Rangoon Development Trust.
Police Advisory Board.
Accountancy Classes Advisory Board, Rangoon.
Advisory Committee Constituted under the Auxiliary Force Act, 1920.
Rangoon General Hospital Advisory Committee.
Local Railway Advisory Council.
Rangoon Water Supply Committee.
Bishop Bigandant Home Board.

All British corporations, companies, firms or persons engaged or interested in mercantile pursuits, such as merchants, bankers, shipowners and brokers or who are connected with agriculture, mining, manufactures, insurance, railways, commerce, art, science or literature shall be eligible to become Chamber Members. Every non-British concern or person, similarly engaged or interested as indicated above, shall be eligible for election as an Associate Member. The annual subscription of each Chamber Member shall be Rs. 480 per annum and of each Associate Member Rs. 360 per annum. An entrance fee of Rs. 150 is payable by each new Member. Officials and others indirectly connected with the trade of the province or who may have rendered distinguished service to the interests represented by the Chamber may be elected by the Committee either on their own motion or on the suggestion of two Members as Honorary Members of the Chamber. Honorary Members are not required to subscribe to the funds of the Chamber.

The Chamber undertakes arbitrations in addition to its ordinary work. It does not publish any statistical returns.

Secretary.—B. P. Cristall, Esq.

Representative on the Council of State.—Hon'ble Mr. J. B. Glass.

Representatives on the Burma Legislative Council.—R. T. Stoneham, Esq., M.L.C.

Representatives on the Rangoon Port Trust Board.—M. L. Burnet, Esq., J. B. Glass, Esq., The Hon'ble Mr. K. B. Harper and C. G. Wodehouse, Esq.

Representative on the Rangoon Corporation—W. T. McIntyre, Esq.

Victoria Memorial Park Trustee.—L. Baird, Esq.

Pasteur Institute Committee.—C. G. Wodehouse Esq., M.L.C.

Burma University Council.—H. B. Prior, Esq., M.A.

Rangoon General Hospital Advisory Committee—G. E. Bain, Esq.

Police Advisory Board.—T. P. Cowie, Esq.

Rangoon Development Trust.—The Hon'ble Mr. J. B. Glass.

Bishop Bigandant Home Board.—A. A. Bruce, Esq.

Accountancy Classes Advisory Board.—L. Baird, Esq.

Local Railway Advisory Council—A. A. Bruce, Esq.

Rangoon Water Supply Committee.—C. G. Wodehouse, Esq., A. T. McGreath, Esq., and C. Lane, Esq.

Advisory Committee constituted under the Auxiliary Force Act, 1920.—J. R. Fairley, Esq.

COCANADA.

The Cocanada Chamber of Commerce was established on 29th October 1868.

The following are the members of the Chamber which has its headquarters at Cocanada, the chief port on the Coromandel Coast north of Madras :—

Members.—The Coromandel Co., Ltd., Ripley & Co., Innes & Co., Wilson & Co., Gordon Woodroffe & Co., (Madras), Ltd., Northern Circars Development Co., and Burmah-Shell Oil Storage and Distributing Co. of India, Ltd.

MEMBERS OF THE COMMITTEE.

Mr. S. A. Cheesman, (*Chairman*).
,, C. D. T. Shores.
,, H. F. Ferguson.
,, G. M. Lake, (*Secretary*).

The rules of the Chamber provide that by the term 'member' be understood a mercantile firm or establishment, or the permanent Agency of a mercantile firm or establishment, or a society of merchants carrying on business in Cocanada or other place in the Districts of Kistna, Godavari, Vizagapatam, and Ganjam, and duly elected according to the Rules of the Chamber, and that all such be eligible but only members resident in Cocanada can hold office. Members are elected by ballot. The Committee, when called upon by disputing members or non-members of the Chamber, give their decision upon all questions of mercantile usage and arbitrate upon any commercial matter referred to them for final judgment. In either case a minimum fee of Rs. 16 must accompany the reference with Rs. 5 from a non-member and Re. 1 from a member as payment for the Chamber's Sealed Certificate.

The Committee consisting of 3 members, including the Chairman, is elected by ballot at the general meeting in January in each year for a term of 12 months. The entrance fee for each member, whose place of business is in Cocanada, is Rs. 100 and for each member whose place of business is elsewhere is Rs. 50. The subscription for each member whose place of business is in Cocanada is Rs. 120 per annum, payable quarterly, and for each member whose place of business is elsewhere is Rs. 60 per annum, payable in advance. The Committee usually meets once a month on the penultimate Thursday and the general body meets on the Last Thursday.

A Fortnightly Circular of current rates of produce, freights, and exchange is drawn up by the Committee.

DEPARTMENT OF COMMERCIAL INTELLIGENCE AND STATISTICS.

The Department of Statistics was reabsorbed into the Department of Commercial Intelligence with effect from the 1st December 1922. The joint department has its office at No. 1, Council House Street, Calcutta, the headquarters of the Director-General. It embraces two distinct classes of work: (*a*) the collection and dissemination of information connected with overseas trade which may be of use to Indian firms and (*b*) the compilation and publication of All-India statistics.

For some time past the Government of India have felt the necessity for the creation of a Central Statistical Research Bureau for the continuous analysis and interpretation of economic and statistical facts and phenomena and they have recently established the nucleus of a Statistical Research Bureau under the Director-General of Commercial Intelligence and Statistics at their headquarters. The Director-General is now stationed at the headquarters of the Government of India with a Deputy Director of Commercial Intelligence and a Deputy Director of Statistics at Calcutta and a new Deputy Director of Statistical Research at the headquarters.

Among the important publications for which the Director-General is responsible are the following annual volumes Review of the Trade of India, Statement of the Foreign Sea-borne Trade and Navigation of British India, Statistical Abstract for British India, Agricultural Statistics, Estimates of Area and Yield of Principal Crops and Indian Customs Tariff. The department also publishes a weekly journal—"The Indian Trade Journal"—the principal features of which are (*a*) information as to tariff change in foreign countries which affect Indian interests (*b*) notices of tenders called for and contracts

placed by Government departments and public bodies, (*c*) crop reports and forecasts, (*d*) Government orders, communiques and other notifications affecting trade, (*e*) analysis of Indian trade statistics, (*f*) market reports, prices and trade movements of the staple exports and imports, (*g*) trade enquiries for securing trade introductions, (*h*) summaries of the leading features of consular and other trade reports, and (*i*) abstracts of the proceedings of the various Chambers of Commerce in India.

The Department also administers the COMMERCIAL LIBRARY AND READING ROOM located at No. 1, Council House Street, Calcutta. This was at first a small departmental library used for the purpose of answering enquiries, but in 1919 the Government of India agreed to the formation of a combined technological library of reference in Calcutta in place of the separate libraries attached to the Departments of Commercial Intelligence, Statistics, and Patents and Designs, and the resultant Commercial Library and Reading Room was placed under the administrative control of the Director-General. It has now been expanded into a first-class technical library containing over 13,863 volumes on different subjects of commercial, economic and industrial interest as well as Indian and foreign statistical publications, and over 380 technical and commercial journals and market reports. Ordinarily books are consulted in the Library, but they are also available on loan upon deposit of value throughout India.

The Department works in close co-operation with Directors of Industries and other Government Departments in India, with the Indian Trade Commissioners in London and Hamburg with His Majesty's Trade Commissioners in India and the Dominions, and with Consular Officers in various parts of the world. And the yearly increase in its correspondence shows that it is steadily being used more and more both by firms in India and by overseas firms interested in Indian exports.

THE BRITISH TRADE COMMISSIONER SERVICE IN INDIA.

The British Trade Commissioners in India are part of the world-wide Commercial Intelligence Organisation of the Imperial Government. The Department of Overseas Trade, London, which is the headquarters of this organisation, is a joint department of the Board of Trade and the Foreign Office and was created in 1917 with the specific object of stimulating the overseas trade of the United Kingdom by securing commercial information from all parts of the world; by disseminating it to British manufacturers and exporters; by undertaking such special constructive activities as may be found possible; and by assisting traders in the removal of their difficulties. The Department has nothing to do with the regulation of trade. It passes no measures and makes no restrictive or regulative orders. Briefly, the policy on which it is based is the policy of assistance without interference.

The Department of Overseas Trade maintains a network of trained and experienced Commercial Intelligence Officers throughout the world; who forward a constant supply of commercial information to London and provide local assistance in the promotion of British economic interests. Those overseas officers who are stationed in the British Empire are members of the Trade Commissioner Service while Foreign countries are served by the Commercial Diplomatic Service forming part of the British Diplomatic Missions and by the Consular Service.

Sir (then Mr.) Thomas M. Ainscough, C.B.E., was appointed His Majesty's Senior Trade Commissioner in India in January 1918 and opened an office in Calcutta in March of that year. For five years, owing to the pressing need for economy in the Public Service, he was singlehanded in covering this vast territory. In 1923, however, H.M.'s Government sanctioned the opening of an office in Bombay and the creation of an additional Trade Commissioner's post in Calcutta. Mr. W. D. M. Clarke holds the appointment of H.M.'s Trade Commissioner at Bombay and in 1930 Mr. R.B. Willmot was appointed as H.M.'s Trade Commissioner at Calcutta. The territory in now divided between the Calcutta and Bombay posts and this development allows the Senior Officer to travel almost continuously to any part of India which may call for his attention and to devote his time to some of the broader politico-economic problems which are becoming so important in view of the changing political conditions in India.

Function of Commissioner.—The primary duty of the British Trade Commissioner comprises the collection of information in regard to opportunities that may arise within his territory for securing and developing trade by British manufacturers and merchants, both in the United Kingdom and other parts of the British Empire. He is, therefore, enjoined carefully to watch and report from time to time to the Board of Trade and the Governments of the Dominions concerned on all matters affecting the trade, industry and commerce of his area. His general functions are to maintain cordial relations with the governing authorities of his area; to enter into personal relations with the Chambers of Commerce, Trade Associations, and similar bodies, and with the principal representative importers and local manufacturers; to visit the principal commercial centres; to report upon foreign competition, on financial and trade conditions, and new legislation affecting trade; to make an annual general report on the conditions and prospects of trade in his area; and to furnish special reports and monographs on particular questions which are likely to be of interest to British manufacturers and exporters. He is also expected to supply a regular flow of commercial information of all kinds to his department; to maintain an active correspondence with firms in the United Kingdom or the Dominions who wish to extend their trade with his area; and to give all possible assistance to the representatives of British firms who may visit his territory.

Every efforts is made by His Majesty's Trade Commissioners to keep in touch with British representatives and agents in India. The offices are equipped with a complete range of directories and reference books of all kinds and information is available with regard to such matters as tariff conditions, port dues and charges throughout the world, etc. A library consisting of over 1,000 catalogues of the leading British manufacturers is maintained in Calcutta and Bombay, and firms desiring information with regard to specific manufacturers of particular machinery or processes are invited either to call personally or to communicate their requirements in writing. It is hoped that local importers and buyers will co-operate by making a more extended use of the information available in the offices and by bringing to the attention of the British Trade Commissioners any cases where the interests of exporters from the United Kingdom or the Dominions may be adversely affected by foreign competition or otherwise.

For many years British traders have deplored the fact that there have not been available officials with commercial experience who could help them in voicing their difficulties and in meeting foreign competition. As a rule these complaints eulogized the Consuls of other countries and invited the attention of Government to their many virtues. In response to this agitation the greatest care has been taken by the British Government to select, as their trade officers Overseas, men of sound commercial training and experience who have acquired some reputation in their respective spheres, and a comprehensive and businesslike organization has been built up at the Department of Overseas Trade, London, to deal with the information sent home. It now rests with the British mercantile community, both at home and also Overseas, to co-operate freely and frankly with the Trade Commissioners and to recognize the work they are doing in the Imperial interest by assisting them with such information and particulars with regard to foreign competing goods, conditions of trade, etc., as they are able to afford.

H. M.'s TRADE COMMISSIONERS IN INDIA.

Calcutta—
Sir Thomas M. Ainscough, C.B.E.,
His Majesty's Senior Trade Commissioner in India and Ceylon.

Imperial Trade Correspondent,
The Principal Collector of Customs, Colombo.

THE INDIAN CENTRAL COTTON COMMITTEE.

The Indian Cotton Committee of 1917-18, a full summary of whose report appears on pages 291-294 of the Indian Year Book of 1922, reviewed the position of cotton growing in India very thoroughly and made a series of recommendations for the improvement of cotton growing and marketing which have proved to be of the greatest value. One of their recommendations was that a permanent Indian Central Cotton Committee should be established to promote the welfare of the cotton-growing industry generally, to advise the Government of India and Local Governments in regard to matters of cotton policy, especially with reference to legislation for the prevention of malpractices and similar matters.

The Indian Central Cotton Committee was appointed by resolution of the Government of India in April 1921, and worked as an advisory body until 1923. Another recommendation of the original Committee was that a cotton cess should be levied to provide funds for the work of the Central Cotton Committee and for agricultural and technological research on cotton. The Cotton Cess Act was passed in 1923 and at the same time the Central Cotton Committee was incorporated and its membership enlarged in order to make it fully representative of all sections of the industry. Its constitution and present membership is as follows :—

President, ex-officio.—Dewan Bahadur Sir T. Vijayaraghavcharya, K.B.E., Vice-Chairman, Imperial Council of Agricultural Research, Simla or Delhi.

Representing the East India Cotton Association, Ltd., (Vice-President)—Sir Purshotamdas Thakurdas, KT., C.I.E., M.B.E., C/o Messrs. Narandas Rajaram & Co., Navsari Chambers, Outram Road, Fort, Bombay.

Ex-Officio—B. C. Burt, Esq., C.I.E., M.B.E., I.A.S., Agricultural Expert, Imperial Council of Agricultural Research, Simla or Delhi.

Representing the Agricultural Department, Madras.—S. V. Ramamurty, Esq., I.C.S., Director of Agriculture, Madras.

Representing the Agricultural Department, Bombay Presidency.—The Director of Agriculture, Bombay Presidency, Poona.

Representing the Agricultural Department, United Provinces.—P. B. Richards, Esq., I.A.S., Entomologist to Government, United Provinces, Cawnpore.

Representing the Agricultural Department, Punjab.—The Director of Agriculture, Punjab, Lahore.

Representing the Agricultural Department, Central Provinces.—J. H. Ritchie, Es;, M.A., B.Sc., I.A.S., Director of Agriculture, Central Provinces, Nagpur.

Representing the Agricultural Department, Burma.—F. D. Odell, Esq., I.A.S., Deputy Director of Agriculture, West Central Circle, Magwe, Burma.

Ex-officio—The Director-General of Commercial Intelligence & Statistics, 1, Council House Street, Calcutta.

Representing the Bombay Millowners' Association.—S. D. Saklatvala, Esq., C/o Messrs. Tata Sons Ltd., Bombay House, Bruce Street, Fort, Bombay.

Representing the Bombay Chamber of Commerce.—H. B. Moore, Esq., C/o The Bombay Co., Ltd., Wallace Street, Fort, Bombay.

Representing the Indian Merchants' Chamber, Bombay.—Chunilal B. Mehta, Esq., 51, Marwadi Bazaar, Sheik Memon Street, Bombay 2.

Representing Cotton Growers, Punjab.—Sardar Gampuran Singh, Bar-at-Law, M.L.C., Honorary Secretary to the Central Co-operative Bank, Ltd., Lyallpur, Punjab.

Representing Cotton Growers, Punjab.—Mian Nurullah, M.L.C., Lyallpur, Punjab.

Representing Cotton Growers, C. P. and Berar.—N. M. Deshmukh, Esq., M.A. (Cantab), Bar-at-Law, Nagpur, C. P.

Representing Cotton Growers, C. P. and Berar.—Janrao Bajirao Deshmukh, Esq., Morshi Road, Amraoti, Berar.

Representing Hyderabad State.—B. A. Collins, Esq., C.I.E., I.C.S., Director-General and Secretary to Government, Department of Commerce and Industries, H. E. H. the Nizam's Government, Hyderabad, Deccan.

Representing Baroda State.—C. V. Sane, Esq., M.Sc. (Wiscon), Director of Agriculture, Baroda State, Baroda.

Representing Gwalior State.—Hiralal H. Pandya, Esq., Agricultural Adviser, Gwalior State, Gwalior.

Representing Rajputana and Central India States.—F. K. Jackson, Esq., N.D.A. (Hons.), Dip. Agri. (Cantab), Director, Institute of Plant Industry, Indore, C.I.

ADDITIONAL MEMBERS NOMINATED BY THE GOVERNOR-GENERAL-IN-COUNCIL.

D. N. Mahta, Esq., Economic Botanist to Government, Central Provinces, Nagpur.

Dr. W. Burns, D.Sc., I.A.S., Director of Agriculture, Bombay Presidency, Poona.

Representing the Mysore State.—Dr. L. C. Coleman, C.I.E., Director of Agriculture, Mysore State, Bangalore.

M. R. Ry. V. Ramanatha Iyer, Avargal, Cotton Specialist, Lawley Road Post Office, Coimbatore.

Representing the Holkar State.—Mashir Bahadur S. V. Kanungo, M.A., Commissioner of Customs, Excise and Commerce, Holkar State, Indore.

W. J. Jenkins, Esq., M.A., B.Sc., I.A.S., Chief Agricultural Officer in Sind, Karachi.

Representing the Indian Merchants' Association, Karachi.—Girdharlal B. Kotak, Esq., B.A., C/o Messrs. Kotak & Co., Navsari Buildings, Bornby Road, Bombay.

Rai Saheb Thakur Ram Prasad Singh, Economic Botanist to Government (for Cotton), United Provinces, Cawnpore.

Khan Bahadur Nawab Fazl-i-Ali Khan, Chairman, District Board, and President, Central Co-operative Bank, Ltd., Gujarat (Punjab).

Khan Saheb Farrukhbeg Sadikalibeg Mirza, Bar-at-Law, President, District Local Board, Nawabshah, Sind.

Representing the Cotton Millowners of Delhi.—Lala Shri Ram, Delhi Cloth and General Mills, Delhi.

Secretary.—Mr. P. H. Rama Reddi, M.A., B. Sc., I.A.S.

Director, Technological Laboratory—Dr. Nazir Ahmad, M.Sc., Ph.D.

Publicity Officer.—Mr. R. D. Mhtra, M.A., Agri. (Oxon), Post Grad. Dip. Agri. (Oxon), Post Grad. Res. B. Litt. (Oxon.)

Office.—Vulcan House, Nicol Road, Ballard Estate, Bombay.

From the commencement the Central Cotton Committee took steps to deal with the various malpractices reported by the original Committee which by spoiling the reputation of the Indian cottons and rendering them less valuable for spinning purposes, were reducing the returns of the grower and causing great economic loss to the country at large.

The Cotton Transport Act passed in 1923 enables any Local Government with the consent of its Legislative Council to notify definite areas of cotton for protection and to prevent the importation of cotton from outside the area except under license. Prior to the passing of the Act inferior cottons were imported in large quantities into the staple cotton tracts for purposes of adulteration, and the reputation of several valuable cottons had been ruined by this abuse. The Act has now been applied to the most important staple cotton areas of the Bombay and Madras Presidencies and the Central Provinces and of the Baroda, Rajpipla, Chhota Udepur, Hyderabad, Indore, and Sangli States and with excellent results.

The Cotton Ginning and Pressing Factories Act (XII of 1925) subsequently passed provides for a certain measure of control of ginning and pressing factories and especially for the marking of all bales of cotton pressed with a press mark and serial number which enables them to be traced to their origin. This Act, with the minimum of official interference, places the cotton trade in a position itself to deal with abuses, and should lead to a very marked improvement in the quality of Indian cottons.

The Central Cotton Committee has also devoted considerable attention to constructive action for the improvement of the marketing of cottons and to bringing to the notice of the trade, both in India and abroad, those improved varieties which have now reached a commercial scale and has carried out some important enquiries into the financing of the cotton crop up-country and primary cotton marketing, and the effect of "pools" of cotton ginning and pressing factories on the price paid to the growers for their produce. As an instance of the progress in cotton growing which has been made since 1917 it may be stated that since that date approximately half a million bales of cotton of medium staple have been added to the Indian crop by the work of the Agricultural Departments. In general it may be said that the Committee affords a common meeting ground for representatives of all sections of the Cotton trade and of the cottongrowing industry, thus enabling a number of problems to be tackled from every point of view and definite progress made towards their solution.

Research Studentships.—The Committee has also instituted a scheme of research studentships to enable distinguished graduates of Indian Universities to undertake research on cotton problems under the direction of experienced research workers in India. Scholarships for training abroad are also sometimes granted.

STATISTICS.—By the efforts of the Committee great improvement has been effected in cotton statistics. The compilation of statistics relating to (1) Indian raw cotton consumed in spinning mills in India, (2) exports by sea and receipts at mills of Indian cotton classified by varieties, (3) stocks of cotton held on the last day of the season by the trade at important cotton centres in India, and by the mills, and (4) loose cotton received in the spinning mills of the major cotton growing provinces, the establishment of weekly statistical returns relating to the number of bales of raw cotton pressed in India, and the revival of rail-borne trade statistics for cotton are some of the results already achieved by the Committee in this direction.

Research.—By means of the Cotton Cess the Committee is provided with funds for the promotion of research. It maintains in Bombay a fully equipped Technological Laboratory which includes a complete experimental, spinning plant and a scientific laboratory for research on the cotton fibre. This laboratory provides Agricultural Departments with complete and authoritative reports on the spinning value of new cottons, thus providing a much needed facility. In addition it is now possible to undertake research work on a number of questions connected with the spinning qualities of cotton which have not been touched in the past. The Laboratory is unique in that it is probably the only institution of its kind which approaches the subject primarily from the standpoint of the grower.

The Committee contributes the greater part of the funds for the Indore Institute of Plant Industry which is a Central Agricultural Research Institute for cotton where many problems of fundamental importance are being studied.

In addition by means of grants-in-aid to Agricultural Departments it has provided for special investigations on problems of general applicability which would otherwise have been left untouched through lack of staff and funds. Such schemes are in operation in all major cotton-growing provinces and now number twenty-seven.

The Committee also assists by means of grants to Agricultural Reports in Provinces and States and to Co-operative Cotton Sale Societies in the wider distribution of seed of improved varieties of cotton. There are 16 such schemes in operation at present.

His Excellency the Viceroy (Lord Reading) when he visited Bombay in December 1924 and formally opened the Committee's Spinning Laboratory laid great stress on the importance and value of the Committee's work.

THE EAST INDIA COTTON ASSOCIATION, LIMITED.

Bombay.—The Association is the outcome of the findings of the Indian Cotton Committee which was appointed by the Governor-General in Council under a resolution dated September 27th, 1917. Until the end of 1917 the Cotton Trade of Bombay was in the hands of seven distinct bodies, *viz.*, The Bombay Cotton Trade Association, Ltd., The Bombay Cotton Exchange, Ltd., The Bombay Millowners' Association, The Bombay Cotton Brokers' Association, Ltd., The Marwari Chamber of Commerce, The Bombay Cotton Merchants' and Muccadums' Association. Ltd., and The Japanese Cotton Shippers' Association. None of these bodies were representative of the trade as a whole and their interests often came into conflict with each other. The necessity of a system of periodical settlements, such as existed in Liverpool, was badly felt, especially when speculation was rife in futures which was so excessive in 1918 that the Trade had to invoke the aid of Government to prevent a financial crisis.

The **Cotton Contracts Committee** was created under the Defence of India Act in June 1918 as a temporary measure under the Chairmanship of Mr. G. Wiles, I.C.S. This body was replaced by the Cotton Contracts Board in 1919, which continued to function until May 1922, when the Act, under which the Board worked, was repealed, and its functions were carried on by the East India Cotton Association under Bombay Act No. XIV of 1922.

The Association continued to function under the above Act until 31st October 1932. With effect from 1st November 1932 the Association has been regulating transactions in cotton under Bombay Act No. IV of 1932 under which it has been declared to be a recognised Cotton Association.

The present constitution of the Board is as follows:—

Haridas Madhavdas, Esq., (*President*), Sellers' Panel; Bhaidas Nanalal, Esq., (*Vice-President*); Sellers' Panel; H. F. Milne, Esq., Buyers' Panel; L. F. H. Goodwin, Esq., Buyers' Panel; R. L. Ferad, Esq., Buyers' Panel; J. G. Anderson, Esq., Buyers' Panel; Surajmal Khialiram, Esq., Sellers' Panel; Chimanlal B. Parikh, Esq, Sellers' Panel; Begraj Gupta, Esq., Brokers, Panel; Chunilal B. Mehta, Esq., Brokers' Panel; Jagjivandas Dossabhai, Esq., Brokers' Panel; P. N. Philon, Esq., Brokers' Panel; Jamnadas Adukia, Esq., Brokers' Panel; Ramdeo Anandilal Podar, Esq., Brokers' Panel; N. M. Deshmukh, Esq., M.A.(Cantab), Bar-at-Law; Mian Nurullah, Esq., M.L.C. Nominated on the Board of Directors as Representatives of Growers' of Cotton by the Indian Central Cotton Committee.

Officers.

D. Mehta, Esq., B.A., Secretary, C. M. Parikh, Esq., B. Com., Assistant Secretary, A. R., Menezes, Esq., Manager, Clearing House.

Some of the objects for which the Association is established are:—To provide and maintain suitable buildings or rooms for a Cotton Exchange in the City of Bombay and elsewhere in India and to regulate admission to and prohibition of the use thereof and the nature and times of such user whether in the case of the general body or particular classes or any individual or firm or company using the Exchange; to provide forms of contracts compulsory or permissive and regulate the making, carrying out and enforcement or cancellation of contracts; to adjust by arbitration or otherwise controversies between persons engaged in the Cotton Trade; to establish just and equitable principles in the said Trade; to maintain uniformity of control of the said trade; to fix or adopt standards of classification of cotton, to acquire, preserve and disseminate useful information connected with the Cotton interest throughout all markets; to decrease or insure the local risk attendant upon business; and generally to control, promote and regulate the Cotton Trade in the Presidency of Bombay and elsewhere in India, improve its stability and augment the facilities with which it may be conducted. To establish and maintain a Clearing House for the purpose of dealing with cotton transactions, and to regulate admission to and prohibition of the user thereof and the nature and times of such use whether in the case of the general body or particular classes or any individual or firm or company using the Clearing House. To regulate the handling and exportation of Cotton from India and the importation of Cotton into India in so far as it may be imported. To bring, prosecute, or defend, or aid in bringing, prosecuting, or defending any suits, actions, proceedings, applications, or arbitrations on behalf of Members or Associate Members or Special Associate Members or otherwise as the Directors of the Association may think proper or conducive to the objects of the Association, and to prescribe the principle of framing of contracts with a view to eliminate the temptation and possibility of speculative manipulation.

The Association has a fine Exchange Building at Sewri Cotton Depot, containing 121 Buyers' Rooms and 84 Sellers' Rooms, and a large Trading Hall on the lines of Liverpool and New York Exchanges.

The inaugural ceremony of the opening of the Exchange Building was performed by His Excellency Sir Leslie Wilson, Governor of Bombay, on the 1st December 1925 in the presence of a large gathering which included most of the prominent business men of the City and many leading citizens.

There is a membership of 398 members.

The Bombay Cotton Annual containing matters relating to every branch of the Trade is published annually in December and statistics are issued twice weekly.

The Textile Industry.

India has been the home of the cotton trade from the earliest times. Its cotton, known as white wool, was well known to the ancients and its cloth was familiar to the West in the days of the overland route. The name Calico comes from the fine woven goods of Calicut, and the products of the Dacca handlooms are still remarkable as the finest muslins human skill can produce.

Indian Cotton.

The exports of Indian cotton began to assume importance with the opening of the sea route. They received an immense stimulus during the American Civil War, when the close blockade of the Confederate ports produced a cotton famine in Lancashire, and threw the English spinners back on India for their supply of raw material. When the war broke out the shipments of Indian cotton were 528,000 bales but during the last year of the war they averaged 973,000 bales. Most of this cotton was sold at an enormously inflated price, and induced a flow of wealth into Bombay, the great centre of the trade, for which there was no outlet. The consequence was an unprecedented outburst of speculation known as the "Share Mania," and when the surrender of Lee re-opened the Southern Ports widespread ruin followed. It is estimated that the surplus wealth brought into the country by the American Civil War aggregated £92 millions. Since then the cultivation of Indian cotton, although interrupted by famine, has steadily increased. For the last season for which returns are available, 1932-33 the total area in all territories reported on was computed at 22,588,000 acres and the total estimated outturn was 4,516,000 bales of 400 lbs. as compared with 23,522,000 acres and 4,064,000 bales in 1931-32.

Bombay, the Central Provinces and Hyderabad are the chief producing centres. The following table gives the rough distribution of the outturn. The figures are the estimated figures for the past season, and are not exact, but they indicate the distribution of the crop :—

Provinces and States.	1932-33. (Provisional Estimates).	
	Acres in Thousands.	Bales of 400 lbs. (In thousands)
Bombay (*a*)	6,587	1,457
Central Provinces and Berar	4,216	740
Punjab (*a*)	2,268	652
Madras (*a*)	1,976	412
United Provinces (*a*)	527	170
Burma	320	62
Bengal (*a*)	76	24
Bihar and Orissa (*b*)	65	13
Assam	37	15
Ajmer-Merwara	33	11
North-West Frontier Province	16	3
Delhi	2	1
Hyderabad	3,602	534
Central India	1,007	135
Baroda	722	144
Gwalior	597	76
Rajputana	419	57
Mysore	88	10
Total	22,558	4,516

(*a*) Including Indian States.

Note.—A bale contains 400 lbs. of cleaned cotton.

(*b*) Excluding certain feudatory states which report an area of 28,000 acres with a yield of 8,000 bales, as against 29,000 acres and 7,000 bales last year.

EXPORTS OF RAW COTTON FROM INDIA.

(In thousands of bales of 400 lbs.) to various Countries for year ending 31st March :—

Countries.	1929-30.	1930-31.	1931-32.	1932-33.

TOTAL ..	4,070	3,926	2,369	2,063

Bombay is the great centre of the cotton trade. The **principal varieties** are Dholleras, Broach, Oomras (from the Berars), Dharwar and Coomptas. Broach is the best cotton grown in Western India. Hinganghat cotton, from the Central Provinces, has a good reputation. Bengals is the name given to the cotton of the Gangetic valley, and generally to the cottons of Northern India. The Madras cottons are known as Westerns, Coconadas, Coimbatores and Tinnevellys. The best of these is Tinnevelly. Cambodia cotton has been grown with success in Southern India, but it shows a tendency to revert. The high prices of cotton realised of recent years have given a great impetus to cultivation. Government have also been active in improving the class of cotton produced, by seed selection, hybridization and the importation of exotic cottons. Although these measures have met with a considerable measure of success, they have not proceeded far enough to leaven the whole outturn, which still consists for the most part of a short-staple early maturing variety suitable to soils where the rainy season is brief.

Reference has been made to the popularity of the Indian handloom cloths in the earliest days of which we have record. This trade grew so large that it excited alarm in England; and it was killed by a series of enactments, commencing in 1701, prohibiting the use or sale of Indian calicoes in England. The invention of the spinning jenny and the power loom and their development in England converted India from an exporting into an importing country, and made her dependent on the United Kingdom for the bulk of her piece-goods. The first attempt to establish a cotton mill in India was in 1838, but the foundations of the industry were really laid by the opening of the first mill in Bombay in 1856. Thereafter, with occasional set backs from famine, plague and other causes, its progress was rapid.

The following statement shows the quantity (in pounds) of yarn of all counts spun in all India for the twelve months April to March, in each of the past 4 years :—

	1929-30.	1930 31.	1931-32.	1932-33.
BRITISH INDIA.

(*a*) Figures for Ratlam are being reported from April 1932.

The spinning of yarn is in a large degree centred in Bombay, the mills of that province producing nearly 55 per cent. of the quantity produced in British India. The United Provinces of Agra and Oudh and Madras produced about 19.4 per cent. while Bengal and the Central Provinces produced 4·0 and 4·4 per cent. Elsewhere the production is as yet very limited.

Bombay Island.

Here is a detailed statement of the quantity (in pounds) and the counts, or numbers, of yarn spun in Bombay island :—

	1928–29.	1929–30.	1930–31.	1931–32.	1932–33.

In the early days of the textile industry the energies of the millowners were largely concentrated on the production of yarn, both for the China market, and for the handlooms of India. The increasing competition of Japan in the China market, the growth of an indigenous industry in China and the uncertainties introduced by the fluctuations in the China exchanges consequent on variations in the price of silver compelled the millowners to cultivate the Home market. The general tendency of recent years has been to spin higher counts of yarn, importing American cotton for this purpose to supplement the Indian supply, to erect more looms, and to produce more dyed and bleached goods. This practice has reached a higher development in Bombay than in other parts of India, and the Bombay Presidency produced in 1932-33 nearly 71·6 per cent. of the cloth woven in India. The United Provinces produced 5·1 per cent., the Central Provinces 2·5 per cent. and Madras 2·3 per cent. Grey and Bleached goods represent nearly 77 per cent. of the whole production.

Analysis of Woven Goods.

The following brief extract is taken from the statement of the quantity (in pounds and their equivalent in yards) and description of woven goods produced in all India, including Native States:—

	1929-30.	1930-31.	1931-32.	1932-33.
Grey and Bleached piece-goods—				
Pounds	421,758,613	460,325,143	520,016,204	531,791,526
Yards	1,814,920,801	2,003,490,240	2,311,104,465	2,422,997,054
Coloured piece-goods—				
Pounds	125,858,886	117,518,225	138,621,286	150,723,943
Yards	604,059,124	557,642,795	678,786,696	746,901,445
Grey and coloured goods other than piece-goods—

Bombay Presidency Woven Goods.

The output of woven goods during the three years in the Bombay Presidency was as follows:—

The weight (in pounds represents the weight of all woven goods; the measure in yards represents the equivalent of the weight of the grey and coloured piece-goods.)

	1929-30.	1930-31.	1931-32.	1932-33.
Pounds	376,413,138	392,057,330	459,247,935	462,222,027
Yards	1,724,925,196	1,829,793,378	2,188,300,219	2,265,897,230
Dozens	960,219	531,704	656,462	608,700

The grand totals for all India are as follows:—

	1929-30.	1930-31.	1931-32.	1932-33.
Pounds	562,058,731	590,336,923	672,256,961	694,901,056
Yards	2,418,979,925	2,561,133,035	2,989,891,101	3,169,898,499
Dozens	1,737,182	1,272,541	1,453,704	1,693,312

Progress of the Mill Industry.

The following statement shows the progress of the Mill Industry in the whole of India.

Years ending 30th June.	Number of Mills	Number of Spindles.	Number of Looms.	Average No of Hands Employed Daily.	Approximate Quantity of Cotton Consumed.	
					Cwts.	Bales of 392 lbs.
1878	53	12,89,706	10,533	Not	stated.	Not stated.
1879	56	14,52,794	13,018	42,914	9,36,547	2,67,585

* Year ending 31st August. †Does not include 31 Mills in course of erection.

The Jute Industry.

Considering its present dimensions, the jute industry of Bengal is of very recent origin. The first jute mill in Bengal was started at Rishra in 1855, and the first power-loom was introduced in 1859. The original outturn was 8 tons per day. In 1909 it had grown to 2,500 tons per day, it is now 4,000 tons per day, and it shows every indication of growing and expanding year by year. Another interesting thing about the jute industry of Bengal is that, although it is practically a monopoly of Scotsmen from Dundee, the industry itself owes its inception to an Englishman. The founder of the industry was George Acland, an Englishman, who began life as a midshipman in the navy, and was for some years in the East India Marine Service. He quitted this service while still a young man, and engaged in commercial pursuits in Ceylon, where he was successful. Later on he turned his attention to Bengal, and arriving in Calcutta about 1853 he got into touch with the management of the paper works, then at Serampore, where experiments were being tried with country grasses and fibre plants to improve the quality or cheapen the manufacture of paper. This seems to have suggested to Acland the manufacture of rhea, and in 1854 he proceeded to England, with a view to obtaining machinery and capital in order to manufacture goods from that material. During this trip he visited Dundee, and while there Mr. John Kerr, of Douglas Foundry, suggested to him the importing of machinery into Bengal "where the jute comes from and spin it there." This suggestion bore fruit, for shortly afterwards Acland placed orders with Kerr for a few systems of preparing and spinning machinery, and returned to India the same year accompanied by his two sons and a few Dundee mechanics who were to assist him in erecting and operating the first jute mill in Bengal. This, as has been stated, was at Rishra, the site of the present Wellington mills, near Serampore, and here, in 1855, the first machine spun jute yarns were made. As not infrequently happens the pioneer got very little out of his venture. After several ups and downs the Acland interest in the Rishra mill ceased in 1867, and the company which Acland had formed in 1854 was wound up in 1868.

Power-looms.—The pioneer's example was followed by Mr. George Henderson of that silk firm, and in 1859 the Borneo Jute Co. was launched under his auspices. To this company is due the credit of introducing the power-loom for jute cloth. Unhampered by the financial difficulties which had burdened the Aclands, the Borneo Jute Co. made rapid progress, doubling their works in 1864, and clearing their capital twice over. In 1872 the mills were turned into a limited liability company, the present "Barnagore Jute Factory Co., Ld." Four other mills followed in succession—Gouripore, Serajgunge, and India Jute Mills.

"From 1868 to 1873," writes Mr. David Wallace in "The Romance of Jute," "the five mills excepting the Rishra mill simply coined money and brought the total of their looms up to 1,250." To illustrate the prosperity of the industry at this period we may take the dividends paid by the Barnagore Company. On the working of their first half year, a 15 per cent. interim dividend was declared, which seemed to justify the enormous capital at which the company was taken over from the Borneo Company, and shares touched 68 per cent. premium. The dividend for the first year, ending August 1873, was 25 per cent., for 1874, 20 per cent., and for 1875, 10 per cent. Then came a change. The investing public had forgotten the effect of the Port Canning bubble, and the condition of the jute industry in 1872-73 seeming to offer a better return than coal or tea, both of which had just enjoyed a boom, it was only necessary to issue a prospectus of a jute mill to have all the shares snapped up in the course of an afternoon.

In 1872–73 three new companies were floated locally—the Fort Gloster, Budge and Sibpore, and two Home companies, the Champdany and Samnugger, all of which commenced operations in 1874. In 1874–5 eight other mills were launched—the Howrah, Oriental (now Union), Asiatic (now Soorah), Clive, Bengal Pressing and Manufacturing Co. (now the Belliaghatta-Barnagore branch mill), Rustomjee (now the Central), Ganges (registered in England), and Hastings, owned by Messrs. Birkmyre Bros., of Greenock fame—in all thirteen new companies, coming on all of a heap and swelling the total looms from 1,250 up to 3,500. This was too much of a strain for the new industry, and for the next ten years all the mills had a severe struggle. The older ones all survived the ordeal, but four of the new concerns—the Oriental, the Asiatic, the Bengal Pressing and Manufacturing Co. and the Rustomjee—became moribund, to appear again later on under new names and management. Fort Gloster also suffered badly.

Between 1875 and 1882 only one new mill was put up. This was Kamarhatty, promoted by Messrs. Jardine, Skinner & Co., which came into being in 1877, as the result of Dr. Barry's visit to Calcutta in 1876, when he transferred the agency of the Gouripore Co. from Messrs. Jardine, Skinner & Co. to his own firm. This mill, together with additions made by some of the other mills, brought the total looms up to 5,150 in 1882. By the end of 1885 the total was further augmented by the Hooghly, Titaghur, Victoria and Kanknarrah mills, bringing the number of looms at work up to 6,700. From this period on to 1894 no new mills came into existence except the Calcutta Twist Mill, with 2,460 spindles, since merged into the Wellington branch of the Champdany Co. Between 1896 and 1900 the following new mills were started:—The Gordon Twist Mill with 1,800 spindles (now acquired by Anglo-India), Khardah, Gondolpara (French owned), Alliance, Arathoon, Anglo-India, Standard, National, Delta (which absorbed the Serajgunge), and the Kinnison. A lull of four years witnessed large extensions to the existing mills after which came the following series of new mills, besides further heavy extensions—Dalhousie, Alexandra, Naihati, Lawrence, Reliance, Belvedere, Auckland, Kelvin and Northbrook. The last decade has seen the construction of Hakumchand, Birla, Shree Hanuman, Gagalbhai, Premchand and Agarpara Mills, which—with the exception of the last-named—are under Indian ownership.

Progress of the Industry.

THE record of the jute industry may well be said to be one of uninterrupted progress. The following statement shews **quinquennial averages** from the earliest year for which complete information is available with actuals for each year from 1917-18 up to 1926-27 and the figures in brackets represent the variations for each period, taking the average of the quinquennium from 1879-80 to 1883-84 as 100 :—

	Number of mills at work.	Authorised Capital (in lakhs of Rs.)	Number (in thousands) of		
			Persons employed daily (average.)	Looms.	Spindles.
Average—					
1879-80 to 1883-84 ..	21 (100)	270·7 (100)	38·8 (100)	5·5 (100)	88 (100)
1884-85 to 1888-89 ..	24 (114)	341·6 (126)	52·7 (136)	7 (127)	138·4 (157)
1889-90 to 1893-94 ..	26 (124)	402·6 (149)	64·3 (166)	8·3 (151)	172·6 (196)
1894-95 to 1898-99 ..	31 (148)	522·1 (193)	86·7 (223)	11·7 (213)	244·8 (278)
1899-1900 to 1903-04..	36 (171)	680 (251)	114·2 (294)	16·2 (295)	334·6 (380)
1904-05 to 1908-09 ..	46 (219)	960 (355)	165 (425)	24·8 (451)	510·5 (580)
1909-10 to 1913-14 ..	60 (286)	1,209 (443)	208·4 (537)	33·5 (609)	691·8 (786)

1929-30	98 (466)	2,186·6 (807)	343·2 (886)	53·9 (980)	1,140·4(1,296)
1930-31	100 (476)	2,360·6 (872)	307·6 (793)	61·8 (1,123)	1,224·9(1,392)

* Revised.

The production of the mills has increased to a still greater extent. The following figures show the exports of jute manufactures and the declared values for the same periods. The value of jute manufactures exported by sea in 1924-25 was over thirty-three times as great as the average value of the export in the period 1879-80 to 1883-84 :—

	Jute manufactures.		
	Gunny bags in millions of number.	Gunny cloths in millions of yards.	Value in lakhs of Rs.
1879-80 to 1883-84	54·9 (100)	4·4 (100)	124·9 (100)
1884-85 to 1888-89	77 (140)	15·4 (350)	162·9 (130)
1889-90 to 1893-94	111·5 (203)	41 (932)	289·3 (232)
1894-95 to 1898-99	171·2 (312)	182 (4,136)	518 (415)
1899-1900 to 1903-04..	206·5 (376)	427·2 (9,709)	826·5 (662)
1904-05 to 1908-09	257·8 (469)	698 (15,864)	1,442·7 (1,154)
1909-10 to 1913-14	339·1 (618)	970 (22,045)	2,024·8 (1,621)
1914-15 to 1918-19	667·6 (1,216)	1,156 (26,273)	4,019·3 (3,218)
1919-20	342·7 (624)	1,275·1 (28,980)	5,0015 (4,004)
1920-21	543·9 (987)	1,352·7 (33,809)	5,299·4 (4,273)

1928-29	497·6 (906)	1,568·2 (35,640)	5,656·4 (4,528)
1929-30	522·3 (951)	1,650·5 (37,511)	5,158·7 (4,130)
1930-31	434·0 (790)	1,270·9 (28,884)	3,148·8 (2,521)
1931-32	388.5 (707)	1,021·0 (23,204)	2,138·6 (1,712)

Until the outbreak of war the exports by sea of raw jute were marked by increases from year to year although the increase was very much less than that in the case of manufactures. During the war years exports declined very considerably. The cessation of the war stimulated the export trade and in 1919-20 the export showed an increase, as compared with the average of the war quinquennium (1914-15 to 18-19). In the following two years, the export recorded a decrease and in 1922-23 they again made a recovery and amounted to 578,000 tons

The total quantity of jute manufacture exported by sea from Calcutta during the year 1922-23 was 668,000 tons as against 639,000 tons in the preceding year and 603,500 tons in the pre-war year 1913-14. The values of these exports amounted to Rs. 40·28 lakhs, or an increase of Rs. 10,36 lakhs over the preceding year and Rs. 12,08 lakhs over the pre-war year. The shipments of gunny bags were valued at Rs. 15,82 lakhs and of gunny cloth Rs. 24,24 lakhs as against Rs. 13,86 and Rs. 15,92 lakhs respectively in the preceding year and Rs. 12,48 and Rs. 15,58 lakhs in the pre-war year.

The price of raw jute reached a very high point in 1906-07, the rate being Rs. 65 per bale; in 1907-08 it dropped to Rs. 42 per bale, and the fall was accentuated in 1908-09 and 1909-10, the price having declined to 36·4 and Rs. 31, in 1917-18 it dropped to Rs. 38-8-0 but rose again in 1919-20 up to Rs. 77-8-0. In 1920-21 it dropped to Rs. 65 but rose again to Rs. 86. It again declined to Rs. 66. In 1921-22 the price rose to Rs. 73 at the end of September, but fell back again to Rs. 50 at the end of November and recovered at Rs. 64 at the close of the year.

The 1932 crop.—The final figures of outturn for the three provinces work out as follows:—

Province.	Yield in Bales.	
	1931.	1932.
Bengal (including Cooch Behar & Tripura States)	5,002,700	6,213,500
Bihar and Orissa	† 367,200	† 543,500
Assam	196,600	340,100
Total ..	5,566,500	7,097,100

Province.	Area in Acres.	
	1931.	1932.
Bengal (including Cooch Behar & Tripura States)	1,613,700	1,845,700
Bihar and Orissa	148,800	170,000
Assam	99,300	127,400
Total ..	1,861,800	2,143,100

† Including Nepal.

The Indian Jute Mills Association now one of the most important, if not the most important, of the bodies affiliated to the Bengal Chamber of Commerce, was started under the following circumstances:—In 1886 the existing mills, finding that, in spite of the constant opening up of new marks, working results were not favourable, came to an agreement, with the late S. E. J. Clarke, Secretary to the Chamber of Commerce, as trustee, to work short time. The only mills which stood out of this arrangement were the Hooghly and Serajgunge. The first agreement, for six months dating from 15th February 1886, was subsequently renewed at intervals without a break for five years up to February 15, 1891. The state of the market at the time of the renewals dictated the extent of the short time, which varied throughout the five years between 4 days a week, 9 days a fortnight and 5 days a week. Besides short time, 10 per cent. of the sacking looms were shut down for a short period in 1890. An important feature of this agreement was a mutual undertaking by the parties not to increase their spinning power during the currency of the agreement, only a few exceptions being made in the case of a few incomplete new mills.

The present officials of the Association are:—

Chairman.—Mr. H. H. Burn, M.L.C.,

Members of Committee:—

Mr. Sheokissen Bhatter, Mr. P. S. Macdonald, Mr. S. K. Acott, Mr. W. A. M. Walker, M.L.C., Mr. A. Wilson, Mr. D. Wilson.

Working days.—With the introduction of the electric light into the mills in 1896, the working day was increased to 15 hours, Saturdays included, which involved an additional amount of cleaning and repairing work on Sundays. In order to minimise this Sunday work and give them a free Sunday, an agitation was got up in 1897 by the Mill European assistants to have the engines stopped at 2 or 3 p.m. on Saturdays. The local Government took the matter up, but their action went no further than applying moral suasion, backed by a somewhat half-hearted threat. The Mill Association held meetings to consider the question and the members were practically agreed as to the utility of early closing on Saturdays, but, *more suo*, could not trust themselves to carry it out without legislation. Unfortunately the Government of India refused to sanction the passing of a Resolution by the provincial Government under the Factory Act and the matter was dropped. Only a year or two ago the Jute Mills Association in despair brought out an American business expert, Mr. J. H. Parks, to advise them on the possibility of forming a jute trust with a view to exercising some control over the production and price of jute. Mr. Parks came, and wrote a report which the Association promptly pigeon-holed because the slump was over and the demand was so prodigious that there was no need to worry about the price of jute.

The working agreements referred to above have been followed by others, differing in points of detail, but with the same object in view namely the restriction of production. During the past 10 years a policy of curtailment of output has been continuously in force. The mills in the membership of the Association,

comprising some 95 per cent of the trade, are at present working 40 hours per week, with 15 per cent of the total complement of looms sealed; and the current agreement incorporates a clause which provides that the mills will not instal any extra productive machinery or relative buildings during the currency of the agreement, which will remain in force until three months notice of intention to alter the present working arrangements, or to terminate the agreement, has expired. In addition to this working arrangement, which as has been stated above applies only to the mills in the membership of the Association, there came into force with effect from 1st August 1932 an agreement with the five principal mills outside the Association, namely Adamjee, Agarpara, Gagalbhai, Ludlow and Shree Hanuman, whereby these mills have undertaken to restrict their working hours to 54 per week up to 30th June 1933. With certain modifications this agreement has since been extended and is now a continuing agreement, subject to six months notice of termination being given by either party, but this notice cannot be given before the 1st July 1934. Five of the Association mills—Premchand, Craig, Waverley, Megna and Nuddea—have also been granted the privilege of working 54 hours per week with a full complement of machinery.

An Association, styled the **Calcutta Jute Dealers Association**, has been formed in Calcutta to promote and to guard the common interests of its members as dealers in jute for local consumption. The members are balers and brokers of jute for sale to the jute mills in and around Calcutta. The present Committee:—Mr. H. A. Luke, *Chairman*. *Members*—Mr D. King, Mr. H. F. Mytton, Mr. G. C. Moon, Mr. A. C. Robertson, Mr. J. W. R. Steven.

Effects of the War.—The official review of the Trade of India in 1916-17 says:—The value of the exports of raw jute increased in 1916-17 by nearly Rs. 65 lakhs to Rs. 1,629 lakhs. The quantity exported, however, was less than in the preceding year. The estimated yield of the crop was 12 per cent. above that of the previous year, *viz.*, 1,490,000 tons or 8,340,000 bales. Owing to the lack of tonnage and other abnormal circumstances brought about by the war, the quantity exported was 10 per cent. below that of the previous year. Of the consumers the United Kingdom and Italy took less, while the United States, France (mainly *via* Dunkirk), Russia (*via* Vladivostok) and Brazil took greater quantities. There were, of course, no exports to enemy countries which took more than 27 per cent. in the five years ending 1913-14, the pre-war year. The increase in the value accompanied by a decrease in the volume of exports was due to the very high range of prices during the months of September, October, November and December. Towards the close of the year under review prices steadily declined, and have since gone still lower.

Jute Manufactures.—The value of the exports now approximates to Rs. 42 crores. In spite of the war with its attendant difficulties of freight and finance, the exports of gunny cloth showed an increase of Rs. 241 lakhs of which Rs. 163 lakhs were due to higher prices and Rs. 78 lakhs to an increase in the volume of exports. There were also an increase of Rs. 118 lakhs in the value of gunny bags exported. The number of bags shipped increased while the weight decreased, sand bags for war purposes being lighter than the ordinary bags for transporting grain. Exports to Australia in 1916-17 were a record. The United Kingdom with Australia took more than half of the number of bags exported while the United States took more than half of the quantity of cloth exported.

There were 74 mills at work throughout the year with 41,292 looms and 863,339 spindles. The number of persons employed was 285,881. There were no difficulties as regards the supply of labour.

The number of gunny bags shipped from Calcutta during 1922-23 declined from 386 million bags to 342 million bags, but the value increased from Rs. 13,87 lakhs to Rs. 15,82 lakhs. Shipments of gunny cloth rose from 1,120 million yards to 1,251 million yards valued at Rs. 15,92 lakhs and Rs. 24,24 lakhs respectively.

Hemp and Jute Substitutes.

Experiments have been made during the last few years by the Agricultural Department of the Government of India with the **Deccan hemp** plant (*Hibiscus cannabinus*), which yields a fibre very similar to jute. As a result, a new variety of the plant, known as Type 3, has been obtained, which it is now proposed to introduce into several parts of India, and, as a beginning, the variety is to be grown on a number of estates in Bihar. A sample of the fibre prepared from this variety by the usual methods of retting was 10 ft. to 12 ft. long, of an exceptionally light colour, well cleaned, and of good strength. It was valued at £18 per ton with Bimlipatam jute at £12 10s., and Bengal first mark jute at £17 per ton. Deccan hemp has been grown fairly extensively in Bombay, the Central Provinces, and Madras, where it is used for ropes and cordage and also for the manufacture of a coarse sackcloth. A valuable feature of the plant is its suitability for cultivation in such parts of India as are not suitable for jute.

Prior to the war, the United Kingdom's requirements of hemp were mainly supplied by the following countries in order of importance:—the Philippine Islands, New Zealand, India, Russia, Italy and Germany. The opinion appears to be held that the effect of the war will be to cause very considerable changes in the character of the fibre market. There will probably be labour difficulties, it is thought, in the preparation of the hemp crops of Russia and Hungary and it is not unlikely that the world will look to countries such as India for the supply of fibres which may be used as substitutes for the European varieties of hemp. There can be no doubt that one of the early effects of the war was to firm up hemp prices. As far as Indian hemp is concerned, values were persistently depreciated during the first six months of 1914 owing to large stocks held; but the closure of the Russian hemp market on the outbreak of war resulted in a marked improvement in values, and there was a keen demand and a considerable rise in price. Exports from Calcutta during 1922-23 made a great recovery from the previous year. The quantity advanced by 37 per cent. from 197,412 cwts. to 269,487 cwts. and the value from Rs. 26·93 lakhs to Rs. 36·68 lakhs.

THE WOOL INDUSTRY.

Wool exported from India consists not only of wool grown in India itself, but of imports from foreign sources, these latter coming into India both by land and by sea. Imports by sea come chiefly from Persia, but a certain quantity from Persia also comes by land, while the main imports are from Afghanistan, Central Asia, Tibet and Nepal. Quetta, Shikarpur, Amritsar and Multan are the main collecting centres for wool received by land from Afghanistan and Persia, whence it is almost invariably railed to Karachi for subsequent export overseas.

Imports and Exports.—A considerable amount of wool is imported annually from Tibet, and in normal years, from Afghanistan. Imports of raw wool in 1932-33 amounted to 7.2 million lbs. valued at Rs. 42 lakhs, showing a marked increase compared with the previous year. Australia was the largest supplier with 3 millions lbs. and the United Kingdom sent 2.1 million lbs., thus ousting Persia from the second place.

Production in India.—The production of wool in India is estimated at 60 million lbs. the estimate being arrived at from the available figures of the number of sheep in the country and their estimated yield per fleece, the average quantity of wool yielded per sheep per annum being taken at only 2 lbs.

All Indian wools are classed in the grade of **carpet wools**, and it is correct to say of perhaps fully half the breeds of sheep found on the plains of India that they yield a kind of hair rather than of wool. They are reared chiefly on account of the mutton, and the fleece has been generally regarded as of subsidiary interest. In many respects, in actual fact, the Indian plains sheep approximate more nearly to the accepted type of the goat rather than of the sheep. Short remarks in his manual on Indian cattle and sheep, particularly with respect to the Madras type, that they "resemble a greyhound with tucked up belly, having some coarseness of form, the feet light, the limbs bony, sides flat and the tail short."

Mill manufacture.—The number of mills in British India in 1930, the latest year for which details are available, was 12 of which five were in the United Provinces. The paid up capita of these mills was Rs. 68,28,576 and the number of looms and spindles was 1,447 and 69,293 respectively. The average number of persons employed daily in these mills was 4,240. There are no complete figures of production, the last year for which they are available being 1921 when the quantity of woollen goods produced was 3,820,879 lbs. valued at Rs. 1,17,99,396. As regards Indian States there are four woollen mills in Mysore which produced woollen goods of 2,700,201 lbs, in weight in 1930, the value being Rs. 17,83,256. The bulk of the wool used by the Indian mills is Indian wool, although it is supplemented to some extent by the importation of merinos and cross-breds from Australia for the manufacture of the finer classes of goods. Their market for manufactured goods is almost entirely in India itself. Imports of woollen piecegoods in 1932-33 increased by over 8 mil linoyards as compared with the preceding year, and even exceeded the imports of 1929-30 by about a million yards. Imports came chiefly from France, Italy, Japan and the United Kingdom. There was a considerable increase in the number of woollen shawls imported in 1932-33, Germany being the largest single source of supply. Imports of carpets and floor-rugs declined to 188,000 lbs. in 1932-33 from 267,000 lbs. in 1931-32. The share of Persia in this trade receded considerably, but imports from the United Kingdom rose.

Blanket weaving and carpet manufacture are carried on in various parts of the country, notably in the Punjab and the United Provinces. Woollen pile carpets are made in many of the jails. Amritsar had a considerable trade at one time in weaving shawls from *pashm*, the fine under fleece of the Tibetan goat, but its place has been taken to some degree by the manufacture of shawls from imported worsted yarns, but more generally by the manufacture of carpets of a fine quality which find a ready sale in the world market. This work is done entirely on hand looms and the carpets fetch a high price.

Bibliography.—Notes on wool in India. By A. H. Silver and J. K. Mehta, Govt. Press, Calcutta, (1919).

Silk.

In the early days of the East India Company the Indian Silk trade prospered greatly, and various sub-tropical races of the Silkworm were introduced. But the trade gradually declined for the following reasons:—

In the seventeenth and eighteenth centuries India's chief competitor in the silk trade was the Levant Company. Successful efforts, however, were made to acclimatise in Europe one or two races of a temperate worm, procured from China and Japan. When sericulture became part of the agriculture of France and Italy, a quality of silk was produced entirely different from that of India and Turkey, and its appearance created a new demand and organized new markets.

All subsequent experience seems to have established the belief that the plains of India, or at all events of Bengal, are never likely to produce silk that could compete with this new industry. On the lower hills of Northern India, on the other hand, a fair amount of success has been attained with this (to India) new worm, as, for example, in Dehra Dun and Kashmir. In Manipur, it would appear probable that *Bombyx mori*, possibly obtained from China, has been reared for centuries. The caprice of fashion has, from time to time, powerfully modified the Indian silk trade. The special properties of the *korah* silk were formerly much appreciated but the demand for them has now declined. This circumstance, together with defective systems of rearing and of hand-reeling and weaving, accounts largely for the present depression in the mulberry silk trade of India.

Mulberry-feeding worms.—Sir George Watt states that in no other country does the necessity exist so pressingly as in India to treat the subject of silk and the silk industries under two sections, *viz.*, Bombycidae, the domesticated or mulberry-feeding silkworms; and Saturniidae, the wild or non-mulberry-feeding worms. In India the mulberry worm (*Bombyx Mori*) has been systematically reared for many centuries, there being six chief forms of it. In the temperate tracts of India various forms of *Morus alba*, (the mulberry of the European silk-producing countries), are grown specially as food for the silkworm. This is the case in many parts of the plains of Northern India, Baluchistan, Afghanistan, Kashmir, and along the Himalaya at altitudes up to 11,000 feet. The other species even more largely grown for the Indian silkworm is *M. Indica* of which there are many distinctive varieties or races. This is the most common mulberry of Bengal and Assam as also of the Nilgiri hills.

India has three well-known purely indigenous silkworms; the *tasar*, the *muga* and the *eri*. The first is widely distributed on the lower hills, more especially these of the great central table-land, and feeds on several jungle trees. The second is confined to Assam and Eastern Bengal, and feeds on a laurel. The third exists in a state of semi-domestication, being reared on the castor-oil plant. From an art point of view the *muga* silk is the most interesting and attractive, and the cocoon can be reeled readily. The eri Silk, on the other hand, is so extremely difficult to reel that it is nearly always carded and spun—an art which was practised in the Khasi Hills of Assam long before it was thought of in Europe.

Experiments and results.—Numerous experiments have been made with a view to improving sericulture in India. French and other experts are agreed that one of the causes of the decline of the silk industry in India has been the prevalence of diseases and parasites among the worms, the most prevalent disease being pebrine. M. Lafont, who has conducted experiments in cross breeding, believes that improvement in the crops will be obtained as soon as the fight against pebrine and other diseases of the worms is taken up vigorously by the producers of seed and the rearers of worms, while improvement in the quality of the cocoons will be obtained by rearing various races, pure and cross breeds.

In Kashmir and Mysore satisfactory results have been obtained. In the former State sericulture has been fostered on approved European principles with Italian reeling machinery, seed being imported annually on a large scale. In 1897 in Mysore Mr. Tata, after selecting a plantation and site for rearing houses, sent to Japan for a Superintendent and trained operatives. The Mysore authorities have made a grant of Rs. 3,000 a year to the Tata farm in return for instruction given to the people of Mysore in Japanese methods of growing the mulberry and rearing the insects. The products of the Mysore State are exported to foreign countries from Madras. The work of the Salvation Army is also noteworthy in various parts of India. They have furnished experts, encouraged the planting of mulberry trees, and subsidised several silk schools. The draft prospectus has been issued of a silk farm and institute to be started at Simla under the auspices of the Salvation Army. The Lieut.-Governor of the Punjab has permitted the school to be called after his name, and the Punjab Government made a grant of Rs. 2,000 towards the expenses. Sir Dorabji Tata has also made a donation of Rs. 1,000. The Bengal Silk Committee under the guidance of some French experts have conducted cross-breeding experiments with a view to establish a multi-voltine hybrid of European quality. There is a Government sericultural farm at Berhampore, where, it is said, a pure white multi-voltine of silk worm is reared. The results of the Bengal Committee's labours may be summed up as follows: the only really effective method of dealing with the problem is to work up gradually to a point at which the whole of the seed cocoon necessary for the province will be supplied to rearers under Government supervision, and to establish gradually a sufficient number of large nurseries throughout the silk districts of the province.

In 1915 there was issued by the Agricultural Research Institute, Pusa, a *Bulletin* (No. 48 of 1915) entitled "First Report on the Experiments carried out at Pusa to improve the Mulberry

Silk Industry." In a short Prefatory note Mr. Bainbrigge Fletcher (Imperial Entomologist) explains that the object of the Bulletin is to place on record some of the more important experiments which were commenced at Pusa, in the year 1910 and have since been carried on in the endeavour to fix a superior multivoltine race of the Mulberry Silkworm which would not degenerate and which would yield silk better both in quality and outturn than that supplied by the multivoltine races which are reared at present.

Central Nurseries.—The report of the Agricultural Department, Bengal, for the year ending June 30, 1913, gives an account of a scheme which has been devised with the object of reclaiming the silk industry. The aim of the scheme is gradually to establish throughout the silk districts a sufficient number of central nurseries with rearing houses and thus enable the whole of the seed cocoons required in the province to be supplied under Government supervision. It is believed that this is the only really effective method of dealing with the problem. A number of the existing smaller nurseries were closed during 1913 and others are being converted into enlarged and improved central nurseries with rearing houses complete. The ultimate success of the scheme depends largely on the willingness of the rearers to pay an adequate price for pure seed.

A pamphlet was published in 1915, by Mr. M. N. De, Sericultural Assistant at Pusa, which contains practical hints on improved methods which are recommended to be used for reeling mulberry silk in Bengal and other silk producing districts. It has been found that, by the provision of two small pulleys to the ordinary Bengal type of reeling machine, superior thread can be obtained, the cost of the extra apparatus is merely nominal (five or six annas per machine) whilst the suitability of the machine for cottage workers is maintained. By attention to such simple points as the stifling and storage of cocoons and the temperature and quality of the water used in the reeling pans, great improvements can be effected in most silk centres in Bengal and other districts.

Exports of Silk.—As a result of the war the trade has shown in some degree signs of revival from its decadent condition, both as regards its volume and value. The value of exports during 1915-16 improved by Rs. 12 lakhs to Rs. 27½ lakhs, of which raw silk accounted for Rs. 24 lakhs. In 1916-17 the total exports rose to Rs. 54¾ lakhs. In 1932-33 exports of raw silk and silk manufactures amounted to Rs. 318 lakhs in value, compared with Rs. 3·34 lakhs in the previous year.

Indigo.

Indigo dyes are obtained from the Indigofera, a genus of Leguminosae which comprises some 300 species, distributed throughout the tropical and warm temperate regions of the globe, India having about 40. Western India may be described as the headquarters of the species, so far as India is concerned, 25 being peculiar to that Presidency. On the eastern side of India, in Bihar, Bengal, Assam and Burma, there is a marked decrease in the number of species but a visible increase in the prevalence of those that are met with.

There is evidence that when Europeans first began to export the dye from India, it was procured from the Western Presidency and shipped from Surat. It was carried by the Portuguese to Lisbon and sold by them to the dyers of Holland, and it was the desire to obtain a more ample supply of dye stuff that led to the formation of the Dutch East India Company and so to the overthrow of the Portuguese supremacy in the East. Opposition to indigo in 17th century Europe was keen owing to its interference with the wood industry, but it was competition to obtain indigo from other sources than India that led on the first decline of the Indian indigo industry. In the middle of the eighteenth century, when the cultivation of indigo in the West Indies had been given up—partly on account of the high duties imposed upon it and partly because sugar and coffee were found to be more profitable—the industry was revived in India, and, as one of the many surprises of the industry, the province of Bengal was selected for this revival. It had no sooner been organised, however, than troubles next arose in Bengal itself through misunderstandings between the planters, their cultivators and the Government, which may be said to have culminated in Lord Macaulay's famous *Memorandum* of 1837. This led to another migration of the industry from Lower and Eastern Bengal to Tirhut and the United Provinces. Here the troubles of the industry did not end, for the researches of the chemical laboratories of Germany threatened the very existence of any natural vegetable dye. They first killed the maddar dye of Europe, then the safflower, the lac and the *al* dyes of India, and are now advancing rapidly with synthetic indigo, intent on the complete annihilation of the natural dye. Opinions differ on many aspects of the present vicissitude; meantime the exports from India have seriously declined, and salvation admittedly lies in the path of cheaper production both in cultivation and manufacture. These issues are being vigorously faced and some progress has been accomplished, but the future of the industry

can scarcely help being described as of great uncertainty. The issue is not the advantage of new regulations of land tenure, but one exclusively of natural *versus* synthetic indigo. (See Watt's "Commercial Products of India.") In this connection it may be noted that increases in the price of coal in England, due to labour difficulties, have greatly strengthened the position of natural indigo. In February 1915 a conference was held at Delhi when the possibility of assisting the **natural indigo industry** was considered from three points of view—agricultural, research and commercial. The agricultural or botanical side of the question is fully discussed by Mr. and Mrs. Howard of Pusa in Bulletins Nos. 51 and 54 of the Agricultural Research Institute. Other aspects of the question have been fully examined in the Agricultural Journal of India by Mr. W. A Davis Indigo Research Chemist to the Government of India. **An Indigo Cess Bill** was passed in the Imperial Legislative Council in 1918. It provides for a cess on indigo exported from India for the scientific investigation of the methods of cultivation and manufacture of indigo, the proceeds of the cess being received and expended by Government.

Decline of the Industry.—Since synthetic indigo was put upon the market, in 1897, the natural indigo industry of India has declined very rapidly; apart from slight recoveries in 1906-07 and 1911-12, the decline continued without a break until the revival due to the impossibility of obtaining artificial dyes in sufficient quantities during the war.

Exports from India fell to 300 cwts. in 1932-33 from 800 cwts. in the previous year.

OILS AND OIL CAKES.

Oilseeds ranked seventh among India's exports in 1932-33 and represented 8.54 per cent of the total value of exports. The total exports of oilseeds fell from 988,000 tons valued at Rs. 14·59 lakhs in 1931-32 to 733,000 tons valued at Rs. 11·31 lakhs. Details of oilseeds exported during 1932-33 appear in the section of the Year Book dealing with exports.

A pamphlet on the subject which was published by the Commercial Intelligence Department points out that it is both economically and industrially unsound for India to export her oil seeds instead of manufacturing the oils and oil cakes in India. It allows other countries to reap the manufacturers' profits and at the same time deprives Indian agriculture of the great potential wealth, as cattle-food and manure, contained in the oil cakes. An immense quantity of oil is, as a matter of fact, already manufactured in this country by more or less crude processes. Village oil mills worked by bullocks and presses worked by hand exist in all parts of the country and supply most of the local demand for oil. There has also been a great increase in recent years in the number of oil mills worked by steam or other mechanical power. These crush all the commoner oil seeds and development has been especially marked in the case of mustard oil, castor oil and groundnut oil. In spite of all this there has been a perceptible diminution in the export of oil from India, particularly of cocoanut oil and linseed oil, and an increase in the export of oil seeds, which is particularly marked in the case of copra and groundnuts. The situation created by the War has naturally led to too much discussion of the possibility of developing on a large scale the existing oil-milling industry in India.

There are three difficulties with which any proposal to develop in India an **oil-milling industry** on a great scale is faced. In the first place, there exist high protective tariffs in European countries which encourage the export from India of the raw material rather than the manufactured product. Secondly, there is a better market for the oil cake in Europe than in India and the freight on oil seeds is less than the freight on cake. Thirdly, it is much easier and less expensive to transport oil seeds by sea than it is to transport oil. While this has been the position in the European markets, Indian made oils, other than cocoanut oil, have made enough headway in Eastern markets to suggest the possibility of a development of those markets.

The problem of finding a market for **oil cakes** is equally important. The value of oil cakes is much better appreciated in Europe than in India. The Indian cultivator is prejudiced against the use of machine-made cake as a cattle food or as manure because he considers that it contains less oil and therefore less nourishment than the village-made cake. He is therefore unwilling to buy it except at a reduced price. His prejudices on this point have no justification in fact since experts are agreed that mill cake is a better food for cattle than village-made cake. Even when the mill cake contains less oil than the village cake, there is still more oil in the cake than cattle can digest. The excess of oil in the village cake, where it exists, is a drawback and not an advantage to the use of the cake as food. A considerable amount of demonstration work has been done by the Agricultural Departments of Government in order to remove the cultivator's prejudices and there is said now to be an increasing demand for most classes of mill cake.

Tea.

Among plantation crops in India tea is the most important. The indigenous tea plant, growing in a wild condition, was first discovered in Assam about 1820. It soon drew the attention of the East India Company, which after some enquiries started an experimental garden in 1835. After working for five years it was handed over to the Assam Company. It may be said, however, that the foundations of the present tea industry were laid between 1856 and 1859. Since the latter date the growth of the industry has been phenomenal and "in less than a hundred years the British Empire has become the tea garden and tea-shop of the world."

The following table shows the growth of the industry since 1875 :—

Progress of the Industry.

Year.	Area under tea in 000 acres.	Production in 000,000 lbs.	Year.	Area under tea in 000 acres.	Production in 000,000 lbs.
1875-79 (average).	173	34	1925	672	335
1880-84 ,, ..	241	57	1926	679	364
1885-89 ,,	307	90	1927	690	361
1900-1904 ,, ..	500	195	1928	702	372
1910	533	249	1929	712	401
1915	594	352	1930	802	391
1920	654	322	1931	807	394
			1932	807	433

It will be seen from the above table that during the last fifty years, while the area under tea has risen by over 300 per cent., the production has increased more than ten times.

Assam and Bengal are the two most important centres of the tea industry in India, Assam alone accounting for more than half the total production.

The following table shows the various centres of the industry in the country and their relative importance :—

Provinces.	Area under crop '000 acres.	Production '000 lbs.	Average daily working strength (permanent and temporary).
Assam.—			
Surma Valley	145	73,784	156,489
Assam Valley	285	185,157	400,995
Total ..	430	258,941	557,484
Bengal.—			
Darjeeling	61	23,009	65,522
Jalpaiguri	128	85,427	125,632
Chittagong	6	1,517	5,745
Total ..	195	109,953	196,899
Madras.—			
Nilgiris	32	11,403	30,759
Malabar	13	6,493	12,832

Others	*	34	44
Total ..	67	27,630	70,852
Coorg	*	169	620
Punjab	10	1,930	10,995
United Provinces	6	1,489	3,871
Bihar and Orissa	4	853	2,902
Total British India	712	400,965	843,623
Indian States	77	32,033	86,849
Total India ..	789	432,998	930,472

* Less than 500 acres.

Although India produces such large quantities of tea its consumption of tea is comparatively very little, about 57 million lbs. as compared with 421 million lbs. in the United Kingdom and the consumption per head is only .18 lb. as compared with 9.20 lbs. in the United Kingdom. The low domestic consumption, however, enables India to export large quantities to other countries the principal among which is the United Kingdom. It is estimated that India supplies about 40 per cent. of the world demand of this commodity. In 1932-33, 87 per cent. of the total quantity of tea produced in India was exported abroad.

The year 1932-33 was one of the worst for the tea industry. In addition to the world-wide depression, there was considerable over-production with the result that producers of tea all over the world were faced with declining prices and accumulation of stocks. The preference granted to Empire teas did not prove sufficiently effective to check the consumption of cheap Java teas. Besides this there was only a small difference in the price of medium and common teas and there was thus no inducement to grow the former.

To check over-production a scheme was therefore introduced to restrict production and to limit exports. A Bill giving legislative effect to the scheme was passed at the autumn session of the Legislative Assembly. The beneficial effects of this measure are already being seen.

The following table explains briefly the position as regards the *export of tea* from India :—

Year.	Amount exported (million of lbs.)	Value in lakhs of rupees.	Col. 3 as percentage of value of total exports.
1	2	3	4
1926–27	349	29,04	9
1927–28	362	32,48	10
1928–29	360	26,60	8
1929–30	377	26,01	8
1930–31	356	23,56	..
1931–32	341	19,44	..
1932–33	379	17,15	..

The following figures show the proportion of exports of tea from India by sea sent to different parts of the world to the total exports :—

	1928-29 per cent.	1929-30 per cent.
To United Kingdom ..	83.0	84.2
To Rest of Europe ..	2.0	2.2
To Asia	5.8	3.8
To America	5.7	5.8
To Australia	1.6	1.3
To Africa	1.9	2.7
	100	100

A considerable quantity of Indian tea imported into the United Kingdom is normally re-exported to other foreign countries.

From 1923 to 1927 the prices obtained for tea were good; but in 1928 a decline set in, and in 1929 and 1930 prices fell further still. The price of Indian common tea particularly fell more than that of others. While as compared to 1923, 'all tea' fluctuated in the London market within a range of 25 per cent., Indian common tea fell by about 50 per cent.

In 1932-33 the fall in tea prices was almost catastrophic. The average price of tea per lb. realised at the Calcutta auction sales during 1932-33 was 5 as. 2 p. as against 6 as. 5 p. in 1931-32 and 9 as. 4 p. in 1930-31.

The following table gives the average wholesale prices of tea in Mincing Lane from 1922-30, in pence per lb. :—

Year.	North India.	South India.
1922	15.46	14.00
1923	18.76	18.14
1924	19.92	19.02
1925	17.68	17.62
1926	19.36	19.00
1927	19.01	18.88
1928	16.49	15.40
1929	15.72	15.35
1930	14.69	14.52

The following table shows the variations in the average prices of Indian tea sold at auction sales in Calcutta and the index numbers of these prices with base 1901-02 to 1910-11=100. :—

	Average price at auction sales.	
	Price per lb. As. p.	Index Number.
1901-02 to 1910-11 ..	6 0	100
1927-28	14 10	247
1928-29	11 4	189
1929-30	9 11	165
1932-33	5 2	..

The fall in tea prices greatly affected the profits of tea companies. The following table which shows the profit per acre of 65 tea companies gives an idea of the effect on profits of the fall in prices :—

Profit per Acre of 65 Indian Tea Companies.

	1913.	1924.	1928.	1929.
Average profit per mature acre	£ 6-10-7	£ 15-2-0	£ 10-0-0	£ 6-9-0
Average profit in pence per lb.	2.6	6.4	3.84	2.26
Average crop per mature acre	599 lbs.	560 lbs.	625 lbs.	684 lbs.

It is quite clear from the above table that, although the yield per acre has considerably increased, the profits per acre are actually lower than in 1913.

The main reasons of the slump in the tea industry are over-production and intense competition, particularly from Java and Sumatra. In order to counteract the adverse influence of the former, an agreement to restrict output, was reached early in 1930 by associations of tea-growers. For India and Ceylon the degree of restriction to be undertaken varied according to the quality of the tea produced, being greater for the lower qualities than for the finer.

According to the latest agreement between the Indian, Ceylon and Netherlands East Indies produces, for five years from 1933 awards exports are to be restricted and extension of cultivation not to be permitted beyond ½ per cent. of the present planted area.

During the year 1931-32 there was a considerable fall in the wages of workers on tea plantations. The average wages of men, women and children in the Assam Valley were Rs. 12-8-5, 9-8-7 and 6-15-8, respectively, as compared with Rs. 14-0-11, 10-12-7 and 7-4-7, respectively, in 1930-31. In the Surma Valley the average earnings fell from Rs. 9-7-2 to Rs. 7-14-11 in the case of men, Rs. 7-10-5 to Rs. 6-1-1 in the case of women and Rs. 5-3-6 to Rs. 4-9-1 in the case of children.

Under the Ottawa agreement Indian Tea has been granted preference by Great Britain.

The following are the important recommendations made by the Royal Commission on Indian Labour in regard to the Tea Industry The recommendations contained therein are very vital to the future welfare of the industry. and the principal amongst them have therefore been reproduced below :—

(1) No further legislation making a breach of contract of service a criminal offence should be countenanced.

(2) The power conferred by section 3 of the Assam Labour and Emigration Act to prohibit recruitment in Assam in particular localities should be withdrawn immediately and no barrier should be set up to prevent free movement of labour from one part of India to another.

(3) The Assam Labour and Emigration Act should be repealed and a new measure set up in its place.

(4) The Assam Labour Board should be abolished.

(5) The Government of India should appoint a Protector of Immigrants in Assam to look after the interests of emigrants from other Provinces who have not yet settled in Assam.

(6) Every future assisted emigrant to an Assam tea garden should have right after the first three years to be repatriated at the employers' expense.

(7) A worker dismissed before the expiry of the three years should be entitled to repatriation at the expense of the employer dismissing him, unless it is established that the dismissal was due to wilful misconduct.

(8) The establishment of statutory wage-fixing machinery, if practicable, is desirable, and there are reasons for believing that, if proper methods are adopted, a practicable scheme can be devised.

(9) Before legislation is undertaken, one enquiry should be undertaken as to the most suitable form of machinery, the actual rates paid and the variation in these rates between district and district and garden and garden.

(10) Maternity benefits should be provided for by legislation.

(11) The employment, either directly or with their parents, of children before the age of 10 years should be prohibited by law.

(12) Boards of Health and Welfare should be established under statute for convenient planting areas.

Some of the above recommendations have already been taken up by the Government of India for legislative or administrative action.

Coffee.

Such historical evidence as is available on the subject shows that coffee was first introduced into India from Mecca as early as the 16th Century. The first coffee garden was planted by a European about 1840 but the industry thus started did not flourish till 1860.

The production of coffee in India is mostly confined to the South. The area under coffee in 1930 (including plantations of less than 10 acres) was 1,63,000 acres, an increase of 14 per cent. over the figures for 1925.

The total exports of coffee decreased from 2,05,000 cwts. in 1925-26 to 1,50,000 cwts. in 1926-27, but in 1927-28 there was a sharp rise to 2,77,000 cwts. In 1928-29 and 1929-30 the shipments again declined and amounted to 1,98,000 cwts. and 1,84,000 cwts. respectively. In 1932-33 the quantity exported was 173,000 cwts. The principal countries to which Indian coffee was exported were, as usual, the United Kingdom and France.

Not only does India export coffee in large quantities but it also imports it chiefly from Java, Ceylon and the Straits Settlements which it re-exports to Mascat Territory, Iraq and the Bahrein Islands.

The following table gives the figures of the production and exports of Indian coffee:—

Production and Export of Indian Coffee in thousands cwts.

12 Months ending June 30th.	Production.	Export.	Surplus available for Home consumption.
1925	272.1	251.9	20.2
1928	317.5	260.9	56.5
1929	247.8	142.6	105.2
1930	352.0	243.0	109.0

Making allowance for the re-exports from India of imported coffee, the consumption of Coffee in India in 1930 was approaching four times the amount consumed in 1925.

The total production of cured coffee in India during the season 1931-32 was nearly 34 million lbs. as compared with 33 million lbs. during the previous season. Exports declined from 293,000 cwts. in 1930-31 to 156,000 cwts. in 1931-32. The pre-war, was and post-war averages were 255,000 cwts. 216,000 cwts. 226,000 cwts, respectively Local consumption of Indian coffee which has been expanding expanded still further owing to the restrictions on imported coffee. As regards exports, the United Kingdom and France which constitute the principal markets, both increased their respective off-takes very considerably and required 52,000 cwts. and 54,000 cwts. as against 44,000 cwts. and 43,000 cwts. respectively in 1931-32. The total value of the exports of coffee was 1,10 lakhs in 1932-33 as against Rs. 94 lakhs in 1931-32.

The daily average number of persons employed in the coffee plantations in 1929-30 was returned at 92,504 of whom 55,972 were permanently employed and 36,532 temporarily employed as compared with 94,865 persons (44,744 garden and 19,094 outside labour permanently employed and 31,027 temporary outside labour) in 1928-29.

The general trade depression did not fail to affect the coffee industry but in addition to the general slump in trade there was an additional factor which depressed coffee prices and this was the exceptionally heavy crops of Brazilian coffee. Since the year 1925 there has been a general downward trend in coffee prices but until the end of 1929 the fall was comparatively slow, but since then it has been very rapid. This will be clearly seen from the fact that while the average wholesale price of Indian coffee in London was 140s. in 1923 and 127s. in 1929 it fell to 86s. in 1930.

The declared value per cwt. of coffee was Rs. 60-11-9 in 1931-32 as against Rs. 65-8-1 in 1930-31. It rose to Rs. 63-6-7 in 1932-33. The wholesale price in India per cwt. in April 1933 was Rs. 72-0-0.

INDIAN TOBACCO.

The tobacco plant was introduced into India by the Portuguese about the year 1605. As in other parts of the world, it passed through a period of persecution, but its ultimate distribution over India is one of the numerous examples of the avidity with which advantageous new crops or appliances are adopted by the Indian agriculturist. Five or six species of *Nicotiana* are cultivated, but only two are found in India, namely, *N. Tabacum* and *N. rustica*. The former is a native of South or Central America, and is the common tobacco of India. About the year 1829 experiments were conducted by the East India Company towards improving the quality of leaf and perfecting the native methods of curing and manufacturing tobacco. These were often repeated, and gradually the industry became identified with three great centres: namely, (1) Eastern and Northern Bengal (more especially the District of Rangpur); (2) Madras, Trichinopoly, Dindigul, Coconada and Calicut in Southern India; and (3) Rangoon and Moulmein in Burma. Bengal is the chief tobacco growing Province, but little or no tobacco is manufactured there. The chief factories are near Dindigul in the Madras Presidency, though, owing to the imposition of heavy import duties on the foreign leaf used as a cigar wrapper, some cigar factories have been moved to the French territory of Pondicherry.

The question of improving the quality of Indian tobaccos has received the attention of the Botanical section of the Agricultural Research Institute, Pusa, and three Memoirs have been published recording the results of investigations in that direction. The immediate problem at Pusa is the production of a good cigarette tobacco. Many attempts have been made in the past to introduce into India the best varieties of cigarette tobacco from America, but the results have been disappointing. It is now hoped to build up by hybridization new kinds of tobacco, suited to Indian conditions of growth, which possess in addition the qualities necessary to obtain a better price.

Area under Cultivation.—The cultivation of tobacco is very widespread in Burma. The two main varieties are called "Burmese tobacco" and "Havana tobacco." Of the Burmese tobacco there are two main varieties "Seywet-gyi," the large-leaved variety and "Seywet-gyun," a smaller-leaved variety with pointed leaves. The former yields a heavier crop, but the latter gives better quality. There is always a great demand on the market for both the Havana and the Burma tobacco. The smooth leaves of the Havana plant are used for the wrappers and the coarser Burmese leaf for the filling.

The most important tobacco tracts in British India are:—(*i*) the Coimbatore and Dindigal tract of Madras, where the *Usi-Kappal* and *Wara Kappal* varieties are largely grown, the former supplying the Trichinopoly cigar; (*ii*) the Godavari Delta of Madras; (*iii*) the Rangpur tract of Bengal; (*iv*) the Districts of Bihar and Orissa; (*v*) Guzerat in Bombay and (*vi*) the delta tract of Burma.

The season for harvesting varies in different localities ranging from December to June, but the bulk of the crop is harvested during the months of February, March and April. The leaves when quite dry, are assorted and placed in heaps in stacks to ferment. They are then tied into bundles of 25 or 30, a useless leaf being employed for tying each bundle. The leaves are laid perfectly flat, the bundles being fan-shaped. In this condition they are baled, the broom-like ends projecting outwards. By varying the degree of fermentation of the leaves, different qualities of tobacco are obtained. A black variety is used in India for cake tobacco, and this is the most common product, but a certain amount of yellow leaf is grown for cigar making.

Exports.—Exports of unmanufactured tobacco declined by 9 per cent in quantity from 28 million lbs. 1930-31 to 25.4 million lbs. in 1931-32 and by 17 per cent in value from Rs. 97 lakhs to Rs. 81 lakhs. In the United Kingdom, notwithstanding a reduced consumptive demand, Indian tobacco gained public favour with the increasing popularity of Empire grown tobacco and the shimments advanced from 10 million lbs. to 11 million lbs. There were, however, decreases in the exports to Aden, the Straits Settlements and the Netherlands which fell by 1 million lbs. each to 4, 1½ and 1 million lbs. respectively. An interesting development of the trade is the rapid increase in purchases by China which absorbed 3 million lbs. in 1931-32 as compared with 1 million lbs. in the preceding year, while Japanese requirements slightly declined to 3·7 million lbs.

The Cocaine Traffic.

The form of cocaine chiefly used in India is Cocaine Hydrochloride. This salt forms light shining crystals, with a bitterish taste, and is soluble in half its weight of water. The alkaloid cocaine—of which this is a salt—is obtained from the dried leaves of the Erythroxylon Cocaine which grows in Bolivia, Peru, Java, Brazil and other parts of South America. The leaves are most active when freshly dried and are much used by the Natives as a stimulant. Tea made from them has a taste similar to green tea and is said to be very effectual in keeping people awake. In India the Coca plant seems never to have been cultivated on a commercial scale. It has been grown experimentally in the tea districts of Ceylon, Bengal and Southern India and has been found to produce a good quality and quantity of cocaine. As the plant has not been seriously cultivated and as there is no possibility for the present of the drug being manufactured in India, no restrictions have as yet been placed on its cultivation.

Spread of the habit.—The cocaine traffic in India which seems to be reaching in alarming proportion in spite of legislation and strict preventive measures is of comparatively recent growth; though it is impossible to estimate how widespread it was in 1903 when the Bombay High Court for the first time decided that cocaine was a drug included within the definition of an intoxicating drug in the Bombay Abkari Act. Since that date the illegal sale of cocaine in India has largely increased and the various provincial Excise Reports bear witness to the spread of the "Cocaine habit." The consumers of the drug, which is notoriously harmful, are to be found in all classes of society and in Burma even school children are reported to be its victims; but in India as in Paris the drug is mostly used by prostitutes or by men as an aphrodisiac. The habit has spread chiefly to those classes which are prohibited by religion or caste rules from partaking of liquor and the well-known Indian intoxicating drugs.

Smuggling.—So far as the cases already detected show, the persons who smuggle the drug by sea from Europe and places outside India, into India, are chiefly sailors, stewards, firemen and sometimes engineers and officers of foreign ships. The ports through which cocaine enters India are Bombay, Karachi, Calcutta, Madras, Marmagoa and Pondicherry. The main inland distributing centres are Delhi, Lucknow, Meerut, Lahore, Moultan, Surat and Ahmedabad. Delhi especially is notorious for the cocaine trade. Great ingenuity is employed in smuggling cocaine through the Custom houses. It is packed in parcels of newspapers, books, toys and piece-goods and in trunks which have secret compartments. The retail trade in the towns is very cunningly organized and controlled. In addition to the actual retailers, there is a whole army of watchmen and patrols whose duty is to shadow the Excise and Police officials and give the alarm when a raid is contemplated. During the War several cases of importation of Japanese cocaine were detected, the importers being Japanese and Chinese sailors. The original marks on the packets and phials are usually destroyed so that the name of the manufacturing firm may not be found out.

The Review of the Customs Administration in India for 1930-31 states that during the year a total of 17,345 grains of cocaine were seized by the Customs authorities, of which 1,792 ounces were valued at approximately Rs. 1,80,000.

The amount seized is either given to Hospitals in India or destroyed. It is no longer possible to buy cocaine from any betelnut seller as it was ten years ago, but scores of cases in the Police Courts show that the retail trade thrives, though to a diminished extent, in Bombay. High profits ensure the continuance of the trade.

The Law in regard to Cocaine.—This varies in different provinces. A summary of the law in Bombay is as follows: No cocaine can be imported except by a licensed dealer and importation by means of the post is entirely prohibited. The sale, possession, transport and export of cocaine are prohibited except under a license or permit from the Collector of the District. A duly qualified and licensed Medical practitioner is allowed to transport or remove 20 grains in the exercise of his profession; and as far as 6 grains may be possessed by any person if covered by a *bona fide* prescription from a duly qualified Medical practitioner. The maximum punishment for illegal sale, possession, transport, etc., under Act V of 1878 as amended by Act XII of 1912 is as follows: Imprisonment for a term which may extend to one year or fine which may extend to Rs. 2,000 or both and on any subsequent conviction imprisonment for a term which may extend to 2 years or fine which may extend to Rs. 4,000 or both. The law in Bombay has been further amended so as to enable security to be taken from persons who have been convicted of cocaine offences. The new Act also contains a section for the punishment of house owners who let their houses to habitual cocaine sellers.

The Opium Trade.

Mention opium and half the Western world directs its thought to India, as though India were a most unscrupulous producer of the most noxious drug on earth. Refer to the League of Nations' proceedings in regard to opium and again, mainly under the leadership of American representatives, one finds India and the Government of India held up to humanity as traffickers in opium and as thereby obstacles to making the world a better place to live in. In fact, neither India nor the Government of India has anything to be ashamed of in its opium history. Whatever may be the case in other countries, centuries of inherited experience have taught the people of India discretion in the use of the drug and its misuse is a negligible feature in Indian life. Abuse of its properties is rarer in India than the abuse of alcohol in Western countries. So much for the internal position.

The record as regards exports is equally clean. India has never driven hard bargains to secure the sale of the product overseas. Where it has been bought the reason is its superiority over other supplies, because of the stringent regulations by which its manufacture has always, under the British authorities, been regulated in India, in order to secure the purity and cleanliness of the finished product. Directly any importing country has expressed a desire to have the trade reduced, the Government of India have responded by stiffening their restrictions on export. There have, in recent years, mainly at the instance of America, been numerous International conferences with a view to making opium and drugs derived from it more difficult to obtain and in every case it has been found that India had already given the lead in the special regulations which it was proposed to lay down.

The China Trade.—The classic case of Indian restriction of her export opium trade is provided by China. There is a long history of Indo-Chinese negotiations on the subject, but it is unnecessary to go further back into these than 1911. On 8th May of that year, there was drawn up between India and China an agreement under which the Government of India assented to: (1) the payment of an import duty three times the existing amount in return for the promised abolition of provincial taxes; (2) the partial closure of China to Indian opium by provinces, including not only stoppage of transit passes, but also treaty port closure, Shanghai and Canton excepted; (3) the total extinction of trade before 1917 on proof of total cessation of opium production in China; and (4) revision of the agreement on due notice by either party. This agreement, as its terms indicate, was on the side of China the outcome of a professed desire to stamp out the opium trade and opium consumption in her midst. And on her side China, in the agreement, undertook, among other things, to reduce production in China *pari passu* with the reduction of exports from India.

In addition to the limit to the China trade imposed by the agreement, the Government of India undertook in order to lessen the danger of smuggling into China, and as an earnest of their desire to assist that country, strictly to confine the remainder of Indian opium export to the legitimate demands of the non-China markets. A figure was elaborately calculated for these markets and India drastically cut her non-China exports down to it in 1911. In subsequent years, she progressively reduced the permissible export limit and in 1913 she stopped exports to China altogether.

The financial sacrifice thereby undertaken by India in order to help the Chinese in their professed desire for reform amounted to many millions sterling a year. China never carried out her side of the bargain. She is still demonstrably the greatest opium producing country in the world and the only effect of the reduction, and eventual abolition, of imports from India is better trade for Chinese opium producers and merchants and largely increased imports of opium into China from Persia and Turkey.

Agreements observed by India.—The Government of India have carried out to the letter their side of the 1911 agreement. They have gone further. Not only were exports to China stopped and exports to non-China countries in the East limited in accordance with the agreement with China, but exports to non-China countries have, on the voluntary initiative of India, been subjected to successive restraining agreements with the countries concerned. The Government of India introduced, with effect from 1st January 1923, a certificate system recommended by the League of Nations, whereby all exports of opium must be covered by certificates from the Government of the importing country that its consignment is approved and is required for legitimate purposes. The pressure exerted by the League of Nations in this regard was not pressure upon the Government of India but upon the Governments of the importing countries and, so far as India was concerned, the new system was welcomed because it removed from the shoulders of the Government of India all responsibility in regard to opium consumption in the importing countries and laid it upon their own respective Governments. In 1926, in order to fulfil the spirit of her international agreements, India decided, though she was in no way bound by their letter to do so, to reduce her exports to Far Eastern countries for other than medical and scientific purposes by 10 per cent. yearly, so as to extinguish them altogether by December 1935, and effect has been given to that policy at considerable financial sacrifice. India is the only country that has made any considerable sacrifices of the kind.

International Aspect of the Problem.—It was only during the processes and negotiations by which the Indian opium export trade to China was being suppressed that the Opium question began to assume a widely international aspect. This happened on the initiative of the U.S.A., at whose instance an International Opium Commission met at Shanghai in 1909 and formulated a series of recommendations for the suppression of opium smoking and the regulation of the use of opium and morphia. The United States thereafter advanced a further proposal for an International Conference at the Hague. This met on 1st December 1911, and finally drew up a convention on the subject the terms of this document presented no new

ideas to the Government of India. Their provisions India had long observed. As regards morphia and cocaine, with which the Hague Conference concerned itself, the uses of these drugs in India had long been subject to exceedingly strict regulations. But these two drugs, the use of which for other than medical purposes invariably takes the form of dangerous vice, were becoming a menace to the world. They were not included within the scope of the proposals submitted by the U.S.A. for the consideration of the Conference. It was mainly owing to pressure by the Government of India that they were included within the terms finally signed and the rigid and universal application of the articles of the Convention which apply to them would rid the world of the drug evil.

As regards prepared opium, that is to say smoking opium, India does not and never has exported it and the sale of it in India is prohibited. No opium is exported from India to the United States of America. None has been exported to Great Britain by private merchants since 1916. Exports to Great Britain are strictly limited to medicinal requirements and go officially from the Government of India to the British Government. Nor is Indian opium exported to any other country in Europe.

Indian Uses of Opium.—There is a fundamental difference between the problem in India and that in foreign countries, particularly in America and Europe. America and Europe are principally concerned with the problem of the vicious consumption of cocaine and morphia and it is on the experience of the abuse of these drugs in those countries that much of the condemnation of Indian policy is based. It is accepted that the consumption of opium in America and Europe is in effect hardly less disastrous than that of morphia and cocaine. And the reason is that to Americans and Europeans opium is an unaccustomed drug. The habit of its use being both new and strange to them, it is never used to moderation but always abused, and the results have no relation to the result of moderate opium eating in India. The fact appears to be that peoples acquire a tolerance to drugs to the use of which they are long habituated. Opium has been used in India since the 16th century at least. The method of use is eating and in India, generally speaking, eating seems to do little, if any, harm. Smoking, which is the habit of the Far Eastern races, rather than of the Indian races, seems to do much more harm in India than eating, while on the other hand where smoking is in ordinary use competent authorities (*e. g.*, the Royal Commission on opium in Malaya) think eating to be more harmful than smoking.

The Government of India have fully participated in the different International Conferences on the drug question and responded to the obligations which her assent to their conclusions has placed upon her in regard to home consumption. But the principal effect upon India of these International discussions has been to draw the fresh attention of her Government and people to the opium situation in her midst, to cause consultations on the subject between the Government of India and the Indian Legislature and to produce what may be described as considerable intelligent progress in the development of those regulations upon the of opium which are time-honoured.

The Commission of 1893.—Despite all this, the principles of Indian internal opium policy essentially remain, subject to certain changes of scientific opinion in regard to medicinal uses, those laid down by a Royal Commission which was appointed by His Majesty's Government, mainly as a result of the activities of the Society for the Suppression of the Opium Trade, in 1893, to inquire into all the circumstances connected with the production and sale of Indian opium. The Society which was largely instrumental in bringing about the institution of the inquiry, recorded its opinion that the appointment of the Commission constituted "the greatest and most solid forward step that the movement for the suppression of the opium trade has yet made" and considered that the Royal Commission was "as fair-minded and impartial a tribunal as the Society could have desired to hear its case." The results of the enquiry were published in 1895 in seven volumes.

The Royal Commissioners examined with the greatest care the problem of opium consumption in India and in brief they found that it was not only subject to careful regulation but was governed by longstanding and admirable disciplinary habits among the people. Excessive use, they found, was exceptional, and condemned by public opinion. As regards the legal restriction of its use to medical needs, they advised that Government could do no more than limit the extent of cultivation and hold a monopoly of manufacture and wholesale supply and that to draw a line in popular opinion between medical uses and those not strictly so describable would be impracticable. They agreed that the mass of Indian opinion was opposed to prohibition as an unnecessary restriction on individual liberty and interference with established customs and habits. Apart from the religious question they found Indians generally to consider the use of alcohol to be more objectionable, more injurious and more disgraceful.

The Government of Lord Hardinge, in a Despatch to His Majesty's Government in 1911, and that of Lord Reading, in a despatch dated 24th March, 1921, both in the same words took their stand on the conclusion of the Royal Commission "that the opium habit as a vice scarcely exists in India, that opium is extensively used for non-medical and quasi-medical purposes, in some cases with benefit and for the most part without injurious consequences, that the non-medical uses are so interwoven with the medical uses that it would not be practicable to draw a distinction between them in the distribution and sale of the drug and that it is not necessary that the growth of the poppy and the manufacture and sale of opium in British India should be prohibited except for medical purposes." The despatch of Lord Hardinge's Government was approvingly quoted by Lord Reading's Government a few years ago. It has long been recognised that any attempt to eradicate by law the use of opium would be open to all the objections involved in bureaucratic interference with popular custom. Eating it is largely quasi-medical; it is used for the prevention, cure and alleviation of disease, as a prophylactic as an anodyne and as the commonest and most treasured household medicine of the people, to whom qualified medical assistance is inaccessible It is also taken as a solace, as a tonic and as a

restorative to lessen or avert fatigue and in other ways in which, when moderately used, it is relatively innocuous.

Present Policy.—The current attitude and policy of the Government of India were lately explained in their behalf to the League of Nations at Geneva. Their representative declared that any genuine measure of reform initiated by a Provincial Minister in connection with it would receive encouragement and support from the Central Government and showed that the policy of that Government is, and has been, one of non-interference with the moderate use of raw opium, whether the object of the consumer be some real or supposed physical benefit or merely the indulgence of the almost universal desire of human beings, particularly those whose occupations involve exposure or severe bodily exertion, for a stimulant or narcotic. Excessive indulgence it is and always has been the desire of Government to express.

Opium is under the current Indian constitution a Provincial Transferred Subject. Nevertheless, owing to the jealous watching and criticism by observers in every continent, the Government of India called an official All-India Conference, which was opened at Simla by Lord Irwin, on 5th May 1930, to consider the question of certain areas where opium consumption was alleged to be unduly high. This followed on the prosecution of special provincial inquiries by committees set up by the Local Governments at the special instance of His Majesty's Government. The Conference, after an exhaustive discussion of the phenomena presented by the various areas selected for investigation, and in the light of the personal knowledge of the representatives of the different Provinces and of the reports of the local committees, concluded that it appeared that certain parts of Assam and Calcutta might correctly be regarded as having excessive consumption and that Orissa and the Ferozepore District of the Punjab might be held to provide cases for further inquiry. In other cases the Conference considered that there was no evidence of prevalent excess. But they gave a series of examples to show that there were simple explanations showing harmless causes for what appeared to be excessive consumption in many places.

While speaking at the Second Geneva Opium Conference on 19th January 1925, Lord Cecil stated that he had seen figures, apparently taken from a report made by the United States Treasury, to the effect that consumption was greater in America than in India. The estimate framed by the Advisory Committee of the League of the annual requirements of opium for strictly medicinal and scientific purposes is 600 milligrammes or 9·25 grains per capital which is roughly equivalent to 6 Indian seers per 10,000. The Health Committee of the League opined that this could be reduced to 450 milligrammes, or 6.94 grains in countries possessing a well developed medical service. The consumption per capita in British India during 1924-25 worked out at 17·2 grains per head. The rate of consumption has certainly fallen since the compilation of this published figure. The amount includes veterinary uses and these are extensive, though to secure statistics of the quantity of opium given to animals is impossible. Allowance also has to be made for the poor morphine content of Indian opium, which is about 9 per cent. at 90 deg. consistence, and the limited number of medical practitioners trained on Western lines to administer strictly measured doses. Lord Cecil's statement at the League of Nations was received with extreme criticism by Mr. Porter of the American delegation. Mr. Porter said the American statistics cited had been disavowed and that Lord Cecil's observations were a "vile slander upon the people of the United States." Lord Cecil apologised and withdrew his statement. But Mr. Frederick Wallis, Commissioner of Correction, New York, writing in the Current History Magazine for February, 1925, showed the annual per capita consumption in Italy to be one grain, in Germany 2 grains, in England 3 grains, in France 4 grains and in the United States 36 grains. In "Current History" for March, 1925, Mr. Wallis defended this last figure and said that in view of the smuggling into the United States "it would appear to me that the consumption would be much larger than the Government officially gave as 36 grains." It appears now to be recognised by all sane opinion throughout the world that India has the cleanest sheet if any in regard to opium control and export. Even the former ill informed sentimental attacks upon the Government in these respects have almost stopped.

Opium policy has on several occasions during the past few years come under discussion in the Central Indian Legislature and in regard to it the Government of India and the non-official members of the Legislature have been in accord. Cultivation of the poppy in British India is confined, except for a few wild and inaccessible regions, to the area that supplies the Government of India Factory at Ghazipur in the United Provinces where it can only be cultivated under license. Importation into British from the Indian States is controlled by prohibition of imports except on Government account and by agreement with the States concerned that they will not allow exports to British India except by arrangement. Cultivation in British India is progressively and rapidly being reduced. The sown area in British India which produced the crop of 1931-32 was 37,012 acres, *i.e.*, 26.3 per cent of the area in 1922-23, and 20 per cent of that in 1912-13. The process of reduction was stayed in 1931-1932 because it was found that the rate before 1931 had been too rapid so that stocks were brought to a dangerously low level. Progressive and rapid reductuion was resumed in 1933. The consumption of opium in the different provinces in India in 1932 is shown in the following table :—

	lbs.
Madras	62,568
Bombay (including Sind)	51,090
Bengal	64,135
United Provinces	39,880
Punjab	62,210
Burma	41,330
Bihar & Orissa	37,724
Central Provinces and Berar	26,446
Assam	30,512
Administered Areas (*a*)	14,445
Total for British India	4,28,340
Aden	90

(*a*) North-West Frontier Province, Baluchistan, Ajmer-Merwara and Delhi.

The population of British India according to the 1931 Census is 271,526,992, and the consumption per head in British India, excluding Aden, inclusive of the opium used for veterinary purposes but excluding that consumed for medicinal purposes was 11.04 grs. per head of the population. The population of Aden in 1931 was 50,809 and the opium consumption per head was 12.3 grs.

Close supervision is maintained over the licensed vendors in all parts of British India; the conditions of their licenses require that the shops shall always be open to inspection, that no opium shall be sold to children or bad characters, that sales shall only be made on the licensed premises and during the prescribed hours, that only unadulterated Government opium shall be sold, that credit shall not be allowed, that no consumption shall be permitted on the premises, that full accounts shall be maintained and that the names and addresses of purchasers of more than one or two tolas shall be recorded. These conditions are effectively enforced by the excise departments of the various provinces.

GLASS AND GLASSWARE.

The total value of the imports of glass and glassware amounted to Rs. 1,42 lakhs as compared with Rs. 1,22 lakhs in 1931-32. Almost all the important descriptions under this head recorded improvements. Of the principal countries participating in this trade Japan retained the foremost position and the value of her supplies advanced to Rs. 65 lakhs in 1932-33 from Rs. 42 lakhs in 1931-32 and Rs. 55 lakhs in 1930-31.

Manufacture of Glass in India.—Glass was manufactured in India in centuries before Christ and Pliny makes mention of "Indian Glass" as being of superior quality. As a result of recent archæological explorations, a number of small crude glass vessels have been discovered indicative of the very primitive stage of the Industry. But no further traces of ancient Indian Glass Industry as such survive; yet, it is certain that by the sixteenth century it was an established Industry producing mainly bangles and small bottles. The quality of the material was inferior and the articles turned out were rough. Beyond this stage the industry had not progressed until the nineties of the last century. Manufacture of glass in India on modern European lines dates from the nineties of the last century, when some pioneer efforts were made in this line. Since then a number of concerns have been started, a number of them have failed, They mainly devote themselves to the manufacture of bangles and lampware side by side with bottle-making on a small scale. This, therefore, is the criterion which determines the two well-defined classes of the industry in its present stage, (i) indigenous Cottage Industry and (ii) the modern Factory Industry.

(i) The indigenous Cottage Industry which is representated in all parts of the country, but has its chief centres in Firozabad District of U. P., and Belgaum District, in the South, is mainly concerned with the manufacture of cheap bangles made from "glass cakes or blocks" made in larger Factories. The industry is at present in a flourishing state and supplies nearly one-third of the Indian demand for bangles. The quality has been improved by the discovery of new glazing processes and for the present the turnover in this line has gone up to 20 lakhs of rupees a year. But these bangles have now to face a very hard competition from Japan whose "silky" bangles are ousting the old type Indian ones.

(ii) The modern Factory type of organization of this Industry is just in its infancy at present. The existing Factories mostly stop at producing glass cakes for bangles as in Firozabad or simple kind of lampwares and bottles. There is one factory in the United Provinces which since 1929 has been manufacturing sheet glass. Artistic glassware is out of the question and the private capitalists who have to run their concerns mostly with commercial ends do not think it worth their while to spend money and labour on it. War caused a great decrease in volume—though not so much in value which was much increased—of the imports of the lampware, etc., and in order to meet the Indian demand for them, new Factories were started and old revived, which produced only cheap and simple kind of lampware and bottles on small scale. The total production of these Indian Glass Works has not been exactly estimated, but it is generally supposed that they were able to meet in these war years nearly half the Indian demand for this kind of glassware. There are a number of Factories engaged in the production of lampware, of which two or three only produce bottle and carboys also. The chief centres for the former kind are Bombay, Jubbulpore, Allahabad, and Bijhoi and Ambala; while bottles are only manufactured at Naini and Lahore, and recently at Calcutta.

During the later years of the war period, a number of Glass Works were opened in the Bombay Presidency and adjoining districts, local manufacture having been stimulated by the cessation of imports of German, Austrian and Belgian glass.

Causes of failure.—Records of the earlier ventures have shown that the failures in some cases were due in part at least to preventible causes, prominent among which were (1) Lack of enlightened management. (2) Lack of proper commercial basis, as in some cases the proprietors had a number of other more larger concerns to look to. (3) Bad selection of site. An ideal site for a Glass Factory would be determined by the (*a*) nearness of quartz and fire-clay, (*b*) nearness of fuel, and (*c*) by the nearness of market. At least two must be present. In some concerns, two were absent. (4) Specialisation was lacking, some factories in their initial stages trying to manufacture three or four different kinds of glassware simultaneously like lampware, bottles, and bangles, etc. (5) Paucity of sufficient fluid capital for initial expenses for machinery or other improvements or even in some cases for running the concern in the beginning.

But beyond these there are certain real and special causes that contributed to the failure of some of these and hinder the progress of the rest. Chief among them are (1) The Industry is in its infant stage and hence such failures are but incidental. (2) No expert guidance in this line, there is a lack of men and good literature. (3) Paucity of skilled labour of higher type. The present Indian workmen in this line and blowers are few in number and illiterate. They, therefore, master the situation and are unamend able to management. (4) Heavy cost of good fuel, the works usually being situated where good sand and quartz can be obtained, and consequently, in most cases, at a great distance from the coal-fields. (5) To a certain extent, competition from Japan and European countries.

The Indian Industrial Commission say in their Report (Appendix E)., *viz.*: "The Glass Industry, even in its simplest form is highly technical and can be efficiently carried on only by scientifically trained managers and expert workmen. The present stage has been reached by importing men, only partially equipped with the necessary qualifications, from Europe and Japan, and by sending Indian students abroad to pick up what knowledge they can. The glass industry is a closed trade and its secrets are carefully guarded, so that the latter method has not proved conspicuously successful."

HIDES, SKINS AND LEATHER.

India's local manufactures of skins and leather have steadily increased in recent years. Previous to the outbreak of war, the trade in raw hides in this country was good; there was a large demand for hides, and prices ruled high. On the declaration of war, the trade which had up till then been brisk was seriously dislocated. Exports to enemy countries especially to the great emporium of Indian hides, Hamburg, were stopped, and exporters had to find new markets for the raw material. The raw hide business of India had up to that time been largely, if not quite entirely, in the hands of German firms or firms of German origin and Germany had the largest share of India's raw hides. In the four months before the outbreak of war she took 39 per cent. of the total exports. In 1912-13 she took 32 per cent. and in 1913-14, 35 per cent. Germany still takes the major share of India's raw hides while America takes the bulk of goat skin exports. Shipments of tanned hides go mostly to Great Britain.

The total value of the export trade was Rs. 743 lakhs in 1932-33 compared with Rs. 892 lakhs a year earlier.

Conditions of the Trade.—The trade in hides and skins and the craft in leather manufacture are in the hands either of Mahomedans or of low caste Hindus, and are on that account participated in by a comparatively small community. The traffic is subject to considerable fluctuations concomitant with the vicissitudes of the seasons. In famine years for instance the exports of untanned hides rise to an abnormal figure. The traffic is also peculiarly affected by the difficulty of obtaining capital and by the religious objection which assigns it to a position of degradation and neglect: it has thus become a monopoly within a restricted community and suffers from the loss of competition and popular interest and favour.

Uses of Indian Hides.—The fifteenth report of the Imperial Economic Committee states that Indian hides, both raw and partially tanned, are largely used for the upper leather of boots; partially tanned skins are used for fancy leather articles, bookbinding and for covering the small rollers used in cotton mills for drawing the thread. Raw sheepskins are used for similar articles and also for gloves. They are exported mostly to Germany, France and Italy. Raw goatskins are used almost entirely in the manufacture of glace kid, of which commodity the United States is the chief producer.

The chief markets for Indian raw hides are in Central and Southern Europe, Hamburg being an important distributing centre. Directly after the war an effort was made to direct more of this trade to the United Kingdom, but it has drifted back to Germany. The assortment and grading of raw hides exported from Calcutta before the war, largely the result of the work of German firms established there, had reached a high standard. After the war the trade became somewhat disorganised from a variety of causes, among which may be cited fiscal changes, the entry into the trade of new and at first inexperienced firms, the increased cost of arranging for supervision at up country points. It has, however, been recovering its reputation.

Protecting the Industry.—The report of the Industrial Commission pointed out that the principal difficulty at present in the hides and leather industry was the lack of organisation and expert skill. Government action to foster the industry was first taken in September 1919, when a Bill was introduced in the Imperial Legislative Council further to amend the Indian Tariff Act, 1894. The effect of this Bill was officially described as follows: "It is to impose an export duty of 15 per cent. on hides and skins with a rebate of 10 per cent. on hides and skins exported to other parts of the Empire, and there tanned. Its object is to ensure that our hides and skins shall be converted into fully tanned leather or articles of leather so far as possible in India and failing this in other parts of the Empire, instead of being exported in a raw state for manufacture in foreign countries." Sir George Barnes who was in charge of the Bill and described the tanning industry as one of the most promising Indian industries explained that "the present position is that we have in India at the present time some hundreds of tanneries for the tanning of hides, a large number of which have come into existence in order to satisfy military requirements during the war. We have in fact the foundations of a flourishing tanning industry, but there is reason to fear that it may tend to dwindle and disappear

with the diminution of military requirements, if some other support is not given. We want to keep this industry alive, and we believe that in this case protection in the shape of a 15 per cent. export duty is justifiable and ought to be effective. It is clearly just also that the same measure of protection should be extended to the tanners of skins whose business, as I have already stated, was injured by the necessities of the war. Though Indian tanneries have enormously increased in number during the past three years, they can only deal with a comparatively small proportion of the raw hides and skins which India produces, and it is to the advantage of India and the security of the Empire generally that this large surplus should, so far as possible, be tanned within the Empire, and with this end in view the Bill proposes a 10 per cent. rebate in respect of hides and skins exported to any place within the Empire. I should add that it is proposed to limit by notification the benefit of this rebate to hides and skins actually tanned within the Empire and Indian hides and skins re-exported from an Empire port for the purpose of being tanned abroad will not be entitled to any rebate."

Indigenous methods.—India possesses a large selection of excellent tanning materials such as Acacia pods and bark, Indian sumach, the Tanner's cassia, Mangroves, and Myrabolams. By these and such like materials and by various methods and contrivances, hides and skins are extensively cured and tanned and the leather worked up in response to an immense, though purely local, demand.

INDIAN INVENTIONS AND DESIGNS.

A handbook to the **Patent Office** in India which is published by the Government Press, Calcutta, gives the various Acts, rules, and instructions bearing on the subject together with hints for the preparation of specifications and drawings, hints for searchers and other valuable information that has not hitherto been readily accessible to the general public in so convenient a form. In the preface the Controller of Patents and Designs explains the scope of the Patent laws in India and indicates wherein they differ from English law and procedure.

The foundation of patent legislation throughout the world lies in the English "Statute of Monopolies" which was enacted in 1623, the 21st year of King James the First. In part this Act has been repealed, but the extant portion of the more important section 6 is as follows:—"Provided also that any declaration beforementioned shall not extend to any letters patent and grants of privilege for the term of fourteen years or under, hereafter to be made of the sole working or making of any manner of new manufactures within this realm to the true and first inventor and inventors of such manufactures, which others at the time of making of such letters patent and grants shall not use, so as also they be not contrary to the law nor mischievous to the State by raising prices of commodities at home, or hurt of trade, or generally inconvenient; the said fourteen years to be accomplished from the date of the first letters patent or grants of such privilege hereafter to be made, but that the same shall be of such force as they should be if this Act had never been made, and of none other."

The existing Indian Patent Law is contained in the Indian Patents and Designs Act, 1911 as amended in 1930 and the Rules of 1933. The Patent Office does not deal with trade marks or with copyright generally in books, pictures, music and other matters which fall under the Indian Copyright Act III of 1914. There is, in fact, no provision of law in British India for the registration of Trade Marks which are protected under the Merchandise Marks Act, (IV of 1889) which forms Chapter XVIII of the Indian Penal Code.

On the whole, Indian law and procedure closely follow that in the United Kingdom for the protection of inventions and the registration of designs, as they always have done in matters of major interest. One main difference exists, however, as owing to the absence of provision of law for the **registration of Trade Marks**, India cannot become a party to the International Convention under which certain rights of priority are obtainable in other countries.

The first Indian Act for granting exclusive privileges to inventors was passed in 1856, after an agitation that had been carried on fitfully for some twenty years. Difficulties arising from an uncertainty as to the effect of the Royal Prerogative prevented earlier action, and, owing to some informalities the Act itself was repealed in the following year. In 1859 it was re-enacted with modifications, and in 1872 the Patterns and Designs Protection Act was passed. The protection of Inventions Act of 1883, dealing with exhibitions, followed, and then the Inventions and Designs Act of 1888. All these are now replaced by the present Act of 1911.

The existing Acts extend to the whole of British India, including British Baluchistan and the Santhal Parganas. This of course includes Burma, but it does not embrace the Native States. Of the latter Hyderabad (Deccan), Mysore, Gwalior, Baroda, Travancore, Marwar, Cochin, Kashmir and Jamu have ordinances of their own, for which particulars must be obtained from the Government of the States in question as they are not administered by the Indian Patent Office in Calcutta. A patent granted in British India does not extend to the United Kingdom or to any other British Possession, but under the reciprocal arrangement an applicant for an Indian patent has 12 months priority in the United Kingdom, Australia, Canada, New Zealand, the Irish Free State, the Union of South Africa and Ceylon and *vice versa*. The object of the Act of 1911 was to provide a simpler more direct, and more effective procedure in regard both to the grant of patent rights and to their subsequent existence and operation. The changes made in the law need not here be referred to in detail. They

gave further protection both to the inventor by providing that his application should be kept secret until acceptance, and to the public, by increasing the facilities for opposition at an effective period. At the same time a Controller of Patents and Designs was established, with power to dispose of many matters previously referred to the Governor-General in Council, and provision was made for the grant of a sealed "patent" instead of for the mere recognition of an "exclusive privilege." The provisions of the Act follow with the necessary modifications those of the British Inventions and Designs Act of 1907.

New Legislation.—Part I (Patents) of the Act of 1911 has been further amended by Act VII of 1930 and includes the following :—

If an Application comprises more than one invention the additional inventions may be made the subject matter of additional applications bearing the same date as the original application.

The term of the Patent will be 16 years instead of 14 years.

Patent of Addition will be granted on the original patent without the payment of additional renewal fees but the additional patent will expire with the date of the original patent.

Fresh provisions are made for the use of an invention by Government.

Government will grant licences to the public on application if the Patentee refuses to do so on reasonable terms.

Several other facilities are given under the Indian Amended Act of 1930 on the lines of the present British Patent Act.

The period of opposition to the grant of a patent has been extended to 4 months from the date of the notification of the "Acceptance" of the application, instead of 3 months. The provisions contained in the Indian Patents and Designs Rules, as regarded divisional applications in respect of inventions covered by the original application and divided therefrom, have been amplified and embodied in the Act itself. Section 10 has been amended to empower the Controller to decide disputes about proceeding with the applications for patents, that may occur between the applicants and third parties, or between joint applicants among themselves.

The time for appeal to the Governor-General in Council has been extended to 3 months, instead of 2 months from the date of the decision appealed against. A new Section 21A has been provided relating to secret patents. A new Section 35A has been provided for giving relief in suits for infringement of patents in respect of valid claim, despite the existence of invalid claims in the specification.

The definition has been altered as to the person entered on the Register as the grantee or proprietor of the patent. Section 78A (4) has been amended to enable British India to enter into reciprocal arrangement with the Indian States.

The definition of the term "Design" has been altered, and the time for applying to secure for the registration in India, the priority date of the application in the United Kingdom or other parts of the British Empire, has been extended to 6 months.

Printed Specification of applications for patents, which have been accepted (One Rupee per copy), may be seen free of charge, together with other publications of the Patent Office at the following places:—

The progressive total of additions to stock (item 9) and net progressive absorption (item 10) are calculated on the annual figures and are not based on these averages. Item 9 is the sum of the yearly figures in item 5 and item 10 the sum of the yearly figures in item 8.

(*a*) Excludes gold imported and exported on behalf of the Bank of England.

(*b*) Figures are for calendar year ending 31st December.

* Net exports.

Insurance in India.

According to the report by Mr. N. Mukarji, Actuary to the Government of India, contained in the Indian Insurance Year Book, 1932, the number of companies subject to the provisions of the Indian Life Assurance Companies Act of 1912 and the Indian Insurance Companies Act of 1928 is 282 of which 136 companies are constituted in India and 146 companies are constituted outside India. Of the 136 Indian companies, 60 are established in the Bombay Presidency, 25 in Bengal, 21 in the Madras Presidency, 14 in the Punjab, 8 in Delhi, 2 each in the Central Provinces, Ajmer and Burma and 1 each in Burma and the U. P. Of the 146 non-Indian companies 71 are constituted in the United Kingdom, 31 in the British Dominions and Colonies, 18 in the Continent of Europe, 12 in the United States of America, 9 in Japan and 5 in Java.

Most of the Indian companies carry on life assurance business only. They are 103 in number and of the remaining 33 Indian companies, 20 carry on life business along with other insurance business and 13 carry on insurance business other than life.

Besides the Indian life offices, there are some pension funds, mostly connected with Government offices, which are exempt from the operation of the Act and the Indian Post Office Insurance Fund is also exempt. As regards non-Indian companies, most of them carry on insurance business other than life. Out of the total number of 146 non-Indian companies, 122 carry on insurance business other than life, 10 carry on life business only and 14 carry on life business along with other insurance business. Of the latter 24 companies, 16 are constituted in the United Kingdom, 6 in the British Dominions and Colonies and 1 each in Germany and Switzerland.

The total new **life assurance business** effected in India during 1931 amounted to 125,000 policies assuring a sum of nearly 26¾ crores and yielding a premium income of 1⅞ crore, of which the new business done by Indian companies amounted to 97,000 policies assuring a sum of 17 crores and having a premium income of 1 crore. The share of the British companies in respect of new sums assured is 3¼ crores, of the Dominion and Colonial companies about 6 crores and of the single German company ¼ crore.

The **average sum assured** under the new policies issued by Indian companies is Rs. 1,764 and under those issued by non-Indian companies Rs. 3,400.

The total life assurance business effected in India and remaining in force at the end of 1931 amounted to 714,000 policies assuring a total sum of 168 crores including reversionary bonus additions and having a premium income of very nearly 8½ crores. Of this the share of Indian companies is represented by 502,000 policies assuring a sum of 94 crores and having a premium income of 4¼ crores.

Most of the Indian companies now transact life assurance business on the scientific principle but there are still some which carry on business on the **dividing plan** under which the sum assured is not fixed but depends on the division of a portion of each year's premium income amongst the claims arising in that year. The Government of India Actuary says in his latest annual report that the main defect of dividing insurance business is that policy-holders in each class are charged the same rate of premium of subscription irrespective of their age on admission ranging even in some cases from 18 to 60 years. "Business of this nature is not only unsound but is apt to lend itself to the practice of fraud on the part of policy-holders and agents and later on by the company. It has been declared to be the curse of insurance enterprise in India." Before the Act of 1912 was passed there were numerous companies which transacted life assurance business on the dividing plan and most of them came to grief. Of such companies which were in existence at the time of the passing of the Act the majority have disappeared and some have stopped issuing policies on the dividing plan. A few new companies have taken up this dividing insurance business and it will not be long before they realise their mistake.

Some Indian life offices have extended their operations outside India, mostly in British East Africa and in the Near East. The total new sums assured by these offices outside India in 1931 amounted to 66 lakhs yielding a premium income of 4 lakhs and the total sum assured including reversionary bonus additions inforce at the end of 1931 amounted to 4 crores, having a premiums income of 21½ lakhs.

The total new annuity business effected during 1931 was for the amount of about ¼ lakh per annum, which was equally shared by Indian and non-Indian companies. The total annuity, business remaining in force at the end of the year was for the amount of 3⅜ lakhs per annum, of which the amount payable by Indian companies was a little over 1½ lakhs per annum.

The life assurance business of Indian companies which steadily increased during 11 years up to 1929 received a setback in 1930 owing to the general financial depression. The following table shows the **new business effected** since 1921 in each year and the total business remaining in force at the end of the year.

Year.	New business written during the year.	Total business remaining in force at the end of the year.
1921	5,47 lakhs.	34 crores.
1922	5,64 ,,	37 ,,
1923	5,85 ,,	39 ,,
1924	6,89 ,,	42 ,,
1925	8,15 ,,	47 ,,
1926	10,35 ,,	53 ,,
1927	12,77 ,,	60 ,,
1928	15,41 ,,	71 ,,
1929	17,29 ,,	82 ,,
1930	16,50 ,,	89 ,,
1931	17,76 ,,	98 ,,

A large portion of the new business transacted by the younger and less firmly established companies lapsed within a short time and the growth of total business in their case is not commensurate with the volume of new business transacted in each year. The total business which lapsed during 1931 was 7⅞ crores and was over 40 per cent. of the total new business.

The **net income** of the Indian companies under their life assurance business from premiums and interest amounted to 5⅝ crores in 1931 and was in excess of ½ crore over the corresponding income of the previous year. Claims amounted to 1⅛ crore and exceeded the previous year's figure by 12 lakhs. Claims by death showed an increase 5 lakhs and claims by survivance an increase of 7 lakhs respectively.

The life assurance funds increased by nearly crores during 1931 and amounted to 22¼ crores at the end of that year. The average rate of interest earned on the life funds during the year was a little less than 5¼ per cent.

The **Post Office Insurance Fund** was instituted by the Government of India in 1883 for the benefit of the postal employees but gradually admission to it has been thrown open to almost all classes of Government servants who are employed on civil duties. The following are some of the important particulars relating to the business of the Fund during the four years 1929 to 1932:—

Year ending 31st March.	New business effected during the year.		Total business remaining in force at the end of the year.		Total income.	Life Assurance fund at the end of the year.
	Number of policies.	Total sums assured.	Number of policies.	Total sums assured and bonuses.		
1929 ..	7,582	1,43,41,000	64,474	13,02,47,000	63,17,000	3,64,44,000
1930 ..	8,894	1,49,56,000	71,479	14,17,81,000	69,36,000	4,02,80,000
1931 ..	9,710	1,50,38,000	79,058	15,32,85,000	76,05,000	4,46,46,000
1932 ..	6,484	98,15,000	83,165	15,88,89,000	81,39,000	4,91,47,000

Fire, Marine and Miscellaneous Insurance Business.—The net Indian premium income of all companies under insurance business other than life assurance during 1931 was 2¼ crores of which the Indian companies' share was ⅝ crore and that of the non-Indian companies 1⅞ crore. The total amount is composed of—

1,28 lakhs from fire.
43 lakhs from marine, and
77 lakhs from miscellaneous insurance business.

The Indian companies received—
28 lakhs from fire,
7 lakhs from marine, and
24 lakhs from miscellaneous insurance business.

The total assets of Indian companies amount to 29 crores of which stock exchange securities from the bulk. These securities are shown in the account at a net value of 20⅜ crores. Mortgage loans on policies and on stocks and shares are shown at 4 crores; land and house property are valued at 1½ crore; deposits, cash and stamps, are shown at ⅞ crore, accrued interest at ½ crore; agents balances and other outstanding items at 1⅛ crore; and loans on personal security and other miscellaneous assets at ⅜ crore. Investments of Indian companies outside India consist mainly of stock exchange securities and amount to ⅞ crore.

Customs Tariff.

General import duties are levied for fiscal purposes and not for the protection of Indian industries. Any duties imposed for protective purposes are on the recommendations of the Tariff Board, as accepted or amended by Government. Under the terms of the Ottawa Agreement a large range of British and Colonial goods received a preferential rate of duty from January 1, 1933. But the tariff has been modified with a view to admitting free or at favourable rates articles, the cheap import of which was considered necessary in the interests of the country. Thus certain raw materials, manures, agricultural implements and dairy appliances are admitted free. Machinery, printing materials, etc., are assessed at 10 per cent. and iron and steel railway material and ships at 15½ per cent.

Re-Imports.—Articles of foreign production on which import duty has been once paid, if subsequently exported, are on re-import exempted from duty on the following conditions:—

The Collector of Customs must be satisfied—

(1) of the identity of the articles;
(2) that no drawback of duty was paid on their export;
(3) that the ownership has not changed between the time of re-export and subsequent re-import;
(4) that they are private personal property re-imported for personal use, not merchandise for sale;
(5) that not more than three years have passed since they were re-exported.

Duty is, however, charged on the cost of alterations, additions, renovations and repairs, involving the substitution of new parts, done to the articles while abroad, which should be declared by the person re-importing the articles in a form which will be supplied to him at the time of re-importation.

To facilitate identification on re-importation an export certificate giving the necessary particulars should be obtained from the Customs Department at the time of shipment of the articles which should be tendered for examination.

This concession of free entry on re-importation is not extended for the benefit of Companies or Corporate Bodies.

Drawbacks.—When any goods, capable of being easily identified which have been imported by sea into any Customs port from any foreign port, and upon which duties of Customs have been paid on importation, are re-exported by sea from such Customs port to any foreign port, or as provisions or stores for use on board a ship proceeding to a foreign port, seven-eighths of such duties shall, except as otherwise hereinafter provided, be repaid as drawback:

Provided that, in every such case, the goods be identified to the satisfaction of the Customs Collector at such Customs port and that the re-export be made within two years from the date of importation, as shown by the records of the Custom House, or within such extended term as the Chief Customs Authority, or Chief Customs Officer on sufficient cause being shown in any case determines, provided further that the Chief Customs Officer shall not extend the term to a period exceeding 3 years.

When any goods, having been charged with Import duty at one Customs port and thence exported to another, are re-exported by sea as aforesaid, drawback shall be allowed on such goods as if they had been so re-exported from the former port:

Provided that, in every such case, the goods be identified to the satisfaction of the Officer-in-Charge of the Custom House at the port of final exportation, and that such final exportation be made within three years from the date on which they were first imported into British India.

No drawback shall be allowed unless the claim to receive such drawback be made and established at the time of re-export.

No such payment of drawback shall be made until the vessel carrying the goods has put out to sea, or unless payment be demanded within six months from the date of entry for shipment.

Every person, or his duly authorised agent, claiming drawback on any goods duly exported, shall make and subscribe a declaration that such goods have been actually exported, and have not been re-landed and are not intended to be re-landed at any Customs port; and that such person was at the time of entry outwards and shipment, and continues to be, entitled to drawback thereon.

Merchandise Marks.—Importers into India especially from countries other than the United Kingdom, would do well to make themselves acquainted with the law and regulations relating to merchandise marks. In Appendix II will be found the principal provisions of the Indian Merchandise Marks Act, 1889, and connected Acts and the notifications issued thereunder. The following summary of the regulations in force does not claim to be exhaustive. For those seeking more complete information a reference is suggested to the Merchandise Marks Manual which is published under the authority of the Government of India and obtainable of all agents for the sale of Indian Government publications.

Infringements or offences may be classified conveniently under four heads:—

1. Counterfeit trade marks;
2. Trade descriptions that are false in respect of the country of origin;
3. Trade descriptions that are false in other respects; and
4. Lengths not properly stamped on piece-goods.

NOTE 1.—In the expression "*ad valorem*" used in these Schedules the reference is to "real value" as defined in section 30 of the Sea Customs Act, 1878 (VIII of 1878), unless an article has a tariff value assigned to it.

NOTE 2.—Tariff-valued heads are based on the ordinary trade description of each article and cover all reduced grades and mixtures unless they are separately provided for.

NOTE 3.—In this publication, the expression "standard rate of duty" means, in the case of articles included in Parts VIII and IX of the Statutory Tariff, the standard rate of duty as opposed to the preferential rate, and, in the case of other articles, the ordinary rate of duty including surcharges, if any.

(The following details of the Indian Customs Tariff are published by courtesy of the Government of India.)

81A	183	CUTLERY, all sorts not otherwise specified ..	..	*Ad valorem.*	30 per cent.	20 per cent. ..	....
82	16	The following Dairy and Poultry Farming Appliances, namely, cream separators, milking machines, milk sterilizing or pasteurizing plant, milk aerating and cooling apparatus, churns, butter dryers, butter workers, milkbottle fillers and cappers, apparatus specially designed for testing milk and other dairy produce, and incubators; also component parts of these appliances, provided that they can be readily fitted into their proper places in the appliances for which they are imported, and that they cannot ordinarily be used for other than dairy and poultry farming purposes.	..	..	Free.	....	....
82A	184	DOMESTIC Refrigerators	..	*Ad valorem.*	30 per cent.	20 per cent. ..	....
82B	232	ELECTRIC lighting bulbs	..	*Ad valorem.*	50 per cent.	40 per cent. ..	....

* Under Government of India, Finance Department (Central Revenues), Notification No. 14, dated the 9th April 1932, articles of imitation jewellery (including buttons and other fasteners) which consist of, or include, base metal plated with gold or silver and in which the proportion of precious metal to total metallic contents is less than 1.5 per cent., are liable to duty as "hardware, other" sorts, at the standard rate of 30 per cent. *ad valorem* or the preferential rate of 20 per cent. *ad valorem*, as the case may be, under Serial No. 84-A.

Schedule II—(Import Tariff)—*continued.*

Serial No.	No. in the Statutory Schedule.	Names of Articles.	Per	Tariff values.	Standard rate of duty.	Preferential rate of duty if the article is the produce or manufacture of—	
						The United Kingdom.	A British Colony.
		III.—Articles wholly or mainly manufactured—*contd.*					
		CUTLERY, HARDWARE, IMPLEMENTS AND INSTRUMENTS—*contd.*					
83	186	The following ELECTRICAL INSTRUMENTS, Apparatus and Appliances, namely :— (*a*) Electrical Control Gear and Transmission Gear, namely, switches (excluding switch-boards), fuses and current-breaking devices of all sorts and descriptions, designed for use in circuits of less than ten amperes and at a pressure not exceeding 250 volts, and regulators for use with motors designed to consume less than 187 watts; bare or insulated copper wires and cables, any one core of which, not being one specially designed as a pilot core, has a sectional area of less than one-eightieth part of a square inch, and wires and cables of other metals of not more than equivalent conductivity; and line insulators, including also cleats, connectors, leading-in tubes and the like, of types and sizes such as are ordinarily used in connection with the transmission of power for other than industrial purposes, and the fittings thereof; (*b*) All other sorts of electrical instruments, apparatus and appliances not otherwise specified, excluding telegraphic and telephonic.	..	*Ad valorem.*	30 per cent.	20 per cent. ..	....

Schedule II—(Import Tariff)—*continued.*

Serial No.	No. in the Statutory Schedule.	Names of Articles.	Per	Tariff values.	Standard rate of duty.	Preferential rate of duty if the article is the produce or manufacture of—	
						The United Kingdom.	A British Colony.
		III.—Articles wholly or mainly manufactured—*contd.*					
		CUTLERY, HARDWARE, IMPLEMENTS AND INSTRUMENTS—*contd.*					
83A	90	The following ELECTRICAL INSTRUMENTS, apparatus and appliances, namely, telegraphic and telephonic instruments, apparatus and appliances not otherwise specified, flash lights, carbons, condensers, and bell apparatus; and switch-boards designed for use in circuits of less than ten amperes and at a pressure not exceeding 250 volts.*†	..	*Ad valorem.*	25 per cent.	....	....
83B	232A	Gold or gold-plated pen nibs..	..	*Ad valorem.*	50 per cent.	40 per cent.	....
84	89	The following HARDWARE, ironmongery and tools, namely, agricultural implements not otherwise specified, buckets of tinned or galvanised iron, and pruning knives.	..	*Ad valorem.*	25 per cent.	....	....

* Under Government of India, Finance Department (Central Revenues), Notification No. 14, dated the 9th April 1932, the following wireless apparatus is liable to duty at 2½ per cent. *ad valorem*:—

(*i*) apparatus for wireless reception [excluding apparatus specially designed for the reception of broadcast wireless and apparatus of the description specified in clause (*ii*) and component parts of such apparatus, when imported under cover of a certificate issued by the Director-General of Posts and Telegraphs to the effect that he is satisfied that the apparatus will not be used for the reception of broadcast wireless;

(*ii*) apparatus for wireless reception incorporated in a single unit with transmitting apparatus.

(*iii*) wireless transmission apparatus and component parts thereof;

Provided that nothing shall be deemed to be a component part of apparatus for wireless telegraphy or telephony for the purpose of this exemption unless it is essential for the working of such apparatus and has been given for that purpose some special shape or quality that would not be essential for its use for any other purpose.

† Under Government of India Finance Department (Central Revenue), Notification No. 14, dated the 9th April 1932, telegraphic instruments and apparatus and parts thereof imported for supply from bond for use of a Railway Administration are liable to duty at 15§ per cent. *ad valorem*, provided that, (*i*) at the time of delivering the bill-of-entry for warehousing a declaration is made thereon by the importer to the effect that the goods have been imported for supply from bond for the use of a Railway Administration; and (*ii*) a certificate from an Officer of the Railway Administration, duly empowered in that behalf by the Agent, is produced along with the application for clearance out of bond that the goods in question are not merely guaranteed stock, but will be definitely appropriated for the use of such Railway on clearance from bond.

4	RICE, husked or unhusked, including rice flour but excluding rice bran and rice dust, which are free.	Piece.	0 14 0	
		,,	0 8 0	
		Indian maund of 82⅔ lbs.	..	Two annas and three pies.

Finance.

The gradual evolution of the present financial organisation of India is in many respects a reflection of her constitutional development. Those who take a broad view of the history of Federal States—and by whatever name it may be called India must in its political structure be a Federal State—nothing is more impressive than the ebb and flow in what may be called the adjustment of Federal and State rights. There is a constant mutation in the powers of the central government and the federal components, though in India we use the terms "Government of India" and "Provincial Governments" to describe them. In the earliest days of British rule, the Provinces, and especially the older Presidencies, were for all practical purposes independent of the central government and responsible only to the authority sitting in London. After the middle of the nineteenth century the process was reversed, and the Government of India was all-powerful, controlling the Provinces down to the smallest items of their expenditure. This centralisation reached its highest point during the long Viceroyalty of Lord Curzon, who was so jealous of his supreme authority that he sought to deprive the Presidency Governors of their right to correspond direct with the Secretary of State for India. This system was found top-heavy in the days of his successors, and a continuous process of devolution set in. In the matter of finance the measures took the form of long-term "contracts" with the Provincial Governments, and later in the assignment of definite heads of revenue to the Provincial Governments, thus removing the dual authority and responsibility which had clogged progress. A much clearer cut was made when the great reform scheme embodied in the Government of India Act of 1919 was passed. Here, for all practical reasons, Provincial finance was entirely separated from the finances of the Government of India, and with one reservation the Local Governments were made masters in their own financial houses. The reservation arose from the circumstance that the funds of the Government of India did not then permit them to do entirely without contributions from the Provinces. These contributions were fixed in the shape of definite sums, which the Provincial Governments had to find from their own resources and pay to the Government of India in cash. They varied between Province and Province, on a scale which at first sight seemed inequitable, but which had a definite logical basis. The total of these contributions was a little less than ten crores of rupees. This was admittedly a temporary expedient, to last only so long as was necessary for the Government of India to reduce its post-war expenditure and develop its revenues to the point when they would balance without drawing from the Provinces. They were an open sore, each Province claiming that it paid an undue proportion of the total contribution, and that it was starved in consequence. There was no possibility of adjusting these differences, so the contributions were reduced as fast as the finances of the Government of India permitted. They finally disappeared from the Budget in 1928-29.

But this did not end the discussion; indeed it was only the first phase. A large issue remains, and despite the extinction of the Provincial contributions the finances of some of the Provinces are in an unsatisfactory state. Broadly the issue may be put in this way. The Government of India has taken the growing heads of revenue those which issue from taxes on income and customs. The Provinces are left with resources which are either almost static, like land revenue, or which are actually declining, as with excise where steps are being taken to reduce the consumption of alcoholic liquor in response to the strong Indian sentiment towards prohibition. At the same time the Provinces are confronted with the great growing sources of expenditure, like those on education and sanitation which bulk largely in Provincial budgets. The burden is heaviest in the industrial provinces, such as Bombay and Bengal. The standard of living is high; wages and costs are a good deal above those of the agricultural provinces. This means an expensive administration. On the other hand the industrial progress which induces this costlier administration pours all its taxable product into the coffers of the Government of India. Rules made to give Bombay and Bengal some share in the Income Tax receipts have been inoperative in practice. Whilst therefore relief is felt at the abolition of the Provincial Contributions under the 1919 settlement, it is felt that this does not go far enough, and there is still this pressure for some share in the revenues from the taxes on income which, it is believed, alone can put the industrial Provinces on a satisfactory basis.

A Review.

The financial organisation was, of course, reviewed as part of the work of the Round Table Conference. A sub-committee of the Federal Structure Committee was appointed under the chairmanship of Lord Peel to examine the question of federal finance and the principles embodied in the sub-committee's report were endorsed by the parent Committee as a suitable basis. A Federal Finance Committee with Lord Eustace Percy as Chairman was appointed at the end of 1931 to subject to the test of figures, the suggested classification of revenues by the Peel Committee and to estimate the probable financial position of the Federal and of the Provincial Governments under the proposed scheme. In the course of their report the Federal Finance Committee said that the transfer to the Provinces of taxes on income though defensible in principle would leave the Centre in deficit. Therefore the Peel Committee suggested a method of transferring to each Province a percentage of the share of income tax estimated to be attributable to it. But in view of the incomplete data on which the estimates were made a special review is said to be necessary at the time federation is established in order to fix the initial percentages. A strict allocation on a percentage basis would still leave some Provinces in deficit and so as to right their finances the committee suggested spreading the charge over the other Provinces by giving them back less in income tax than they were entitled to.

Regarding possible new sources of revenue, Federal or Provincial, the Federal Finance Committee reported as follows :—

Federal.

Excise on Tobacco.—The present position in regard to this tax appears to be that a substantial revenue may be expected from a system of vend licenses and fees, but that an excise duty imposed in the near future could not be relied on to yield a substantial revenue. There is general agreement that such a duty could not be imposed on the cultivator, and it is doubtful whether a duty on the manufactured product could be successful while manufacture continues to be so largely carried on in small establishments and even as a domestic industry. Vend licenses and fees can obviously be imposed only by the Governments of the Units, and their imposition by the Provincial Governments is now being encouraged by the Government of India. The difficulties in the way of a federal excise may be overcome in course of time, but it would be unsafe for us to rely on this in the near future.

Excise on Matches—The imposition of an excise duty on matches is already under active consideration, and we feel justified in contemplating the existence of such a duty from the outset of federation. We are advised that the probable net yield of the tax for all-India at a reasonable rate, with due allowance for reduced consumption, would be about 3 crores, of which at least 2.50 crores would be raised in British India.

Other Excises.—It is possible that other excise duties may occupy an important place in the fiscal Policy of India in the future, but we do not feel warranted in relying upon the introduction of such measures in the early years of federation.

Monopolies.—We have examined the suggestion, made at the Round Table Conference, that federal revenues should be augmented by a few selected monopolies. From the fiscal point of view it is only in very special circumstances that a monopoly, whether of production, manufacture or sale, is to be preferred to an excise duty as a means of raising revenue. Except in so far as the proposals already noticed in regard to tobacco may be regarded as a monopoly, we can suggest no new commodity to which the monopoly method could be applied with advantage. The manufacture of arms and explosives, which has been suggested as a possible monopoly, is already subject to license. Public utility monopolies stand on rather a different footing; but the only new federal monopoly of this kind that has been suggested to us is broadcasting, the revenue from which must be entirely problematical.

Commercial Stamps.—In the Peel Report it was observed that "There is much to be said for federalising Commercial Stamps on the lines of various proposals made in the past," but no definite recommendation was made. We have examined this suggestion, but on the whole we cannot recommend it, at least as an immediate measure.

The yield of certain stamp duties which might be placed in this category was, in 1930-31, slightly more than one crore. This was a sub-normal year, and the normal yield should be somewhat higher. In 1930-31 about 40 per cent. of the yield was received by Bombay (one-eight of this being attributable to Sind), 27 per cent. by Bengal and 12 per cent. by Madras. The loss of revenue resulting from the federalisation of these duties would therefore be unevenly distributed, and their federalisation would not ease the problem of distributing income-tax.

Further, there are obvious difficulties in the way of separating stamp duties into two classes, commercial and non-commercial. It could only be done by means of a schedule, and a large element of purely arbitrary selection would be involved. The simple constitutional solution would be to class all stamp duties as provincial sources of revenue.

We have given some attention to the question, considered by the Federal Structure Committee whether the Provincial Governments should be given power also to fix the rates of duty on all stamps, or whether legislation on this subject should be reserved, wholly or partially, to the Federal Government. We suggest that the Federal Government should retain the power to legislate on behalf of the Provinces in regard to those stamp duties which are the subject of legislation by the Central Government at the date of federation. The duties which are now the subject of central legislation are those on acknowledgments, bills of exchange, share certificates, cheques (not now dutiable), delivery orders in respect of goods, letters of allotment of shares, letters of credit, insurance policies, promissory notes, proxies, receipts and shipping orders. We understand that proposals have been under consideration for adding other duties to this list, and would suggest that, if any such additions are contemplated, that should be made before the establishment of the Federation.

We ought to add, in this connection, that difficulties already arise in estimating the share of each Province in the proceeds from the sale of postage stamps for use on taxed documents, and these difficulties may be expected to lead to considerable friction with the Provincial Governments unless a more satisfactory system can be devised.

Finally, in proposing that the proceeds of commercial stamps should be assigned to the Units, we have to some extent been influenced by a doubt whether the problems arising from the imposition of federal stamp duties in the States might not be disproportionate to the revenue involved. We do not, however, wish to prejudge the possibility that, as part of the general federation settlement with the States, it might be found desirable to include these duties among the sources of federal revenue. This consideration might well outweigh the reasons which have led us to recommend that commercial stamps should not be made a source of federal revenue.

Corporation Tax.—From the financial point of view, it seems clear that, if a corporation tax were imposed on companies registered in the States on the same basis as the present super-tax on companies in British India, the yield at present would be negligible.

Provincial.

Taxation of Tobacco.—We have already dealt briefly with this question and have suggested that the taxation of tobacco, otherwise than by excise on production or manufacture, should rest with the Units, but that the Federal Government should be given the right to impose a general federal excise. This distinction is, we think, justified by the fact that *ex hypothesi* the introduction of excise duties on manufacture will be difficult, if not impossible, until manufacture becomes more highly industrialised; and as that development takes place an excise levied at the factory by one Unit of the Federation would be a tax on consumers in other Units. It will be seen from our later proposals in regard to powers of taxation that the federalisation of tobacco excise would not preclude the Federal Government from assigning the proceeds to the Units, if it so desired.

There is, unfortunately, no material which would enable us to estimate the yield of any of these forms of taxation. The provincial taxes will take some time to mature, but eventually they may be expected to form at least a very useful additional source of provincial revenue.

Succession Duties.—Bombay is, we believe, the only Provincial Government which has attempted legislation for the imposition of succession duties, and the attempt was unsuccessful. We understand that even that Government would have preferred that legislation should have been undertaken by the Government of India. We propose elsewhere that succession duties should be classed among taxes leviable by the Federal Government for the benefit of the Units; but clearly the facts would not justify reliance on them as a source of revenue in the near future.

Terminal Taxes.—We have been asked to weigh the issues which arise from the proposal to introduce terminal taxes generally as an additional source of revenue for the Provinces. As the arguments for and against this proposal have been so fully set forth in previous reports, it scarcely seems necessary to re-state them here. The feature of such taxation which has impressed us most seriously is its operation as, in effect, a surcharge on railway freights. Where municipal octrois are in force, there appears to be a tendency to substitute for the general levy of dues on all goods entering the municipal boundaries the simpler alternative of a terminal tax collected at the railway station, and there is already a danger that this habit may result in diversion of traffic to the roads. We therefore recommend that, if terminal taxes are to be regarded as a permanent part of the financial structure, they should be imposed by the Federal Legislature for the benefit of the Units. Such terminal taxes as are already in existence (mainly as municipal taxes) will fall into much the same category as other taxes classed as federal which, at the time of federation, are being levied by certain Units; but though it may be necessary for this reason to authorise the municipalities and Provinces concerned to continue to raise these taxes, they should be allowed to do so only within limits laid down by the Federal Legislature. Assam and Bihar and Orissa are the two Provinces which, having few or no municipal taxes of the kind at present, are most desirous of deriving provincial revenue from this source. While we do not rule out the possibility of terminal taxes in these two Provinces and elsewhere as a temporary expedient, in view of the practice which has grown up in various parts of India, we are not prepared to regard terminal taxes as a normal source of revenue.

Taxation of Agricultural Incomes.—We have not considered the broad issues of policy involved in the taxation of agricultural incomes, but we have considered, as we were commissioned to do, the more limited question of "the possibility of empowering individual Provinces, if they so desire, to raise, or appropriate the proceeds of a tax on agricultural incomes." In view of the close connection between this subject and land revenue, we agree that the right to impose such taxation should rest with the Provinces. For the same reason, we think that this right should be restricted to the taxation of income originating in the Province concerned. There will presumably be no difficulty in drafting into the constitution a definition of agricultural income which has so long been recognised in Indian income-tax law and practice.

We are not prepared to express a final opinion as to whether agricultural and non-agricultural income should be aggregated for the purpose of determining the right of the assessee to exemption and the rate of taxation to which he is liable on either section of his income; and we doubt whether any provision need be inserted in the constitution on this point since we are advised that, in practice, it would scarcely be possible for either the Federal or a Provincial Government to take into consideration income not liable to taxation by it, except with the consent and co-operation of the other Government.

We are aware of no reliable data for estimating the yield of such taxation.

Conclusion.—In this survey of possible sources of additional revenue, we have deliberately left out of account the question whether or to what extent it would be possible to increase the yield of existing taxes. We have confined ourselves to an examination of new sources, and in this field the results of our survey are not encouraging. We have found that such provincial taxes as appear to be within the sphere of practical politics in the immediate future cannot be relied on to yield any substantial early additions to provincial revenues. In using the phrase "practical politics," we are not, of course, expressing an opinion as to whether this or that tax ought or ought not to be imposed, or even as to whether it is or is not likely to be imposed by the legislatures of autonomous Provinces when these are constituted. We are only noting the fact that the opposition to certain forms of taxation, or the difficulty of their imposition, is still so great that they are not likely to be adopted soon enough to influence the financial situation at the time when the Federation comes into being. In the federal sphere, the excise on matches is the only tax which we feel justified in taking into account as an immediate reinforcement of federal revenues.

Railway Finance.—The year 1924-25 was marked by a step of great importance in the better organisation of Indian finance. As is explained in detail under the section Railways (*q.v.*) the Government of India is a great railway owner. It owns and operates itself a very large proportion of the railway system through what are called State Railways; it is the principal shareholder in other lines which are leased to Companies which operate them. Prior to the year in question, the railway finances were incorporated in the general finances of the country. The effects of this were unfortunate. As the finances of a State are not managed on commercial lines, the railways were not conducted on commercial principles. Then the annual allotments to railway expenditure were not determined by the needs of the railways themselves, but by the amount at the disposal of the Government of India. The evil effects of this policy were forcibly exposed in the report of a strong committee of investigation, usually called after the name of its chairman, the Acworth Committee, which recommended the entire separation of the Railway Budget from the general finances. Some delay incurred in giving effect to this recommendation, but it was carried out in the year 1924-25. The bases of the settlement were complete separation of finance; a definite annual contribution from the railways revenues to the general revenues; and the creation of a Standing Finance Committee of the Legislative Assembly to review estimates of railway expenditure before they are placed before the Assembly. The railway contribution was settled on the basis of one per cent. on the capital at charge, plus one-fifth of the surplus profits; further, if after the payment of the contributions so fixed the amount available for transfer to Railway Reserves exceeds the sum of Rs. 3 crores, one-third of the excess should be paid to the General Revenues. The effects of this change are expected to yield to the General Revenues a fixed contribution from the railway property instead of a varying figure destructive of accurate budgetting, and to give to the railways the usufruct of their operation and secure management and development on commercial principles.

In the past few years, owing to the economic depression, the railways have been unable to make the contribution to general revenues.

I. RECENT INDIAN FINANCE.

The year 1924 marked a distinct and very important stage in the finances of India. Those who have studied the history of Indian finance will remember the general trend of the country's balance sheet. Up to the outbreak of the war it was a record of very careful finance, with a general surplus of revenue over expenditure, all such surpluses, save when they were in the nature of "windfalls" going to the avoidance of debt. Throughout the war the finances were carefully handled and with certain moderate increases in taxation the accounts were made to balance. But commencing in 1919 a lamentable change came over the situation. The wanton invasion of India by Afghanistan meant a war which cost the exchequer directly some 34 crores of rupees. Nor was this all. Whilst the military resistance of Afghanistan to the Indian forces was contemptible, and Kabul lay open to easy seizure if it had been thought worth while to occupy it, the effect of this attack was to set a large part of the North-West Frontier ablaze and to thrust on the Government of India a series of costly expeditions. When these were completed, there remained the necessity of establishing a new Frontier system to take the place of that which collapsed in 1919. This especially in the notoriously troublesome country of Waziristan, (*q. v.* Frontier) involved the occupation of certain dominating posts and of connecting them with each other and with the advanced military stations of India by a series of very expensive roads. This abnormal expenditure dislocated the financial equilibrium of the whole country. Nor is it possible to acquit the Finance Department of the Government of India in the difficult post-war period of a relaxation of that close control of expenditure which in previous years had balanced the accounts, even in the years of famine and plague. The result was that the accumulated deficits of the Government of India reached the very high figure of Rs. 100 crores. This led to two results.

Retrenchment and Taxation.—Owing to the insistent demand for retrenchment the Government of India appointed in 1922 a retrenchment committee, on the model of the Geddes Committee which overhauled the extravagant post-war expenditure of the British Government. This committee is generally called after its chairman, the Inchcape Committee. It sat in 1923, and presented a report which recommended reductions in expenditure which amounted in the aggregate to Rs. 18 crores.

Financial equilibrium was established and a surplus realised in the Budget of 1923-24.

Statement comparing the actual Revenue and Expenditure of the Central Government since 1921-22.

In lakhs of Rupees.

Year.	Revenue.	Expenditure.	Surplus(+) Deficit(−)

(*a*) Whole surplus placed to provision for reduction or avoidance of debt.

(*b*) Surplus to Earthquake Fund.

II. THE PRESENT FINANCIAL POSITION.

India, in common with other countries of the world, felt the full force of the economic blizzard which began in 1930 and attained its maximum the following year. The net result from the Government of India's point of view was the introduction during 1931 of two Budgets, the ordinary Budget in the spring of the year and a supplementary Budget containing fresh taxation proposals in September. When Sir George Schuster faced the Legislative Assembly at the end of February, he had a sorry tale to tell. Trade depression, coupled with civil disobedience movement, had completely vitiated the estimates made for 1930-31. These estimates showed a surplus of Rs. 86 lakhs; the revised estimates worked upto a deficit of Rs. 13.56 crores, which the Finance Member said would remain uncovered and would be added to the unproductive debt. The main items of deterioration as compared with the Budget can be summarised as follows :—

	Lakhs.
Important revenue heads, viz., Customs, Taxes on Income, Salt and Opium (net) ..	12,10
Posts and Telegraphs (including the Indo-European Telegraph Department)	89
Finance headings, viz., Debt services, Currency and Mint.	1,38
Other heads	5
Total Rs.	14,42

Turning to the estimates for 1931-32, the Finance Member said they must face a fall in tax revenue, as compared with the current Budget estimates, of no less than Rs. 13.16 crores, including a drop of Rs. 8 crores in Customs and 4¼ crores in income tax. The total deterioration under Finance headings was Rs. 376 lakhs and on commercial departments Rs. 118 lakhs. This meant a total deterioration of Rs. 18.10 crores as compared with the Budget estimates for the current year, and as those provided for a surplus of Rs. 86 lakhs the net deficit would be Rs. 17.24 crores. To meet this deficit the Finance Member announced a cut of Rs. 175 lakhs in army expenditure and retrenchment to the extent of Rs. 98 lakhs in civil expenditure, making a total saving of Rs. 273 lakhs. The estimated deficit was reduced thereby to Rs. 14.51 crores, which he proposed to cover by fresh taxation.

New Taxation Proposals.—His proposals are grouped under two heads, Customs and Income Tax. Referring to the first the Finance Member said : "The heads in respect of which I propose alterations of the substantive tariff itself, are liquors, sugar, silver bullion, betelnuts, spices and exposed cinematograph films. The liquor duties are to be enhanced appreciably; the duty on beer and the like is at present undoubtedly low relatively to those on other alcoholic beverages and will be raised by about 66 per cent. above the present level, while those on wines and spirits (except denatured spirit and spirit used in drugs and medicines) will be raised by between 30 and 40 per cent. The duty on silver bullion I propose to increase from 4 to 6 annas per ounce. The other items mentioned will be transferred from the general rate of duty (now 15 per cent. *ad valorem*) to the "luxury" rate at 30 per cent. Of the surcharges, we have at a stroke added to the 10 per cent. schedule a surcharge of 2½ per cent., to the general or 15 per cent. schedule one of 5 per cent., and to the "luxury" or 30 per cent. schedule one of 10 per cent. By far the most important of these surcharges is that 5 per cent. on the general revenue schedule of 15 per cent., and connected with this, I must mention a feature of particular importance. We propose for this purpose to treat the basic duty of 15 per cent. on cotton piece-goods on the same lines as the general 15 per cent. schedule and to place the surcharge of 5 per cent. on these goods also. The surcharge on the 15 per cent schedule is expected to yield 90 lakhs for cotton piece-goods and 2,63 lakhs for other goods. Coming now to the schedule of non-protective special duties, here we have made additions appropriate to the general scheme, and I need only mention specially the surcharges that I propose to levy upon kerosene and motor spirit. Both customs and excise duty on kerosene are to be raised by 9 pies per gallon, while motor spirit is to bear a surcharge of 2 annas per gallon. Finally, I must explain my proposals as regards sugar. The position is special, because, while I am now proposing an increase in the duty for revenue purposes, we had received, just when my budget proposals were on the point of completion, the recommendations of the Tariff Board for the protection of sugar. Summarised, the Board's recommendations are :—(1) a basic duty of Rs. 6-4-0 per cwt. on all classes of sugar, including sugar candy, to be imposed for 15 years; (2) an additional duty of Re. 1 per cwt. on all classes of sugar to be imposed for the first 7 years; (3) power to be taken to add 8 annas per cwt. to the duty at any time if the landed price of sugar at Calcutta ex-duty falls below Rs. 4 per maund; (4) no protective duty on molasses. My own proposals for revenue purposes had been very close to this, for I had actually contemplated an extra duty round about Re. 1 to Rs. 1-8-0 per cwt. What I have now included is an increase of Rs. 1-4-0 per cwt. on all grades of sugar. This, as I have said, must be regarded purely as a revenue

measure pending consideration of the Tariff Board's recommendations. The combined effect of all these proposals as regards Custom duties will be to produce an additional revenue next year of 9.32 crores. We shall also obtain about 50 lakhs more from the increased import duties on galvanized pipes and sheets which the House discussed on 28th January last. This will raise the additional yield to 9.82 crores. Incidentally, the new duties, which will operate from 1st March, and the increased duties on galvanized pipes and sheets, which came into force on 30th December, will add to our revenue for the current year a sum estimated at 88 lakhs, thus reducing the current year's deficit to 12.68 crores."

Increased Income Tax.—Dealing with his proposed new tax on incomes, the Finance Member said: "The taxable minimum income for income-tax—Rs. 2,000—will not be lowered. The rate of tax on the lowest zone up to Rs. 4,999 will be raised by 4 pies. The rates on higher grades up to Rs. 39,999 will be raised in some cases by 5 pies, in some cases by 6 pies, and in the highest of these grades by 7 pies. At present the highest rate is reached at Rs. 40,000. It is now 19 pies. I propose a rate of 25 pies on incomes from Rs. 40,000 to Rs. 99,999, and a maximum rate of 26 pies on incomes of Rs. 1 lakh and over. The estimated yield of these increases is 5,07 lakhs gross or, deducting 53 lakhs on account of increased refunds, 4,54 lakhs net. In addition to this, I propose certain changes as regards super-tax. At present all assessees except Hindu undivided families are allowed a deduction of Rs. 50,000 in computing the income liable to super-tax. This will be lowered to Rs. 30,000 except for Hindu undivided families and companies, which will be allowed, as at present, a deduction of Rs. 75,000 and Rs. 50,000 respectively. In the new zone, Rs. 30,001 to Rs. 50,000 the super-tax rate will be 9 pies. Above Rs. 50,000 the graduated scales will be increased by 2 pies throughout. The flat rate for companies will be 1 anna as at present. These changes will yield, it is estimated, 46 lakhs. Thus the total estimated additional net revenue from taxes on income will be 5 crores. Briefly they will add an extra charge of about 2 to 5 per cent. on all incomes. The rates of additional tax have been so adjusted as to produce, in the final result, an evenly graduated scale of burden increasing as the income increases, and this object must be borne in mind in interpreting our proposals. The total yield from the proposed changes in Customs duties and taxes on income thus amounts to Rs. 14.82 crores, as against which the gap to be filled is Rs. 14.51 crores, so that I am left with a small surpuls of Rs. 31 lakhs.

Silver Duty.—Referring to silver, the Finance Member said:—"It is necessary for me to make a special reference to the proposed increase in the tax on silver because this has a general bearing on the whole question of our policy in relation to silver and its effect on the world position. The increase of two annas an ounce which we are proposing is estimated to produce 75 lakhs from the import duty and 7 lakhs from the excise or 82 lakhs in all. In itself it is a clearly justifiable form of raising revenue as part of the general plan designed to meet the situation which confronts us this year. The only possible objection to it might be based on broad grounds, that is to say, on a fear that it might tend to check consumption of silver in India and thus further weaken the price of silver to the disadvantage not only of India but of the whole world. We have given the fullest weight to this consideration, but with the very moderate increase in the duty which we now propose we do not think that the fear is justified. Similar apprehensions were expressed in certain quarters last year when we imposed the duty of 4 annas. But although this weakened the price for a few days, the market almost immediately recovered, and in spite of the duty and of the great decline of India's purchasing power, the consumption of silver in the current year is keeping up to the normal level. In fact, we anticipate a consumption, taking all sources of supply into account, of between 100 and 110 million ounces. India's consumption should not therefore this year be seriously affected by the increased duty, while, as regards helping to maintain the price of silver, we are prepared to consider action in other ways. I announced in my budget speech last year that the Government of India would be prepared to co-operate with other silver interests if any practical scheme could be devised for controlling the production of new silver and the sale of and new existing stocks. Unfortunately, the only response to my offer has been on the lines indicated in certain utterances which have appeared in the press by representatives of the main producing interests in America. In general, these gentlemen propose that their own production of new silver should remain unrestricted, but that Governments and others who hold large stocks of silver should refrain from realising their holdings, and leave the world's markets free for the new production. Now, whatever criticisms non-official members in this House may have made in the past on our policy of selling silver, I am sure that they would not expect the Government of India to part with the country's rights by acceding to any such one-sided arrangement. The demand that the Government of India should refrain from selling is, indeed, an astonishing proposition when the facts are studied. For, in fact, the whole world depends on India as a consumer. In the five years ending March 31, 1930, India absorbed about 540 million ounces of silver or 108 million ounces per annum. According to present indications, her absorption, even in the current year, will be up to this average, so that the total absorption in 6 years will be about 650 million ounces. As against this, the Government of India have sold out of their own holdings a total of only about 90 million ounces since 1926. Yet it is suggested that even this moderate realisation is to stop, and that India is to stand aside and keep her own home market free to absorb the production from the Mines of Mexico and the United States. This is a clearly unacceptable idea, and however anxious we may be—as indeed we are—to help, we must, as a condition of co-operation, secure fair consideration of India's interests. In the meanwhile, we must retain a free hand."

WAYS AND MEANS.

The following is a summary of the estimates of ways and means in India during 1933-34 and 1934-35 :—

(In crores of rupees.)

	Budget, 1933-34.	Revised, 1933-34.	Budget, 1934-35.
RECEIPTS.			
1. Excess of Revenue of the Central Government over Expenditure charged to Revenue.. ..	35.82	32.56	32.96
2. Unfunded Debt incurred—			
(*a*) Post Office Cash Certificates (net)	5.00	7.80	5.50
(*b*) Post Office Savings Bank deposits (net) ..	3.40	9.10	6.00
(*c*) Other Savings Bank deposits (net)	4.80	5.40	5.99
3. Appropriation for reduction or avoidance of debt.	6.88	3.00	3.00
4. Railway and Posts and Telegraphs Depreciation Funds	.42	.09	—.35
5. Post Office Cash Certificate Bonus Fund ..	1.35	.70	1.10
6. Miscellaneous Deposits and Remittances (net) ..	.24	.41	1.67
TOTAL RECEIPTS	57.91	59.06	55.87
DISBURSEMENTS.			
7. Capital Expenditure not charged to Revenue—			
(*a*) State Railways	2.00	—.75	2.96
(*b*) Posts and Telegraphs	.16	.16	.40
(*c*) Other items	1.06	1.41	1.29
8. Permanent Debt discharged (net)	28.95	42.54	13.24
9. Floating Debt discharged (net)	8.00	13.82	....
10. Loss on revaluation, sale transfer, etc., of assets of the Paper Currency Reserve (net)	....	7.89	.05
11. Loans by the Central Government—			
(*a*) To Provincial Loans Fund	3.91	3.68	6.00
(*b*) Other Loans	—.19	.28	1.49
12. Remittances between England and India—			
(*a*) Remittance from India for financing Home Treasury	28.00	50.00	35.60
(*b*) Transfers through the Gold Standard Reserve and the Paper Currency Reserve	—.50	—31.75	....
(*c*) Sale of silver	.50	5.08	....
(*d*) Other transactions (net)	1.39	1.57	.70
13. Balances of Provincial Governments	—2.76	—2.90	—2.91
TOTAL DISBURSEMENTS ..	70.52	91.03	58.82
NET DISBURSEMENTS	12.61	31.97	2.95
New Loan	12.00	30.82	.....
Reduction (+) or increase (—) of cash balance ..	+.61	+1.15	+2.95
Opening Balance	11.73	14.59	13.44
Closing Balance	11.12	13.44	10.49

Reception by the Assembly.—Strong opposition was manifested in the Assembly to the new income tax and super tax rates, and on the plea that Government's duty was to retrench expenditure still further, an amendment was passed reducing the proposed revenue from this source by Rs. 240 lakhs. Government found themselves unable to accept this cut, and the Finance Bill was returned to the Assembly by the Governor-General with the recommendation that it should be passed with an amendment to the Finance Member's original scheme involving a reduction in the lowest grades of income tax and leaving the higher grades untouched. The estimated decrease in revenue was about a crore of rupees compared with nearly two and a half crores created by the Assembly's vote. The following were the rates recommended by the Governor-General :—

In the case of every individual, Hindu undivided family, unregistered firm and other association of individuals not being a registered firm or a company :—

	Rate.
When the total income is less than Rs. 2,000	*Nil.*
When the total income is Rs. 2,000 or upwards, but is less than Rs. 5,000	Six pies in the rupee.
When the total income is Rs. 5,000 or upwards, but is less than Rs. 10,000	Nine pies in the rupee.
When the total income is Rs. 10,000 or upwards, but is less than Rs. 15,000	One anna in the rupee.
When the total income is Rs. 15,000 or upwards, but is less than Rs. 20,000	One anna and four pies in the rupee.
When the total income is Rs. 20,000 or upwards, but is less than Rs. 30,000	One anna and seven pies in the rupee.
When the total income is Rs. 30,000 or upwards, but is less than Rs. 40,000	One anna and eleven pies in the rupee.
When the total income is Rs. 40,000 or upwards, but is less than Rs. 1,00,000	Two annas and one pie in the rupee.
When the total income is Rs. 1,00,000 or upwards	Two annas and two pies in the rupee.
In the case of every company and registered firm, whatever its total income	Two annas and two pies in the rupee.

The Bill in its recommended form was, however, rejected by the Assembly by 60 votes to 56, and was sent to the Council of State where it was passed. It became law on being certified by the Governor-General. The gap of Rs. 105 lakhs caused by the amended income tax figures was partly filled by reduction of military expenditure to the extent of Rs. 60 lakhs and by Rs. 15 lakhs cut in civil expenditure.

Other cuts made by the Assembly and accepted by Government included token reductions of Rs. 100 in the demands for Customs, Income Tax, Executive Council and Army Department. Two cuts of Rs. one lakh and Rs. 100 were made in the Railway Board demand and were accepted.

Supplementary Budget.—It soon became evident that the worsening of the trade depression had seriously vitiated the revenue estimates in the February budget, and in September Sir George Schuster came before the Legislative Assembly with a Supplementary Finance Bill. The Finance Member said that the returns for the first five months indicated that they would fall short of their budget estimates for customs by at least Rs.10 crores, the heaviest reductions being under cotton piece-goods, sugar, silver, spirits and liquor, excise on motor spirit, iron and steel and in the jute export duty, while they expected a deficit of Rs. 1¼ crores on income-tax. Income from Railways and Posts and Telegraphs showed a similar decline. The total deterioration in income amounted to Rs. 11.33 crores in tax revenue, Rs.5.48 crores on commercial departments, Rs.2.29 crores in general finance headings, Rs. 23 lakhs under extraordinary receipts and Rs. 23 lakhs under other heads. As the budget provided for a small surplus of Rs. 1 lakh on the basis of the present estimates there would be a net deficit of Rs.19.55 crores. Putting the deficit for the current year and next year together they had a gap to fill of Rs. 39.05 crores. He proposed

to deal with the situation on three distinct lines, firstly, to reduce expenditure; secondly, to impose an emergency cut in salaries; and thirdly, to impose fresh taxation. Retrenchment measures in civil expenditure he estimated would save about Rs.30 lakhs in the current year, and Rs. 250 lakhs next year, while military expenditure next year would be curtailed by Rs.450 lakhs. A ten per cent cut in pay in both civil and military departments would lead to a saving of Rs. 60 lakhs in the current year and Rs.190 lakhs next year. Turning to new methods of raising revenue the Finance Member said his first proposal would be an immediate increase in the salt revenue by abolishing the credit system, which would mean that the revenue would be increased by a crore of rupees each year on this account. The main plank of his new taxation proposals was to put a temporary surcharge on all existing taxes with the exception of Customs export duties, the surcharge being 25 per cent on the existing rates in each case. He proposed that the surcharge for the current year in income-tax should only be 12½ per cent, but it would be collected at this rate on the whole year's income. Government held that in the present emergency they were justified in reducing the income-tax exemption limit and imposing a small tax of four pies in the rupee on incomes between Rs. 1,000 and Rs.2,000 per annum. Dealing with special increases and new taxes, the Finance Member said: "We propose to increase the import duty on artificial silk piece-goods from 20 to 40 per cent. and on artificial silk yarn from 10 per cent. to 15 per cent. We also propose to increase the duty on brown sugar from Rs.6-12-0 to Rs.7-4-0 per cwt. This follows the Tariff Board's recommendation. As regards boots and shoes, we propose that there should be imposed as an alternative to the 20 per cent. duty a minimum of 4 annas per pair. The duty will thus be 20 per cent. or 4 annas a pair, whichever is the higher. We also propose to increase the duty on camphor and on electric bulbs from 20 to 40 per cent. As regards all these articles the surcharge wil lbe levied on the increased duty."

"Then there are three items formerly on the free list on which we think it justifiable to impose a small duty on revenue grounds. The result of the surcharges imposed in last Budget and proposed now is that the level of the general revenue tariff has been increased from 15 to 25 per cent. There is, therefore, some justification for adding a 10 per cent. duty to articles hitherto free. We propose to put duties of 10 per cent. on machinery and dyes, and of ¼ anna per lb. on raw cotton. I must expect criticism of these duties especially from the cotton mills, and I must acknowledge that their imposition may appear to be in some ways inconsistent with previous policy. The justification must be the need for revenue, while as regards the cotton mills we may claim that on balance their position will be improved by our surcharge proposals, for under these the import duties on cotton piece-goods will be increased by one quarter. This more than offsets the burden of ¼ anna per lb. on goods made from imported cotton, and affords an effective answer to possible criticisms on the grounds to which I have referred. I have one more word to say as regards the income-tax proposals. In considering the cut to be applied to the salaries of Government officials we considered what total reduction of their emoluments could fairly be imposed. If the general rate of reduction is to be 10 per cent., that represents what we think fair, and if further increases of income-tax were to be added, that would go beyond the reasonable limit. We therefore propose that increases of income-tax both by way of surcharge on existing rates or by way of imposition of a tax for the first time on salaries from Rs.1,000 to Rs.2,000 should be merged in any general cut which we are imposing or which the Provincial Governments may impose."

The Finance Member's final proposal was to increase the postage for inland letters to 1½ annas instead of 1 anna and for postcards to 9 pies instead of 6 pies. That enhancement was expected to produce Rs.73 lakhs in a full year and go a long way to cover the deficit of Rs.92 lakhs in the working results of the Posts and Telegraphs Department which would be left even if the recommendations of the Posts and Telegraphs Accounts Enquiry Committee were accepted.

Need for Solvency.—The net result for the current year was an estimated increase in taxation of Rs. 711 lakhs which, together with Rs. 37 lakhs from increased postal charges and Rs. 100 lakhs from salt revenue, meant, with retrenchment measures, an improvement of Rs. 938 lakhs as against an estimated deficit of Rs. 19.55 crores. They would thus close the year with a deficit of Rs. 10.17 crores. On the other hand, in 1932-33 they would feel the full benefit of the retrenchment measures and the extra taxaion, making a total improvement of Rs. 24.73 crores against an estimated deficit of Rs. 19.50 crores They should thus close the year with a surplus. of Rs. 5·23 crores. The combined result of the two years would be a deficit of Rs. 4·94 crores, which they were justified in regarding as covered by making during this period of exceptional stress a reduction of about Rs. 247 lakhs in each year for the provision for reduction or avoidance of debt. The net administrativen expenditure would, according to their plans, prooceed as follows :—

1930-31	..	Rs.79.67 crores.
1931-32	..	Rs.74.66 crores.
1932-33	..	Rs.65.95 crores.

Concluding his speech Sir George Schuster said: "I referred at the outset of my speech to the dangers, now that we are divorced from a gold standard, of any inflationary action for the purposes of meeting the current expenditure of the Government. If once that process starts, it may be impossible to save the country from a complete collapse of its currency. That has been the experience of all countries whose currencies collapsed after the War. They all went through the same process. Budgetary deficits, met first by borrowing; then a reluctance of the public to subscribe to government loans or treasury bills, then recourse to the note-printing press and inflation to provide funds to meet current public expenditure; then collapse in confidence in the currency, notes printed faster and faster until the amounts reached astronomical figures, and finally the complete disappearance of any value to the currency at all. We want to erect a solid

barrier against the possibility of India getting on to that slippery slope. That is the essential justification for our proposals. We have heard much talk in the last days about the disappearance of our currency reserves. But no currency can be large enough to stand up against a lack of confidence in the currency. Reserves are only valuable to tide over temporary difficulties. The real safeguard must be confidence in the soundness of a country's financial situation. If a country meets current expenditure with current revenue, and if, further, it has a favourable balance of trade, then it can face all the vicissitudes of fortune with confidence, and its actual currency reserves are of minor importance.

Assembly Opposition.—The Finance Member's statement and fresh taxation proposals came as a shock to the Assembly, and strong opposition to certain sections of the Bill was manifested from the start. Most of the non-official members maintained that larger cuts in expenditure should be made, instancing the need for still further retrenchment in the Army demands. When the Bill was discussed clause by clause, a motion was carried placing mill machinery, etc., again on the free import list and the proposal to increase postal rates was rejected. Amendments to the income tax increases were carried omitting the reduction of the minimum taxable income from Rs. 2,000 to Rs.1,000, and making the 25 per cent. surcharge levied during 1932-33 applicable only to incomes over Rs.10,000 per annum. When the discussion finished the Bill was returned to the Assembly with a recommendation by the Governor-General that it should be passed in its original form. Lord Willingdon pointed out that the amendments made by the Assembly would reduce the expected revenue by Rs.4 crores over eighteen months, and added "I am satisfied that I cannot consistently with my responsibilities allow this deficiency to remain uncovered." The Bill as amended was, however, rejected by the Assembly by 63 votes to 48. It was taken to the Council of State where it was passed and was thereafter certified as law by the Governor-General.

The 1932-33 Budget.—Presenting the 1932-33 budget on March 7th, 1932, the Finance Member explained that the circumstances were somewhat unusual. The supplementary budget had been introduced only six months earlier. He did not, therefore, propose to ask the House at the present stage to approve any extensions or modifications of the plan for raising revenue put forward in September 1931. On the basis of the supplementary budget in September it was hoped to reduce the deficit for the current year to Rs. 10.17 crores and for the following year to realise a surplus of Rs. 523 lakhs but experience had made it necessary to revise these estimates. A deterioration in the figures by about Rs. 3 crores was to be allowed for each year and it was anticipated that the current year would close with a deficit of Rs. 13.6 crores and that the surplus for 1932-33 would be Rs. 2.15 crores. The Finance Member reminded the House that for the current year and the next year combined no less than Rs. 13.71 crores was being provided from revenue for reduction or avoidance of debt.

Revenue Estimates.—The budget estimates for customs receipts in 1932-33 were put at Rs. 415 lakhs less than in the previous year in spite of the increased duties imposed by the emergency budget and which were expected to bring in an additional revenue of Rs. 9¾ crores. The main deterioration occurred under the heads of sugar, silver, cotton piecegoods and liquors. Referring to the revenue from the commercial departments the Finance Member said that no contributions from the railways were expected either in the current year or the next. As regards Posts and Telegraphs the loss in working in the coming year was expected to be about Rs. 16 lakhs.

Expenditure Estimates.—The total civil and net military expenditure in 1932-33 was estimated at Rs. 67,39 lakhs which was Rs. 11,84 lakhs less than for 1930-31 and Rs. 795 lakhs less than the current budget. On the subject of retrenchment the Finance Member said:

"For the present I would remind Honourable Members of the following broad facts, when they compare what we have achieved with the recommendations of the various Retrenchment Committees. The total recommended by the four civil Sub-Committees was Rs. 4,99 lakhs, and we have against this achieved economies of Rs. 4,33 lakhs or nearly 87 per cent.—before allowing for terminal charges which, of course, the committees did not take into account."

"I would mention two other striking results in this connection. The first is the actual reduction in Expenditure. I have already given the figures from the accounts showing a reduction of 11,84 lakhs for Civil and Military Expenditure (excluding Posts and Telegraphs) since 1930-31. The position may also be stated in another way. If Honourable Members will look at the analytical table which is included in the Financial Secretary's memorandum (which is prepared now on a slightly different basis from that which I circulated in September) they will find that what I may describe as the net controllable administrative expenditure, civil and military (which excludes the cost of collection of taxes and of the administration of salt and Posts and Telegraphs expenditure) has been brought down from just over Rs. 76 crores in 1930-31 to just over Rs. 64 crores for 1932-33, a reduction of about 16 per cent."

The second fact is of a more distressing nature, but it indicates the magnitude of the effect which we have made. In pursuance of the retrenchment campaign the following appointments in the Civil Departments (including Posts and Telegraphs) have been or will shortly come under reduction so far as information is at present available—

Gazetted officers	299
Ministerial establishment and other superior establishment	5,279
Inferior establishment	1,485
Total ..	7,063

Army Expenditure.—On the subject of military expenditure the Finance Member said:—

"In September last I informed the House that His Excellency the Commander-in-Chief had agreed, as the Army's contribution in the national emergency to accept a cut of Rs. 5¼ crores on his 1931-32 budget. I have now only to say that His Excellency has made good his undertaking in full, and that the estimate for the military budget in 1932-33, excluding again the special grant for the Territorial Force, stands at 46.65 crores."

"Honourable Members will find among their budget documents an Army Department paper giving a detailed account of the methods by which this reduced figure has been reached. The total reduction, which is raised to 5½ crores to allow for certain unavoidable new items such as the establishment of the Indian Sandhurst, is made up of first, 1.40 crores from cuts in pay, secondly, 3.10 crores from retrenchment measures in recurrent expenditure, and thirdly, 1 crore from postponement of progress with the special re-equipment programme. It is necessary to appreciate the exact significance of these savings. To take the first—the cut in pay, this, except for certain categories of British Army personnel (in regard to whom the reduction, following what has been done in England, is permanent), represents the general 10 per cent. cut which we have imposed on all Government servants, and, as we have undertaken that this cut will be restored as soon as conditions permit, most of this part of the reduction must be regarded as purely temporary. Turning to the second class, the retrenchment in recurrent expenditure, this to some extent is accounted for by special temporary savings, such as the eating down of stocks and postponement of essential buildings. As regards the third class, the postponement of the re-equipment programme, this cannot be regarded as permanently cancelled. It does, however, represent special non-recurring expenditure, and when conditions permit it will be necessary to consider special means for financing the completion of this programme."

"The significance of these remarks may be indicated in the following way. As regards the cut in pay, when the general cut of 10 per cent. is removed this will automatically throw back on to the Army a recurrent liability of 1,23 lakhs—(1,40 *less* 17 which is a permanent cut). As regards the retrenchment in normal expenditure, about 65 lakhs of this represents savings which are not in the strict sense recurrent. About 20 lakhs represents drafts on stocks, etc. and 45 lakhs postponement of the provision for buildings which are regarded by the Army Department as essential. As regards the postponement of the re-equipment programme, the one crore saved on this for next year may have to be found later by some form of special non-recurring provision. The Army authorities have throughout made it clear that they have only agreed to postponement in order to help in meeting the present national emergency, and that the permanent cancellation of these measures could not—consistently with maintaining the efficiency of the Army—be effected."

"His Excellency the Commander-in-Chief has given an assurance that he will not relax his efforts to secure further reductions in recurrent expenditure both by pressing on with measures already accepted, and by developing any further lines that may present themselves, but he has made it clear that he does not see any hope of being able to find economies in normal expenditure, that is to say, economies from measures other than the reduction of fighting troops which raises quite different issues, which can go near to balancing the burden of 1,23 lakhs which would arise from restoring cuts in pay combined with the disappearance of the 65 lakhs of special savings on recurrent expenditure from next year. In support of this he points out that in spite of the intensive examination of all sources of economy both by his own officers and by the Retrenchment Committee, it was only possible to work up to the present reduction of 5¼ crores by reducing troops at a saving of 35 lakhs. Further, although provision has been made in the estimates for 1932-33 for some rise in the prices of food grains, as compared with those prevailing in 1931-32, the rates now taken are still far below the recent normal level, and, if prices should rise to, and be stabilised at, something like the 1929 level, this event, though welcome on general grounds, would mean an automatic increase in the military estimates. On these considerations His Excellency wishes it to be made clear that he cannot regard the budget figure of 46.65 crores as representing a new standard level of standing charges, and that the normal cost of the Forces at their present strength when the cut in pay is restored must be recognised to be about 48 crores even if the prevailing low prices for grain, etc., continue. I have thought it right to let Honourable Members know the conclusions which His Excellency has drawn from the facts of the present situation, and I can only add that the Government will continue to press for all possible efforts to secure further recurrent economies, and that the campaign for retrenchment will not be regarded as finally closed with the achievements of this year."

The 1933-34 Budget.—In introducing the budget, the Finance Member summarised the results for the two previous years. The results for 1931-32 had turned out to be Rs. 2 crores better than anticipated in the budget speech and the account for the year showed a deficit after providing nearly Rs. 7 crores for the reduction of debt of Rs. 11¾ crores. For the year 1932-33 the latest revised estimates indicated that the surplus would be Rs. 217 lakhs or Rs. 2 lakhs more than was estimated. He continued to estimate revenue for 1933-34—particularly customs revenue—is, in view of the completely uncertain and abnormal conditions, a task of quite unprecedented difficulty. Indeed I may say that accurate estimation is impossible. In these circumstances and for the reasons which I have explained, we have thought that the most reasonable course is to assume that the general position next year will be the same as for the current year, neither better nor worse, and in particular that India will be able to maintain the same purchasing power for commodities imported from abroad.

Customs.—The assumption, however, that the value of imports will be maintained does not necessarily imply that the value of the import duties will also remain the same.

I have already explained the special position as regards sugar, showing how the present development of the Indian industry is affecting our revenue. On these considerations we think it necessary to allow for a drop of one crore in receipts from the sugar import duties which will not be offset by any increase under other heads.

In regard to cotton piece-goods also, for reasons which I have explained, we think it necessary to regard the revenue from import duties—at least on Japanese goods—as to some extent abnormal and not likely to be repeated. Here therefore we have allowed for a drop of 30 lakhs.

As against these reductions we have thought it safe to count on a small revenue (25 lakhs) from silver imports—because having closed the gap in our land customs line on the Burmese frontier, through which a large trade in silver from China was suddenly developing in the course of the last year, we think it reasonable to expect a moderate resumption of dutiable imports.

Making allowance for these and other minor variations, our customs revenue estimates for next year are put at 51,25 lakhs showing a reduction of 104 lakhs from the revised estimates of the current year.

The position as regards net receipts may be summarised as follows :—

	Revenue (Lakhs).
Budget Estimate, 1932-33 ..	52,31.27
Revised Estimate, 1932-33 ..	52,28.55
Budget Estimate, 1933-34 ..	51,24.60

Debt Service—Regarding the service of debt the Finance Member said :—

"In the first place, as regards interest payments, the reductions shown are satisfactory, namely, 204 lakhs as compared with 1931-32, and 51 lakhs as compared with the revised estimate for 1932-33. I must however explain that the full result of the conversion operations recently undertaken is not yet revealed. The results indeed of the latest operation were not known at the time our estimates had to be compiled; but apart from this there are other special reasons. Although our main conversion scheme has been directed to substituting one form of permanent debt for another, the process has been a continuous one which is not yet completed, and the first actual result in the current year has been to reduce treasury bills held by the public and the Paper Currency Reserve by approximately Rs. 34 crores. Current rates for treasury bills had fallen so low that this aspect of the conversion actually represents, initially at least, an increase in the interest charges. It must be remembered however, that this large reduction in our treasury bill outstandings is not only a sound operation in itself, but by strengthening the Government position enables it to reduce interest rates both for the remaining volume of treasury bills and for its permanent debt."

Civil Expenditure.—"The budget estimate of Civil expenditure for the current year (1932-33), *i.e.*, excluding military expenditure, expenditure on Commercial departments and Debt services, was 20,65 lakhs. Our revised estimate now gives the figure as 20,89 lakhs. There is thus an apparent increase of 24 lakhs. But a closer examination shows that this increase does not denote any increase in real expenditure, and, indeed, that the economy in recurrent expenditure has been greater than that which we promised. The figure of expenditure as shown in our accounts has had to be increased because special items amounting in all to 68½ lakhs, but the great bulk of which do not denote real expenditure, have had to be included.

"Under the other heads of real expenditure we shall have achieved during this year economies of Rs. 45 lakhs more than we promised. It may be remembered that in my budget speech in March last I stated that, broadly speaking, against a total retrenchment in expenditure of Rs. 499 lakhs recommended by the four civil sub-committees, Government had achieved economies of 433 lakhs, or nearly 87 per cent. before allowing for terminal charges which the committees did not take into account. The results according to the revised estimate for the current year which I have just given show that the actual economies achieved in normal expenditure amount to 45 lakhs more than this, that is to say, to a total of 478 lakhs, or nearly 96 per cent. of the amount recommended by the retrenchment committees.

"Turning to the estimates of expenditure under these civil heads for next year, I am glad to be able to report a still further improvement. As compared with the current year with its budget estimate of 20,65 lakhs and the revised estimate of 20,89 lakhs, the estimates for 1933-34 are 20,53 lakhs, that is to say, a reduction of 36 lakhs on the current year in spite of the following facts; first, that we have allowed for reducing the cut in pay to 5 per cent. thereby incurring extra charges of 28 lakhs on these particular civil heads, secondly that we have to meet the normal increments in time scale pay which still involve an annual addition of something like 15 lakhs, and thirdly, that we have to meet new obligatory expenditure amounting to about 17 lakhs, the nature of which I shall shortly explain. If all these items are taken into account it will be seen that the total of the net reductions otherwise effected under the normal heads of expenditure amount to no less than 96 lakhs. Honourable Members may say that they are not concerned with this figure but only with the saving of 36 lakhs actually effected, but I have given these explanations in order to show how we are continuing the retrenchment effort and what a constant effort is required 'merely to prevent expenditure from growing."

Military Expenditure.—"When I turn to the provision for the Military or Defence Budget the results are equally, or even more, satisfactory. For the current year (1932-33) allowing for the full effects of the 10 per cent. cut in pay, the net budgetary allotment was Rs. 46.74 crores. For next year the net expenditure provided for in the estimates, after allowing for an extra charge of Rs. 52½ lakhs due to the reduction in the cut in pay to 5 per cent. is Rs. 46.20 crores. That is to say although the pay bill is increased by Rs. 52½ lakhs the net expenditure is to be reduced by Rs. 54 lakhs."

Financial Summary, 1933-34.

	Rs. lakhs. Better.	Worse.
REVENUE—		
Customs.—(Reduction due to fall allowed for in imports of sugar and cotton piece-goods)		1,04
Income-tax.—(Increase due to removal of exemption from surcharge on Government servants)	53	..
Salt.—(Reduction mainly due to termination of temporary increase in receipts on termination of credit system)		1,63
Opium	25	..
Finance heads.—Net changes including additional expenditure of 1 on account of part restoration of cut in pay		15
Commercial departments.—Net revenue		11
Miscellaneous.—(Reduction of 30 due to no provision being included in next year's estimates for Gain by Exchange)		45
EXPENDITURE—		
Military : Civil heads.—Net reduction effected in spite of part restoration of pay cut costing 79½ lakhs under these heads as compared with the revised estimates. (This net reduction together with the reduction of 5 under Irrigation and Currency and Mint taken on the revenue side gives a total reduction of 90 as mentioned in para. 61) ..	85	..
Total ..	163	338

As a result of the changes thus summarised the net deterioration for next year is estimated at 175 lakhs, and thus the surplus of 217 lakhs shown in the revised estimate for the current year will be reduced to surplus of 42 lakhs.

The Cut in Pay.—Concerning the Government's decision to restore half the cut in pay the Finance Member said that the total cost was Rs. 108 lakhs.

As against this the Central budget will recover as a result of the withdrawal of the exemption of income-tax surcharges and the tax on incomes below Rs. 2,000 from Government officials—not only officials paid against the Central budget, but officials of the Railways and officials serving under the Provincial Governments—a net increase in income-tax receipts of 53 lakhs.

The net cost of the proposal to the Central Government is thus 55 lakhs.

Changes in Duties.—The budget announced changes in the import duties on boots and shoes and artificial silk goods.

Assembly Decisions.

The assembly threw out the proposal for a stamp duty on cheques and by 59 votes to 33 carried a resolution to reduce the rate of income tax from 4 pies to 2 pies on incomes between Rs. 1,000 and Rs. 1,500.

The 1934-35 Budget.—Summing up the results for 1933-34 when introducing the 1934-35 budget the Finance Member said that with the arrangement to provide Rs. 3 crores for debt reduction instead of the Rs. 6.89 crores due under the debt reduction convention the year would close with a surplus of Rs. 129 lakhs. This sum Government proposed to set aside as a special fund to cover relief measures in respect of earthquake damage. For 1934-35 Government were expecting a drop of Rs. 280 lakhs in revenue which was more than accounted for by the anticipated falling off in sugar import duties, while expenditure would be Rs. 2 lakhs higher. In order to provide an even balance for 1934-35 it was necessary to find means of improving the position to the extent of Rs. 153 lakhs.

Customs.—On the subject of the likely yield from customs revenue the Finance Member said :—

The most important single item is sugar, in the case of which the very rapid development of local manufacture, to which I have already referred and to which I shall refer again, seems to be leading towards the early extermination of imports on a substantial scale. Indeed it is no exaggeration to say that the success of our protective policy for sugar is the main cause of our budgetary difficulties. In 1930-31 we raised over 10½ crores from sugar. Even in 1932-33 we got nearly 7 crores. In the current year we budgeted for 6,10 lakhs and we actually expect to receive no more than 5,00 lakhs, while for next year we cannot count on more than 2,05 lakhs. Indeed we should normally only have allowed for 1,80 lakhs next year (or an import of about 100,000 tons) but as a result of the earthquake in Bihar the operation of seven factories may be altogether stopped or seriously curtailed and on this account we have increased our estimate of imports. Even so this item accounts for a loss of 2,95 lakhs as compared with the revised estimates for 1933-34 and of 4,05 lakhs as compared with the budget estimate.

Closely connected with this is the item of Land Customs which has hitherto mainly represented duty on sugar imports over the Viramgam line. In this case our revised estimate for

1933-34 at 1 crore is 30 lakhs higher than the budget, the increase being mainly due to the receipt of a large payment of arrears. For next year we are only budgeting for 35 lakhs owing to declining sugar imports so that under this head there is a loss of 65 lakhs as compared with the revised estimate for 1933-34.

Then we must be prepared for a substantial drop in the machinery import duty. We expect to get 1,32 lakhs from this in the current year, or 17 lakhs more than our budget estimate but these high receipts are to the exceptionally large imports of sugar machinery. We cannot count on their continuance and we have reduced next year's estimated to 1 crore which means a drop of 32 lakhs on the revised estimates of the current year.

Another item which I will select for special mention, because I have some proposals to make about it later, is manufactured tobacco. Here the operation of our duties as a result of recent changes and surcharges has given a protective stimulus to the local manufacture of a class of cigarette which was hitherto imported. We budgeted for 50 lakhs in the current year, but on our revised estimates expect to get only 28 and on this we have to allow for a further loss of 8 lakhs next year unless a change is made.

The special items which I have selected for mention account for a loss in import duties next year of 4,0(lakhs as compared with the revised estimates for the current year. On all the other customs items combined we are budgeting for a net increase of 1,75 lakhs, so that the net deterioration under customs as compared with the revised estimates for the current year is 2,25 lakhs.

Other Revenue.—The changes in other heads of Revenue do not call for any detailed comment. We are allowing for a slight recovery of 12 lakhs in Taxes on Income to a total of 17¼ crores, and we should have put this 25 lakhs higher if it had not been for the losses which must be anticipated from the earthquake. We are also allowing for an increase of 18 lakhs on salt and for a drop in the gross receipts from Opium of 64 lakhs. The declining revenue from the latter item owing to the policy adopted in 1925 has been another cause of budgetary difficulties. Altogether the total drop to be allowed for in Revenue as compared with the Revised estimates for the current year is 2,74 lakhs, which is more than accounted for by the loss on sugar.

Expenditure.—On the subject of expenditure Sir George Schuster said:—

So far as concerns expenditure, we are still searching for further economies, and have regidly maintained our rule that no new item of expenditure shall be admitted unless it is absolutely obligatory or unless it is likely to be economically productive. We have also, as I have already announced, decided that the 5 per cent. cut in pay ought to be retained for another year. As a result there is a very satisfactory reduction of 2,12 lakhs in the Budget provision for next year as compared with the Budget for the current year, and of 2,90 lakhs as compared with the actuals for last year (1932-33) for, while expenditure on Civil Administration has been kept practically unchanged in spite of the normal increments in pay, there is a substantial saving on interest charges due to conversion schemes and the improvement in Government credit, while the military contribution from His Majesty's Government means a big reduction in the Army Budget.

The demand under the Defence head stands for next year at 44.38 crores. This is 4 lakhs less than the Revised estimates for the current year and 1,82 lakhs better than the Budget estimate. The latter big reduction is of course due to the payment now made by His Majesty's Government as a result of the finding of the Capitation Tribunal, to which I have already referred. The House is fully informed as to the facts in this case, and I need not add further explanations, but I wish to take this occasion to review the course of military expenditure during the period of my office as Finance Member. The salient fact is that the total demand has been reduced by no less than 10.72 crores, from 55.10 crores in 1929-30 to the present figure of 44.38 crores. This is a remarkable reduction and I venture to think that if I had prophesied its achievement in 1929, my prophecy would have been greeted either with incredulity or, among those who gave credence to it, with extreme satisfaction. In the debates at that time the great demand was always that we should get Defence expenditure down to the so-called Inchcape figure of 50 crores. Yet now we are nearly six crores below that.

Debt Services.—Regarding the interest on debt, the Finance Member said:—It is a notable fact that the net figure for 1934-35 under Interest on Ordinary debt is less than nothing—in fact a surplus balance of about 1 lakh. This is a reduction of 1,17 lakhs on the budget for 1933-34, though it is actually about the same as for the revised estimates. The comparison is complicated by the position as regards war debt payments. In the budget of 1933-34 we provided 88 lakhs against this liability, but as no payment was made this amount was saved, and, as I have already explained, is the main reason for the saving on the revised estimates. As regards 1934-35, His Majesty's Government has already agreed to the postponement of the instalment due in June 1934, but we have made provision for the second half year's instalment, and we have also assumed that the outstanding arrears, excluding the amount in suspense, will be capitalised and the total discharged by equated payments ending 1952 to cover principal and interest. On this basis we are making provision for 58 lakhs in the 1934-35 budget. Excluding these War Debt provisions the comparison between 1933-34 and 1934-35 works out as follows:—

1933-34 Budget	..	28 lakhs.
1933-34 Revised	..	*Nil.*
1934-35 Budget	..	—59 lakhs (*i.e.*, net surplus).

There is thus really an improvement of 87 lakhs on the budget for 1933-34 and of 59 lakhs on the Revised.

Under Interest on Other Obligations there is an increase in the budget provision for 1934-35 of 72 lakhs over the budget for 1933-34 and 68

lakhs over the Revised estimate. This is accounted for by an extra charge of 50 lakhs in respect of bonus on Post Office Cash Certificates, while the balance represents mainly interest on the increased amount of Post Office Savings Bank deposits.

I might sum up the result by saying that as regards Interest charges, including both Interest on Ordinary Debt and Interest on Other Obligations, we have to provide next year 45 lakhs less than was allowed for in the budget of 1933-34, but 68 lakhs more than we are allowing in the revised estimates, and that as against the latter increase we are providing 58 lakhs more on War Debt and 50 lakhs more on Post Office Cash Certificates.

Changes in Duties.—The Finance Member announced the imposition of an excise duty on sugar in the following words :—

After careful consideration we have decided to propose a dual policy ; on the one hand the imposition of an *excise duty on factory produced sugar*, and on the other hand the introduction of legislation by the Central Government which will enable the Provincial Governments to apply schemes for enforcing a minimum price for cane to be paid by the factory to the grower. As I have already stated, the present duty of Rs. 9-1-0 per cwt. is Re. 1-13-0 above the basic duty of Rs. 7-4-0 recommended by the Tariff Board. In their report, however, the Tariff Board recommended that there should be power for Government to increase the measure of protection by 8 annas per cwt. when Java sugar was being imported at a price less than Rs. 4 per maund to Calcutta. We propose to assume that the conditions justifying this extra margin of protection are likely to continue in existence for the present, and therefore to leave a protective margin of Rs. 7-12-0 per cwt. and to impose an excise *duty of Re.* 1-5-0 *per cwt.* We assume that this will yield Rs. 1,47 lakhs, and out of this we propose to set aside an amount equivalent to 1 anna per cwt., representing about 7 lakhs, as a fund to be distributed among the Provinces where white sugar is produced for the purpose of assisting the organisation and operation of co-operative societies among the cane growers so as to help them in securing fair prices, or for other purposes directed to the same end.

Tobacco Duties.—The Finance Member said :—

Under our present tariff, as modified by the two surcharges, the duty on cigarettes works out at something like double the duty on the tobacco used in making similar cigarettes in India ; and the result has been to divert the manufacture of the great majority of the leading brands of cigarettes to factories in India belonging to the same interests as previously imported these brands from abroad. Such an industrial development has never made a claim—and I do not think it could make a good claim—that it satisfies the principles of discriminatory protection and should therefore receive abnormal encouragement from the tariff. We have now decided to fix the relation between the duty on cigarettes and the duty on raw tobacco on a more rational basis, and we have considerable hopes that, while not depriving the interest concerned of reasonable assistance, it will bring back the class of cigarette concerned into the field of open competition between the imported and locally made article, and result, without detriment to the interest of the consumer, in some increase of revenue from import duties. We propose to take for cigarettes a specific duty roughly corresponding to the identical amount that would have been paid on the quantity of leaf contained in the cigarettes and to add to this specific duty the normal revenue duty of 25 per cent. *ad valorem*, thus leaving the local industry with no more than the benefit which is enjoyed by every non-protected industry engaged in the manufacture of goods which are subject to our present normal revenue duty of 25 per cent. The details are as follows.

At present what I may call the basic rate of duty on cigarettes is Rs. 10-10 per thousand, while there are smaller classes which are assessed at Rs. 15 and Rs. 8-8 per thousand, the division between these classes being dependent upon values. The present rate of duty on raw tobacco is Rs. 2 per lb. standard and Re. 1-8 preferential. (Imports entitled to the benefit of preferential duty are negligible). The revised rates that we propose are :—

On raw tobacco : Rs. 2-6-0 per lb. standard and Re. 1-14-0 per lb. preferential.

On cigarettes : Rs. 5-15-0 per thousand *plus* 25 per cent. *ad valorem*.

Silver.—Announcing a reduction in the silver import by 2½ annas to 5 annas per ounce Sir George Schuster said :—

At present the imports of silver have for all practical purposes ceased, so that against our budget estimate for the current year of 25 lakhs we only expected to receive 1 lakh, and there is no reason, if the present duty continues, to anticipate more next year. The decline in the import of silver is of course primarily due to the lack of purchasing power in the country which has turned India into an exporter of gold instead of an importer to the extent of many crores per annum of gold and silver. Therefore in pesent conditions the existence of this high duty can hardly be regarded as having any appreciable effect on the normal trade, though it is probably encouraging some smuggling, and it is certainly attracting movements of silver through any graps which exist in out land customs regime. Last year I mentioned that we were taking steps to deal with this on the Burma frontier, and further steps in respect of other places are now under consideration. While this is an undesirable condition we think that the time has come on general grounds to take account of the fact that if India's purchasing power for silver were to revive the existence of a duty at the present level would not only provide an increased incentive to smuggling, but would also act as a serious obstacle to legitimate trade. Moreover we must also take into account our general policy in this matter. The part which the Indian delegates played in bringing about the silver agreement at the World Economic Conference, which has already been ratified by the Indian Legislature must be regarded as indicating our desire to co-operate with other countries and especially with the United States

of America in measures designed to improve its price. Although we must reserve our liberty to impose a duty on silver for revenue purposes, we must on the other hand recognise that a duty which is so high as to operate as a serious impediment to trade may also be unprofitable from the revenue point of view. Therefore, both as a measure of co-operation with the United States of America and other countries interested in silver, and also for the purpose of improving the prospects of our own revenue, we think the time has come to make a reduction in the silver duties.

The only consideration which can weigh with us on the other side is the effect of any such reduction on local prices. There can be no doubt that the existence of our duty throughout the last few years has done something to protect the internal price of a commodity which is an important store of value to the poorest classes. We do not wish to disturb this position, but as the facts are to-day we think we can lower the duty without risk of doing so. Taking the prices of silver which have been ruling recently in London (about 19½*d.* to 20⅛*d.* per standard ounce), the prices in Bombay have been ruling round about Rs. 55 per 100 tolas as against 19½*d.* per ounce in London. On the basis of a London price of 19½*d.* was calculated that the parity price in Bombay allowing for import duty and other charges, ought to be Rs. 61-11-9 per hundred tolas, so that it looks as if the Bombay prices have been keeping at a level at least Rs. 6-11-9 per 100 tolas below the full parity. The duty of 7½ annas per ounce is equivalent to Rs. 17-9-3 per 100 tolas. It appears therefore that we might reduce the duty by one-third *i.e.*, by 2½ annas per ounce without thereby necessarily affecting the Bombay price at all, for it would still be somewhat below the London parity.

Export Duty on Hides.—The export duty on raw hides was abolished by the 1934-35 budget.

Excise on Matches.—Announcing that the Government intended to hand over half the jute export duty to the jute producing Provinces, the Finance Member said that the Government of India would recoup their losses by imposing a levy on matches at the rate of Rs. 2-4-0 per gross of boxes on matches made in British India.

Assembly Decisions.

The assembly accepted the whole of the financial plan except to the extent that government themselves accepted a change in the match excise duty. The changes as summed up by the Select Committee which examined the Bill, were the most important question which confronted us was whether the duty as fixed by the Bill would so react on the retail selling price of matches as to bring about a very serious diminution of sales. In order to avoid this it seemed to us essential that the duty be so regulated as to make it possible a reasonable sized box of matches retailed singly in bazaars at the price of one pice.

After very careful consideration we have come to the conclusion that if this result is to be achieved and a sufficient margin of profit left for retailers and manufacturers, the rate of excise duty initially, at least, should not be fixed higher than one rupee per gross of boxes containing on average 40 matches.

We hold that the duty could be fixed at corresponding rates for matches in boxes of 60 or 80, and that the classification of matches according to these standards is most suitable and convenient from the administrative standpoint.

From matches packed otherwise we have left the duty to be fixed by the Governor-General-in-Council.

Posts and Telegraphs.—The following changes in postal and telegraph charges were announced :—

Postal.—(*a*) In the postal tariff we propose to lower the initial weight of inland letters from 2½ tolas to ½ a tola coupled with a reduction in the charge from 1½ anna to one anna. For heavier letters the charges will continue to be 1½ anna for letters not exceeding 2½ tolas, with additional 1½ anna for successive weights of 2½ tolas or fractions. This change introduces a lighter unit of weight and will undoubtedly benefit the poor citizens and the business community. Allowing for a recovery of 10 per cent. in traffic we estimate that in the first year this reduction will involve a loss in revenue of 27 lakhs, but we have good reasons to hope that in the second year this loss will practically disappear, and that thereafter there will be a gradually increasing net gain.

(*b*) As a second change in postal charges we propose the remission of the extra pie per five pice embossed envelope which was imposed in 1931 to recover the cost of manufacturing the envelope. This is more of the nature of an administrative reform considered necessary on general grounds than a regrading of the rate, but it is again a reform which will benefit the ordinary citizen. We estimate a loss of revenue of two and a half lakhs from this change.

(*c*) Thirdly, as regards Postal rates, we propose a small change in a contrary direction, namely, that the initial charge on inland book packets not exceeding 5 tolas in weight should be raised from 6 to 9 pies. The book packet method of transmission is undoubtedly being abused, and a change is urgently necessary to stop the diversion, with consequent loss of revenue, that is occurring of post card traffic to the book packet category. We estimate a gain of a little over 5 lakhs in revenue from this change.

Telegrams.—The last change which we propose is as regards Telegrams. Instead of having, as at present, a minimum charge for ordinary telegrams of 12 annas with a surcharge of one anna for a message of 12 words, we propose to introduce a minimum charge for a telegram of 8 words of 9 annas, while that for an express telegram of the same length will be one rupee and two annas. For each additional word in the two classes of telegrams the additional charge will be one and two annas respectively. We estimate a loss during the first year of 3 lakhs from this change, but here also, as in the case of the postal rates, we hope that in the second year this loss will disappear, while without making this change we consider that there is a prospect of a continuous decline in telegraph receipts.

THE LAND REVENUE.

The principle underlying the Land Revenue system in India has operated from time immemorial. It may be roughly formulated thus—the Government is the supreme landlord and the revenue derived from the land is equivalent to rent. On strictly theoretical grounds, exception may be taken to this statement of the case. It serves, however, as a substantially correct description of the relation between the Government and the cultivator. The former gives protection and legal security. The latter pays for it according to the value of his holding. The official term for the method by which the Land Revenue is determined is "Settlement." There are two kinds of settlements in India—Permanent and Temporary. Under the former the amount of revenue has been fixed in perpetuity, and is payable by the landlord as distinguished from the actual cultivator. The Permanent Settlement was introduced into India by Lord Cornwallis at the close of the eighteenth century. It had the effect intended of converting a number of large revenue farmers in Bengal into landlords occupying a similar status to that of landowners in Europe. The actual cultivators became the tenants of the landlords. While the latter became solely responsible for the payment of the revenue, the former lost the advantage of holding from the State. This system has prevailed in Bengal since 1795 and in the greater part of Oudh since 1859. It also obtains in certain districts of Madras.

Temporary Settlements.

Elsewhere the system of Temporary Settlements is in operation. At intervals of thirty years, more or less, the land in a given district is subjected to a thorough economic survey, on the basis of the trigonometrical and topographic surveys carried out by the Survey Department of the Government of India. Each village area, wherever the Temporary Settlement is in vogue, has been carefully mapped, property-boundaries accurately delineated, and records of rights made and preserved. Under the Permanent Settlement in Bengal the occupant does not enjoy these advantages. The duty of assessing the revenue of a district is entrusted to Settlement Officers, members of the Indian Civil Service specially delegated for this work. The duties of a Settlement Officer are thus described in Strachey's *India* (revised edition, 1911):—"He has to determine the amount of the Government demand and to make a record of all existing rights and responsibilities in the land. He has a staff of experienced subordinates, almost all of whom are natives of the country, and the settlement of the district assigned to him is a work which formerly required several years of constant work. The establishment of agricultural departments and other reforms have however led to much simplification of the Settlement Officer's Proceedings, and to much greater rapidity in the completion of the Settlements. All the work of the Settlement Officer is liable to the supervision of superior officers, the assessments proposed by him require the sanction of the Government before they become finally binding: and his judicial decisions may be reviewed by the Civil Courts. It is the duty of the settlement officer to make a record of every right which may form the subject of future dispute, whether affecting the interests of the State or of the people. The intention is to alter nothing, but to maintain and place on record that which exists."

The Two Tenures.

Under the Temporary Settlement land tenures fall into two classes—peasant-holdings and landlord-holdings, or *Ryotwari* and *Zemindari* tenures. Broadly speaking, the difference between the two in a fiscal sense is that in Ryotwari tracts the *ryot* or cultivator pays the revenue direct: in *Zemindari* tracts the landlord pays on a rental assessment. In the case of the former, however, there are two kinds of *Ryotwari* holdings—those in which each individual occupant holds directly from Government, and those in which the land is held by village communities, the heads of the village being responsible for the payment of revenue on the whole village area. This latter system prevails in the North. In Madras, Bombay, Burma and Assam, ryotwari tenure is on an individual basis, and the Government enters into a separate agreement with every single occupant. The basis of assessment on all classes of holdings is now more favourable to the cultivator than it used to be. Formerly what was believed to be a fair average sum was levied on the anticipated yield of the land during the ensuing period of settlement. Now the actual yield at the time of assessment alone is considered, so that the cultivator gets the whole of the benefit of improvements in his holding subsequently brought about either by his own enterprise or by "unearned increment." The Government, however, may at a new settlement re-classify a holding so as to secure for itself a fair share in an increment that may have resulted from public works in the vicinity, such as canals and railways, or from a general enhancement of values. But the principle that improvements effected by private enterprise shall be exempt from assessment is now accepted by the Government and provided for in definite rules.

Incidence of the Revenue.

The incidence of the revenue charges varies according to the nature of the settlement, the class of tenure, and the character and circumstances of the holding. Under the Permanent Settlement in Bengal Government derive rather less than £3,000,000 from a total rental estimated at £12,000,000. Under Temporary

Settlements, 50 per cent. of the rental in the case of *Zemindari* land may be regarded as virtually a maximum demand. In some parts the impost falls as low as 35 and even 25 per cent. and only rarely is the proportion of one-*half* the rental exceeded. In regard to *Ryotwari* tracts it is impossible to give any figure that would be generally representative of the Government's share. But one-fifth of the gross produce is the extreme limit, below which the incidence of the revenue charge varies greatly. About sixteen years ago the Government of India were invited in an influentially signed memorial to fix one-fifth of the gross produce as the maximum Government demand. In reply to this memorial and other representations the Government of India (Lord Curzon being Viceroy) issued a Resolution in defence of their Land Revenue Policy. In it was stated that "under the existing practice the Government is already taking much less in revenue than it is now invited to exact" and "the average rate is everywhere on the down grade." This Resolution, together with the statements of Provincial Governments on which it was based, was published as a volume; it is still the authoritative exposition of the principles controlling the Land Revenue Policy of the Government of India. In a series of propositions claimed to be established by this Resolution the following points are noted:—(1) In *Zemindari* tracts progressive moderation is the key-note of the Government's policy, and the standard of 50 per cent. of the assets is more often departed from on the side of deficiency than excess; (2) in the same areas the State does not hesitate to interfere by legislation to protect the interests of the tenants against oppression at the hands of the landlords; (3) in *Ryotwari* tracts the policy of long-term settlements is being extended, and the proceedings in connection with new settlements simplified and cheapened; (4) local-taxation (of land) as a whole is neither immoderate nor burdensome; (5) over-assessment is not, as alleged, a general or widespread source of poverty, and it cannot fairly be regarded as a contributory cause of famine. At the same time the Government laid down as principles for future guidance—(*a*) large enhancements of revenue, when they occur, to be imposed progressively and gradually, and not *per saltum*; (*b*) greater elasticity in revenue collection, suspensions and remissions being allowed according to seasonal variations and the circumstances of the people; (*c*) a more general resort to reduction of assessments in cases of local deterioration.

Protection of the Tenants.

In regard to the second of the five propositions noted above, various Acts have been passed from time to time to protect the interests of tenants against landlords, and also to give greater security to the latter in possession of their holdings. The Oudh Tenancy Act of 1886 placed important checks on enhancement of rent and eviction, and in 1900 an Act was passed enabling a landowner to entail the whole or a portion of his estate, and to place it beyond the danger of alienation by his heirs. The Punjab Land Alienation Act, passed at the instance of Lord Curzon, embodied the principle that it is the duty of a Government which derives such considerable proportion of its revenue from the land, to interfere in the interests of the cultivating classes. This Act greatly restricted the credit of the cultivator by prohibiting the alienation of his land in payment of debt. It had the effect of arresting the process by which the Punjab peasantry were becoming the economic serfs of money-lenders. A good deal of legislation affecting land tenure has been passed from time to time in other provinces, and it has been called for more than once in Bengal where under the Permanent Settlement (in the words of the Resolution quoted above), "so far from being generously treated by the Zemindars, the Bengal cultivator was rack-rented, impoverished, and oppressed."

Government and Cultivator.

While the Government thus interferes between landlord and tenant in the interests of the latter, its own attitude towards the cultivator is one of generosity. Mention has already been made of the great advantage to the agricultural classes generally of the elaborate systems of Land Survey and Records of Rights carried out and maintained by Government. In the Administration Report of Bombay for 1911-12, it is stated:—"The Survey Department has cost the State from first to last many lakhs of rupees. But the outlay has been repaid over and over again. The extensions of cultivation which have occurred (by allowing cultivators to abandon unprofitable lands) have thus been profitable to the State no less than to the individual; whereas under a *Zemindari* or kindred system the State would have gained nothing, however much cultivation had extended throughout the whole of 30 years' leases." On the other hand, the system is of advantage to the *ryots* in reducing settlement operations to a minimum of time and procedure. In the collection of revenue the Government consistently pursues a generous policy. In times of distress, suspensions and remissions are freely granted after proper inquiry.

Land revenue is now a provincial head of revenue and is not shown in the All-India accounts. It may be taken roughly at £28 million, as compared with £84 million said to have been raised annually by Aurungzebe from a much smaller Empire.

The literature on the subject is considerable. The following should be consulted by readers who require fuller information:—"Land Revenue Policy of the Indian Government," 1902 (Superintendent of Government Printing); Baden Powell's "Land Systems of British India"; Sir John Strachey's "India, its Administration and Progress, 1911," (Macmillan & Co.); M. Joseph Chailley's "Administrative Problems of British India" (Macmillan & Co., 1910), and the Annual Administration Reports of the respective Provincial Governments.

EXCISE.

The Excise revenue in British India is derived from the manufacture and sale of intoxicating liquors, hemp drugs, toddy and opium. It is a common place amongst certain sections of temperance reformers to represent the traffic in intoxicating liquors as one result of British rule. There is, however, abundant evidence to show that in pre-British days the drinking of spirituous liquors was commonly practised and was a source of revenue.

The forms of intoxicating liquor chiefly consumed are country spirit; fermented palm juice; beer made from grain; country brands of rum, brandy, etc., locally manufactured malt beer and imported wine, beer and spirits. Country spirit is the main source of revenue, except in the Madras Presidency, and yields about two-thirds of the total receipts from liquors. It is usually prepared by distillation from the Mhowra flower, molasses and other forms of unrefined sugar, fermented palm juice and rice. In Madras a very large revenue is derived from fresh toddy. The British inherited from the Native Administration either an uncontrolled Out-Still System or in some cases a crude Farming System and the first steps to bring these systems under control were the limitation of the number of shops in the area farmed, and the establishment of an improved Out-Still System under which the combined right of manufacture and sale at a special shop was annually granted. This of course was a kind of control, but it only enabled Government to impose haphazard taxation on the liquor traffic as a whole by means of vend fees. It did not enable Government to graduate the taxation accurately on the still-head duty principle nor to insist upon a standard of purity or a fixed strength of liquor. Moreover for political and other reasons the extent of control could not at first be complete. There were tribes of aborigines who regarded the privilege of making their own liquor in their private homes as a long established right and who believed that liquor poured as libations to their god should be such as had been made by their own hands. The introduction of any system amongst those peoples had to be worked very cautiously. Gradually as the Administration began to be consolidated the numerous native pot-stills scattered all over the country under the crude arrangements then in force began to be collected into Central Government enclosures called Distilleries, thus enabling Government to perfect its control by narrowing the limits of supervision; and to regularize its taxation by imposing a direct still-head duty on every gallon issued from the Distillery. Under Distillery arrangements it has also been possible to regulate and supervise thoroughly the manufacture of its liquor and its disposal subsequent to leaving the Distillery by means of a system of transport passes, establishment supervision, improved distribution and vend arrangements.

Various Systems.

The Out-Still System may be taken to include all systems prior in order of development to the imposition of Still-head duty. Briefly stated the stages of development have been—First: farms of large tracts; Second: farms of smaller areas; Third: farms of the combined right to manufacture and sell at particular places without any exclusive privilege over a definite area; Fourth: farms of similar right subject to control of means and times for distilling and the like. The Provincial Governments have had to deal with the subject in different ways suited to local conditions, and so the order of development from the lower forms of systems to the higher has not been always everywhere identical in details. Yet in its essence and main features the Excise Administration in most provinces of British India has progressed on uniform lines the keynote lying in attempts, where it has not been possible to work with the fixed duty system in its simplest forms, to combine the farming and fixed duty systems with the object of securing that every gallon of spirit should bear a certain amount of taxation. The Out-Still System has in its turn been superseded by either the Free-supply system or the District Monopoly system. The Free-supply system is one of free competition among the licensed distillers in respect of manufacture. The right of vend is separately disposed of. The District monopoly system on the other hand is one in which the combined monopoly of manufacture and sale in a district is leased to a farmer subject to a certain amount of minimum still-head duty revenue in the monopoly area being guaranteed to the State during the term of the lease.

The recommendations of the Indian Excise Committee of 1905-06 resulted in numerous reforms in British India, one of them being that the various systems have been or are gradually being superseded by the Contract Distillery System under which the manufacture of spirit for supply to a district is disposed of by tender, the rate of still-head duty and the supply price to be charged are fixed in the contract and the right of vend is separately disposed of. This is the system that now prevails over the greater portion of British India. The other significant reforms have been the revision of the Provincial Excise Laws and Regulations, and the conditions of manufacture, vend, storage and transport, an improvement in the quality of the spirit, an improved system of disposal of vend licenses, reductions and re-distributions of shops under the guidance and control of Local Advisory Committees and gradual enhancement of taxation with a view to checking consumption.

Excise has now been made over entirely to the Provincial Governments, and the duties vary from province to province. The governing principle in fixing these rates is the highest duty compatible with the prevention of illicit distillation. In the Bombay Presidency the issue of spirit to all country spirit shops has been rationed on the basis of consumption for the year 1920-21.

From that consumption reduced to proof gallons. 10 per cent. is deducted in the case of shops in Bombay City and 5 per cent. elsewhere and the ration is then fixed for each shop according to the issues in the corresponding month of 1920-21. This is the most important step taken by the new Government to reduce consumption. Two large distilleries in the Presidency have been placed entirely under Government management, thus partially superseding the Contract Distilling system.

Sap of the date, palmyra, and cocoanut palms called toddy, is used as a drink either fresh or after fermentation. In Madras and Bombay the revenue is obtained from a fixed fee on every tree from which it is intended to draw the liquor and from shop license fees. In Bengal and Burma the sale of shop licenses is the sole form of taxation. Country brands of rum, and so-called brandies and whiskies, are distilled from grape juice, etc. The manufacture is carried out in private distilleries in various parts of India. A number of breweries has been established, mostly in the hills, for the manufacture of a light beer for European and Eurasian consumption.

Foreign liquor is subject to an import duty at the tariff rates, which are set out in the Customs Tariff (*q.v.*). It can only be sold under a license.

Since the war Brandy and Whisky have been manufactured in considerable quantities at Baroda.

The base used is the Mhowra flower. It is drunk in big towns as a substitute for German spirit, and is excised at tariff rates.

Drugs.—The narcotic products of the hemp plant consumed in India fall under three main categories, namely, ganja or the dry flowering tops of the cultivated female hemp plant charas, or the resinous matter which forms an active drug when collected separately; and bhang, or the dried leaves of the hemp plant whether male or female cultivated or uncultivated. The main features of the existing system are restricted cultivation under supervision, storage in Bonded Warehouses, payment of a quantitative duty before issue, retail sale under licenses and restriction on private possession. Licenses to retail all forms of hemp drugs are usually sold by auction. The sale of charas has been prohibited in the Bombay Presidency except Sindh from the 1st April 1922.

Opium.—Opium is consumed in all provinces in India. The drug is commonly taken in the form of pills; but in some places, chiefly on social and ceremonial occasions, it is drunk dissolved in water. Opium smoking also prevails in the City of Bombay and other large towns. The general practice is to sell opium from the Government Treasury, or a Central Warehouse, to licensed vendors. The right of retail to the public is sold by annual auction to one or several sanctioned shops. Further legislation against opium smoking in clubs and dens is now under contemplation.

The revenue from opium is derived mainly from exports of what is called provision opium to foreign countries and from the sale to Provincial Governments of excise opium for internal consumption in India. The entire quantity is now exported under the system of direct sales to Foreign and Colonial governments, the system of auction sales in Calcutta to traders for export to foreign countries having been stopped with effect from 7th April, 1926. In no case are exports permitted without an import certificate by the Government of the country of import as prescribed by the League of Nations.

It has been decided to reduce the total of the opium exported since the calendar year 1926 by 10 per cent. annually in each subsequent year until exports are totally extinguished at the end of 1935.

Excise opium is sold to Provincial Governments for internal consumption in India at a fixed price based on the cost of production. This opium is retailed to licensed vendors at rates fixed by the Provincial Governments and varying from Province to Province.

SALT.

The salt revenue was inherited by the British Government from Native rule, together with a miscellaneous transit dues. These transit dues were abolished and the salt duty consolidated and raised. There are four great sources of supply; rock salt from the Salt range and Kohat Mines in the Punjab; brine salt from the Sambhar Lake in Rajputana, salt brine condensed on the borders of the lesser Rann of Cutch; and sea salt factories in Bombay, Madras and at the mouth of the Indus.

The Salt Range mines contains an inexhaustible supply. They are worked in chambers excavated in salt strata, some of which are 250 feet long, 45 feet wide and 200 feet high. The Rajputana supply chiefly comes from the Sambhar Lake where brine is extracted and evaporated by solar heat. In the Rann of Cutch the brine is also evaporated by solar heat and the product is known as Baragara salt. Important works for the manufacture of that salt were opened in Dhrangadhra State in 1923. In Bombay and Madras sea water is let into shallow pans on the sea-coast and evaporated by solar heat and the product sold throughout India. In Bengal the damp climate together with the large volume of fresh water from the Ganges and the Brahmaputra into the Bay of Bengal render the manufacture of sea-salt difficult and the bulk of the supply, both for Bengal and Burma, is imported from Liverpool, Germany, Aden, Bombay and Madras.

Broadly, one-half of the indigenous salt is manufactured by Government Agency, and the remainder under license and excise systems,

In the Punjab and Rajputana the salt manufactories are under the control of the Northern India Salt Department, a branch of the Commerce and Industry Department. In Madras and Bombay the manufactories are under the supervision of Local Governments. Special treaties with Native States permit of the free movement of salt throughout India, except from the Portuguese territories of Goa and Damaun on the frontiers of which patrol lines are established to prevent the smuggling of salt into British India.

From 1888-1903 the duty on salt was Rs. 2-8 per maund of 82 lbs. In 1903, it was reduced to Rs. 2; in 1905 to Rs. 1-8-0; in 1907 to Re. 1 and in 1916 it was raised to Rs. 1-4-0. The successive reductions in duty have led to a largely increased consumption, the figures rising by 25 per cent. between 1903-1908. In 1923 the duty was doubled bringing it again to Rs. 2-8. In 1924 it was reduced to Re. 1-4-0. The duty remained at Rs. 1-4-0 from March 1924 to 29th September 1931. It was raised to Rs. 1-9-0 with effect from 30th September 1931. Prior to 17th March 1931, the excise duty and import duty on salt were always kept similar, but by the Indian Salt (Additional Import Duty) Act XIV of 1931, a temporary additional customs duty of 4½ annas per maund was imposed on foreign salt. In March 1933 the customs duty was reduced by 2 annas.

CUSTOMS.

The import duties have varied from time to time according to the financial condition of the country. Before the Mutiny they were five per cent.; in the days of financial stringency which followed they were raised to 10 and in some cases 20 per cent. In 1875 they were reduced to five per cent.; but the opinions of Free Traders, and the agitation of Lancashire manufacturers who felt the competition of the Indian Mills, induced a movement which led to the abolition of all customs dues in 1882. The continued fall in exchange compelled the Government of India to look for fresh sources of revenue and in 1894 five per cent. duties were imposed, yarns and cotton fabrics being excluded. Continued financial stringency brought piece-goods within the scope of the tariff, and after various expedients the demands of Lancashire were satisfied by a general duty of 3½ per cent. on all woven goods—an import duty on goods by sea, an excise duty on goods produced in the country. The products of the hand-looms are excluded. These excise duties are intensely unpopular in India, for reasons set out in the special article dealing with the subject. In 1910-11, in order to meet the deficit threatened by the loss of the revenue on opium exported to China, the silver duty was raised from 5 per cent. to 4d. an ounce, and higher duties levied on petroleum; tobacco, wines, spirits; and beer. These were estimated to produce £1 million annually.

The Customs Schedule was completely recast in the Budget of 1916-17 in order to provide additional revenue to meet the financial disturbance set up by the war. The general import tariff, which had been at the rate of 5 per cent. *ad valorem* since was raised to 7½ per cent. *ad valorem*, except in the case of sugar; as India is the largest producer of sugar in the world the import duty on this staple was fixed at 10 per cent. There was also a material curtailment of the free list. The principal article of trade which was not touched was cotton manufactures. For the past twenty years the position has been that cotton twists and yarns of all kinds are free of duty while a duty at the rate of 3½ per cent. is imposed on woven goods of all kinds whether imported or manufactured in Indian mills. The Budget left the position as it stood. The Government of India would have been glad to see the tariff raised to 5 per cent. without any corresponding alteration of the excise, but were over-ruled by the Cabinet on the ground that this controversial matter must come up for discussion after the war. Finally the Budget imposed export duties on tea and jute. In the case of tea the duty was fixed at Re. 1-8-0 per 100 lbs.; in the case of jute the export duty on raw jute was fixed at Rs. 2-4-0 per bale of 400 lbs., approximately equivalent to an *ad valorem* duty of 5 per cent.; manufactured jute was charged at the rate of Rs. 10 per ton on sacking and Rs. 16 per ton on Hessians.

The Customs Tariff was further materially modified in the Budget for 1917-18. In the previous year an export duty on jute was imposed at the rate of Rs. 2-4-0 per bale of 400 lbs. in the case of raw jute and Rs. 10 per ton on sackings, and Rs. 16 per ton on Hessians; these rates were doubled, with a view to obtaining an additional revenue of £500,000. The import duty on cotton goods was raised from 3½ per cent. to 7½ per cent. without any alteration in the Excise, which remained at 3½ per cent. This change was expected to produce an additional revenue of £1,000,000. The question of the Excise was left untouched, for the reason, amongst others, that the Government could not possibly forego the revenue of £320,000, which it was expected to produce. With these changes in operation the revenue from Customs in 1920-21 was Rs. 32,37,29,000.

The Customs Tariff was further raised in the Budget of 1921-22 in order to provide for the big deficit which had then to be faced. The general *ad valorem* duty was raised from 7½ to 11 per cent.; a special duty was levied on matches of 12 annas per gross boxes in place of the existing *ad valorem* duty of 7½ per cent. the duties on imported liquors was raised to 8 annas per degree of proof per gallon; the *ad valorem* duty of 7½ per cent. was raised to 20 per cent. in the case of certain articles of luxury; the import duty on foreign sugar was increased from 10 to 15 per cent. and the duty on manufactured tobacco was raised by 50 per cent. The Customs duties were further increased in the Budget of 1922-23. The Government proposals in this direction have been described in an early passage. They were to raise the general Customs duty from 11 to 15 per cent., the cotton excise duty from 3½ per cent. to 7½ per cent., the duty on sugar from 15 to 25 per cent., a duty of 5 per cent. on imported yarn, a rising duty on machinery, iron, steel and railway material from 2½ per cent. to 10 per cent. together with the general duty on articles of luxury from 20 per cent. to 30 per cent. In the course of the passage of the Budget through the Legislatures the cotton excise duty was

retained at 3½ per cent., the duty on machinery was retained at 2½ per cent. and the duty on cotton piece-goods at 11 per cent., the other increases being accepted. In 1925 the Cotton Excise duties were finally abolished. Full details with regard to the customs duty are set out in the section on Indian Customs Tariff (*q.v.*). The Customs duties have been repeatedly raised in recent Budgets both as a protective measure and for revenue purposes. The latest duties will be found in detail in the Financial Section of the Year Book. The estimated revenue from the Customs in 1934-35 is Rs. 44,62 lakhs.

The Senior Collectors were Covenanted Civilians specially chosen for this duty, before the introduction of the Imperial Customs Service in 1906. Since that date, of the five Collectorship at the principal ports (Calcutta, Bombay, Madras, Rangoon, and Karachi) three are ordinarily reserved for Members of the I. C. S. (*i. e.*, "Covenanted Civilians"). The other two are reserved for members of the Imperial Customs Service.

Assistant Collectors in the Imperial Customs Service are recruited in two ways: (*a*) from members of the Indian Civil Service—3 vacancies, and (*b*) by the Secretary of State—19 vacancies. There are in addition a few Gazetted Officers in what is known as the Provincial Customs Service. These posts are in the gift of the Government of India, and are usually filled by promotion from the subordinate (in the Government sense of the word) service. The "subordinate" staff is recruited entirely in India.

INCOME TAX.

The income tax was first imposed in India in 1860, in order to meet the financial dislocation caused by the Mutiny. It was levied at the rate of four per cent. or a little more than 9½d. in the pound on all incomes of five hundred rupees and upwards. Many changes have from time to time been made in the system, and the present schedule was consolidated in the Act of 1886. This imposed a tax on all incomes derived from sources other than agriculture which were exempted. On incomes of 2,000 rupees and upwards it fell at the rate of five pies in the rupee, or about 6¼d. in the pound; on incomes between 500 and 2,000 rupees at the rate of four pies in the rupee or about 5d. in the pound. In March 1903 the minimum taxable income was raised from 500 to 1,000 rupees. The income-tax schedule was completely revised, raised, and graduated in the Budget of 1916-17 in the general scale of increased taxation imposed to meet the deficit arising out of war conditions.

Since then the process has been almost continuous and in every financial difficulty the authorities turn to the Income Tax as a means of raising fresh revenue. The last revision was in the Supplementary Finance Bill of 1931, when the scale was fixed as follows :—

(RATES OF INCOME-TAX.)

A. In the case of every *individual, Hindu undivided family, unregistered firm* and other association of individuals not being a registered firm or company :—

	RATE. (*Vide Footnote.*)
(1) When the *total* income is less than Rs. 2,000.	*Six pies* in the rupee.
(2) When the total income is Rs. 2,000 or upwards, but is less than Rs. *5,000*.	*Nine pies* in the rupee
(3) When the total income is Rs. 5,000 or upwards, but is less than Rs. *10,000*.	*One anna* in the rupee.
(4) When the total income is Rs. 10,000 or upwards, but is less than Rs. *15,000*.	*One anna and four pies* in the rupee.
(5) When the total income is Rs. 15,000 or upwards, but is less than Rs. *20,000*.	*One anna and seven pies* in the rupee.
(6) When the total income is Rs. 20,000 or upwards, but is less than Rs. *30,000*.	*One anna and eleven pies* in the rupee.
(7) When the total income is Rs. 30,000 or upwards, but is less than Rs. *40,000*.	*Two annas and one pie* in the rupee.
(8) When the total income is Rs. 40,000 or upwards, but is less than Rs. *100,000*.	*Two annas and two pies* in the rupee.
(9) When the total income is Rs. *100,000 or upwards*.	*Two annas and two pies* in the rupee.

B. In the case of *every company and registered firm* whatever its total income.

N.B.—Additional tax (Sur-charge) for the financial year—

1931-32 at 12½ per cent.
and
1932-33 at 25 per cent.

over the rates prescribed by the Indian Finance Act, 1931, *except* in cases of income between Rs. 1,000 to Rs. 1,999.

Tax at 2 *pies* on incomes between Rs. 1,000 to Rs. 1,999 for the year *1931-32* and

Tax at 4 *pies* for the year *1932-33* on the same income.

The surcharge was continued in the budget of 1933-34, as resolved by the assembly the rate or incomes between Rs. 1,000 & Rs. 1,500 was reduced from 4 pies to 2 pies. The surcharge continues in 1934-35.

RATES OF SUPER-TAX.

In respect *of the excess over thirty thousand* of total income :—

	RATE.
(1) in the case of *every company*—	
(*a*) in respect of the *first twenty thousand* rupees of such excess.	*Nil.*
(*b*) for every rupee of the *remainder* of such excess.	*One anna* in the rupee.
(2) (*a*) in the case of every Hindu undivided family :—	
(*i*) in respect of the *first forty-five thousand* rupees of such excess.	*One anna* in the rupee.
(*ii*) for every rupee of the *next twenty-five thousand* rupees of such excess.	*One anna and three pies* in the rupee.
(*b*) in the case of every *individual, unregistered firm and other* association of individuals not being a registered firm or a company :—	*Nil.*
(*i*) for every rupee of the *first twenty thousand* rupees of such excess.	*Nine pies* in the rupee.
(*ii*) for every rupee of the *next fifty thousand* rupees of such excess.	*One anna and three pies* in the rupee.
(*c*) in the case of every *individual, Hindu undivided family, unregistered firm* and other association of individuals not being a registered firm or a company.	
(*i*) for every rupee of the *next fifty thousand* rupees of such excess.	*One anna and nine pies* in the rupee.
(*ii*) for every rupee of the *next fifty thousand* rupees of such excess.	*Two annas and three pies* in the rupee.
(*iii*) for every rupee of the *next fifty thousand* rupees of such excess.	*Two annas and nine pies* in the rupee.
(*iv*) for every rupee of the *next fifty thousand* rupees of such excess.	*Three annas and three pies* in the rupee.
(*v*) for every rupee of the *next fifty thousand* rupees of such excess.	*Three annas and nine pies* in the rupee.
(*iv*) for every rupee of the *next fifty thousand* rupees of such excess.	*Four annas and three pies* in the rupee.
(*vii*) for every rupee of the *next fifty thousand* rupees of such excess.	*Four annas and three pies* in the rupee.
(*viii*) for every rupee of the *next fifty thousand* rupees of such excess.	*Five annas and three pies* in the rupee.
(*ix*) for every rupee of the *next fifty thousand* rupees of such excess.	*Five annas and nine pies* in the rupee.
(*x*) *for every rupee of the remainder of such excess.*	*Six annas and three pies* in the rupee.

The head of the Income-Tax Department of a province is the Commissioner of Income-tax who is appointed by the Governor-General in Council. The rest of the income-tax staff in a province are subordinate to him and they are appointed and dismissed by him. His power of appointment and dismissal is, under section 5 (4) "subject to the control of the Governor-General in Council," but the Governor-General in Council exercises this control through the local Government.

The estimated yield of Income-tax in 1934-35 is Rs. 17,25 lakhs.

HISTORY OF THE COINAGE.

The Indian mints were closed to the unrestricted coinage of silver for the public from the 26th June 1893, and Act VIII of 1893, passed on that date, repealed Sections 19 to 26 of the Indian Coinage Act of 1870, which provided for the coinage at the mints for the public of gold and silver coins of the Government of India. After 1893 no Government rupees were coined until 1897, when, under arrangements made with the Native States of Bhopal and Kashmir, the currency of those States was replaced by Government rupees. The re-coinage of these rupees proceeded through the two years 1897 and 1898. In 1899 there was no coinage of rupees; but in the following year it seemed that coinage was necessary, and it was begun in February 1900, the Government purchasing the silver required, and paying for it mainly with the gold accumulated in the Paper Currency Reserve. In that and the following month a crore of rupees was coined and over 17 crores of rupees in the year ending the 31st March 1910 including the rupees issued in connection with the conversion of the currencies of Native States. From the profit accruing to Government on the coinage it was decided to constitute a separate fund called the Gold Reserve Fund as the most effective guarantee against temporary fluctuations of exchange. The whole profit was invested in sterling securities, the interest from which was added to the fund. In 1906 exchange had been practically stable for eight years, and it was decided that of the coinage profits devoted to this fund, six crores should be kept in rupees in India, instead of being invested in gold securities. The Gold Reserve Fund was then named the Gold Standard Reserve. It was ordered in 1907 that only

one-half of the coinage profits should be paid into the reserve, the remainder being used for capital expenditure on railways.

Gold.

Since 1870 there had been no coinage of double mohurs in India and the last coinage of single mohurs before 1918 in which year coinage was resumed, was in the year 1891-92.

A Royal proclamation was issued in 1918 establishing a branch of the **Royal Mint at Bombay**. It stated:—Subject to the provision of this proclamation the Bombay Branch Mint shall for the purpose of the coinage of gold coins be deemed to be part of the Mint, and accordingly, (*a*) the Deputy Master of the Bombay Branch Mint shall comply with all directions he may receive from the Master of the Mint whether as regards the expenditure to be incurred or the returns to be made or the transmission of specimen coins to England or otherwise and (*b*) the said specimen coins shall be subject to the trial of the pyx under section 12 of the Coinage Act, 1870, so that they shall be examined separately from the coins coined in England or at any other branch of the Mint, and (*c*) the Deputy Master of the Bombay Branch Mint and other officers and persons employed for the purpose of carrying on the business of the Branch Mint may be appointed, promoted, suspended and removed and their duties assigned and salaries awarded and in accordance with the provisions of section 15 of the Coinage Act, 1870. Pending the completion of the arrangements at the Branch, Royal Mint, power was taken by legislation to coin in India gold mohurs of the same weight and fineness as the sovereign. Altogether 2,109,703 pieces of these new coins of the nominal value of Rs. 3,16,45,545, were struck at the Bombay Mint. The actual coinage of sovereigns was begun in August, 1918, and 1,295,372 sovereigns were coined during the year. This branch of the Royal Mint was closed in April, 1919, owing to difficulties in supplying the necessary staff.

The Indian Currency Act of 1927 established a new ratio of the rupee to gold. It established this ratio at one shilling and six pence by enacting that Government would purchase gold at a price of twenty-one rupees three annas ten pies per tola of fine gold in the form of bars containing not less than forty tolas and would sell gold or, at the option of Government, sterling, for immediate delivery in London at the same price after allowing for the normal cost of transport from Bombay to London. A rate of one shilling and five pence forty-nine sixty-fourths was notified as Government's selling rate for sterling to meet these obligations. Great Britain and India left the gold standard in September 1931 but the buying and selling rates for sterling are still maintained.

With the receipt of large consignments of gold, the Bombay Mint made special arrangements for the **refining of gold** by the chlorine process and at the end of the year 1919-20 the Refinery Department was capable of refining a daily amount of 6,000 ounces of raw gold.

Silver.

The weight and fineness of the silver coins are:—

—	Fine Silver grains.	Alloy grains.	Total grains.
Rupee	165	15	180
Half-rupee	82½	7½	90
Quarter-rupee or 4-anna piece	41¼	3¾	45
Eighth of a rupee or 2-anna piece ..	20⅝	1⅞	22½

One rupee = 165 grains of fine silver.
One shilling = $80\frac{1}{11}$ grains of fine silver.
One rupee = shillings 2·0439.

Copper and Bronze.

Copper coinage was introduced into the Bengal Presidency by Act XVII of 1835 and into the Madras and Bombay Presidencies by Act XXII of 1844.

The weight of the copper coins struck under Act XXIII of 1870 remained the same as it was in 1835. It was as follows:—

	Grains troy.
Double pice or half-anna	200
Pice or quarter-anna	100
Half-pice or one-eighth of an anna ..	50
Pie being one-third of a pice or one-twelfth of an anna	33⅓

The weight and dimensions of bronze coins are as follows:—

	Standard weight in grains troy.	Diameter in millimetres.
Pice	75	25·4
Half-pice	37½	21·15
Pie	25	17·45

Nickel.

The Act of 1906 also provides for the coinage of a nickel coin. It was directed that the nickel one-anna piece should thenceforth be coined at the Mint and issue. The notification also prescribed the design of the coin, which has a waved edge with twelve scollops, the greatest diameter of the coin being 21 millimetres and its least diameter 19·8 millimetres. The desirability of issuing a half-anna nickel coin was considered by the Government of India in 1909 but after consultation with Local Governments it was decided not to take action in this direction until the people had become thoroughly familiar with the present one-anna coin. The two-anna nickel coin was introduced in 1917-18; and the four-anna and eight-anna nickel coins in 1919. The eight-anna nickel is now being withdrawn from circulation.

The Currency System.

The working of the Indian currency system which has commanded a large amount of public attention since 1893, was forced to the front in 1920, as the result of measures taken to stabilise the exchange value of the rupee after the fluctuations caused by the war. These assumed so much importance, and they continue to bulk so largely in all Indian economic questions, that we propose to give here a short summary of the Indian currency system in non-technical language.

I. THE SILVER STANDARD.

Prior to 1893 the Indian currency system was a mono-metallic system, with silver as the standard of value and a circulation of silver rupees and notes based thereon. But with the opening of new and very productive silver mines in the United States of America the supply of silver exceeded the demand and it steadily receded in value. The result was that the gold value of the rupee, which was nominally two shillings, fell continuously until it reached the neighbourhood of a shilling. These disturbances were prejudicial to trade, but they were still more prejudicial to the finances of the Government. The Government of India has to meet every year in London a substantial sum in the form of payment of interest on the debt, the salaries of officials on leave, the pensions of retired officials, as well as large payment for stores required for State enterprises. As the rupee fell in its gold value the number of rupees required to satisfy these payments rose. The total reached a pitch which seriously alarmed the Government, which felt that it might be called upon to raise a sum in rupees which would necessitate a considerable increase in taxation, which should be avoided if possible. It was therefore decided to take measures to raise and fix the gold value of the rupee for the purposes of exchange.

Closing the Mints.—The whole question was examined by a strong committee under the presidency of Lord Herschell, whose report is commonly called the Herschell Report. It was decided in 1893 to close the mints to the unrestricted coinage of silver. This step led, as was intended, to a gradual divergence between the exchange value of the rupee and the gold value of its silver content. Government ceased to add rupees to the circulation. Rupees remained unlimited legal tender and formed the standard of value for all internal transactions. Since Government refused, and no-one else had the power to coin rupees, as soon as circumstances led to an increasd demand for rupees, the exchange value of the rupee began to rise. By 1898 it had approached the figure of one shilling and four pence. Meantime, in response to the undertaking of Government to give notes or rupees for gold at the rate of fifteen rupees to the pound sterling, gold began to accumulate in the Paper Currency Reserve. These purposes having been attained, a second committee was appointed under the chairmanship of Sir Henry Fowler to consider what further steps should be adopted in the light of these conditions. The report of the Fowler Committee as it was called marked the second stage in Indian currency policy.

II. THE NEW STANDARD.

The Fowler Committee rejected the proposal to re-open the Mints to the free coinage of silver. They proposed that the exchange value of the rupee should be fixed at one shilling and four-pence, or fifteen rupees to the sovereign. They further suggested that the British sovereign should be made a legal tender and a current coin in India: that the Indian mints should be thrown open to the unrestricted coinage of gold; so that the rupee and the sovereign should freely circulate side by side in India. The goal which the Committee had in view was a gold standard supported by a gold currency. Now under the condition which compelled the Government of India to give either rupees or rupee notes for gold tendered in India, at the rate of fifteen rupees to the sovereign, it was impossible for the rate of exchange to rise above one shilling and four pence, save by the fraction which covered the cost of shipping gold to India. But if the balance of trade turned against India, it was still possible for the rate of exchange to fall. To meet this the Fowler Committee recommended that the profits on coining rupees should not be absorbed in the general revenues, but should be set aside in a special reserve, to be called the Gold Standard Reserve. Inasmuch as the cost of coining rupees was approximately elevenpence halfpenny, and they were sold to the public at one and four pence, the profits were considerable; they were to have been kept in gold, so as to be freely available when required for the support of exchange.

A 16 pence Rupee.—The Government of India professed to accept all the recommendations of the Fowler Committee; actually only a portion of them was put in practice. The official rate of exchange was fixed at one and four-pence. The sovereign and the half sovereign were declared unlimited legal tender in India. But after a first attempt, when sovereigns soon came back to the treasuries, no effort was made to support the gold standard by an active gold currency. The gold mint was not set up. The Gold Standard Reserve was established, but, instead of holding the Reserve in gold, it was invested in British securities. These practices gave rise to conditions which were never contemplated by the Fowler Committee. Reference has been made to the Home Charges of the Government of India, which at the time amounted to about seventeen millions sterling a year. These are met by the sale of what are called Council Bills. That is to say, the Secretary of State, acting on behalf of the Government of India, sold Bills against gold deposited in the Bank of England in London. These Bills when presented

in India were cashed at the Government Treasuries. Now if the Secretary of State sold Council Bills only to meet his actual requirements, it follows that the balance of trade in favour of India over and above this figure would be liquidated, as it is in other countries, by the importation of bullion or by the creation of credits. It is a fact that owing to the failure of the policy of encouraging an active gold circulation to support the gold standard, gold tended to accumulate in India in embarrassing quantities. In 1904 therefore the Secretary of State declared his intention of selling Council Bills on India without limit at the price of one shilling fourpence one-eighth—that is to say gold import point. The effect of this policy was to limit the import of gold to India, for it was generally more convenient to deposit the gold in London and to obtain Council Bills against it, than to ship the gold to India. Nevertheless as the Egyptian cotton crop was very largely financed in sovereigns it was sometimes cheaper and more convenient to ship sovereigns from Egypt, or even from Australia, than to buy Council Bills. Considerable quantities of sovereigns found their way into India and circulated freely, particularly in the Bombay Presidency, the Punjab and parts of the Central Provinces.

Sterling Remittance.—This system worked until 1907-08. A partial failure of the rains in India in 1907, and the general financial stringency all over the world which followed the American financial crisis in the autumn, caused the Indian exchange to become weak in November. This was one of the occasions contemplated, in a different form, by the Fowler Committee when it proposed the formation of the Gold Standard Reserve. There had been very heavy coining of rupees in India and the amount in the Reserve was ample. But the Reserve was in securities not in gold, and was therefore not in a liquid form, nor was the time an opportune one for the realisation of securities. Moreover the authorities did not realise that a reserve is for use in times of emergency. It had been assumed that in times of weakness it would be sufficient for the Secretary of State to stop selling Council Bills, and it would firm up; meantime he would finance himself by drawing on the funds in the Gold Standard Reserve. But it was apparent that the stoppage of the sales of Councils was not enough; there was an insistent demand for the export of gold, or the equivalent of gold. The Government of India refused and exchange fell to one and threepence twenty-three thirty-seconds. Ultimately the authorities had to give way. It was decided to sell in India a certain quantity of sterling bills on London at one and threepence twenty-nine thirtyseconds, representing gold export point, and the equivalent of the export of gold. These were met in London from the funds in the Gold Standard Reserve. Bills to the extent of between eight and nine millions sterling were sold, which regularised the position and the Indian export trade recovered. Thus were gradually evolved the main principles of the Indian currency system. It consisted of silver rupees and rupee notes in India, with the sovereign and half sovereign unlimited legal tender at the rate of fifteen rupees to the sovereign, or one and fourpence. The rate of exchange was prevented from rising above gold import point by the unlimited sale of Council Bills at gold point in London; it was prevented from falling below gold point by the sale of Sterling Bills (commonly called Reverse Councils) at gold export point in India. But it was not the system proposed by the Fowler Committee, for there was no gold mint and only a limited gold circulation; some people invented for it the novel term of the gold exchange standard, a term unknown to the law of India. It was described by one of the most active workers in it as a "limping standard."

III. THE CHAMBERLAIN COMMITTEE.

This brings us to the year 1913. There were many critics of the system. Some hankered for a return to the open mints; others objected to the practice of unlimited sales of Council Bills as forcing rupees into circulation in excess of the requirements of the country. But the general advantages of a fixed exchange were so great as to smother the voices of the critics, and the trade and commerce of the country adjusted itself to the one and fourpenny rupee. But there gradually grew up a formidable body of criticism directed against the administrative measures taken by the India Office. These criticisms were chiefly directed at the investment of the Gold Standard Reserve in securities instead of keeping it in gold in India; at a raid on that reserve in order temporarily to relieve the Government of the difficulty of financing its railway expenditure; at the transfer of a solid block of the Paper Currency Reserve from India to London; at the holding of a portion of the Gold Standard Reserve in silver in order to facilitate the coining of rupees; and at the unlimited sales of Council Bills at rates which prevented the free flow of gold to India, thus forcing token rupees into circulation in quantities in excess of the requirements of the country. The cumulative effect of this policy was to transfer from India to London an immense block of India's resources, aggregating over seventy millions, where they were lent out at low rates of interest to the London bankers, whilst India was starved of money until at one point money was not available for loans even against Government securities and the bank rate was artificially high. All these things were done, it was contended, on the *obiter dicta* of a small Finance Committee of the India Office, from which all Indian influence was excluded, and on which London banking influence was supreme. The India Office for long ignored this criticism, until it was summarised in a series of articles in *The Times*, and public opinion was focussed on the discussion through the action of the India Office in purchasing a big block of silver for coining purposes from Messrs. Montagu & Co., instead of through their recognised and constituted agents, the Bank of England. The Government could no longer afford to stand aloof and yet another Currency Committee was appointed under the chairmanship of Mr. Austen Chamberlain. This is known as the Chamberlain Committee

New Measures.—The conclusions of this Commission were that it was unnecessary to support the Gold Standard by a gold currency; that it was not to the advantage of India to encourage the internal use of gold as currency; that the internal currency should be supported by a thoroughly adequate reserve of gold and sterling; that no limit should be fixed to the amount of the Gold Standard Reserve, one-half of which should be held in gold; that the silver branch of the Gold Standard Reserve should be abolished; that Reverse Councils should be sold on demand; that the Paper Currency should be made more elastic; and that there should be two Indian representatives out of three on the Finance Committee of the India Office. The Committee dealt in conclusively with the accumulation of excessive balances in London, the general tenor of their recommendations being "not guilty, but do not do it again." They gave a passing commendation to the idea of a State Bank. Sir James Begbie, the only Indian banker on the Committee, appended a vigorous minute of dissent, in which he urged that the true line of advance was to discourage the extension of the token currency by providing further facilities for the distribution of gold when increases to the currency became necessary, including the issue of an Indian gold coin of a more convenient denomination than the sovereign or the half sovereign.

IV. CURRENCY AND THE WAR.

The report was in the hands of the Government of India shortly before the outbreak of the war. Some immediate steps were taken, like the abolition of the silver branch of the Gold Standard Reserve, but before the Government could deal entirely with the temporising recommendations of the Commission, the war broke out. The early effects of the war were precisely those anticipated. There was a demand for sterling remittance which was met by the sale of Reverse Councils, 68,707,000, being sold up to the end of January 1915. There were withdrawals from the Post Office Savings Banks, and a net sum of Rs. 8 crores was taken away. There was some lack of confidence in the Note issue, and a demand for gold; Notes to the extent of Rs. 10 crores were presented for encashment and the Government were obliged to suspend the issue of gold. But these were transient features and did not demand a moratorium; confidence was soon revived and Exchange and the Note issue continued strong. The difficulties which afterwards arose were from causes completely unanticipated by all students of the Indian currency. They arose from an immense balance of trade in favour of India, caused by the demand for Indian produce for the United Kingdom and the Allies and the decline in the export trade from these countries; a heavy expenditure in India on behalf of the British Government; and a phenomenal rise in the price of silver. If we take the three years 1916-17 to 1918-19 the balance of trade in favour of India was £6 millions a year above the corresponding years of the previous quinquennium. The disbursements in India on behalf of the Government of the United Kingdom and the Allies were by December 1919 £240,000,000. This balance of trade and expenditure for Imperial purposes could not be financed either by the import of the precious metals, owing to the universal embargo on the movement of gold and silver nor by credits in India. It could be financed only by the expansion of the Note issue, against sterling securities in the United Kingdom, chiefly Treasury Bills, and the issue of coined rupees. But simultaneously there was a reduction in the output of the silver mines of the world coinciding with an increased demand for the metal. The price of silver in 1915 was 27¼ pence per standard ounce. In May 1919 it was 58 pence, on the 17th December of that year it was 78 pence. The main difficulties in India were not therefore the prevention of the rupee from falling below the ratio of 15 to one, but to keep it within any limits and to provide a sufficiency to meet the demand.

Rise in Exchange.—The measures adopted by the Government of India in these emergencies were to bring exchange under rigid control, confining remittance to the finance of articles of national importance. The next step was to raise the rate for the sale of Council Bills, so that silver might be purchased at a price which would allow rupees to be coined without loss. The following table shows how rates were raised from one shilling fourpence to two shillings fourpence:—

Date of Introduction.	Minimum Rate for Immediate Telegraphic Transfers.
3rd January 1917 ..	1 4⅛
28th August 1917 ..	1 5
12th April 1918 ..	1 6
13th May 1919 ..	1 8
12th August 1919 .	1 10
15th September 1919 .	2 0
22nd November 1919 ..	2 2
12th December 1919 ..	2 4

V. THE 1919 COMMITTEE.

The effect of these measures however was to jettison the currency policy pursued from 1893 to 1915, the main object of which was to stabilise the rupee at one and fourpence. The war being over, a Committee was appointed to advise in regard to the future of Indian exchange and currency. It sat in 1919 and reported towards the end of the year. Its main recommendations are summarised below:—

(i) It is desirable to restore stability to the rupee and to re-establish the automatic working of the Indian currency system.

(*ii*) The reduction of the fineness or weight of the rupee, the issue of 2 or 3-rupee coins of lower proportional silver content than the present rupee, or the issue of a nickel rupee, are expedients that cannot be recommended.

(*iii*) The maintenance of the convertibility of the note issue is essential, and proposals that do not adequately protect the Indian paper currency from the risk of becoming inconvertible cannot be entertained.

(*iv*) The rise in exchange, in so far as it has checked and mitigated the rise in Indian prices, has been to the advantage of the country as a whole, and it is desirable to secure the continuance of this benefit.

(*v*) Indian trade is not likely to suffer any permanent injury from the fixing of exchange at a high level.

If, contrary to expectation, a great and rapid fall in world prices were to take place, and if the costs of production in India fail to adjust themselves with equal rapidity to the lower level of prices, then it might be necessary to consider the problem afresh.

(*vi*) The development of Indian industry would not be seriously hampered by a high rate of exchange.

(*vii*) The gain to India of a high rate of exchange for meeting the Home charges is an incidental advantage that must be taken into consideration.

(*viii*) To postpone fixing a stable rate of exchange would be open to serious criticism and entail prolongation of Government control.

(*ix*) The balance of advantage is decidedly on the side of fixing the exchange value of the rupee in terms of gold rather than in terms of sterling.

(*x*) The stable relation to be established between the rupee and gold should be at the rate of Rs. 10 to one sovereign, or, in other words at the rate of one rupee for 11·30,016 grains of fine gold, both for foreign exchange and for internal circulation.

(*xi*) If silver rises for more than a brief period above the parity of 2s. (gold), the situation should be met by all other available means rather than by impairing the convertibility of the note issue. Such measures might be (*a*) reduction of sale of Council Bills; (*b*) abstention from purchase of silver; (*c*) use of gold to meet demands for metallic currency. If it should be absolutely necessary to purchase silver, the Government should be prepared to purchase even at a price such that rupees would be coined at a loss.

(*xii*) Council Drafts are primarily sold not for the convenience of trade but to provide for the Home charges in the wider sense of the term. There is no obligation to sell drafts to meet all trade demands; but, if without inconvenience or with advantage the Secretary of State is in a position to sell drafts in excess of his immediate needs, when a trade demand for them exists, there is no objection to his doing so, subject to due regard being paid to the principles governing the location of the reserves.

Council Drafts should be sold as now by open tender at competitive rates, a minimum rate being fixed from time to time on the basis of the sterling cost of shipping gold to India. At present this rate will vary; but when sterling is again equivalent to gold, it will remain uniform.

The Government of India should be authorised to announce, without previous reference to the Secretary of State on each occasion, their readiness to sell weekly a stated amount of Reverse Councils (including telegraphic transfers) during periods of exchange weakness at a price based on the cost of shipping gold from India to the United Kingdom.

(*xiii*) The import and export of gold to and from India should be free from Government control.

(*xiv*) The statutory minimum for the metallic portion of the Paper Currency Reserve should be 40 per cent. of the gross circulation.

As regards the fiduciary portion of the reserve, the holding of securities issued by the Government of India should be limited to 20 crores. The balance should be held in securities of other Governments comprised within the British Empire, and of the amount so held not more than 10 crores should have more than one year's maturity and all should be redeemable at a fixed date. The balance of the invested portion above these 30 crores should be held in short-dated securities, with not more than one year's maturity, issued by Government within the British Empire.

The sterling investments and gold in the Paper Currency Reserve should be revalued at 2s. to the rupee. The depreciation which will result from this revaluation, cannot be made good at once, but any savings resulting from the rise in exchange will afford a suitable means of discharging this liability in a limited number of years.

(*xv*) With a view to meeting the seasonal demand for additional currency, provision should be made for the issue of notes up to five crores over and above the normal fiduciary issue as loans to the Presidency Banks on the security of export bills of exchange.

Minority Report.—The main object of the Committee, it will be seen, was to secure a stable rate of exchange, without impairing the convertibility of the Note issue, and without debasing the standard silver rupee in India, or substituting another coin of inferior metallic content, which would be debasement in another form. In order to attain these ends it was imperative to fix a ratio for the rupee in relation to gold which would ensure that the Government was able to purchase silver for coining purposes without more than temporary loss. For reasons given in the report they fixed this point at two shillings gold: all other recommendations are subsidiary thereto. But in this they were not unanimous: an important member of the Committee, Mr. Dadiba Dalal, of Bombay, appended a minority report in which he urged the adoption of the following courses:—

(*a*) The money standard in India should remain unaltered; that is, the standard of the sovereign and gold mohur with rupees related thereto at the ratio of 15 to 1.

(*b*) Free and unfettered imports and exports by the public of gold bullion and gold coins.

(*c*) Free and unfettered imports and exports by the public of silver bullion and silver coins.

(*d*) The existing silver rupees of 165 grains of fine silver at present in circulation to continue full legal tender.

(*e*) As long as the price of silver in New York is over 92 cents, Government should not manufacture silver rupees containing 165 grains fine silver.

(*f*) As long as the price of silver is over 92 cents Government should coin 2 rupee silver coins of reduced fineness compared with that of the present silver rupee and the same to be unlimited legal tender.

(*g*) Government to sell Council Bills by competitive tenders for the amount defined in the Budget as required to be remitted to the Secretary of State. The Budget estimate to show under separate headings the amount of Council Bills drawn for Home Charges, for Capital Outlay and Discharge of Debt. Council Bills to be sold for Government requirements only and not for trade purposes, except for the purpose mentioned in the next succeeding recommendation.

(*h*) "Reverse" drafts on London to be sold only at 1s. 3 29-32d. The proceeds of "Reverse" drafts to be kept apart from all other Government funds and not to be utilised for any purpose except to meet drafts drawn by the Secretary of State at a rate not below 1s. 4 3-32d. per rupee.

VI. THE TWO SHILLING RUPEE.

The fundamental recommendation of the Committee was that the rupee should be linked to gold and not to sterling, in view of the decline in the value of sterling; that it should be linked at the rate of two shillings instead of the standard value, one and fourpence: all other recommendations were ancillary to this. But it is very important to bear in mind the twofold problem which confronted the Committee. It would be quite easy to fix any low ratio provided the paper currency were made inconvertible, or the rupee debased to such a point that the Government in providing rupee currency, were independent of the price of silver. But if the convertibility of the rupee were to be maintained, and if the rupee were not to be debased, it was essential that the new ratio should be one at which the Government could reasonably rely on purchasing without loss the silver necessary to meet the heavy demands for rupee in India. For reasons set out in the Report, the Committee came to the conclusion that the Government could reckon on purchasing silver for coining at a little under two shillings gold, and that powerfully influenced them in fixing the new ratio at two shillings gold.

The Report Adopted.—The Currency Committee's Report was signed in December 1919, but it was not until February 1920 that action was taken thereon. In the first week of that month a Notification was issued in India accepting the principal recommendations in the Report and notifying that the necessary official action would be taken thereon. This action covered a wide field, but for the sake of clarity in this narrative we shall concentrate on the main issue, the changing of the official monetary standard from fifteen rupees to the sovereign to ten rupees to the sovereign and its effect on Indian currency and trade. That may be summarised in a sentence. A policy which was avowedly adopted to secure fixity of exchange produced the greatest fluctuations in the exchanges of any solvent country and widespread disturbance of trade, heavy losses to Government, and brought hundreds of big traders to the verge of bankruptcy.

Financial Confusion.—This result was produced by many causes. It has been explained above that the essential features of the Indian currency system are the free sales of Council Bills at gold export point in London to prevent exchange from rising above the official standard and the sale of Reverse Councils in India at gold export point to prevent exchange from falling below the official standard. Now when the Currency Report was signed the Indian exchanges were practically at two shillings gold. But between the signing of the Report and the taking of official action, there was a sensational fall in the sterling exchanges, as measured in dollars, the dollar-sterling rate, inasmuch as America was the only free gold market, being the dominating factor in the situation. Consequently the Indian exchanges were considerably below the two shillings gold rate when the Notification accepting the Currency Committee's Report was issued. The Indian exchanges were two shillings and fourpence, and weak at that; the gold rate was about two shillings ninepence. There was an immediate and prodigious demand for Reverse Councils, to take advantage of this high rate of exchange; the market rate jumped up to two shillings eight pence.

Effect of the Rise.—The effect of a rise in exchange has been well described in the words of the Currency Committee's Report; it is that a rising exchange stimulates imports and impedes exports, the effect of a falling exchange is the reverse.

Now when the official notification of the two shilling rupee was made the Indian export trade was weak. The great consuming markets of Great Britain and America were glutted with Indian produce. The continent of Europe, which was starved of Indian produce and in urgent need of it, had not the wherewithal to pay for it nor the means of commanding credit. The only Indian staples which were in demand were foodstuffs, and as the rains of 1920 failed over a wide area, the Government were not able to lift the embargo on the export for foodstuffs, save to a limited extent in the case of wheat. On the other hand, the import trade was strong. Orders had been placed for machinery and other manufactured goods during the war and after the Armistice for delivery at the discretion of manufacturers. These began to come forward.

Difficulties Accentuated.—In accordance with the principles laid down by the Currency Committee these difficulties were accentuated by the action of Government in raising exchange by an administrative act. The weak export trade was almost killed. At the same time the temptation of a high exchange gave powerful stimulus to the import trade and orders were placed for immense quantities of manufactured goods, in which textiles filled a important place. Afterwards other forces intervened which accentuated the difficulties of the situation. There was a severe commercial crisis in Japan and this

checked the export of Indian cotton. Japan is the largest buyer of Indian cotton, and when her merchants not only stopped buying but began to re-sell in the Indian markets, the trade was severely shaken and stocks accumulated at a great rate. Even before the 1920 crop came into the market the stocks in Bombay were double those in the corresponding period of the previous year. The expectations of a revival in the buying power of the Continent which were held in many quarters were disappointed and throughout the year there was a heavy balance of trade against India, which made the stabilisation of exchange at the high ratio attempted a hopeless proposition.

Confession of Failure.—Government struggled long against these conditions in the desperate hope that a revival of the export trade would come to their assistance, but they were further handicapped by the variations of the sterling-dollar exchange, which at one time took the rate for Reverse Councils to two shillings tenpence half penny. They sold two millions of Reverse Councils a week, then five millions, then dropped down to a steady million. But their policy only aggravated the situation. In addition to arresting the export trade and stimulating the import trade at a time when the precise converse was demanded, their action created an artificial movement for the transfer of capital from India to England. Large war profits accumulated in India since 1914 were hurriedly liquidated and transferred to England. Then the difference between the Reverse Council rate and the market rate, which on some occasions was several pence, induced gigantic speculations. The Exchange Banks set aside all their available resources for the purpose of bidding for Bills, and at once sold their allotments at substantial profits. Considerable groups of speculators pooled their resources and followed the same course. In this way the weekly biddings for the million of Reverse Councils varied from a hundred and 20 millions to a hundred and thirty millions and the money market was completely disorganised. The biddings assumed such proportions that it was necessary to put up fifty lakhs of rupees to obtain the smallest allotment made, five thousand pounds, and Reverse Councils and the large profits thereon came under the entire control of the Banks and the wealthy speculators. Various expedients were tried to remedy the situation but without the slightest effect.

Sterling for Gold.—The first definite break from the recommendations of the Currency Committee came at the end of June, when the Government announced that instead of trying to stabilise the rupee at two shillings gold they would aim at stabilising it at two shillings sterling, leaving the gap between sterling and gold to be closed when the dollar-sterling rate became par. The effect of this was to alter the rate at which Reverse Councils were sold from the fluctuating rate involved in the fluctuations of dollar-sterling exchange to a fixed sterling rate, namely, one shilling elevenpence nineteen-thirty seconds. But this had little practical effect. The biddings for Reverse Councils continued on a very big scale, and the market rate for exchange was always twopence or threepence below the Reverse Council rate. This practice continued until the end of September, when it was officially declared that Reverse Councils would be stopped altogether. Exchange immediately slumped to between one and sixpence and one and sevenpence, and it continued to range between these narrow points until the end of the year. The market made its own rate; it made a more stable rate than the efforts of Government to attain an administrative stability.

Other Measures.—Apart from the effort to stabilise exchange, which had such unfortunate results, the policy of Government had certain other effects. During the year all restrictions on the movement of the precious metals were removed, in accordance with the recommendations of the Currency Committee. This included the abandonment of the import duty on silver, always a sore point with Indian bullionists. Legislative action was taken to alter the official ratio of the sovereign from fifteen to one to ten to one; due notice of this intention was given to holders of sovereigns and of the gold mohurs which were coined as an emergency measure in 1918, and they were given the option of tendering them at fifteen rupees. As the gold value of these coins was above fifteen rupees only a limited number was tendered, although there was extensive smuggling of sovereigns into India to take advantage of the premium. Then measures were adopted to give greater elasticity to the Note issue. Under the old law the invested proportion of the Note issue was fixed by statute and it could be altered only by altering the law or by Ordinance. An Act was passed fixing the metallic portion of the Paper Currency Reserve at fifty per cent. of the Note Issue, the invested portion being limited to Rs. 20 crores in Indian securities and the balance in British securities of not more than twelve months' currency. The invested portion of the Paper Currency Reserve was revalued at the new rate of exchange, and an undertaking was given that the profits on the Note issue would be devoted to writing off the depreciation, as also would be the interest on the Gold Standard Reserve when the total had reached £40 millions. Further, in order to give greater elasticity to the Note issue, power was taken to issue Rs. 5 crores of emergency currency in the busy season against commercial bills. These measures, save the alteration of the ratio, were generally approved by the commercial public.

Results.—It remains to sum up the results of these measures. In a pregnant sentence in their report the Currency Committee say that whilst a fixed rate of exchange exercises little influence on the course of trade, a rising exchange impedes exports and stimulates imports, a falling exchange exercises a reverse influence. Here we have the key to the failure of the currency policy attempted. At the moment when it was sought suddenly and violently to raise the rate of exchange by the introduction of the new ratio of two shillings gold, the export trade was weak and the import trade in obedience to the delivery of long deferred orders was strong. The very principle enunciated by the Currency Committee wrecked the policy which they recommended. The rising rate of exchange scotched the weak export trade and gave a great stimulus to imports. Unexpected forces, such as the financial crisis in Japan, the lack of buying power on the Continent, and the movement for the transfer of capital from India to England at the

artificially high rate of exchange stimulated these forces, but they had their origin in the attempt by administrative action artificially and violently to raise the rate of exchange. If let alone, the natural fall in exchange would have tended to correct the adverse balance of trade; the official policy exaggerated and intensified it. The effects on Indian business were severe. Exporters found themselves loaded with produce for which there was no foreign demand; importers found themselves loaded up with imported goods, bought in the expectation of the continuance of a high rate of exchange, delivered when it had fallen one and fourpence from the highest point reached. Immense losses were incurred by all importers. The Government sold £55 millions of Reverse Councils before abandoning their effort to stabilise exchange at the new ratio; the loss on these—that is the difference between the cost of putting the funds down in London and in bringing them back to India—was Rs. 35 crores of rupees. Government sold £53 millions of gold, without breaking or seriously affecting the premium on gold. The Secretary of State, in the absence of any demand for Council Bills, was able to finance his expenditure in England only through the lucky chance of heavy expenditure on behalf of the Imperial Government for the forces in Mesopotamia—this expenditure being made in India and set off by payments in London. The only advantages were a considerable contraction of the Note issue and the silver token currency.

VII. COMMISSION OF 1925-26.

These unfortunate experiments induced a period of great caution in dealing with Indian currency. The currency quacks having had their way, and proved their ignorance, went out of the field, and the wholesome policy of leaving Exchange alone, to find its natural level, followed. Left alone Exchange established itself round about the old ratio of fifteen to one, that is one shilling and fourpence to the rupee. Meantime great improvements were made in the organisation of Indian credit. The three Presidency Banks were merged in the Imperial Bank of India, a State Bank in all but name, and the Bank entered into a contract with Government to open a hundred new branches in the first five years of its existence. The Bank mobilised and strengthened and widened Indian credit. The metallic backing of the Paper Currency was strengthened and the fiduciary portion of the Reserve brought within negligible proportions. Greater elasticity was established in the currency by the power to issue emergency currency up to Rs. 12 crores against commercial paper endorsed by the Imperial Bank when there is a tightness of money, and the practice of also issuing emergency currency against sterling in England. The Government of India now purchases sterling in India to meet its Home Charges when the conditions are favourable, instead of relying entirely on the sales of Council Bills in London. A notable feature in Exchange history was the rise of Exchange, of its own strength, above the one and fourpenny figure. Towards the close of 1924 it gradually rose to one shilling and sixpence and stayed there.

At this figure Exchange was maintained by Government, though the state of trade might have led to a higher figure. But as the wholly artificial ratio of the two shilling rupee remained on the statute book, the demand for an authoritative inquiry to fix the ratio of the rupee to gold or sterling was insistent, and a Committee was appointed in the autumn of 1925. Of this Commander Hilton Young was chairman, with Sir Henry Strakosch as the chief gold expert. The personnel of the Committee was strongly criticised in India, on the ground that the Indian membership was inadequate, and that the individuals selected were not authoritative; a resolution was passed in the Assembly hostile to the whole body. Nevertheless the Committee arrived in India in November 1925 and took evidence in Delhi, Bombay and Calcutta. It sailed for England in February 1926, and resumed its hearings in London, and reported on July 1st, 1926.

The main recommendations of this Commission are summarised in the actual report in the following terms, and they are textually reproduced in order that they may be above question:—

(i) The ordinary medium of circulation should remain the currency note and the silver rupee and the stability of the currency in terms of gold should be secured by making the currency directly convertible into gold, but gold should not circulate as money.

(ii) The necessity of unity of policy in the control of currency and credit for the achievement of monetary stability involves the establishment of a Central Banking system.

(iii) The Central Banking functions should be entrusted to a new organisation, referred to as the Reserve Bank.

(iv) Detailed recommendations are made as to the constitution and functions and capacities of the Bank.

(v) The outlines of a proposed charter are recommended to give effect to the recommendations which concern the Reserve Bank.

(vi) Subject to the payment of limited dividends and the building up of suitable reserve funds, the balance of the profits of the Reserve Bank should be paid over to the Government.

(vii) The Bank should be given the sole right of note issue for a period of (say) 25 years. Not later than five years from the date of the charter becoming operative, Government notes should cease to be legal tender except at Government Treasuries.

(viii) The notes of the Bank should be full legal tender, and should be guaranteed by Government. The form and material of the note should be subject to the approval of the Governor-General in Council. A suggestion is made as to the form of the note.

(*ix*) An obligation should be imposed by statute on the Bank to buy and sell gold without limit at rates determined with reference to a fixed gold parity of the rupee but in quantities of not less than 400 fine ounces, no limitation being imposed as to the purpose for which the gold is required.

(*x*) The conditions which are to govern the sale of gold by the Bank should be so framed as to free it in normal circumstances from the task of supplying gold for non-monetary purposes. The method by which this may be secured is suggested.

(*xi*) The legal tender quality of the sovereign and the half-sovereign should be removed.

(*xii*) Government should offer "on tap" savings certificates redeemable in 3 or 5 years in legal tender money or gold at the option of the holder.

(*xiii*) The paper currency should cease to be convertible by law into silver coin. It should, however, be the duty of the Bank to maintain the free interchangeability of the different forms of legal tender currency, and of the Government to supply coin to the Bank on demand.

(*xiv*) One-rupee notes should be re-introduced and should be full legal tender.

(*xv*) Notes other than the one-rupee note should be legally convertible into legal tender money, *i.e.*, into notes of smaller denomination or silver rupees at the option of the currency authority.

(*xvi*) No change should be made in the legal tender character of the silver rupee.

(*xvii*) The Paper Currency and Gold Standard Reserves should be amalgamated, and the proportions and composition of the combined Reserve should be fixed by statute.

(*xviii*) The proportional reserve system should be adopted. Gold and gold securities should form not less than 40 per cent. of the Reserve, subject to a possible temporary reduction, with the consent of Government, on payment of a tax. The currency authority should strive to work to a reserve ratio of 50 to 60 per cent. The gold holding should be raised to 20 per cent. of the Reserve as soon as possible and to 25 per cent. within ten years. During this period no favourable opportunity of fortifying the gold holding in the Reserve should be allowed to escape. Of the gold holding at least one-half should be held in India.

(*xix*) The silver holding in the Reserve should be very substantially reduced during a transitional period of ten years.

(*xx*) The balance of the Reserve should be held in self-liquidating trade bills and Government of India securities. The "created" securities should be replaced by marketable securities within ten years.

(*xxi*) A figure of Rs. 50 crores has been fixed as the liability in respect of the contractibility of the rupee circulation. Recommendations are made to secure that an amount equal to one fifth of the face value of any increase or decrease in the number of silver rupees in issue shall be added to or subtracted from this liability, and the balance of profit or loss shall accrue to or be borne by the Government revenues.

(*xxii*) The Issue Department of the Reserve Bank should be kept wholly distinct from its Banking Department.

(*xxiii*) The Reserve Bank should be entrusted with all the remittance operations of the Government. The Secretary of State should furnish in advance periodical information as to his requirements. The Bank should be left free, at its discretion, to employ such method or methods of remittance as it may find conducive to smooth working.

(*xxiv*) During the transition period the Government should publish a weekly return of remittances made. A trial should be made of the system of purchase by public tender in India.

(*xxv*) The cash balances of the Government (including any balances of the Government of India and of the Secretary of State outside India), as well as the banking reserves in India of all banks operating in India, should be centralised in the hands of the Reserve Bank. Section 23 of the Government of India Act should be amended accordingly.

(*xxvi*) The transfer of Reserve assets should take place not later than 1st January 1929, and the Bank's obligation to buy and sell gold should come into operation not later than 1st January 1931.

(*xxvii*) During the transition period the currency authority (*i.e.*, the Government until the transfer of Reserve assets and the Bank thereafter) should be under an obligation to buy gold and to sell gold or gold exchange at its option at the gold points of the exchange. This obligation should be embodied in statutory form, of which the outline is suggested.

(*xxviii*) Stabilisation of the rupee should be effected forthwith at a rate corresponding to an exchange rate of 1*s.* 6*d.*

(*xxix*) The stamp duty on bills of exchange and cheques should be abolished. Bill forms, in the English language and the vernacular in parallel, should be on sale at post offices.

(*xxx*) Measures should be taken to promote the development of banking in India.

(*xxxi*) Every effort should be made to remedy the deficiencies in the existing body of statistical data.

A Minute of Dissent.—Whilst all the members of the Commission signed the report, one of their number, Sir Purshotamdas Thakordas, did so subject to a minute of dissent. In the first part of this Minute Sir Purshotamdas subjected the long correspondence between the Government of India and the India Office on currency policy to a detailed analysis. The conclusions to which he came were that throughout the Government of India had striven for a system following the Fowler Report—a gold standard based on a gold currency, and that their efforts were emasculated by successive Secretaries of State, who had in view some which was often called the Gold

Exchange Standard, but which was in effect no standard at all. On the question of the Gold Standard, he stressed the importance of the free movement of gold in India, but subject to this condition accepted the Gold Bullion Standard recommended by his colleagues. As for the proposed Reserve Bank, Sir Purshotamdas, whilst recognising that the scheme proposed might be the ideal, to be attained in process of time, thought that the best immediate course was to develop the Imperial Bank into a central bank for India. The chief point of difference with his colleagues was however the ratio.

Dealing with the ratio of the rupee to gold Sir Purshotamdas said that in September 1924 the rate was approximately one and fourpence gold. At that time the Government was pressed to stabilise at the then ratio, and thus legally to restore the long current legal standard of money payments. This it declined to do, and by limiting the supply of currency, the ratio was raised to one and sixpence gold by April 1925. He declined therefore to attach any importance to a ratio reached by such measures. Proceeding to analyse the course of prices and wages, he combated the conclusion of his colleagues that prices had adjusted themselves in a preponderant degree to one shilling and sixpence. For these reasons he recommended that the rupee should be stabilised at the rate which was current for nearly twenty years, namely one and fourpence. His conclusions were summarised in the following terms :—

"I look upon the question of the ratio in this Report as being no less important than the question of the standard to be adopted for the Indian Currency System. I am convinced that if the absolute necessity of the free inflow of old, which I have emphasised, is recognised, and steps taken to ensure it, the gold bullion standard proposed will be the correct one, and the likelihood of its breaking down under the strain of any convulsions in the future will be as remote as it can reasonably be. But I have very grave apprehensions that if the recommendation of my colleagues to stabilise the rupee at 1*s.* 6*d.* is accepted and acted upon, India will be faced during the next few years with a disturbance in her economic organisation, the magnitude of which is difficult to estimate, but the consequences of which may not only hamper her economic development but may even prove disastrous. Such a disturbance and its consequences my colleagues do not foresee to-day. But the possibility of their occurring cannot be ignored. Until adjustment is complete, agriculture threatens to become unattractive and less remunerative than it is to-day, and industries will have to undergo a painful process of adjustment, unnatural, unwarranted and avoidable—an adjustment which will be much to their cost, and affect not only their stability and their progress, but in certain cases, their very existence. And should Nature have in store for India a couple of lean years after the four good harvests that we have had, during the period of forced adjustment to a rate of 1*s.* 6*d.*, the steps that the Currency Authority will have to take to maintain exchange at this rate may deplete the gold resources of the country to an extent that may seriously shake the confidence of the people in the currency system recommended."

A Survey.—The official summary of the Report, and the summary of the minute of dissent, given above, do not however convey an idea of the far-reaching proposals embodied therein. These can be appreciated only if they are examined in close relation to the currency system of India in its various phases since 1899. This was done in an article contributed to *The Bankers' Magazine* by Sir Stanley Reed, which was recognised to be a fair presentation of the position. The main features thereof are reproduced below. There is here some re-treading of the path laid out in the introductory section, but this is unavoidable, if the full bearing of the measures proposed by the Commission are to be appreciated. After describing the standard in force Sir Stanley Reed asked :—

"What was the standard thus established ? It is generally described in London as the Gold Exchange Standard. That status was never claimed for it by its principal protagonist, the late Sir Lionel Abrahams, who described it as a 'limping standard.' The Royal Commission declares that 'in truth in so far as it amounted to a definite standard at all, it was a standard of sterling exchange.' Later they show that 'the automatic working of the exchange standard is thus not adequately provided for in India, and never has been. The fundamental basis of such a standard is provision for the expansion and contraction of the volume of currency.....Under the Indian system, contraction is not, and never has been, automatic.'

"However, the standard limped along until the third year of the war. The exchange value of the rupee was stable ; prices adjusted themselves to the ratio ; Indian trade and industry developed. From the narrow standpoint of profit and loss, the investment of the reserves, instead of keeping them in gold, resulted in a considerable gain to the finances estimated in 1925 at £17,962,466. But it had three great disadvantages : it did not inspire public confidence ; it placed the Indian currency at the mercy of the silver market which was on occasion deliberately cornered against it ; and it left the control of currency by the Government divorced from the control of credit by the Presidency Banks, afterwards amalgamated in the Imperial Bank of India. On this the Commission make a very suggestive comment : 'when allowance has been made for all misunderstandings and misapprehensions, the fact remains that a large measure of distrust in the present system is justified by its imperfections.'

"There is, I think, an inadequate appreciation of the influence on the Indian currency and exchange of the war, and the action taken thereafter. The first break in the permanent ratio of one shilling and fourpence did not occur until 1917, when the full effect of dependence on the silver market was revealed. Faced by the unprecedented rise in the price of silver the Government of India had either to raise the price of Council Drafts or else abandon the

convertibility of the Note Issue. Wisely, it took the former alternative; the price of Council Drafts followed the price of silver. The effect of this would have been transitory, but for the attempt in 1920, on the advice of the Babington Smith Committee, to stabilise the rupee at a new ratio of two shillings gold when all gold prices were crashing. It is easy to be wise after the event, but if the Government had followed silver down, as it followed silver up, there is no room to doubt that the rupee would have returned to its 'permanent' ratio with no more disturbance than was inevitable under war conditions. However, this was not done. The vain effort to stabilise the new ratio was abandoned in September, 1920, and the two shilling rupee has since been a legal fiction. Left free from administrative action, the rupee fell below one shilling and threepence sterling and one shilling gold in 1921. Since under the influence of good harvests, it has climbed upwards, and has been in the neighbourhood of one shilling and sixpence gold for the past twelve months. But it is not always realised in London that under these vicissitudes the Indian standard has legally perished. In the words of the report, 'The stability of the gold value of the rupee is thus based upon nothing more substantial than a policy of the Government, and at present that policy can be found defined in no notification or undertaking by the Government. It has to be implied from the acts of the Government in relation to the currency, and those acts are subject to no statutory regulation or control.'

The responsibility remitted to the Commission was not therefore the mere stabilisation of the rupee, but the establishment of a standard which would command reasoned confidence in India, to link the rupee to that standard, and to provide for its statutory control, automatic working and stability; to bring the control of currency and of credit under a single authority and to free the Indian currency and exchange system from the dominance of the silver market. In short, it was to establish the rule of law in place of the practice of administrative discretion.

Scheme for Gold Currency.—In the course of their inquiries in India the Commission had placed before them a scheme for the immediate establishment of a gold bullion standard, and its early conversion into the gold standard supported by the gold currency which a large body of Indian opinion has insistently demanded. The scheme was presented by the officials of the Finance Department, but it is known to be the work of the Finance Member, Sir Basil Blackett, whose work in India is of the greatest value.

The essential features of this Scheme were the undertaking of a statutory obligation by Government to buy and sell gold bullion in 400 oz. bars; as soon as sufficient gold was available to put a gold coin in circulation; after a period tentatively fixed at five years to undertake to give gold coin in exchange for notes and rupees, and after a further period, also tentatively fixed at five years, make the silver rupee legal tender only for sums up to a small fixed amount. The scheme involved the disposal of 200 crores of silver rupees, or 687 million fine ounces, in ten years; the acquisition in all of £103 millions of gold; and the establishment of credits in London or New York. The cost was estimated at one and two-thirds crores of rupees per annum during the first five years and thereafter from two-thirds of a crore to 1·12 crore.

This scheme is subjected by the Commission to a detailed examination, and rejected on grounds which are convincing. The main grounds for this decision are that the estimates of the amount and time of the gold demand are uncertain, and the absorption by India of this £103 millions of gold, in addition to the normal absorption for the arts, hoards, etc., would powerfully react on the supplies of credit, the rates of interest, and gold prices, throughout the world. The reaction on the silver market from the dethronement of the rupee and realisation of this large quantity of silver bullion would be even more marked, with severely prejudicial effects on the silver hoards of the people of India and the exchanges with China, where India still does a large business. Moreover, the capacity to raise the required credits is doubtful, and the cost is placed by the India Office at Rs. 3 crores a year.

The evidence of the highest financial authorities in London and New York established beyond doubt that it is not in the interests of India to precipitate any currency reform that would violently disturb the gold and silver markets, however desirable that reform might be in itself. Also, that whilst London, working in close harmony with New York, would strain every nerve to supply India with the funds she might require for her own development, it could hardly be expected to provide credits for a scheme which would upset the gold and silver markets. But whilst on these grounds the Commission were not able to endorse Sir Basil Blackett's scheme, there is no doubt that they were profoundly influenced by it in their own recommendations. The ultimate evolution of a policy which promises a cure for India's currency bills is therefore in large measure due to the courage and resolution with which the Finance Authorities in that country faced them.

A Gold Bullion Standard.—The currency system recommended by the Commission is a gold bullion standard. They propose that an obligation shall be imposed by statute on the currency authority to buy and sell gold without limit at rates determined with reference to a fixed gold parity of the rupee, but in quantities of not less than 400 fine ounces, no limitation being imposed as to the purpose for which the gold is required. The essence of this proposal is "that the ordinary medium of circulation in India should remain as at present the currency note and the silver rupee, and that the stability of the currency in terms of gold should be secured by making the currency directly convertible into gold for all purposes, but that gold should not circulate as money. It must not circulate at first, and it need not circulate ever." In breaking adrift from any idea of a sterling exchange, or gold exchange standard, the Commission were powerfully influenced by two factors—the necessity for safeguarding the

Indian system from the price of silver rising above the melting point of the rupee and the desirability of establishing confidence by giving the country not only a real, but conspicuously visible link between the currency and gold.

This reasoning is eminently sound, and the scheme in its broad outlines should command the unhesitating support not only of India, but of all interested in Indian trade. India will have nothing to do with any exchange standard; its experience has been too painful. Proposals to that end would be rejected by the legislature and prolong the currency controversies it is desired to close. The gold bullion standard satisfies all the country's real needs. True, it will not give it the gold mint and the gold currency which have long been demanded; it involves the demonetisation of the sovereign to which a sentimental influence attaches. But whilst it does not do these things, it keeps the door open. No-one contends that a gold standard and a gold currency are immediately practicable. The most rapid progress thereto is embodied in Sir Basil Blackett's scheme, which is full of uncertainties and risks. But when the gold reserves are strengthened to the requisite point, the proposals leave India perfectly free to decide, through her legislature, where a gold currency is worth the expense.

We must, however, face the obligation which a gold bullion standard imposes on the currency authority in India; indeed the Commission do not attempt to burke it. "The obligation is to convert the currency, not merely into foreign exchange, but into metallic gold, and it is an obligation that is not, as formerly, conditional and circumscribed, but absolute and unlimited. Nevertheless. . . . it has been undertaken by every other country that has adopted an effective gold standard: and we have satisfied ourselves that the present resources in the form of reserves at the disposal of the Government of India are adequate to enable the currency authority safely to undertake the obligation, with the measures of fortification, and at the time, which we specify." It is important, therefore, to examine the reserves and the procedure thereat.

The reserves held for the purpose of maintaining the value of the token currency are twofold—the Paper Currency Reserve and the Gold Standard Reserve. Their constitution on April 30, 1926 (the date taken by the Commission), was as follows:—

Paper Currency Reserve.

	Rs. Crores.
Silver coin	77·0
Silver bullion	7·7
Gold coin and bullion	22·3
Rupee securities	57·1
Sterling securities	21·0
	185·1

(The gold coin and bullion and the sterling securities are converted at the legal fiction ratio of two shillings per rupee.)

The Gold Standard Reserve amounts at present to £40,000,000 invested in Gold and in British Treasury Bills and other sterling securities.

In theory the two reserves fulfil entirely different functions. The Paper Currency Reserve is the backing for the Note Issue. The Gold Standard Reserve, accumulated from the profits on coining, is designed to maintain the external value of the rupee. In practice their action is closely interlocked, and the first line of defence in the event of a demand for remittance from India is the gold in the paper currency reserve. This invisible line of demarcation will disappear if the Commission's proposals are adopted. The Commission are justified in recommending that the two shall be amalgamated. Their further proposals are that the proportions and composition of the combined Reserve should be fixed by statute; that gold and gold securities should form not less than 40 per cent. of the whole, with 50 to 60 per cent. as the ideal; and that the holding of gold, which now stands at about 12·8 per cent. should be raised to 20 per cent. as soon as possible, and to 25 per cent. in ten years. Generally, they are of opinion that during this period no favourable opportunity of fortifying the gold holding in the Reserve should be allowed to escape.

The proposal to bring the combined Reserve under statutory control is wise; an arguable case could be made out for the thesis that the currency difficulties of India have arisen in the main from the decision of Lord Curzon's Government not to invest the official acceptance of the Fowler Report with legislative authority. The strengthening of the gold reserves is in entire accord with Indian needs.

The Ratio.—The majority of the Commission, Sir Purshotamdas Thakordas being the only dissentient, recommend that the rupee be stabilised in relation to gold at a rate corresponding to an exchange rate of one shilling and sixpence to the rupee. Round this point controversy in India will be concentrated; it is worth while to refresh our memories of the history of the ratio. The Fowler Committee recommended that the rupee should be permanently stabilised at one shilling and fourpence; the Secretary of State for India accepted their recommendations without qualification. The rupee was substantially steady at this point until August, 1917.

One principle advanced in Sir Dadiba Dalal's prophetic minority report in 1919, that the legal standard of money payments should be, and usually is, regarded as less open to repeal or modification than any other legislative Act, will command general acceptance. But when Sir Dadiba went on to suggest that the Government of India might have avoided this measure by larger borrowings in India and encouraging investment abroad he was on ground where no one in touch with Indian conditions can follow him. In the circumstances of the day the Government had no alternative to raising the rate of exchange save in declaring the rupee inconvertible, which during the war would have been disastrous. I must reiterate the belief that the real mischief was done not when the rate of exchange was raised to meet the rise in silver, but when it was not lowered as silver fell; the attempt to stabilise the rupee

at the two shilling rate caused the Government of India large losses, and inflicted a terrible blow on trade; after it was abandoned in September, 1920, the rupee fell below one shilling and threepence sterling and one shilling gold. Thereafter, under the influence of a succession of abundant harvests, it recovered. In 1923, it was one shilling and fourpence sterling; in October, 1924, one and sixpence sterling and one and four gold. With the rise in the pound to gold parity, the rupee reached one and sixpence gold in June, 1925, and has remained there.

It is not, I think, open to doubt that if the vain attempt to stabilise the rupee at two shillings had not been made in 1920, or if advantage had been taken of its return to one and four, the permanent standard might have been re-established without undue disturbance. Sir Purshotamdas Thakordas asserts in his minute of dissent that "the Executive had made up their minds to work up to a one shilling and sixpence ratio long before this Commission was appointed to examine the question. Indeed, they have presented to us the issue in this regard as a *fait accompli*, achieved by them, not having hesitated by manipulation to keep up the rate even while we were in session. I cannot conceive of any parallel to such a procedure in any country."

It is to my mind a great misfortune that the opportunity of restoring the permanent ratio of one and four was not seized when it offered. Not because there is any special sanctity in a ratio as such but because there is a sanctity in the legal standard of money payments. If this had been done the Commission's scheme would have received practically unanimous support in India; as it is a violent controversy will rage round this secondary issue, obscuring the great merit of the Commission's basic recommendation a true gold standard, statutory in its composition and automatic in action, with the coalescence of the currency and credit authorities. However, we have to deal with facts as we find them. The majority of the commission base their recommendation on the "conviction, which has been formed and cumulatively reinforced during the progress of our inquiry, that at the present exchange rate of about one shilling and sixpence, prices in India have already attained a substantial measure of adjustment with those in the world at large, and as a corollary, that any change in the rate would mean a difficult period of readjustment, involving widespread economic disturbance, which it is most desirable in the interests of the people to avoid, and which would in the end be followed by no countervailing advantage." Sir Purshotamdas Thakordas, in a closely-reasoned minute of dissent, supported by a wealth of figures, avers—and to my mind with conclusive force that the adjustments are far from complete, and cannot be completed in regard to wages without disastrous labour disputes. Both sides admit that their conclusions are weakened by the unreliability of the Indian index figures.

The truth, I suggest, lies between these two contentions. There have been very substantial adjustments to one shilling and sixpence; no ratio could be operative for over a year without inducing this result. But it is clear that the adjustments, especially in regard to wages in Western India, are not complete. In the matter of the indebtedness of the agricultural classes of India—seventy per cent. of the whole population there has been no adjustment, not in relation to the land revenue they pay to Government. The ratio therefore cannot be determined as a question of academic principle, but is a matter of expediency.

Here, it seems to me, the decisive factor is the economic consequence of a return to one shilling and fourpence. There is no half-way house; the rate must be either the *de facto* one of one and sixpence, or the old permanent ratio of one and fourpence. The change would be immediate not a matter of weeks or months, but of hours or minutes. There would be an immediate rise in prices of twelve and a half per cent., with a consequent reduction of real wages by that proportion; there would be convulsive disturbance of the foreign trade; there would be violent speculation. I omit all calculation of the effect of the lower rate on the finances of the Government of India, because this is an influence which has been over-valued in the past; it is infinitesimal in comparison with the industrial and commercial interests involved. No one who realises the sensitiveness of the Indian market, and the proneness to speculation, can contemplate these violent disturbances without a feeling akin to dismay. The balance of advantage lies with stabilisation at one and six; the controversy which must ensue is part of the price to be paid for the neglect to re-establish the permanent ratio when it was practicable.

The Note Issue.—Before the war there was a considerable and growing circulation of sovereigns. On the outbreak of hostilities these disappeared as currency; the actual currency of India is a token, the silver rupees and another token, the note convertible into rupees. Ever since the breakway from the accepted gold standard this obligation has imposed serious difficulties on the currency. It drove it into the very heavy coining which followed recovery from the famine of 1899-1900; it compelled heavy purchases of silver, which invariably rose in prices as the Government came into the market; and it placed the Indian currency system, as occurred during the war, at the mercy of the silver market. The maintenance of the convertibility of the note into silver rupees of the present fineness is only possible so long as silver does not rise above 48*d.* an ounce. The removal of this anomalous provision, the Commission say, is an essential step in Indian currency reform which must be taken sooner or later. "No opportunity for the termination of this obligatory convertibility is likely to be so favourable at the present when, by making the notes convertible into gold bars for all purposes, a more solid right of convertibility is attached to them than they have ever had since silver ceased to be a reliable standard of value." Both proposition can be accepted in their entirety.

The rise in the volume of the paper currency is one of the most remarkable features in Indian financial history. It developed from no change in the status of the note itself; it was always convertible on demand; but from increased facilities for the encashment of notes, beginning with the introduction of universal notes of small de-

nomination and steadily progressing as experience was gained. We can therefore endorse the conclusion of the Commission that the best way to foster the use of currency notes is to establish confidence in their practical convertibility, "and this confidence has been secured not so much by a legal obligation to encash them at currency offices as by making rupees readily available to the public at centres where there is a demand for them." There has been another factor in popularising the note which commands less attention. The rise in prices made the rupee an unsuitable medium for large commercial transactions, from the bulk and weight of the amount of currency required.

The Commission therefore propose that whilst the legal obligation to convert into rupees all the notes in circulation shall remain, this obligation should not attach to the new notes to be issued by the Central Bank, and coincidentally the one-rupee note, which had acquired great popularity before it was discontinued on the ground of economy, shall be re-issued. The legal obligation on the Central Bank will be to give legal tender money, either notes of smaller denominations or silver rupees, at its option; but it will be the duty of the Bank to supply rupees freely in such quantities as may be required for circulation, and of the Government to furnish the Bank with such coin. The currency position is such that the change in the legal status of the note will be unfelt. India is suffering from a surfeit of rupees, the total volume of which is estimated at approximately Rs. 400 crores. There are Rs. 85 crores of silver coin and bullion in reserve. The whole tendency will be in the direction of a return of rupees to the reserve rather than to an appetite therefor. Not only will there exist the fullest capacity to supply rupees on demand, but there will be a positive inducement to the currency authority to encourage a demand for rupees in order to get rid of its redundant stock. It is clear that the present opportunity of freeing the currency authority from the dependence on the silver market which has hampered India for so many years is exceptionally favourable, and should be seized without hesitation.

The reception of the Report followed very closely the lines indicated as probable in the article in *The Bankers' Magazine* which we have quoted extensively above. There was a considerable protest, strongest in Western India but shared in other parts of the country, against the proposal to stabilise the rupee at one shilling and sixpence and a demand for a reversion to one and fourpence. There was, particularly in Bombay, a reluctance to agree to the establishment of the Reserve Bank, coupled with the desire that the Imperial Bank of India should be re-moulded in order to make it the Central Bank, with the functions proposed to be remitted to the Reserve Bank. These voices were so loud that they overbore the consideration of the basic recommendations of the Report, a true gold standard, and the establishment of an organisation which would link currency with credit. In Bombay there was started a Currency League, with branches in other parts of India, whose main efforts were directed to the ratio, and to the idea that the legal ratio should be one and four, not one and six.

In August 1926 the Government published the text of a Bill designed to fix the ratio at one and six, and to support it by the sale of bullion on the lines laid down in the Report. At the request of a large body of opinion in the Legislative Assembly, which urged that there had not been time to study the Report and that the papers were not available, the discussion of this measure was postponed until the 1927 session. On November 18th the Government of India issued a notification to the following effect:—

"After considering the report of the Royal Commission on Indian Currency and Finance, the Secretary of State for India in Council in agreement with the Government of India, is prepared to accept as a whole the recommendations of the Commission, subject to such further consideration of details as may prove to be necessary. The necessary legislation to give effect to these recommendations will be introduced in the Indian Legislature during the forthcoming session."

The new Ratio.—So far from closing the discussion, this notification intensified it. Feeling ran high on the subject of the ratio, considerable interests in the country being convinced that one shilling and sixpence was a higher rate than the manufacturing and agricultural industries could bear without prolonged and disastrous readjustment. These found strong expression when the Bill to give effect to the new rate was brought before the Legislative Assembly in February-March 1927. The Indian Currency Bill was however accepted by the Assembly by a small majority, and adopted by the Council of State. It established the ratio of one shilling and sixpence by enacting that the Government would purchase gold at a price of twenty-one rupees three annas ten pies per tola of fine gold in the form of bars containing not less than forty tolas and would sell gold or, at the option of Government, sterling for immediate delivery in London at the same price after allowing for the normal cost of transport from Bombay to London. A rate of one shilling fivepence forty-nine sixty-fourths was notified as Government's selling rate for sterling to meet these obligations.

Exchange has since remained stable at the one and sixpenny rate. World trade depression in the last few years made it increasingly difficult for the Government of India to maintain the statutory ratio, but their difficulties were solved when Great Britain went off the Gold standard in September 1931, and the rupee was linked to sterling. By the end of the year exports of commercial gold from India had begun to show their effects, and on December 30 the T.T rate had risen to 1/6 $\frac{1}{16}$, compared with 1/5$\frac{31}{32}$ on September 18.

The characters of the **Reserves** which are the backbone of the Indian currency system are shown below:—

THE RESERVE BANK.

The following Act of the Indian Legislature received the assent of the Governor-General on March 6, 1934, and is known as the Reserve Bank of India Act, 1934 :—

Whereas it is expedient to constitute a Reserve Bank for India to regulate the issue of bank notes and the keeping of reserves with a view to securing monetary stability in British India and generally to operate the currency and credit system of the country to its advantage ;

And whereas in the present disorganisation of the monetary systems of the world it is not possible to determine what will be suitable as a permanent basis for the Indian monetary system ;

But whereas it is expedient to make temporary provision on the basis of the existing monetary system, and to leave the question of the monetary standard best suited to India to be considered when the international monetary position has become sufficiently clear and stable to make it possible to frame permanent measures;

It is hereby enacted as follows :—

(1) A Bank to be called the Reserve Bank of India shall be constituted for the purposes of taking over the management of the currency from the Governor-General in Council and of carrying on the business of banking in accordance with the provisions of this Act.

(2) The Bank shall be a body corporate by the name of the Reserve Bank of India, having perpetual succession and a common seal, and shall by the said name sue and be sued.

Share Capital.—(1) The original share capital of the Bank shall be five crores of rupees divided into shares of one hundred rupees each, which shall be fully paid up.

(2) Separate registers of shareholders shall be maintained at Bombay, Calcutta, Delhi, Madras and Rangoon, and a separate issue of shares shall be made in each of the areas served by those registers, as defined in the First Schedule, and shares shall be transferable from one register to another.

(3) A shareholder shall be qualified to be registered as such in any area in which he is ordinarily resident or has his principal place of business in India, but no person shall be registered as a shareholder in more than one register ; and no person who is not—

(*a*) domiciled in India and either an Indian subject of His Majesty, or a subject of a State in India, or

(*b*) a British subject ordinarily resident in India and domiciled in the United Kingdom or in any part of His Majesty's Dominions the government of which does not discriminate in any way against Indian subjects of His Majesty, or

(*c*) a company registered under the Indian Companies Act, 1913, or a society registered under the Co-operative Societies Act, 1912, or any other law for the time being in force in British India relating to co-operative societies or a scheduled bank, or a corporation or company incorporated by or under an Act of Parliament or any law for the time being in force in any part of His Majesty's Dominions the

government of which does not discriminate in any way against Indian subjects of His Majesty, and having a branch in British India,

shall be registered as a shareholder or be entitled to payment of any dividend on any share, and no person, who, having been duly registered as a shareholder, ceases to be qualified to be so registered, shall be able to exercise any of the rights of a shareholder otherwise than for the purpose of the sale of his shares.

(4) The Governor-General in Council shall, by notification in the Gazette of India, specify the parts of His Majesty's Dominions which shall be deemed for the purposes of clauses (*b*) and (*c*) of sub-section (3) to be the parts of His Majesty's Dominions in which no discrimination against Indian subjects of His Majesty exists.

(5) The nominal value of the shares originally assigned to the various registers shall be as follows, namely :—

(*a*) to the Bombay register—one hundred and fory lakhs of rupees ;

(*b*) to the Calcutta register—one hundred and forty-five lakhs of rupees ;

(*c*) to the Delhi register—one hundred and fifteen lakhs of rupees.

(*d*) to the Madras register—seventy lakhs of rupees.

(*e*) to the Rangoon register—thirty lakhs of rupees :

Provided that if at the first allotment the total nominal value of the shares on the Delhi register for which applications are received is less than one hundred and fifteen lakhs of rupees, the Central Board shall, before proceeding to any allotment, transfer any shares not applied for up to a maximum nominal value of thirty-five lakhs of rupees from that register in two equal portions to the Bombay and the Calcutta register.

A Committee consisting of two elected members of the Assembly and one elected member of the Council of State to be elected by non-official members of the respective Houses shall be associated with the Central Board for the purpose of making public issue of shares and looking after the first allotment of shares.

(6) In allotting the shares assigned to a register, the Central Board shall, in the first instance, allot five shares to each qualified applicant who has applied for five or more shares ; and, if the number of such applicants is greater than one-fifth of the total number of shares assigned to the register, shall determine by lot the applicants to whom the shares shall be allotted.

(7) If the number of such applicants is less than one-fifth of the number of shares assigned to the register, the Central Board shall allot the remaining shares firstly, up to the limit of one-half of such remaining shares, to those applicants who have applied for less than five shares, and thereafter as to the balance to the various applicants in such manner as it may deem fair and equitable, having regard to the desirability of distributing the shares and the voting rights attached to them as widely as possible.

(8) Notwithstanding anything contained in sub-sections (6) and (7), the Central Board shall reserve for and allot to Government shares of the nominal value of two lakhs and twenty thousand rupees to be held by Government for disposal at par to Directors seeking to obtain the minimum share qualification required under sub-section (2) of section 11.

(9) If, after all applications have been met in accordance with the provisions of sub-sections (6), (7) and (8), any shares remain unallotted, they shall, notwithstanding anything contained in this section, be allotted to and taken up by Government, and shall be sold by the Governor General in Council as soon as may be, at not less than par, to residents of the areas served by the register concerned.

(10) The Governor General in Council shall have no right to exercise any vote under this Act by reason of any shares allotted to him under sub-section (8) or under sub-section (9).

(11) A Director shall not dispose of any shares obtained from Government under the provisions of sub-section (8) otherwise than by re-sale to Government at par, and Government shall be entitled to re-purchase at par all such shares held by any Director on his ceasing from any cause to hold office as Director.

Increase and reduction of share capital —(1) The share capital of the Bank may be increased or reduced on the recommendation of the Central Board, with the previous sanction of the Governor General in Councill and with the approval of the Central Legislature, to such extent and in such manner as may be determined by the Bank in General meeting.

(2) The additional shares so created shall be of the nominal value of one hundred rupees each and shall be assigned to the various registers in the same proportions as the shares constituting the original share capital.

(3) Such additional shares shall be fully paid up, and the price at which they may be issued shall be fixed by the Central Board with the previous sanction of the Governor General in Council.

(4) The provisions of section 4 relating to the manner of allotment of the shares constituting the original share capital shall apply to the allotment of such additional shares, and existing shareholders shall not enjoy any preferential right to the allotment of such additional shares.

The Bank shall, as soon as may be, establish offices in Bombay, Calcutta, Delhi, Madras and Rangoon and a branch in London, and may establish branches or agencies in any other place in India or, with the previous sanction of the Governor General in Council, elsewhere.

The general superintendence and direction of the affairs and business of the Bank shall be entrusted to a Central Board of Directors which may exercise all powers and do all acts and things which may be exercised or done by the Bank and are not by this Act expressly directed or required to be done by the Bank in general meeting.

(1) The Central Board shall consist of the following Directors, namely :—

(*a*) a Governor and two Deputy Governors, to be appointed by the Governor General in Council after consideration of the recommendations made by the Board in that behalf.

(*b*) four Directors to be nominated by the Governor General in Council.

(*c*) eight Directors to be elected on behalf of the shareholders on the various registers, in the manner provided in section 9 and in the following numbers, namely :—

(*i*) for the Bombay register—two Directors ;
(*ii*) for the Calcutta register—two Directors :

(*iii*) for the Delhi register—two Directors ;
(*iv*) for the Madras register—one Director :
(*v*) for the Rangoon register—one Director, and

(*d*) one government official to be nominated by the Governor General in Council.

(2) The Governor and Deputy Governors shall devote their whole time to the affairs of the Bank, and shall receive such salaries and allowances as may be determined by the Central Board, with the approval of the Governor General in Council.

(3) A Deputy Governor and the Director nominated under clause (*d*) of sub-section (1) may attend any meeting of the Central Board and take part in its deliberations but shall not be entitled to vote.

Provided that when the Governor is absent a Deputy Governor authorized by him in this behalf in writing may vote for him.

(4) The Governor and a Deputy Governor shall hold office for such term not exceeding five years as the Governor General in Council may fix when appointing them, and shall be eligible for re-appointment.

A Director nominated under clause (*b*) or elected under clause (*c*) of sub-section (1) shall hold office for five years, or thereafter until his successor, shall have been duly nominated or elected, and, subject to the provisions of section 10, shall be eligible for re-nomination or re-election.

A Director nominated under clause (*d*) of sub-section (1) shall hold office during the pleasure of the Governor General in Council.

(5) No act or proceeding of the Board shall be questioned on the ground merely of the existence of any vacancy in, or any defect in the constitution of, the Board.

Local Boards.—(1) Local Board shall be constituted for each of the five areas specified in the First Schedule, and shall consist of—

(*a*) five members elected from amongst themselves by the shareholders who are registered on the register for that area and are qualified to vote, and

(*b*) not more than three members nominated by the Central Board from amongst the shareholders registered on the register for that area, who may be nominated at any time.

Provided that the Central Board shall in exercising this power of nomination aim at securing the representation of territorial or economic interests not already represented, and in particular the representation of agricultural interests and the interests of co-operative banks.

(2) At an election of members of a Local Board for any area, any shareholder who has been registered on the register for that area, for a period of not less than six months ending with the date of the election, as holding five shares shall have one vote, and each shareholder so registered as having more than five shares shall have one vote for each five shares, but subject to a maximum of ten votes, and such votes may be exercised by proxy appointed on each occasion for that purpose, such proxy being himself a shareholder entitled to vote at the election and not being an employee of the Bank.

(3) The members of a Local Board shall hold office until they vacate it under sub-section (6) and, subject to the provisions of section 10, shall be eligible for re-election or re-nomination, as the case may be.

(4) At any time within three months of the day on which the Directors representing the shareholders on any register are due to retire under the provisions of this Act, the Central Board shall direct an election to be held of members of the Local Board concerned, and shall specify a date from which the registration of transfer from and to the register shall be suspended until the election has taken place.

(5) On the issue of such direction the Local Board shall give notice of the date of the election and shall publish a list of shareholders holding five or more shares, with the dates on which their shares were registered, and with their registered addresses, and such list shall be available for purchase not less than three weeks before the date fixed for the election.
